i. **EER/EER2/SEER/SEER2/CEER/HSPF/HSPF2 Rating.** When performance compliance requires installation of a space conditioning system with a rating that is greater than the minimum rating required by Table 150.1-A or specified for the standard design, the installed system shall be field verified in accordance with the procedures specified in the applicable sections of Reference Residential Appendix RA3.4.

ii. **Variable capacity heat pump (VCHP) compliance option**. When performance compliance requires installation of a heat pump system that meets all the requirements of the VCHP compliance option specified in the ACM Reference Manual, the system shall be field verified in accordance with the procedures in Reference Residential Appendix RA3.4.4.3.

iii. **Low leakage air handler.** When performance compliance requires installation of a low leakage air-handling unit, the installed air-handling unit shall be field verified in accordance with the procedures specified in Reference Residential Appendix RA3.1.4.3.9.

iv. **RESERVED**

v. **Heat pump** - **rated heating capacity.** When performance compliance requires installation of a heat pump system, the heating capacity values at 47° F and 17° F shall be field verified in accordance with the procedures specified in Reference Residential Appendix RA3.4.

vi. **Whole-house fan**. When performance compliance requires installation of a whole-house fan, the whole-house fan ventilation airflow rate and fan efficacy shall be field verified in accordance with the procedures in Reference Residential Appendix RA3.9.

vii. **Central fan ventilation cooling system**. When performance compliance requires installation of a central fan ventilation cooling system, the installed system shall be field verified in accordance with the procedures in Reference Residential Appendix RA3.3.4.

viii. **Building enclosure air leakage**. When performance compliance requires a building enclosure leakage rate that is lower than the standard design, the building enclosure shall be field verified in accordance with the procedures specified in Reference Residential Appendix RA3.8.

ix. **Quality Insulation Installation (QII).** When performance compliance requires field verification of QII, the building insulation system shall be field verified in accordance with the procedures in Reference Residential Appendix RA3.5.

(c) **Prescriptive standards/component packages.** Buildings that comply with the prescriptive standards shall be designed, constructed and equipped to meet all of the requirements for the appropriate climate zone shown in Table 150.1-A. In Table 150.1-A, NA (not allowed) means that feature is not permitted in a particular climate zone and NR (no requirement) means that there is no prescriptive requirement for that feature in a particular climate zone. Installed components shall meet the following requirements:

1. **Insulation.**

   A. Roof and ceiling insulation shall be installed in a ventilated attic with an R-value equal to or greater than that shown in Table 150.1-A meeting options ii or iii below.

      i. Option A: **RESERVED**.

      ii. Option B: A minimum R-value of insulation installed between the roof rafters in contact with the roof deck and an additional layer of ceiling insulation located between the attic and the conditioned space when meeting Section 150.1(c)9A; or

      iii. Option C: A minimum R-value of ceiling insulation located between the attic and the conditioned space when meeting Section 150.1(c)9B.

      Note: Low rise residential single-family buildings with the ducts and air handler located in the conditioned space, as specified by Section 150.1(c)9B, need only comply with insulation requirements of Option C.

   B. **Walls.**

      i. Framed exterior walls shall be insulated such that the exterior wall has an assembly U-factor equal to or less than that shown in Table 150.1-A. The U-factors shown are maximum U-factors for the exterior wall assembly.

      ii. Mass walls above grade and below grade shall be insulated such that the wall has an assembly U-factor equal to or less than that shown in Table 150.1-A, or walls shall be insulated with continuous insulation that has an R-value equal to or greater than that shown in Table 150.1-A. “Interior” denotes continuous insulation installed on the inside surface of the wall, and “exterior” denotes continuous insulation installed on the outside surface of the wall.

      iii. Other unframed exterior walls, excluding mass walls, shall meet the requirements for framed walls shown in Table 150.1-A.

   C. Raised-floors shall be insulated such that the floor assembly has an assembly U-factor equal to or less than shown in Table 150.1-A, or shall be insulated between wood framing with insulation having an R-value equal to or greater than that shown in Table 150.1-A.

      Exception to Section 150.1(c)1C: Raised-floor insulation may be omitted if the foundation walls are insulated to meet the wall insulation minimums shown in Table 150.1-A, and a vapor retarder is placed over the entire floor of the crawl space, and the vents are fitted with automatically operated louvers, and the requirements of Reference Residential Appendix RA4.5.1 are met.

   D. Slab floor perimeter insulation shall be installed with a U-factor equal to or less than, or R-value equal to or greater than shown in TABLE 150.1-A. The minimum depth of concrete-slab floor perimeter insulation shall be 16 inches or the depth of the footing of the building, whichever is less.

      Exception to Section 150.1(c)1: The insulation requirements of Tables 150.1-A may also be met by ceiling, roof deck, wall, or floor assemblies that meet the required maximum U-factors using a U-factor calculation method that considers the thermal effects of all elements of the assembly and is approved by the Executive Director.

   E. All buildings shall comply with the Quality Insulation Installation (QII) requirements shown in Table 150.1-A. When QII is required, insulation installation shall meet the criteria specified in Reference Appendix RA3.5.

2. **Radiant barrier.** A radiant barrier required in Table 150.1-A shall meet the requirements specified in Section 110.8(j), and shall meet the installation criteria specified in the Reference Residential Appendix RA4.

3. **Fenestration.**

   A. Installed fenestration products, including glazed doors, shall have an area-weighted average U-factor and Solar Heat Gain Coefficient (SHGC) meeting the applicable fenestration value in Table 150.1-A and shall be determined in accordance with Sections 110.6(a)2 and 110.6(a)3.

   Exception 1 to Section 150.1(c)3A: For each dwelling unit, up to 3 square feet of new glazing area installed in doors and up to 3 square feet of new tubular skylights area with dual-pane diffusers shall not be required to meet the U-factor and SHGC requirements of Table 150.1-A.

   Exception 2 to Section 150.1(c)3A: For each dwelling unit up to 16 square feet of new skylight area with a maximum U-factor of 0.55 and a maximum SHGC of 0.30.

   Exception 3 to Section 150.1(c)3A For fenestration containing chromogenic type glazing:

   i. The lower-rated labeled U-factor and SHGC shall be used with automatic controls to modulate the amount of solar gain and light transmitted into the space in multiple steps in response to daylight levels or solar intensity;

   ii. Chromogenic glazing shall be considered separately from other fenestration; and

   iii. Area-weighted averaging with other fenestration that is not chromatic shall not be permitted and shall be determined in accordance with Section 110.6(a).

   EXCEPTION 4 to Section 150.1(c)3A: For dwelling units containing unrated site-built fenestration that meets the maximum area restriction, the U-factor and SHGC can be determined in accordance with the Nonresidential Reference Appendix NA6 or use default values in Table 110.6-A and Table 110.6-B.

   B. The maximum total fenestration area shall not exceed the percentage of conditioned floor area, CFA, as indicated in TABLE 150.1-A. Total fenestration includes skylights and west-facing glazing.

   C. The maximum west-facing fenestration area shall not exceed the percentage of conditioned floor area as indicated in TABLE 150.1-A. West-facing fenestration area includes skylights tilted in any direction when the pitch is less than 1:12.

4. **Shading.** Where Table 150.1-A requires a maximum SHGC, the requirements shall be met by one of the following:

   A. Complying with the required SHGC pursuant to Section 150.1(c)3A; or

   B. An exterior operable shading louver or other exterior shading device that meets the required SHGC; or

   C. A combination of Items A and B to achieve the same performance as achieved in Section 150.1(c)3A.

   D. For south-facing glazing only, optimal overhangs shall be installed so that the south-facing glazing is fully shaded at solar noon on August 21 and substantially exposed to direct sunlight at solar noon on December 21.

   E. Exterior shading devices must be permanently secured with attachments or fasteners that are not intended for removal.

   Exception to Section 150.1(c)4E: Where the California Building Code (CBC) requires emergency egress or where compliance would conflict with health and safety regulations.

5. **Doors.** Installed swinging door products separating conditioned space from outside or adjacent unconditioned space, but not including glazed door products, shall have an area-weighted average U-factor no greater than the applicable door value in Table 150.1-A and shall be determined in accordance with Section 110.6(a)2. Glazed door products are treated as fenestration products in Sections 150.1(c)3 and 150.1(c)4.

   Exception to Section 150.1(c)5: Swinging doors between the garage and conditioned space that are required to have fire protection are not required to meet the applicable door value in Table 150.1-A.

6. **Heating system type.** Heating system types shall be installed as required in Table 150.1-A. For climate zones 3, 4, 13 and 14, the space conditioning system shall be a heat pump, or shall meet the performance compliance requirements of Section 150.1(b)1.

Exception to Section 150.1(c)6: A supplemental heating unit may be installed in a space served directly or indirectly by a primary heating system, provided that the unit thermal capacity does not exceed 2 kW or 7,000 Btu/hr and is controlled by a time-limiting device not exceeding 30 minutes.

7. **Space heating and space cooling.** All space heating and space cooling equipment shall comply with minimum Appliance Efficiency Regulations as specified in Sections 110.0 through 110.2 and meet all applicable requirements of Sections 150.0 and 150.1(c)7A.

   A. **Refrigerant charge**. When refrigerant charge verification or fault indicator display is shown as required by Table 150.1-A, the system shall comply with either Section 150.1(c)7Ai or 150.1(c)7Aii:

      i. air-cooled air conditioners and air-source heat pumps, including but not limited to ducted split systems, ducted packaged systems, small duct high velocity systems, and mini-split systems, shall comply with subsections a, b and c, unless the system is of a type that cannot be verified using the specified procedures:

         a. Have measurement access holes (MAH) installed according to the specifications in Reference Residential Appendix Section RA3.2.2.3; and

            Exception to Section 150.1(c)7Aia: Systems that cannot conform to the specifications for hole location in Reference Residential Appendix Figure RA3.2-1, shall not be required to provide holes as described in Figure RA3.2-1.

         b. System airflow rate in accordance with subsection I or II shall be confirmed through field verification and diagnostic testing in accordance with all applicable procedures specified in Reference Residential Appendix Section RA3. 3 or an approved alternative procedure as specified by Section RA1; and

            I. For small duct high velocity systems the system airflow rate shall be greater than or equal to 250 cfm per ton; or

            II. For all other air-cooled air conditioner or air-source heat pump systems the system airflow rate shall be greater than or equal to 350 cfm per ton.

            Exception to Section 150.1(c)7Aib: Standard ducted systems without zoning dampers may comply with the minimum airflow rate by meeting the applicable requirements in Table-150.0-B or 150.0-C as confirmed by field verification and diagnostic testing in accordance with the procedures in Reference Residential Appendix Section RA3.1.4.4 and RA3.1.4.5. The design clean-filter pressure drop requirements of Section 150.0(m)12D for the system air filter device(s) shall conform to the requirements given in Tables 150.0-B and 150.0-C.

         c. The installer shall charge the system according to manufacturer's specifications. Refrigerant charge shall be verified according to one of the following options, as applicable:

            I. The installer and rater shall perform the standard charge procedure as specified by Reference Residential Appendix Section RA3.2.2, or an approved alternative procedure as specified by Section RA1; or

            II. The system shall be equipped with a fault indicator display (FID) device that meets the specifications of Reference Joint Appendix JA6. The installer shall verify the refrigerant charge and FID device in accordance with the procedures in Reference Residential Appendix Section RA3.4.2. The HERS Rater shall verify FID device in accordance with the procedures in Section RA3.4.2; or

            III. The installer shall perform the weigh-in charging procedure as specified by Reference Residential Appendix Section RA3.2.3.1 provided the system is of a type that can be verified using the Section RA3.2.2 standard charge verification procedure and Section RA3.3 airflow rate verification procedure or approved alternatives in Section RA1. The HERS Rater shall verify the charge using Sections RA3.2.2 and RA3.3 or approved alternatives in Section RA1.

            Exception 1 to Section 150.1(c)7Aic: When the outdoor temperature is less than 55°F and the installer utilizes the weigh-in charging procedure in Reference Residential Appendix Section

RA3.2.3.1 to verify the refrigerant charge, the installer may elect to utilize the HERS Rater verification procedure in Reference Residential Appendix Section RA3.2.3.2. If the HERS Rater verification procedure in Section RA3.2.3.2 is used for compliance, the system's thermostat shall conform to the specifications in Section 110.12. Ducted systems shall comply with minimum system airflow rate requirement in Section 150.1(c)7Aib.

ii. Air-cooled air conditioners and air-source heat pumps, including but not limited to ducted split systems, ducted packaged systems, small duct high velocity systems and mini-split systems, which are of a type that cannot comply with the requirements of Section 150.1(c)7Ai shall comply with Subsections a and b, as applicable.

a. The installer shall confirm the refrigerant charge using the weigh-in charging procedure specified in Reference Residential Appendix Section RA3.2.3.1, as verified by a HERS Rater according to the procedures specified in Reference Residential Appendix Section RA3.2.3.2; and

b. Systems that utilize forced air ducts shall comply with the minimum system airflow rate requirement in Section 150.1(c)7Aib provided the system is of a type that can be verified using the procedures in Section RA3.3 or an approved alternative procedure in Section RA1.

Exception to Section 150.1(c)7A: Packaged systems for which the manufacturer has verified correct system refrigerant charge prior to shipment from the factory are not required to have refrigerant charge confirmed through field verification and diagnostic testing. The installer of these packaged systems shall certify on the Certificate of Installation that the packaged system was pre-charged at the factory and has not been altered in a way that would affect the charge. Ducted systems shall comply with minimum system airflow rate requirements in Section 150.1(c)7Aib, provided that the system is of a type that can be verified using the procedure specified in Section RA3.3 or an approved alternative in Section RA1.

8. **Domestic water-heating systems.** Water-heating systems shall meet the requirements of A, B, C, or shall meet the performance compliance requirements of Section 150.1(b)1. For recirculation distribution systems, only demand recirculation systems with manual on/off control as specified in the Reference Appendix RA4.4.9 shall be used:

A. A single 240 volt heat pump water heater (HPWH). The storage tank shall be located in the garage or conditioned space. In addition, meet the following:

i. A compact hot water distribution system as specified in the Reference Appendix RA4.4.6 in climate zone 1 and 16; and

ii. A drain water heat recovery system that is field verified as specified in the Reference Appendix RA3.6.9 in climate zone 16.

B. A single 240 volt HPWH that meets the requirements of NEEA Advanced Water Heater Specification Tier 3 or higher. In addition, for Climate Zone 16, a drain water heat recovery system that is field verified as specified in the Reference Appendix RA3.6.9 and the storage tank shall be located in the garage or conditioned space.

C. A solar water-heating system with electric backup meeting the installation criteria specified in Reference Residential Appendix RA4 and with a minimum annual solar savings fraction of 0.7.

Exception 1 to Section 150.1(c)8: For climate zones 3, 4, 13 and 14, a gas or propane instantaneous water heater with an input of 200,000 Btu per hour or less and no storage tank may be installed.

NOTE: The space conditioning system shall be a heat pump as specified in Section 150.1(c)6.

Exception 2 to Section 150.1(c)8: An instantaneous electric water heater with point of use distribution as specified in RA4.4.5 may be installed for new dwelling units with a conditioned floor area of 500 square feet or less.

Exception 3 to Section 150.1(c)8A and B: A 120V HPWH may be installed in place of a 240V HPWH for new dwelling unit with one bedroom or less.

9. **Space conditioning distribution systems.** All space conditioning systems shall meet all applicable requirements of A or B below:

   A. High performance attics. Air handlers or ducts are allowed to be in ventilated attic spaces when the roof and ceiling insulation level meet Option B in Table 150.1-A. Duct insulation levels shall meet the requirements in Table 150.1-A.

   B. Duct and air handlers located in conditioned space. Duct systems and air handlers of HVAC systems shall be located in conditioned space, and confirmed by field verification and diagnostic testing to meet the criterion of Reference Residential Appendix Section RA3.1.4.3.8. Duct insulation levels shall meet the requirements in Table 150.1-A.

   Note: Gas heating appliances installed in conditioned spaces must meet the combustion air requirements of the California Mechanical Code Chapter 7, as applicable.

10. **Central fan integrated ventilation systems.** Central forced air system fans used to provide outside air, shall have an air-handling unit fan efficacy less than or equal to the maximum W/cfm specified in A, B, or C. The airflow rate and fan efficacy requirements in this section shall be confirmed through field verification and diagnostic testing in accordance with all applicable procedures specified in Reference Residential Appendix RA3.3. Central Fan integrated ventilation systems shall be certified to the Energy Commission as intermittent ventilation systems as specified in Reference Residential Appendix RA3.7.4.2.

    A. 0.45 W/cfm for gas furnace air-handling units.

    B. 0.58 W/cfm for air-handling units that are not gas furnaces.

    C. 0.62 W/cfm for small duct high velocity air-handling units.

    Exception to Section 150.1(c)10A: Gas furnace air-handling units manufactured prior to July 3, 2019 shall comply with a fan efficacy value less than or equal to 0.58 w/cfm as confirmed by field verification and diagnostic testing in accordance with the procedures given in Reference Residential Appendix RA3.3.

11. **Roofing products.** All roofing products shall meet the requirements of Section 110.8 and the applicable requirements of Subsection A or B:

    A. Single-family residential buildings with steep-sloped roofs in climate zones 10 through 15 shall have a minimum aged solar reflectance of 0.20 and a minimum thermal emittance of 0.75, or a minimum SRI of 16.

    B. Single-family residential buildings with low-sloped roofs; in climate zones 13 and 15 shall have a minimum aged solar reflectance of 0.63 and a minimum thermal emittance of 0.75 or a minimum SRI of 75.

    Exception 1 to Section 150.1(c)11: Building integrated photovoltaic panels and building integrated solar thermal panels are exempt from the minimum requirements for aged solar reflectance and thermal emittance or SRI.

    Exception 2 to Section 150.1(c)11: Roof constructions with a weight of at least 25 lb/ft^2 are exempt from the minimum requirements for aged solar reflectance and thermal emittance or SRI.

12. **Ventilation cooling**. Single--family homes shall comply with the Whole-house fan (WHF) requirements shown in Table 150.1-A. When a WHF is required, comply with Subsections A, B and C below.

    A. Have installed one or more WHFs whose total airflow cfm is equal to or greater than 1.5 cfm/ft^2 of conditioned floor area. Airflow cfm for WHF's shall be determined based on the airflow listed in the Home Ventilating Institute Certified Products Directory.

    B. Have at least 1 square foot of attic vent free area for each 750 cfm of rated whole-house fan airflow cfm, or if the manufacturer has specified a greater free vent area, the manufacturers' free vent area specifications.

    Exception to Section 150.1(c)12B: WHFs that are directly vented to the outside.

    C. Provide homeowners who have WHFs with a one page "How to operate your whole-house fan" informational sheet.

Exception to section 150.1(c)12: New dwelling units with a conditioned floor area of 500 square feet or less shall not be required to comply with the WHF requirements.

13. **HVAC system bypass ducts.** Bypass ducts that deliver conditioned supply air directly to the space conditioning system return duct airflow shall not be used.

14. **Photovoltaic requirements.** All single-family residential buildings shall have a newly installed photovoltaic (PV) system or newly installed PV modules meeting the minimum qualification requirements specified in Joint Appendix JA11. The annual electrical output of the PV system shall be no less than the smaller of a PV system size determined using Equation 150.1-C, or the maximum PV system size that can be installed on the building's Solar Access Roof Area (SARA).

    A. SARA includes the area of the building's roof space capable of structurally supporting a PV system, and the area of all roof space on covered parking areas, carports, and all other newly constructed structures on the site that are compatible with supporting a PV system per Title 24, Part 2, Section 1511.2.

    B. SARA does NOT include:

        i. Any roof area that has less than 70 percent annual solar access. Annual solar access is determined by dividing the total annual solar insolation, accounting for shading obstructions, by the total annual solar insolation if the same areas were unshaded by obstructions. For steep slope roofs only shading from existing permanent natural or manmade obstructions that are external to the dwelling, including but not limited to trees, hills, and adjacent structures, shall be considered for annual solar access calculations. For low slope roofs, all obstructions including those that are external to the dwelling unit, and obstructions that are part of the building design and elevation features shall be considered for the annual solar access calculations.

        ii. Occupied roof areas as specified by CBC Section 503.1.4.

        iii. Roof area that is otherwise not available due to compliance with other building code requirements if confirmed by the Executive Director.

    EQUATION 150.1-C ANNUAL PHOTOVOLTAIC ELECTRICAL OUTPUT

    $$kW_{PV} = (CFA \times A)/1000 + (N_{DU} \times B)$$

    WHERE:

    kW_{PV} = kW_{dc} size of the PV system

    CFA = Conditioned floor area

    N_{DU} = Number of dwelling units

    A = CFA adjustment factor from Table 150.1-C

    B = Dwelling unit adjustment factor from Table 150.1-C

    Exception 1 to Section 150.1(c)14: For steep slope roofs, SARA shall not consider roof areas with a northerly azimuth that lies between 300 degrees and 90 degrees from true north. No PV system is required if the SARA is less than 80 contiguous square feet.

    Exception 2 to Section 150.1(c)14: No PV system is required when the minimum PV system size specified by section 150.1(c)14 is less than 1.8 kW_{dc}.

    Exception 3 to Section 150.1(c)14: Buildings with enforcement-authority-approved roof designs, where the enforcement authority determines it is not possible for the PV system, including panels, modules and components

and supports and attachments to the roof structure, to meet the requirements of the American Society of Civil Engineers (ASCE), Standard 7-16, Chapter 7, Snow Loads.

Exception 4 to Section 150.1(c)14: For buildings that are approved by the local planning department prior to January 1, 2020 with mandatory conditions for approval:

a. Shading from roof designs and configurations for steep-sloped roofs, which are required by the mandatory conditions for approval, shall be considered for the annual solar access calculations; and

b. Roof areas that are not allowed by the mandatory conditions for approval to have PVs, shall not be considered in determining the SARA.

EXCEPTION 5 to Section 150.1(c)14: PV system sizes determined using Equation 150.1-C may be reduced by 25 percent if installed in conjunction with a battery storage system. The battery storage system shall meet the qualification requirements specified in Joint Appendix JA12 and have a minimum usable capacity of 7.5 kWh

Footnote requirements to TABLE 150.1-A:

1. Install the specified R-value with an air space present between the roofing and the roof deck, such as standard installation of concrete or clay tile.
2. R-values shown for below roof deck insulation are for wood-frame construction with insulation installed between the framing members. Alternatives including insulation above rafters or above roof deck shall comply with the performance standards.
3. Assembly U-factors for exterior framed walls can be met with cavity insulation alone or with continuous insulation alone, or with both cavity and continuous insulation that results in an assembly U-factor equal to or less than the U-factor shown. Use Reference Joint Appendices JA4 Table 4.3.1, 4.3.1(a), or Table 4.3.4 to determine alternative insulation products to be less than or equal to the required maximum U-factor.
4. Mass wall has a heat capacity greater than or equal to 7.0 Btu/h-ft^2.
5. "Interior" denotes insulation installed on the inside surface of the wall. "Exterior" denotes insulation installed on the exterior surface of the wall.
6. Below grade "interior" denotes insulation installed on the inside surface of the wall, and below grade "exterior" denotes insulation installed on the outside surface of the wall.
7. HSPF means heating seasonal performance factor.
8. When whole-house fans are required (REQ), only those whole-house fans that are listed in the Home Ventilating Institute Certified Products Directory may be installed. Compliance requires installation of one or more WHFs whose total airflow cfm is capable of meeting or exceeding a minimum 1.5 cfm/square foot of conditioned floor area as specified by Section 150.1(c)12.
9. A supplemental heating unit may be installed in a space served directly or indirectly by a primary heating system, provided that the unit thermal capacity does not exceed 2 kilowatts or 7,000 Btu/hr and is controlled by a time-limiting device not exceeding 30 minutes.
10. For duct and air handler location: REQ denotes location in conditioned space. When the table indicates ducts and air handlers are in conditioned space, a HERS verification is required as specified by Reference Residential Appendix RA3.1.4.3.8.

SUBCHAPTER 9
SINGLE-FAMILY RESIDENTIAL BUILDINGS - ADDITIONS AND ALTERATIONS TO EXISTING RESIDENTIAL BUILDINGS

SECTION 150.2 – ENERGY EFFICIENCY STANDARDS FOR ADDITIONS AND ALTERATIONS TO EXISTING SINGLE-FAMILY RESIDENTIAL BUILDINGS

(a) **Additions.** Additions to existing single-family residential buildings shall meet the requirements of Sections 110.0 through 110.9, Sections 150.0(a) through (n), (p), (q), and either Section 150.2(a)1 or 2.

Exception 1 to Section 150.2(a): Additions of 300 square feet or less are exempt from the roofing requirements of Section 150.1(c)11.

Exception 2 to Section 150.2(a): Existing inaccessible piping shall not require insulation as defined under Section 150.0(j)1.

Exception 3 to Section 150.2(a): Space-conditioning system. When heating or cooling will be extended to an addition from the existing system(s), the existing heating and cooling equipment need not comply with Part 6. The heating system capacity must be adequate to meet the minimum requirements of CBC Section 1204.1.

Exception 4 to Section 150.2(a): space-conditioning system ducts. When any length of duct is extended from an existing duct system to serve the addition, the existing duct system and the extended duct shall meet the applicable requirements specified in Section 150.2(b)1Di and 150.2(b)1Dii.

Exception 5 to Section 150.2(a): Additions 1,000 square feet or less are exempt from the ventilation cooling requirements of Section 150.1(c)12.

Exception 6 to Section 150.2(a): Photovoltaic systems, as specified in Section 150.1(c)14, are not required for additions.

Exception 7 to Section 150.2(a): Space heating system. New or replacement space heating system serving an addition may be a heat pump or gas heating system.

1. **Prescriptive approach.** Additions to existing buildings shall meet the following additional requirements:
    A. Additions that are greater than 700 square feet shall meet the requirements of Section 150.1(c), with the following modifications:
        i. Extensions of existing wood-framed walls may retain the dimensions of the existing walls and shall install cavity insulation of R-15 in a 2x4 framing and R-21 in a 2x6 framing.
        ii. The maximum allowed fenestration area shall be the greater of 175 square feet or 20 percent of the addition floor area, and the maximum allowed west-facing fenestration area shall be the greater of 70 square feet or the requirements of Section 150.1(c).
        iii. When existing siding of a wood-framed wall is not being removed or replaced, cavity insulation of R-15 in a 2x4 framing and R-21 in a 2x6 framing shall be installed and continuous insulation is not required.
        iv. Additions that consist of the conversion of existing spaces from unconditioned to conditioned space shall not be required to perform the following as part of QII:
            a. Existing window and door headers shall not be required to be insulated.

b. Air sealing shall not be required when the existing air barrier is not being removed or replaced.

B. Additions that are 700 square feet or less shall meet the requirements of Section 150.1(c), with the following modifications:

i. Roof and ceiling insulation in a ventilated attic shall meet one of the following requirements:

a. In Climate Zones 1, 2, 4, and 8 through 16, achieve an overall assembly U-factor not exceeding 0.025. In wood framed assemblies, compliance with U-factors may be demonstrated by installing insulation with an R-value of R-38 or greater.

b. In Climate Zones 3, and 5 through 7, achieve an overall assembly U-factor not exceeding 0.031. In wood framed assemblies, compliance with U-factors may be demonstrated by installing insulation with an R-value of R-30 or greater.

ii. Radiant barriers shall be installed in climate zones 2-15.

iii. Extensions of existing wood-framed walls may retain the dimensions of the existing walls and shall install cavity insulation of R-15 in a 2×4 framing and R-21 in a 2×6 framing.

iv. In Climate Zones 2, 4 and 6-15; the maximum allowed west-facing fenestration area shall not be greater than 60 square feet; and shall also comply with either a or b below:

a. For additions that are 700 square feet or less but greater than 400 square feet, the maximum allowed fenestration area limit is the greater of 120 square feet or 25 percent of the conditioned floor area of the addition; or

b. For additions that are 400 square feet or less, the maximum allowed fenestration area is the greater of 75 square feet or 30 percent of the conditioned floor area of the addition.

v. Quality Insulation Installation (QII) requirements of Section 150.1(c)1E do not apply.

vi. When existing siding of a wood-framed wall is not being removed or replaced, cavity insulation of R-15 in a 2×4 framing and R-21 in a 2×6 framing shall be installed and continuous insulation is not required.

Exception to Section 150.2(a)1B: Insulation in an enclosed rafter ceiling shall meet the requirements of Section 150.0.

C. **Mechanical ventilation for indoor air quality**. Additions to existing buildings shall comply with Section 150.0(o) subject to the requirements specified in subsections i and ii below.

i. **Whole-dwelling unit mechanical ventilation**.

a. Dwelling units that meet the conditions in subsections 1, or 2 below shall not be required to comply with the whole-dwelling unit ventilation airflow specified in Sections 150.0(o)1C, 150.0(o)1E, or 150.0(o)1F.

1. Additions to an existing dwelling unit that increase the conditioned floor area of the existing dwelling unit by less than or equal to 1000 square feet.

2. Junior Accessory Dwelling Units (JADU) that are additions to an existing building.

b. Additions to an existing dwelling unit that increase the conditioned floor area of the existing dwelling unit by more than 1,000 square feet shall have mechanical ventilation airflow in accordance with Section 150.0(o)1C, 150.0(o)1E, or 150.0(o)1F as applicable. The mechanical ventilation airflow rate shall be based on the conditioned floor area of the entire dwelling unit comprised of the existing dwelling unit conditioned floor area plus the addition conditioned floor area.

c. New dwelling units that are additions to an existing building shall have mechanical ventilation airflow provided in accordance with Section 150.0(o)1C, 150.0(o)1E, or 150.0(o)1F as applicable. The mechanical ventilation airflow rate shall be based on the conditioned floor area of the new dwelling unit.

ii. **Local mechanical exhaust**. Additions to existing buildings shall comply with all applicable requirements specified in 150.0(o)1G and 150.0(o)2.

D. **Water heater**. When a second water heater is installed as part of the addition, one of the following types of water heaters shall be installed:

i. A single heat pump water heater. The storage tank shall not be located outdoors and shall be placed on an incompressible, rigid insulated surface with a minimum thermal resistance of R-10. The water heater shall be installed with a communication interface that meets either the requirements of 110.12(a) or has a ANSI/CTA-2045-B communication port; or

ii. A single heat pump water heater that meets the requirements of NEEA Advanced Water Heater Specification Tier 3 or higher; or

iii. A gas or propane instantaneous water heater with an input of 200,000 Btu per hour or less and no storage tank; or

iv. For additions that are 500 square feet or less, an instantaneous electric water heater with point of use distribution as specified in RA4.4.5; or

v. A water-heating system determined by the Executive Director to use no more energy than the one specified in Item i, ii, iii, or iv.

2. **Performance approach.** Performance calculations shall meet the requirements of Section 150.1(a) through (c), pursuant to the applicable requirements in Items A, B, and C below.

A. **For additions alone.** The addition complies if the addition alone meets the energy budgets as specified in Section 150.1(b).

B. **Existing plus alteration plus addition.** The standard design for existing plus alteration plus addition energy use is the combination of the existing building's unaltered components to remain; existing building altered components that are the more efficient, in TDV energy, of either the existing conditions or the requirements of Section 150.2(b)2; plus the proposed addition's energy use meeting the requirements of Section 150.2(a)1. The proposed design energy use is the combination of the existing building's unaltered components to remain and the altered components' energy features, plus the proposed energy features of the addition.

EXCEPTION to Section 150.2(a)2B: Existing structures with a minimum R-11 insulation in framed walls showing compliance with Section 150.2(a)2 are exempt from showing compliance with Section 150.0(c).

C. **Mechanical Ventilation for Indoor Air Quality**. Additions to existing buildings shall comply with Section 150.0(o) subject to the requirements specified in subsections i, ii below.

i. **Whole-dwelling unit mechanical ventilation**.

a. Dwelling units that meet the conditions in Subsections 1, or 2 below shall not be required to comply with the whole-dwelling unit ventilation airflow specified in Section 150.0(o)1C, 150.0(o)1E, or 150.0(o)1F.

1. Additions to an existing dwelling unit that increase the conditioned floor area of the existing dwelling unit by less than or equal to 1000 square feet.

2. Junior Accessory Dwelling Units (JADU) that are additions to an existing building.

b. Additions to an existing dwelling unit that increase the conditioned floor area of the existing dwelling unit by more than 1,000 square feet shall have mechanical ventilation airflow in

accordance with Section 150.0(o)1C, 150.0(o)1E, or 150.0(o)1F as applicable. The mechanical ventilation airflow rate shall be based on the conditioned floor area of the entire dwelling unit comprised of the existing dwelling unit conditioned floor area plus the addition conditioned floor area.

c. New dwelling units that are additions to an existing building shall have mechanical ventilation airflow provided in accordance with Section 150.0(o)1C, 150.0(o)1E, or 150.0(o)1F as applicable. The mechanical ventilation airflow rate shall be based on the conditioned floor area of the new dwelling unit.

ii. **Local mechanical exhaust** . Additions to existing buildings shall comply with all applicable requirements specified in 150.0(o)1G and 150.0(o)2.

(b) **Alterations.** Alterations to existing single-family residential buildings or alterations in conjunction with a change in building occupancy to a single-family residential occupancy shall meet either Item 1 or 2 below.

1. **Prescriptive approach.** The altered component and any newly installed equipment serving the alteration shall meet the applicable requirements of Sections 110.0 through 110.9 and all applicable requirements of Sections 150.0(a) through (l), 150.0(m)1 through 150.0 (m)10, and 150.0(p) through (q); and

A. **Added fenestration**. Alterations that add vertical fenestration and skylight area shall meet the total fenestration area and west facing fenestration area, U-factor, and Solar Heat Gain Coefficient requirements of Section 150.1(c) and TABLE 150.1-A.

Exception 1 to Section 150.2(b)1A: Alterations that add fenestration area of up to 75 square feet shall not be required to meet the total fenestration area and west-facing fenestration area requirements of Sections 150.1(c)3B and C.

Exception 2 to Section 150.2(b)1A: Alterations that add up to 16 square feet of new skylight area with a maximum U-factor of 0.55 and a maximum SHGC of 0.30 area shall not be required to meet the total fenestration area and west-facing fenestration area requirements of Sections 150.1(c)3B and C.

B. **Replacement fenestration.** New manufactured fenestration products installed to replace existing fenestration products of the same total area shall meet the U-factor and Solar Heat Gain Coefficient requirements of Sections 150.1(c)3A, and 150.1(c)4.

Exception 1 to Section 150.2(b)1B: Replacement of vertical fenestration no greater than 75 square feet with a U-factor no greater than 0.40 in Climate Zones 1-16, and a SHGC value no greater than 0.35 in Climate Zones 2, 4, and 6-15.

Exception 2 to Section 150.2(b)1B: Replaced skylights must meet a U-factor no greater than 0.55, and a SHGC value no greater than 0.30.

NOTE: Glass replaced in an existing sash and frame or sashes replaced in an existing frame are considered repairs, provided that the replacement is at least equivalent to the original in performance.

C. **Entirely new or complete replacement space-conditioning systems** installed as part of an alteration, shall include all the system heating or cooling equipment, including but not limited to: condensing unit cooling or heating coil, and air handler for split systems; or complete replacement of a packaged unit; plus entirely new or replacement duct system (Section 150.2(b)1Diia). Entirely new or complete replacement space-conditioning systems shall meet the requirements of Sections 150.0(h), 150.0(i), 150.0(j)1, 150.0(j)2, 150.0(m)1 through 150.0(m)10; 150.0(m)12; 150.0(m)13, 150.1(c)7, 150.2(b)1G, and TABLE 150.2-A.

D. **Altered duct systems - duct sealing**: In all Climate Zones, when more than 25 feet of new or replacement space-conditioning system ducts are installed, the ducts shall comply with the applicable requirements of subsections i and ii below. Additionally, when altered ducts, air-handling units, cooling or heating coils, or plenums are located in garage spaces, the system shall comply with subsection 150.2(b)1Diic regardless of the length of any new or replacement space-conditioning ducts installed in the garage space.

i. New ducts located in unconditioned space shall meet the applicable requirements of Sections 150.0(m)1 through 150.0(m)10, and the duct insulation requirements of Table 150.2-A; and

TABLE 150.2-A DUCT INSULATION R-VALUE

Climate Zone	3, 5 through 7	1, 2, 4, 8 through 16
Duct R-Value	R-6	R-8

ii. The altered duct system, regardless of location, shall be sealed as confirmed through field verification and diagnostic testing in accordance with all applicable procedures for duct sealing of altered existing duct systems as specified in Reference Residential Appendix Section RA3.1, utilizing the leakage compliance criteria specified in Subsection a or b below.

a. **Entirely new or complete replacement duct system.** If the new ducts form an entirely new or complete replacement duct system directly connected to the air handler, the duct system measured leakage shall be equal to or less than 5 percent of the system air handler airflow as confirmed by field verification and diagnostic testing utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.1.

Entirely new or complete replacement duct systems installed as part of an alteration is constructed of at least 75 percent new duct material, and up to 25 percent may consist of reused parts from the dwelling unit's existing duct system, including but not limited to registers, grilles, boots, air handler, coil, plenums, duct material; if the reused parts are accessible and can be sealed to prevent leakage.

Entirely new or complete replacement duct systems shall also conform to the requirements of Sections 150.0(m)12 and 150.0(m)13. If the air handler and ducts are located within a vented attic, the requirements of Section 150.2(b)1J shall also be met.

b. **Extension of an existing duct system**. If the new ducts are an extension of an existing duct system serving single-family dwellings, the combined new and existing duct system shall meet one of the following requirements:

I. The measured duct leakage shall be equal to or less than 10 percent of system air handler airflow as confirmed by field verification and diagnostic testing utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.1; or

II. The measured duct leakage to outside shall be equal to or less than 7 percent of system air handler airflow as confirmed by field verification and diagnostic testing utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.4; or

III. If it is not possible to meet the duct sealing requirements of either Section 150.2(b)1DiibI, or 150.2(b)1DiibII, then all accessible leaks shall be sealed and verified through a visual inspection and a smoke test by a certified HERS Rater utilizing the methods specified in Reference Residential Appendix RA3.1.4.3.5.

Exception to Section 150.2(b)1Diib: Duct sealing. Existing duct systems that are extended, which are constructed, insulated or sealed with asbestos.

c. **Altered ducts and duct system components in garage spaces.** When new or replacement space-conditioning ducts, air-handling units, cooling or heating coils, or plenums are located in a garage space, compliance with either I or II below is required.

I. The measured system duct leakage shall be less than or equal to 6 percent of system air handler airflow as determined utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.1; or

II. All accessible leaks located in the garage space shall be sealed and verified through a visual inspection and a smoke test by a certified HERS Rater utilizing the methods specified in Reference Residential Appendix RA3.1.4.3.5.

E. **Altered space-conditioning system - duct sealing.** In all climate zones, when a space-conditioning system serving a single-family dwelling is altered by the installation or replacement of space-conditioning system equipment, including replacement of the air handler, outdoor condensing unit of a split system air conditioner or heat pump, or cooling or heating coil; the duct system that is connected to the altered space-conditioning system equipment shall be sealed, as confirmed through field verification and diagnostic testing in accordance with the applicable procedures for duct sealing of altered existing duct systems as specified in Reference Residential Appendix RA3.1 and the leakage compliance criteria specified in Subsection i, ii, or iii below. Additionally, when altered ducts, air-handling units, cooling or heating coils, or plenums are located in garage spaces, the system shall comply with Section 150.2(b)1Diic regardless of the length of any new or replacement space-conditioning ducts installed in the garage space.

i. The measured duct leakage shall be equal to or less than 10 percent of system air handler airflow as determined utilizing the procedures in Reference Residential Appendix RA3.1.4.3.1; or

ii. The measured duct leakage to outside shall be equal to or less than 7 percent of system air handler airflow as determined utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.4; or

iii. If it is not possible to meet the duct sealing requirements of either Section 150.2(b)1Ei or 150.2(b)1Eii, then, all accessible leaks shall be sealed and verified through a visual inspection and a smoke test by a certified HERS Rater utilizing the methods specified in Reference Residential Appendix Section RA3.1.4.3.5.

Exception 1 to Section 150.2(b)1E: Duct sealing. Duct systems that are documented to have been previously sealed as confirmed through field verification and diagnostic testing in accordance with procedures in the Reference Residential Appendix RA3.1.

Exception 2 to Section 150.2(b)1E: Duct sealing. Duct systems with less than 40 linear feet as determined by visual inspection.

Exception 3 to Section 150.2(b)1E: Duct sealing. Existing duct systems constructed, insulated or sealed with asbestos.

F. **Altered space-conditioning system - mechanical cooling.** When a space-conditioning system is an air conditioner or heat pump that is altered by the installation or replacement of refrigerant-containing system components such as the compressor, condensing coil, evaporator coil, refrigerant metering device or refrigerant piping, the altered system shall comply with the following requirements:

i. All thermostats associated with the system shall be replaced with setback thermostats meeting the requirements of Section 110.2(c).

ii. In Climate Zones 2, 8, 9, 10, 11, 12, 13, 14 and 15, air-cooled air conditioners and air-source heat pumps, including but not limited to ducted split systems, ducted package systems, small duct high velocity air systems, and minisplit systems, shall comply with Subsections a and b, unless the system is of a type that cannot be verified using the specified procedures. Systems that cannot comply with the requirements of 150.2(b)1Fii shall comply with Section 150.2(b)1Fiii.

Exception to Section 150.2(b)1Fii: Entirely new or complete replacement packaged systems for which the manufacturer has verified correct system refrigerant charge prior to shipment from the factory are not required to have refrigerant charge confirmed through field verification and diagnostic testing. The installer of these packaged systems shall certify on the Certificate of Installation that the packaged system was pre-charged at the factory and has not been altered in a way that would affect the charge. Ducted systems shall comply with minimum system airflow rate requirement in Section 150.2(b)1Fiia, provided that the system is of a type that can be verified using the procedure specified in RA3.3 or an approved alternative in RA1.

a. Minimum system airflow rate shall comply with the applicable Subsection I or II below as confirmed through field verification and diagnostic testing in accordance with the procedures

specified in Reference Residential Appendix Section RA3.3 or an approved alternative procedure as specified in Section RA1.

I. Small duct high velocity systems shall demonstrate a minimum system airflow rate greater than or equal to 250 cfm per ton of nominal cooling capacity; or

II. All other air-cooled air conditioner or air-source heat pump systems shall demonstrate a minimum system airflow rate greater than or equal to 300 cfm per ton of nominal cooling capacity; and

Exception 1 to Section 150.2(b)1Fiia: Systems unable to comply with the minimum airflow rate requirement shall demonstrate compliance using the procedures in Section RA3.3.3.1.5; and the system's thermostat shall conform to the specifications in Section 110.12.

Exception 2 to Section 150.2(b)1Fiia: Entirely new or complete replacement space conditioning systems, as specified by Section 150.2(b)1C, without zoning dampers may comply with the minimum airflow rate by meeting the applicable requirements in Tables-150.0-B or 150.0-C as confirmed by field verification and diagnostic testing in accordance with the procedures in Reference Residential Appendix Section RA3.1.4.4 and RA3.1.4.5. The design clean-filter pressure drop requirements of Section 150.0(m)12C for the system air filter device(s) shall conform to the requirements given in Tables150.0-B and 150.0-C.

b. The installer shall charge the system according to manufacturer's specifications. Refrigerant charge shall be verified according to one of the following options, as applicable.

I. The installer and rater shall perform the standard charge verification procedure as specified in Reference Residential Appendix Section RA3.2.2, or an approved alternative procedure as specified in Section RA1; or

II. The system shall be equipped with a fault indicator display (FID) device that meets the specifications of Reference Joint Appendix JA6. The installer shall verify the refrigerant charge and FID device in accordance with the procedures in Reference Residential Appendix Section RA3.4.2. The HERS Rater shall verify FID device in accordance with the procedures in Section RA3.4.2; or

III. The installer shall perform the weigh-in charging procedure as specified by Reference Residential Appendix Section RA3.2.3.1 provided the system is of a type that can be verified using the RA3.2.2 standard charge verification procedure and RA3.3 airflow rate verification procedure or approved alternatives in RA1. The HERS Rater shall verify the charge using RA3.2.2 and RA3.3 or approved alternatives in RA1.

Exception 1 to Section 150.2(b)1Fiib: When the outdoor temperature is less than 55° F and the installer utilizes the weigh-in charging procedure in Reference Residential Appendix Section RA3.2.3.1to demonstrate compliance, the installer may elect to utilize the HERS Rater verification procedure in Reference Residential Appendix Section RA3.2.3.2. If the HERS Rater verification procedure in Section RA3.2.3.2 is used for compliance, the system's thermostat shall conform to the specifications in Section 110.12. Ducted systems shall comply with the minimum system airflow rate requirements in Section 150.2(b)1Fiia.

iii. In climate Zones 2, 8, 9, 10, 11, 12, 13, 14, and 15, air-cooled air conditioners or air-source heat pumps, including but not limited to ducted split systems, ducted package systems, small duct high velocity, and minisplit systems, which are of a type that cannot comply with the requirements of 150.2(b)1Fiib shall comply with subsections a and b, as applicable.

a. The installer shall confirm the refrigerant charge using the weigh-in charging procedure specified in Reference Residential Appendix Section RA3.2.3.1, as verified by a HERS Rater according to the procedures specified in Reference Residential Appendix RA3.2.3.2; and

b. Systems that utilize forced air ducts shall comply with the minimum system airflow rate requirement in Section 150.2(b)1Fiia provided the system is of a type that can be verified using the procedures in Section RA3.3 or an approved alternative procedure in Section RA1.

Exception to Section 150.2(b)1Fiii: Entirely new or complete replacement packaged systems for which the manufacturer has verified correct system refrigerant charge prior to shipment from the factory are not required to have refrigerant charge confirmed through field verification and diagnostic testing. The installer of these packaged systems shall certify on the Certificate of Installation that the packaged system was pre-charged at the factory and has not been altered in a way that would affect the charge. Ducted systems shall comply with minimum system airflow rate requirement in Section 150.2(b)1Fiiib, provided that the system is of a type that can be verified using the procedure specified in Section RA3.3 or an approved alternative in Section RA1.

G. **Altered Space Heating System.** Altered or replacement space heating systems shall not use electric resistance as the primary heat source.

Exception 1 to Section 150.2(b)1G: Non-ducted electric resistance space heating systems, if the existing space heating system is electric resistance.

Exception 2 to Section 150.2(b)1G: Ducted electric resistance space heating systems, if the existing space heating system is electric resistance and a ducted space cooling system is not being replaced or installed.

Exception 3 to Section 150.2(b)1G: Electric resistance space heating systems, if the existing space heating system is electric resistance and the building is located in climate zones 7 or 15.

H. **Water-Heating System**. Altered or replacement service water-heating systems or components shall meet the applicable requirements below:

i. **Pipe Insulation.** For newly installed ad existing accessible piping, the insulation requirements of Section 150.0(j)1 shall be met.

ii. **Distribution System.** For recirculation distribution systems serving individual dwelling units, only demand recirculation systems with manual on/off control as specified in the Reference Appendix RA4.4.9 shall be installed.

iii. **Water heating system.** The water heating system shall meet one of the following:

a. A natural gas or propane water-heating system; or

b. A single heat pump water heater. The storage tank shall not be located outdoors and be placed on an incompressible, rigid insulated surface with a minimum thermal resistance of R-10. The water heater shall be installed with a communication interface that either meets the requirements of Section 110.12(a) or has an ANSI/CTA-2045-B communication port; or

c. A single heat pump water heater that meets the requirements of NEEA Advanced Water Heater Specification Tier 3 or higher; or

d. If the existing water heater is an electric resistance water heater, a consumer electric water heater; or

e. A water-heating system determined by the Executive Director to use no more energy than the one specified in Item a above; or if no natural gas is connected to the existing water heater location, a water-heating system determined by the executive director to use no more energy than the one specified in Item d above.

l. **Roofs.** Replacements of the exterior surface of existing roofs, including adding a new surface layer on top of the existing exterior surface, shall meet the requirements of Section 110.8 and the applicable requirements of Subsections i and ii where more than 50 percent of the roof is being replaced.

i. **Steep-sloped roofs.** Steep-sloped roofs shall meet the following:

New roofing products in Climate Zones 4 and 8 through 15 shall have a minimum aged solar reflectance of 0.20 and a minimum thermal emittance of 0.75, or a minimum SRI of 16.

Exception 1 to Section 150.2(b)1Ii: The following shall be considered equivalent to Subsection i:

a. Buildings with ceiling assemblies with a U-factor lower than or equal to 0.025 or that are insulated with at least R-38 ceiling insulation; or

b. Buildings with a radiant barrier in the attic, where the radiant barrier is not installed directly above spaced sheathing, meeting the requirements of Section 150.1(c)2; or

c. In Climate Zones 2, 4, 9, 10, 12 and 14, buildings that have no ducts in the attic; or

d. Buildings with R-2 or greater continuous insulation above or below the roof deck.

Exception 2 to Section 150.2(b)1Ii: Roof area covered by building integrated photovoltaic panels or building integrated solar thermal panels is not required to meet minimum requirements for aged solar reflectance, thermal emittance or SRI.

Exception 3 to Section 150.2(b)1Ii: Roof constructions with a weight of at least 25 lb/ft^2 are exempt from minimum requirements for aged solar reflectance and thermal emittance, or SRI.

ii. **Low-sloped roofs.** Low-sloped roofs shall meet the following:

a. New roofing products in Climate Zones 4 and 6 through 15 shall have an aged solar reflectance equal to or greater than 0.63 and a thermal emittance equal or greater than 0.75, or a minimum SRI of 75.

Exception 1 to Section 150.2(b)1Iiia: The aged solar reflectance can be met by using insulation at the roof deck specified in Table 150.2-B.

TABLE 150.2-B AGED SOLAR REFLECTANCE INSULATION TRADE OFF TABLE

Minimum Aged Solar Reflectance	Roof Deck Continuous Insulation R-value (Climate Zones 6-7)	Roof Deck Continuous Insulation R-value (Climate Zones 2, 4, & 8-15)
0.60	2	16
0.55	4	18
0.50	6	20
0.45	8	22
No Requirement	10	24

Exception 2 to Section 150.2(b)1Iiia: Roof area covered by building integrated photovoltaic panels or building integrated solar thermal panels is not required to meet the minimum requirements for aged solar reflectance, thermal emittance or SRI.

Exception 3 to Section 150.2(b)1Iiia: Roof constructions with a weight of at least 25 lb/ft^2 are exempt from the minimum requirements for aged solar reflectance and thermal emittance, or SRI.

b. Roofs shall be insulated to the levels specified in Table 150.2-C.

TABLE 150.2-C INSULATION REQUIREMENTS FOR ROOF ALTERATIONS

Climate Zone	Continuous Insulation R-value	Roof Assembly U-factor
3, 5-7	NR	NR
1, 2, 4, 8-16	R-14	0.039

Exception 1 to Section 150.2(b)1Iiib: Existing roofs with R-10 or greater continuous insulation above or below the roof deck; or

Exception 2 to Section 150.2(b)1Iiib: Existing roofs with an assembly U-factor of 0.056 or less or that are insulated with at least R-19 insulation between the roof rafters and in contact with the roof deck in Climate Zones 1, 2, 4, and 8 through 10; or

Exception 3 to Section 150.2(b)1Iiib: The continuous insulation requirements of Table 150.2-C may be reduced to R-4 where the following conditions are met:

i. Mechanical equipment is located on the roof and will not be temporarily disconnected and lifted as part of the roof replacement and the addition of insulation required by Table 150.2-C would reduce the height from the roof surface to the top of the base flashing to less than that set forth in the manufacturer's installation instructions as per California Residential Code Section R900; or

ii. Replaced roofing abuts sidewall or parapet walls and the addition of insulation required by Table 150.2-C would reduce the height from the roof surface to the top of the base flashing to less than that set forth in the manufacturer's installation instructions as per the California Residential Code Section R900, provided that the following conditions apply:

1. The sidewall or parapet walls are finished with an exterior cladding material other than the roof covering membrane material; and
2. The sidewall or parapet walls have exterior cladding material that must be removed to install the new roof covering membrane to maintain the minimum base flashing height; and
3. The ratio of the replaced roof area to the linear dimension of affected sidewall or parapet walls is less than 25 square feet per linear foot; or

Exception 4 to Section 150.2(b)1Iiib: The continuous insulation requirements per Table 150.2-C may be reduced where increasing the thickness of above deck insulation would reduce the flashing around an existing exterior wall opening below what is permitted by the fenestration or door manufacturer's installation instructions, or registered design professionals approved flashing design, as per the California Residential Code Section R703.4, or by California Residential Code Section R905.2.8.3.

Exception 5 to Section 150.2(b)1Biib: Tapered insulation with thermal resistance less than prescribed at the drains and other low points may be used provided that the thickness of insulation is increased at the high points of the roof so that the average thermal resistance equals or exceeds the required value.

J. **Ceiling.** Vented attics shall meet the following:

i. In Climate Zones 1 through 4, 6, and 8 through 16 insulation shall be installed to achieve a weighted U-factor of 0.020 or insulation installed at the ceiling level shall result in an insulated thermal resistance of R-49 or greater for the insulation alone; and

Exception to Section 150.2(b)1Ji: In Climate Zones 1, 3, and 6, dwelling units with at least R-19 existing insulation installed at the ceiling level.

ii. In Climate Zones 2, 4, and 8 through 16 air seal all accessible areas of the ceiling plane between the attic and the conditioned space in accordance with Section 110.7; and

Exception 1 to Section 150.2(b)1Jii: Dwelling units with at least R-19 existing insulation installed at the ceiling level.

Exception 2 to Section 150.2(b)1Jii: Dwelling units with atmospherically vented space heating or water heating combustion appliances located inside the pressure boundary of the dwelling unit.

iii. In Climate Zones 1 through 4 and 8 through 16 recessed downlight luminaires in the ceiling shall be covered with insulation to the same depth as the rest of the ceiling. Luminaires not rated for insulation contact must be replaced or retrofitted with a fireproof cover that allows for insulation to be installed directly over the cover; and

Exception 1 to Section 150.2(b)1Jiii: In Climate Zones 1 through 4 and 8 through 10, dwelling units with at least R-19 existing insulation installed at the ceiling level.

iv. Attic ventilation shall comply with the California Building Code requirements.

Exception 1 to Section 150.2(b)1J: Dwelling units with at least R-38 existing insulation installed at the ceiling level.

Exception 2 to Section 150.2(b)1J: Dwelling units where the alteration would directly cause the disturbance of asbestos.

Exception 3 to Section 150.2(b)1J: Dwelling units with knob and tube wiring located in the vented attic.

Exception 4 to Section 150.2(b)1J: Where the accessible space in the attic is not large enough to accommodate the required R-value, the entire accessible space shall be filled with insulation provided such installation does not violate Section 806.3 of Title 24, Part 2.5.

Exception 5 to Section 150.2(b)1J: Where the attic space above the altered dwelling unit is shared with other dwelling units and the requirements of Section 150.2(b)1J are not triggered for the other dwelling units.

K. **Lighting**. The altered lighting system shall meet the lighting requirements of Section 150.0(k). The altered luminaires shall meet the luminaire efficacy requirements of Section 150.0(k) and TABLE 150.0-A. Where existing screw base sockets are present in ceiling-recessed luminaires, removal of these sockets is not required provided that new JA8 compliant trim kits or lamps designed for use with recessed downlights or luminaires are installed.

L. **Mechanical ventilation for indoor air quality - entirely new or complete replacement ventilation Systems.** Entirely new or complete replacement ventilation systems shall comply with all applicable requirements in Section 150.0(o). An entirely new or complete replacement ventilation system includes a new ventilation fan component and an entirely new duct system. An entirely new or complete replacement duct system is constructed of at least 75 percent new duct material, and up to 25 percent may consist of reused parts from the dwelling unit's existing duct system, including but not limited to registers, grilles, boots, air filtration devices and duct material, if the reused parts are accessible and can be sealed to prevent leakage.

M. **Mechanical ventilation for indoor air quality - altered ventilation systems**. Altered ventilation system components or newly installed ventilation equipment serving the alteration shall comply with Section 150.0(o) as applicable subject to the requirements specified in subsections i and ii below.

i. **Whole-dwelling unit mechanical ventilation**.

a. **Whole-dwelling unit airflow**. If the whole-dwelling ventilation fan is altered or replaced, then one of the following subsections 1 or 2 shall be used for compliance as applicable.

1. Dwellings that were required by a previous building permit to comply with the whole-dwelling unit airflow requirements in Section 150.0(o) shall meet or exceed the whole-dwelling unit mechanical ventilation airflow specified in Section 150.0(o)1C, 150.0(o)1E or 150.0(o)1F as confirmed through field verification and diagnostic testing in accordance with the applicable procedures specified in Reference Residential Appendix RA3.7.

2. Dwellings that were not required by a previous building permit to have a whole-dwelling unit ventilation system shall not be required to comply with the whole-dwelling unit ventilation airflow specified in Section 150.0(o)1C, 150.0(o)1E or 150.0(o)1F.

b. **Replacement ventilation fans.** Whole-dwelling unit replacement ventilation fans shall be rated for airflow and sound in accordance with the requirements of ASHRAE 62.2 Sections 7.1 and 7.2. Additionally, when conformance to a specified whole-dwelling unit airflow rate is required for compliance, the replacement fans shall be rated at no less than the airflow rate required for compliance.

c. **Air filters**. If the air filtration device for a whole-dwelling unit ventilation system is altered or replaced, then one of the following subsections 1 or 2 shall be used for compliance as applicable.

1. Dwellings that were required by a previous building permit to comply with the ventilation system air filtration requirements in Section 150.0(m)12 shall comply with the air filtration requirements in Section 150.0(m)12.

2. Dwellings that were not required by a previous building permit to comply with the ventilation system air filtration requirements in 150.0(m)12 shall not be required to comply with the air filtration requirements specified in Section 150.0(m)12.

ii. **Local mechanical exhaust**.

a. **Bathroom local mechanical exhaust**. Altered bathroom local mechanical exhaust systems shall comply with the applicable requirements specified in Section 150.0(o)1G.

b. **Kitchen local mechanical Exhaust**. If the kitchen local ventilation fan is altered or replaced, then one of the following subsections 1, 2, or 3 shall be used for compliance as applicable.

1. Dwellings that were required by a previous building permit to comply with the kitchen local exhaust requirements in 150.0(o)1G shall meet or exceed the applicable airflow or capture efficiency requirements in Section 150.0(o)1G.

2. Dwellings that were required by a previous building permit to install a vented kitchen range hood or other kitchen exhaust fan, shall install a replacement fan that meets or exceeds the airflow required by the previous building permit, or 100 cfm, whichever is greater.

3. Dwellings that were not required to have a kitchen local ventilation exhaust system according to the conditions in either subsection 1 or 2 above shall not be required to comply with the requirements of Section 150.0(o)1G.

c. **Replacement Ventilation Fans.** New or replacement local mechanical exhaust fans shall be rated for airflow and sound in accordance with the requirements of ASHRAE 62.2 Section 7.1 and Title 24, Part 6 Section 150.0(o)1Gvi. Additionally, when compliance with a specified exhaust airflow rate is required, the replacement fan shall be rated at no less than the airflow rate required for compliance.

N. **Exterior doors.** Alterations that add exterior door area shall meet the U-factor requirement of Section 150.1(c)5.

2. **Performance approach.**

The altered component(s) and any newly installed equipment serving the alteration shall meet the applicable requirements of Subsections A, B, and C below.

A. The altered components shall meet the applicable requirements of Sections 110.0 through 110.9, Sections 150.0(a) through (l), Sections 150.0(m)1 through 150.0 (m)10, and Sections 150.0(p) through (q). Entirely new or complete replacement mechanical ventilation systems as these terms are used in Section 150.2(b)1L, shall comply with the requirements in Section 150.2(b)1L. Altered mechanical ventilation systems shall comply with the requirements of Section 150.2(b)1M. Entirely new or complete replacement space-conditioning systems, and entirely new or complete replacement duct systems, as these terms are used in Sections 150.2(b)1C and 150.2(b)1Diia, shall comply with the requirements of Sections 150.0(m)12 and 150.0(m)13.

B. The standard design for an altered component shall be the higher efficiency of existing conditions or the requirements stated in Table 150.2-D. For components not being altered, the standard design shall be based on the existing conditions. When the third party verification option is specified as a requirement, all components proposed for alteration for which the additional credit is taken, must be verified.

TABLE 150.2-D STANDARD DESIGN FOR AN ALTERED COMPONENT

Altered Component	Standard Design Without Third Party Verification of Existing Conditions Shall be Based On	Standard Design With Third Party Verification of Existing Conditions Shall be Based On
Ceiling Insulation, Wall Insulation, and Raised-floor Insulation	The requirements of Sections 150.0(a), (c), and (d)	The existing insulation R-value
Fenestration	The U-factor of 0.40 and SHGC value of 0.35. The glass area shall be the glass area of the existing building.	If the proposed U-factor is ≤ 0.40 and SHGC value is ≤ 0.35, the standard design shall be based on the existing U-factor and SHGC values as verified. Otherwise, the standard design shall be based on the U-factor of 0.40 and SHGC value of 0.35. The glass area shall be the glass area of the existing building.
Window Film	The U-factor of 0.40 and SHGC value of 0.35.	The existing fenestration in the alteration shall be based on Table 110.6-A and Table 110.6-B.
Doors	The U-factor of 0.20. The door area shall be the door area of the existing building.	If the proposed U-factor is < 0.20, the standard design shall be based on the existing U-factor value as verified. Otherwise, the standard design shall be based on the U-factor of 0.20. The door area shall be the door area of the existing building.
Space-Heating and Space-Cooling Equipment	TABLE 150.1-A for equipment efficiency requirements; Section 150.2(b)1C for entirely new or complete replacement systems; Section 150.2(b)1F for refrigerant charge verification requirements.	The existing efficiency levels.
Air Distribution System – Duct Sealing	The requirements of Sections 150.2(b)1D and 150.2(b)1E	The requirements of Sections 150.2(b)1D and 150.2(b)1E
Air Distribution System – Duct Insulation	The proposed efficiency levels.	The existing efficiency levels.
Water Heating Systems	The requirements of Section 150.2(b)1Hii	The existing efficiency level.
Roofing Products	The requirements of Section 150.2(b)1I.	The requirements of Section 150.2(b)1I
All Other Measures	The proposed efficiency levels.	The existing efficiency levels.

C. The proposed design shall be based on the actual values of the altered components.

Notes to Section 150.2(b)2:

1. If an existing component must be replaced with a new component, that component is considered an altered component for the purpose of determining the standard design altered component energy budget and must meet the requirements of Section 150.2(b)2B.
2. The standard design shall assume the same geometry and orientation as the proposed design.
3. The "existing efficiency level" modeling rules, including situations where nameplate data are not available, are described in the Residential ACM Approval Manual.

Exception 1 to Section 150.2(b): Any dual-glazed greenhouse or garden window installed as part of an alteration complies with the U-factor requirements in Section 150.1(c)3.

Exception 2 to Section 150.2(b): Where the space in the attic or rafter area is not large enough to accommodate the required R-value, the entire space shall be filled with insulation provided such installation does not violate Section 1203.2 of Title 24, Part 2.

(c) **Whole building.** Any addition or alteration may comply with the requirements of Title 24, Part 6 by meeting the requirements for the entire building.

Note: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8, 25910, and 25943, Public Resources Code.

SUBCHAPTER 10
MULTIFAMILY BUILDINGS—MANDATORY REQUIREMENTS

SECTION 160.0 – GENERAL

Multifamily buildings shall comply with the applicable requirements of Sections 160.1 through 160.9. Sections 160.1 through 160.9 apply to dwelling units and common use areas in multifamily buildings. Nonresidential occupancies in a mixed occupancy building shall comply with nonresidential requirements in Sections 120.0 through 141.1.

Note: The requirements of Sections 160.1 through 160.9 apply to newly constructed buildings. Sections 180.1 through 180.4 specify which requirements of Sections 160.1 through 160.9 apply to additions or alterations.

Note: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8, and 25943, Public Resources Code.

SECTION 160.1 – MANDATORY REQUIREMENTS FOR BUILDING ENVELOPES

(a) **Ceiling and roof insulation.** The opaque portions of ceilings and roofs separating conditioned spaces from unconditioned spaces or ambient air shall meet the requirements of Item 1 or 2, and 3 below:

1. Attic roof. Roofs with an attic space shall meet the requirements of A through C below:
   A. Shall be insulated to achieve an area-weighted average U-factor not exceeding U-0.043 or shall be insulated between wood-framing members with insulation resulting in an installed thermal resistance of R-22 or greater for the insulation alone. For vented attics, the mandatory insulation shall be installed at the ceiling level; for unvented attics, the mandatory insulation shall be placed at either ceiling or roof level;
   B. Attic access doors shall have permanently attached insulation using adhesive or mechanical fasteners. The attic access shall be gasketed to prevent air leakage; and
   C. When loose-fill insulation is installed, the minimum installed weight per square foot shall conform with the insulation manufacturer's installed design weight per square foot at the manufacturer's labeled R-value.
2. Non-attic roof. Roofs without attic spaces shall meet the applicable requirements of A through C below:
   A. Metal building—The area-weighted average U-factor of the roof assembly shall not exceed 0.098.
   B. Wood framed and others—The area-weighted average U-factor of the roof assembly shall not exceed 0.075.
   C. Insulation placement—When insulation is installed at the roof, fixed vents or openings to the outdoors or to unconditioned spaces shall not be installed. When the space between the ceiling and the roof is either directly or indirectly conditioned space, it shall not be considered an attic for the purposes of complying with CBC attic ventilation requirements.

      Exception to Section 160.1(a)2C: Vents that do not penetrate the roof deck and are instead designed for wind resistance for roof membranes are not within the scope of Section 160.1(a)2C.

3. Insulation shall be installed in direct contact with a roof or ceiling that is sealed to limit infiltration and exfiltration as specified in Section 110.7, including but not limited to placing insulation either above or below the roof deck or on top of a drywall ceiling.

(b) **Wall insulation.** Opaque portions of above grade walls separating conditioned spaces from unconditioned spaces or ambient air shall meet the following applicable requirements:

1. Metal building—The area-weighted average U-factor of the wall assembly shall not exceed 0.113.
2. Metal framed—The area-weighted average U-factor of the wall assembly shall not exceed 0.151.
3. Wood framed and others—
   A. Nominal 2x4 inch framing shall have an area-weighted average U-factor of the wall assembly not exceeding 0.102.
   B. Nominal 2x6 inch framing shall have an area-weighted average U-factor of the wall assembly not exceeding 0.071.
   C. Other wall assemblies shall have an area-weighted average U-factor of the wall assembly not exceeding 0.102.
4. **Light mass walls**—A 6 inch or greater hollow core concrete masonry unit shall have a U-factor not to exceed 0.440.
5. **Heavy mass walls**—An 8 inch or greater hollow core concrete masonry unit shall have a U-factor not to exceed 0.690.
6. **Spandrel panels and curtain wall**—The area-weighted average U-factor of the spandrel panels and curtain wall assembly shall not exceed 0.280.
7. **Demising walls**—The opaque portions of framed demising walls shall meet the requirements of Item A or B below:

A. Wood framed walls shall be insulated to meet a U-factor not greater than 0.099.

B. Metal framed walls shall be insulated to meet a U-factor not greater than 0.151.

8. Bay or bow window roofs and floors shall be insulated to meet the wall insulation requirements of Table 170.2-A.

(c) **Floor and soffit insulation.** The opaque portions of floors and soffits that separate conditioned spaces from unconditioned spaces or ambient air shall meet the applicable requirements of Items 1 through 3 below:

1. Raised mass floors shall have a minimum of 3 inches of lightweight concrete over a metal deck or the area-weighted average U-factor of the floor assembly shall not exceed 0.269.

2. Raised wood floor shall have an overall assembly U-factor not exceeding U-0.037. In a wood framed assembly, compliance with the U-factor may be demonstrated by installing insulation with an R-value of 19 or greater.

3. Other floors—The area-weighted average U-factor of the floor assembly shall not exceed 0.071.

4. Heated slab on grade floor—A heated slab on grade floor shall be insulated to meet the requirements of Section 110.8(g).

Exception to Section 160.1(c): A building with a controlled ventilation or unvented crawl space may omit raised floor insulation if all of the following are met:

A. The foundation walls are insulated to meet the wall insulation minimums as shown in Table 170.2-A; and

B. A Class I or Class II vapor retarder is placed over the entire floor of the crawl space; and

C. Vents between the crawl space and outside air are fitted with automatically operated louvers that are temperature actuated; and

D. The requirements in Reference Residential Appendix RA4.5.1.

(d) **Vapor retarder.**

1. In Climate Zones 1–16, the earth floor of unvented crawl space shall be covered with a Class I or Class II vapor retarder. This requirement shall also apply to controlled ventilation crawl space for buildings complying with the Exception to Section 160.1(c).

2. In Climate Zones 14 and 16, a Class I or Class II vapor retarder shall be installed on the conditioned space side of all insulation in all exterior walls, vented attics and unvented attics with air-permeable insulation.

(e) **Fenestration products.** Fenestration separating conditioned space from unconditioned space or outdoors shall meet the requirements of either Item 1 or 2 below:

1. Fenestration, including skylight products, must have a maximum U-factor of 0.58.

Exception 1 to Section 160.1(e)1: Up to 0.5 percent of the conditioned floor area is exempt from the maximum U-factor requirement.

Exception 2 to Section 160.1(e)1: For dual-glazed greenhouse or garden windows, up to 30 square feet of fenestration area per dwelling unit is exempt from the maximum U-factor requirement.

2. The area-weighted average U-factor of all fenestration, including skylight products, shall not exceed 0.58.

(f) **Installation of fireplaces, decorative gas appliances and gas logs.** If a masonry or factory-built fireplace is installed, it shall comply with Section 110.5, Section 4.503 of Part 11, and shall have the following:

1. Closable metal or glass doors covering the entire opening of the firebox; and

2. A combustion air intake to draw air from the outside of the building, which is at least 6 square inches in area and is equipped with a readily accessible, operable and tight-fitting damper or combustion-air control device; and

Exception to Section 160.1(f)2: An outside combustion-air intake is not required if the fireplace will be installed over concrete slab flooring and the fireplace will not be located on an exterior wall.

3. A flue damper with a readily accessible control.

Exception to Section 160.1(f)3: When a gas log, log lighter or decorative gas appliance is installed in a fireplace, the flue damper shall be blocked open if required by the CMC or the manufacturer's installation instructions.

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8, and 25943, Public Resources Code.

SECTION 160.2 – MANDATORY REQUIREMENTS FOR VENTILATION AND INDOOR AIR QUALITY

(a) **General requirements.**

1. Attached dwelling units in multifamily buildings shall comply with the applicable requirements of Subsection 160.2(b) below. Occupiable spaces in multifamily buildings other than attached dwelling units shall comply with the applicable requirements of Section 160.2(c). When HERS field verification and diagnostic testing of attached dwelling units is required by Section 160.2, buildings with three habitable stories or fewer shall use the applicable procedures in the Residential Appendices, and buildings with four or more habitable stories shall use the applicable procedures in Nonresidential Appendices NA1 and NA2.

   NOTE: Section 160.2 is not applicable to townhouses or dwellings that contain two dwelling units.

2. The required outdoor air-ventilation rate and the air-distribution system design shall be clearly identified on the building design plans submitted to the enforcement agency in accordance with Section 10-103 of Title 24, Part 1.

(b) **Attached dwelling units.** Attached dwelling units shall comply with the requirements of Subsections 1 and 2 below**.**

1. **Air filtration.**

   A. System types specified in Subsections i, ii and iii shall be provided with air filters in accordance with Sections 160.2(b)1B, 160.2(b)1C and 160.2(b)1D. System types specified in Subsection i shall also comply with Section 160.2(b)1E.

      i. Mechanical space-conditioning systems that supply air to an occupiable space through ductwork exceeding 10 ft (3 m) in length.

      ii. Mechanical supply-only ventilation systems and makeup air systems that provide outside air to an occupiable space.

      iii. The supply side of mechanical balanced ventilation systems, including heat recovery ventilation systems, and energy recovery ventilation systems that provide outside air to an occupiable space.

   B. **System design and installation.**

      i. The system shall be designed to ensure that all recirculated air and all outdoor air supplied to the occupiable space are filtered before passing through any system's thermal conditioning components.

         Exception to Section 160.2(b)1Bi: For heat recovery ventilators and energy recovery ventilators, the location of the filters required by Section 160.2(b)1 may be downstream of a system thermal conditioning component, provided the system is equipped with ancillary filtration upstream of the system’s thermal conditioning component.

      ii. All systems shall be designed to accommodate the clean-filter pressure drop imposed by the system air filter(s). The design airflow rate, and maximum allowable clean-filter pressure drop at the design airflow rate applicable to each air filter, shall be determined and reported on labels according to Subsection iv below.

         Systems specified in Section 160.2(b)1Ai shall be equipped with air filters that meet either Subsection a or b below:

         a. Nominal two-inch minimum depth filter(s) shall be sized by the system designer, or

         b. Nominal one-inch minimum depth filter(s) shall be allowed if the filter(s) are sized according to Equation 160.2-A, based on a maximum face velocity of 150 ft per minute and according to the maximum allowable clean-filter pressure drop specified in Section 160.2(b)1Dii.

$A_{face} = Q_{filter} / V_{face}$ (Equation 160.2-A)

where:

A_{face} = air filter face area, the product of air filter nominal length × nominal width, ft^2.

Q_{filter} = design airflow rate for the air filter, ft^3/min

V_{face} = air filter face velocity ≤ 150 ft/min

iii. All system air filters shall be located and installed in such a manner as to be accessible for regular service by the system owner.

iv. All system air filter installation locations shall be labeled to disclose the applicable design airflow rate and the maximum allowable clean-filter pressure drop. The labels shall be permanently affixed to the air filter installation location, readily legible, and visible to a person replacing the air filter.

v. Filter racks or grilles shall use gaskets, sealing or other means to close gaps around inserted filters and prevent air from bypassing the filter.

C. **Air filter efficiency**. The system shall be provided with air filters having a designated efficiency equal to or greater than MERV 13 when tested in accordance with ASHRAE Standard 52.2, or a particle size efficiency rating equal to or greater than 50 percent in the 0.30–1.0 µm range, and equal to or greater than 85 percent in the 1.0–3.0 µm range when tested in accordance with AHRI Standard 680.

D. **Air filter pressure drop**. All systems shall be provided with air filters that conform to the applicable maximum allowable clean-filter pressure drop specified in Subsection i, ii, iii or iv below, when tested using ASHRAE Standard 52.2, or as rated using AHRI Standard 680, for the applicable design airflow rates for the system air filters.

i. The maximum allowable clean-filter pressure drop shall be determined by the system design for the nominal two-inch minimum depth air filter required by Section 160.2(b)1Biia, or

ii. A maximum of 25 Pa (0.1 inches water) clean-filter pressure drop shall be allowed for a nominal 1-inch depth air filter sized according to Section 160.2(b)1Biib, or

iii. For systems specified in Sections 160.2(b)1Aii and 160.2(b)1Aiii, the maximum allowable clean filter pressure drop shall be determined by the system design.

iv. If Exception 1 to Section 160.3(b)5Lii or iv is utilized for compliance with cooling system airflow rate and fan efficacy requirements, the clean-filter pressure drop for the system air filter shall conform to the requirements given in Table 160.3-A or 160.3-B.

E. **Air filter product labeling.** Systems described in Section 160.2(b)1Ai shall be equipped with air filters that have been labeled by the manufacturer to disclose the efficiency and pressure drop ratings that demonstrate conformance with Sections 160.2(b)1C and 160.2(b)1D.

Exception to Section 160.2(b)1: Evaporative coolers are exempt from the air filtration requirements in Section 160.2(b)1.

2. **Ventilation and indoor air quality for attached dwelling units**. All attached dwelling units shall meet the requirements of ASHRAE Standard 62.2, Ventilation and Acceptable Indoor Air Quality in Residential Buildings subject to the amendments specified in Section 160.2(b)2A below. All dwelling units shall comply with Section 160.2(b)2B below.

Exception to Section 160.2(b)2 The following sections of ASHRAE 62.2 shall not be required for compliance: Section 4.1.1, Section 4.1.2, Section 4.1.4, Section 4.3, Section 4.6, Section 5, Section 6.1.1, Section 6.5.2 and Normative Appendix A.

A. **Amendments to ASHRAE 62.2 requirements.**

i. **Window operation**. Window operation is not a permissible method of providing the dwelling unit ventilation airflow specified in Subsection iv or v below.

ii. **Central fan integrated (CFI) ventilation systems**.

a. Continuous operation prohibition. Continuous operation of a dwelling unit's central forced air system air handlers used in CFI ventilation systems is not a permissible method of providing the whole-dwelling unit ventilation airflow required by Section 160.2(b)2Aiv.

Exception to Section 160.2(b)2Aiia: The Energy Commission may approve continuous operation of central fan integrated ventilation systems pursuant to Section 10-109(h).

b. Outdoor air damper(s). A motorized damper(s) shall be installed on the connected ventilation duct(s) of CFI systems that prevents all airflow into or out of the space-conditioning duct system when the damper(s) is closed.

c. Damper control. The required motorized damper(s) shall be controlled to be in an opened position when outdoor air ventilation is required for compliance, and shall be in the closed position when ventilation air is not required. The damper(s) shall be closed whenever the space-conditioning system air handling unit is not operating. If the outdoor airflow for the CFI ventilation system is fan-powered, then the outdoor air fan shall not operate when the required motorized damper(s) on the outdoor air ventilation duct(s) is closed.

d. Variable ventilation. CFI ventilation systems shall incorporate controls that track outdoor air ventilation run time, and either open or close the required motorized damper(s) depending on whether or not outdoor air ventilation is required for compliance with Section 160.2(b)2Aiv. During periods when comfort conditioning is not called for by the space-conditioning thermostat, the CFI ventilation system controls shall operate the space-conditioning system central fan and outdoor air damper(s) when necessary to ensure compliance with the minimum outdoor air ventilation required by Section 160.2(b)2Aiv in accordance with applicable variable mechanical ventilation methods specified in ASHRAE 62.2 Section 4.5.

iii. **Air filtration.** Air filtration shall conform to the specifications in Section 160.2(b)1. Compliance with ASHRAE 62.2 Sections 6.7 (Minimum Filtration) and 6.7.1 (Filter Pressure Drop) shall not be required.

iv. **Whole-dwelling unit mechanical ventilation**. Multifamily attached dwelling units shall comply with Subsections a and b below.

a. Mechanical ventilation airflow shall be provided at rates greater than or equal to the value determined in accordance with Equation 160.2-B.

Total Required Ventilation Rate [ASHRAE 62.2:4.1.1].

$$Q_{tot} = 0.03A_{floor} + 7.5(N_{br} + 1) \quad \text{(Equation 160.2-B)}$$

WHERE:

Q_{tot} = total required ventilation rate, cfm

A_{floor} = dwelling-unit floor area, ft^2

N_{br} = number of bedrooms (not to be less than 1)

b. All dwelling units in a multifamily building shall use the same whole-dwelling unit ventilation system type. The system type installed throughout the building shall be only one of the following three types: supply, exhaust or balanced. The dwelling unit shall comply with one of the following Subsections 1 or 2 below.

1. **Balanced ventilation**. A balanced ventilation system shall provide the required whole-dwelling-unit ventilation airflow. Systems with heat recovery or energy recovery that serve a single dwelling unit shall have a fan efficacy of ≤1.0 W/cfm; or

2. **Supply or exhaust ventilation with compartmentalization testing**. Continuously operating supply ventilation systems or continuously operating exhaust ventilation systems shall be allowed to be used to provide the required whole-dwelling unit ventilation airflow only if the dwelling unit envelope leakage is less than or equal to 0.3 cubic feet per minute at 50 Pa (0.2 inch water) per ft^2 of dwelling unit envelope surface area as confirmed by HERS field verification and diagnostic testing in accordance with the procedures specified in Reference Appendix RA3.8 or NA2.3 as applicable.

v. **Multifamily building central ventilation system airflow rate tolerance.** Multifamily building central ventilation systems that serve multiple dwelling units shall have airflow rates in each dwelling unit served that meet or exceed a design ventilation airflow rate specification.

a. Designers shall specify a design ventilation airflow rate for each dwelling unit that is equal to or greater than the rate specified by Equation 160.2-B.

b. The design ventilation airflow rate for each dwelling unit shall be stated on the building design plans approved by the enforcement agency.

c. Airflow in each dwelling unit shall be no more than twenty percent greater than the specified design ventilation airflow rate. Ventilation systems shall utilize mechanical or software airflow control means to ensure each of the dwelling-unit airflows can be maintained at the design ventilation airflow within this tolerance at all times. System airflow control-means may include but are not limited to constant air regulation devices, orifice plates and variable speed central fans.

vi. **Local mechanical exhaust.** A local mechanical exhaust system shall be installed in each kitchen and bathroom. Systems shall be rated for airflow in accordance with ASHRAE 62.2 Section 7.1.

a. **Nonenclosed kitchens** shall have a demand-controlled mechanical exhaust system meeting the requirements of Section 160.2(b)2Avic.

b. **Enclosed kitchens and all bathrooms** shall have either one of the following options 1 or 2:

1. A demand-controlled mechanical exhaust system meeting the requirements of Section 160.2(b)2Avic; or

2. A continuous mechanical exhaust system meeting the requirements of Section 160.2(b)2Avid.

c. **Demand-controlled mechanical exhaust.** A local mechanical exhaust system shall be designed to be operated as needed.

1. **Control and operation.** Demand-controlled mechanical exhaust systems shall be provided with at least one of the following controls:

A. A readily accessible occupant-controlled ON-OFF control.

B. An automatic control that does not impede occupant ON control.

2. **Ventilation rate and capture efficiency.** The system shall meet or exceed either the minimum airflow in accordance with Table 160.2-E or the minimum capture efficiency in accordance with Table 160.2-E, and Table 160.2-G. Capture efficiency ratings shall be determined in accordance with ASTM E3087, and listed in a product directory approved by the Energy Commission.

d. **Continuous mechanical exhaust.** A mechanical exhaust system shall be installed to operate continuously. The system may be part of a balanced mechanical ventilation system.

1. **Control and operation**. A manual ON-OFF control shall be provided for each continuous mechanical exhaust system. The system shall be designed to operate during all occupiable hours. For multifamily dwelling units, the manual ON-OFF control may be accessible to the dwelling unit occupant; however, the manual ON-OFF control shall not be required to be accessible to the dwelling unit occupant.

2. **Ventilation rate.** The minimum delivered ventilation shall be at least the amount indicated in Table 160.2-F during each hour of operation.

e. **Airflow measurement of local mechanical exhaust by the system installer.** The airflow required by Section 160.2(b)2Avi is the quantity of indoor air exhausted by the ventilation system as installed in the dwelling unit. When a vented range hood utilizes a capture efficiency rating to demonstrate compliance with Section 160.2(b)2Avic2, the airflow listed in the approved directory corresponding to the compliant capture efficiency rating point shall be met by the installed system. The as-installed airflow shall be verified by the system installer to ensure compliance by use of either Subsection 1 or 2 below:

1. The system installer shall measure the airflow by using a flow hood, flow grid or other airflow measuring device at the mechanical ventilation fan's inlet terminals/grilles or outlet terminals/grilles in accordance with the procedures in Reference Appendix RA3.7 or NA2.2 as applicable.

2. As an alternative to performing an airflow measurement of the system as installed in the dwelling unit, compliance may be demonstrated by installing an exhaust fan and duct system that conforms to the specifications of Table 160.2-H. Visual inspection shall verify the installed system conforms to the requirements of Table 160.2-H.

   When using Table 160.2-H for demonstrating compliance, the airflow rating shall be greater than or equal to the value required by Section 160.2(b)2Avi at a static pressure greater than or equal to 0.25 in. of water (62.5 Pa). When a vented range hood utilizes a capture efficiency rating to demonstrate compliance with Section 160.2(b)2Avic2, a static pressure greater than or equal to 0.25 in. of water at the rating point shall not be required, and the airflow listed in the approved directory corresponding to the compliant capture efficiency rating point shall be applied to Table 160.2-H for determining compliance.

   Use of Table 160.2-H is limited to ventilation systems that conform to all of the following three specifications:

   A. Total duct length is less than or equal to 25 feet (8 m),

   B. Duct system has no more than three elbows, and

   C. Duct system has exterior termination fitting with a hydraulic diameter greater than or equal to the minimum duct diameter and not less than the hydraulic diameter of the fan outlet.

f. **Sound ratings for local mechanical exhaust**. Local mechanical exhaust systems shall be rated for sound in accordance with Section 7.2 of ASHRAE 62.2 at no less than the minimum airflow rate required by Section 160.2(b)2Avi.

   Exception to Section 160.2(b)2Avif: Kitchen range hoods may be rated for sound at a static pressure determined at working speed as specified in HVI 916 Section 7.2.

vii. **Airflow measurement of whole-dwelling unit ventilation**. The airflow required by Section 160.2(b)2Aiv or 160.2(b)2Av is the quantity of outdoor ventilation air supplied or indoor air exhausted by the mechanical ventilation system as installed and shall be measured by using a flow hood, flow grid or other airflow measuring device at the mechanical ventilation fan's inlet terminals/grilles or outlet terminals/grilles in accordance with the procedures in Reference Appendix Section RA3.7.4.1.1 or NA2.2.4.1.1 as applicable for supply and exhaust systems or RA3.7.4.1.2 or NA2.2.4.1.2 as applicable for balanced systems. Balanced mechanical ventilation system airflow shall be the average of the supply fan and exhaust fan flows.

viii. **Sound ratings for whole-dwelling unit ventilation systems. Whole-**dwelling unit ventilation systems shall be rated for sound in accordance with Section 7.2 of ASHRAE 62.2 at no less than the minimum airflow rate required by Section 160.2(b)2Aiv or 160.2(b)2Av as applicable.

ix. **Label for whole-dwelling unit ventilation system on-off control**. Compliance with ASHRAE 62.2 Section 4.4 (Control and Operation) shall require manual ON-OFF control switches associated with whole-dwelling unit ventilation systems to have a label clearly displaying the following text, or equivalent text: "This switch controls the indoor air quality ventilation for the home. Leave switch in the 'on' position at all times unless the outdoor air quality is very poor."

x. **Combustion air and compensating outdoor air or makeup air.**

a. All dwelling units shall conform to the applicable requirements specified in California Mechanical Code Chapter 7, Combustion Air.

b. All dwelling units shall conform to the requirements in ASHRAE 62.2 Section 6.4, Combustion and Solid-Fuel-Burning Appliances.

B. **Dwelling unit HERS field verification and diagnostic testing.**

i. The whole-dwelling unit ventilation airflow required by Section 160.2(b)2Aiv or 160.2(b)2Av shall be confirmed through HERS field verification and diagnostic testing in accordance with Reference Appendix RA3.7.4.1.1 or NA2.2.4.1.1 as applicable for supply and exhaust systems or RA3.7.4.1.2 or NA2.2.4.1.2 as applicable for balanced systems. Balanced mechanical ventilation system airflow shall be the average of the supply fan and exhaust fan flows. Ventilation airflow of systems with multiple operating modes shall be tested in all modes designed to comply with the required ventilation airflows.

ii. **Kitchen local mechanical exhaust—vented range hoods.** Vented range hoods installed to comply with local mechanical exhaust requirements specified in Section 160.2(b)2Avi shall be HERS field verified in accordance with Reference Appendix RA3.7.4.3 or NA2.2.4.1.4 as applicable to confirm the model is rated by HVI or AHAM to comply with the following requirements:

a. The minimum ventilation airflow rate as specified by Section 160.2(b)2Avi, or alternatively the minimum capture efficiency as specified by Section 160.2(b)2Avi; and

b. The maximum sound rating as specified in Section 160.2(b)2Avif.

iii. **Heat recovery ventilation (HRV) and energy recovery ventilation (ERV) system fan efficacy.** At a minimum, systems with heat or energy recovery serving a single dwelling unit shall have a fan efficacy of ≤1.0 W/cfm as confirmed by HERS field verification in accordance with Reference Appendix RA3.7.4.4 or NA2.2.4.1.5 as applicable. If Section 170.2(c)3Biva requirements are applicable to the dwelling unit, then HERS field verification shall instead confirm compliance with the maximum fan efficacy and minimum sensible recovery efficiency specified in Section 170.2(c)3Biva in accordance with the procedures specified in Reference Appendix RA3.7.4.4 or NA2.2.4.1.5 as applicable.

C. **Multifamily building central ventilation system field verification.**

i. **Central ventilation system duct sealing.** Ventilation ducts that conform to Subsections a and b below shall meet the duct sealing requirements in California Mechanical Code Section 603.10 and have leakage that is no greater than six percent of the rooftop fan or central fan design airflow rate as confirmed by field verification in accordance with the procedures in Reference Appendix NA7.18.3. The leakage test shall be conducted using a test pressure of 25 Pa (0.1 inches) for ducts serving six or fewer dwelling units and 50 Pa (0.2 inches) for ducts serving more than six dwelling units, and shall measure the leakage of all ductwork between the central fan and the connection point to the in-unit grille or fan.

a. The ventilation ducts serve multiple dwelling units.

b. The ventilation ducts provide continuous airflows or airflows to provide balanced ventilation to meet the requirements specified in Section 160.2(b)2Aiv or 160.2(b)2Av as applicable.

(c) **Common use areas.** All occupiable spaces shall comply with the requirements of Subsection 1 and shall also comply with either Subsection 2 or Subsection 3:

1. **Air filtration.**
   A. Mechanical system types specified in Subsections i, ii and iii below shall be designed to ensure that all recirculated air and all outdoor air supplied to the occupiable space are filtered before passing through any system's thermal conditioning components. Air filters shall conform to the requirements of Sections 160.2(c)1B, 160.2(c)1C and 160.2(c)1D.

      i. Mechanical space-conditioning systems that supply air to an occupiable space through ductwork exceeding 10 ft (3 m) in length.

      ii. Mechanical supply-only ventilation systems and makeup air systems that provide outside air to an occupiable space.

      iii. The supply side of mechanical balanced ventilation systems, including heat recovery ventilation systems and energy recovery ventilation systems that provide outside air to an occupiable space.

      Exception to Section 160.2(c)1A: For heat recovery ventilators and energy recovery ventilators, the location of the filters required by Section 160.2(c)1A may be downstream of a system's thermal conditioning component, provided the system is equipped with ancillary filtration upstream of the system's thermal conditioning component.

   B. **Air filter efficiency**. The filters shall have a designated efficiency equal to or greater than MERV 13 when tested in accordance with ASHRAE Standard 52.2, or a particle size efficiency rating equal to or greater than 50 percent in the 0.30–1.0 µm range, and equal to or greater than 85 percent in the 1.0–3.0 µm range when tested in accordance with AHRI Standard 680; and

   C. Systems shall be equipped with air filters that meet either Subsection i or ii below.

      i. Nominal two inch minimum depth filter(s); or

      ii. Nominal one inch minimum depth filter(s) shall be allowed if the filter(s) are sized according to Equation 160.2-A, based on a maximum face velocity of 150 ft per minute.

   D. Filter racks or grilles shall be gasketed or sealed to eliminate any gaps around the filter to prevent air from bypassing the filter.

2. **Natural ventilation.** Naturally ventilated spaces shall be designed in accordance with Sections 160.2(c)2A through 160.2(c)2C and include a mechanical ventilation system designed in accordance with Section 160.2(c)3:

   Exception 1 to Section 160.2(c)2: The mechanical ventilation system shall not be required where natural ventilation openings complying with Section 160.2(c)2 are either permanently open or have controls that prevent the openings from being closed during periods of expected occupancy.

   Exception 2 to Section 160.2(c)2: The mechanical ventilation system shall not be required where the zone is not served by a space-conditioning system.

   A. **Floor area to be ventilated**. Spaces or portions of spaces to be naturally ventilated shall be located within a distance based on the ceiling height, as specified in i, ii and iii. The ceiling height (H) to be used in i, ii or iii shall be the minimum ceiling height in the space, or for ceilings that are increasing in height as distance from the operable openings is increased, the ceiling height shall be determined as the average height of the ceiling within 20 ft from the operable opening. [ASHRAE 62.1:6.4.1]

      i. Single side opening. For spaces with operable opening on one side of the space, the maximum distance from the operable opening shall be not more than 2H. [ASHRAE 62.1:6.4.1.1]

      ii. Double side opening. For spaces with operable openings on two opposite sides of the space, the maximum distance from the operable opening shall be not more than 5H. [ASHRAE 62.1:6.4.1.2]

      iii. Corner opening. For spaces with operable openings on two adjacent sides of a space, the maximum distance from the operable openings shall be not more than 5H along a line drawn between the two

openings that are the farthest apart. Floor area outside that line shall comply with i or ii. [ASHRAE 62.1:6.4.1.3]

iv. Ceiling height. The ceiling height (H) to be used in Sections 160.2(c)2Ai through 160.2(c)2Aiii shall be the minimum ceiling height in the space.

Exception to Section 160.2(c)2Aiv: For ceilings that are increasing in height as distance from the opening is increased, the ceiling height shall be determined as the average height of the ceiling within 20 feet from the operable openings. [ASHRAE 62.1:6.4.1.4]

B. **Location and size of openings**. Spaces or portions of spaces to be naturally ventilated shall be permanently open to operable wall openings directly to the outdoors. The openable area shall be not less than 4 percent of the net occupiable floor area. Where openings are covered with louvers or otherwise obstructed, the openable area shall be based on the net free unobstructed area through the opening. Where interior rooms, or portions of rooms, without direct openings to the outdoors are ventilated through adjoining rooms, the opening between rooms shall be permanently unobstructed and have a free area of not less than 8 percent of the area of the interior room or less than 25 square feet. [ASHRAE 62.1:6.4.2]

C. **Control and accessibility.** The means to open the required operable opening shall be readily accessible to building occupants whenever the space is occupied. Controls shall be designed to coordinate operation of the natural and mechanical ventilation systems. [ASHRAE 62.1:6.4.3]

3. **Mechanical ventilation.** Occupiable spaces shall be ventilated with a mechanical ventilation system capable of providing an outdoor airflow rate (V_z) to the zone no less than the larger of A or B as described below:

A. The outdoor airflow rate to the zone (Vz) shall be determined in accordance with Equation 160.2-G; or

$$V_z = R_a \times A_z \qquad \text{(Equation 160.2-G)}$$

Where:

R_a = Outdoor airflow rate required per unit area as determined from Table 160.2-B.

A_z = Zone floor area is the net occupiable floor area of the ventilation zone in square feet.

B. For spaces designed for an expected number of occupants, the outdoor airflow rate to the zone (V_z) shall be determined in accordance with Equation 160.2-H;

$$V_z = R_p \times P_z \qquad \text{(Equation 160.2-H)}$$

Where:

R_p = 15 cubic feet per minute of outdoor airflow per person

P_z = The expected number of occupants. The expected number of occupants shall be the expected number specified by the building designer. For spaces with fixed seating, the expected number of occupants shall be determined in accordance with the California Building Code.

Exception to Section 160.2(c)3: Transfer air. The rate of outdoor air required by Section 160.2(c)3 may be provided with air transferred from other ventilated space if:

i. Use of transfer air is in accordance with Section 160.2(c)8; and

ii. The outdoor air that is supplied to all spaces combined is sufficient to meet the requirements of Section 160.2(c)3 for each space individually.

4. **Exhaust ventilation.** The design exhaust airflow shall be determined in accordance with the requirements in Table 160.2-C. Exhaust makeup air shall be permitted to be any combination of outdoor air, recirculated air or transfer air. [ASHRAE 62.1:6.5.1]

5. **Operation and control requirements for minimum quantities of outdoor air**.

A. **Times of occupancy.** The minimum rate of outdoor air required by Section 160.2(c) shall be supplied to each space at all times when the space is usually occupied.

Exception 1 to Section 160.2(c)5A: Demand control ventilation. In intermittently occupied spaces that do not have processes or operations that generate dusts, fumes, mists, vapors or gases and are not provided with local exhaust ventilation (such as indoor operation of internal combustion engines or areas designated for unvented food service preparation), the rate of outdoor air may be reduced if the ventilation system serving the space is controlled by a demand control ventilation device complying with Section 160.2(c)5D or by an occupant sensor ventilation control device complying with Section 160.2(c)5E.

Exception 2 to Section 160.2(c)5A: Temporary reduction. The rate of outdoor air provided to a space may be reduced below the level required by Section 160.2(c) for up to 30 minutes at a time if the average rate for each hour is equal to or greater than the required ventilation rate.

B. **Preoccupancy.** The lesser of the minimum rate of outdoor air required by Section 160.2(c) or three complete air changes shall be supplied to the entire building during the 1-hour period immediately before the building is normally occupied.

C. **Required demand control ventilation.** Demand ventilation controls complying with Section **160.2(c)5D** are required for a space with a design occupant density, or a maximum occupant load factor for egress purposes in the CBC, greater than or equal to 25 people per 1000 square feet (40 square feet or less per person) if the system serving the space has one or more of the following:

i. an air economizer; or

ii. modulating outside air control; or

iii. design outdoor airflow rate > 3,000 cfm.

Exception 1 to Section 160.2(c)5C: Where space exhaust is greater than the design ventilation rate specified in Section 160.2(c)3 minus 0.2 cfm per ft^2 of conditioned area.

Exception 2 to Section 160.2(c)5C: Spaces that have processes or operations that generate dusts, fumes, mists, vapors or gases and are not provided with local exhaust ventilation, such as indoor operation of internal combustion engines or areas designated for unvented food service preparation, daycare sickrooms, science labs, barber shops or beauty and nail salons, shall not install demand control ventilation.

Exception 3 to Section 160.2(c)5C: Spaces with an area of less than 150 square feet or a design occupancy of less than 10 people as specified by Section 160.2(c)3.

D. **Demand control ventilation devices.**

i. For each system with demand control ventilation (DCV), CO_2 sensors shall be installed in each room that meets the criteria of Section 160.2(c)5C with no less than one sensor per 10,000 ft^2 of floor space. When a zone or a space is served by more than one sensor, a signal from any sensor indicating that CO_2 is near or at the setpoint within the zone or space shall trigger an increase in ventilation.

ii. CO_2 sensors shall be located in the room between 3 ft and 6 ft above the floor or at the anticipated height of the occupants' heads.

iii. Demand ventilation controls shall maintain CO_2 concentrations less than or equal to 600 ppm plus the outdoor air CO_2 concentration in all rooms with CO_2 sensors.

Exception to Section 160.2(c)5Diii: The outdoor air ventilation rate is not required to be larger than the design outdoor air ventilation rate required by Section 160.2(c)3 regardless of CO_2 concentration.

iv. Outdoor air CO_2 concentration shall be determined by one of the following:

a. CO_2 concentration shall be assumed to be 400 ppm without any direct measurement; or

b. CO_2 concentration shall be dynamically measured using a CO_2 sensor located within 4 ft of the outdoor air intake.

v. When the system is operating during hours of expected occupancy, the controls shall maintain system outdoor air ventilation rates no less than the rate listed in Table 160.2-B for DCV, times the conditioned floor area for spaces with CO_2 sensors, plus the rate required by Section 160.2(c)3 for other spaces served by the system, or the exhaust air rate, whichever is greater.

vi. CO_2 sensors shall be certified by the manufacturer to be accurate within plus or minus 75 ppm at a 600 and 1000 ppm concentration when measured at sea level and 25°C, factory calibrated, and certified by the manufacturer to require calibration no more frequently than once every 5 years. Upon detection of sensor failure, the system shall provide a signal that resets to supply the minimum quantity of outside air to levels required by Section 160.2(c)3 to the zone serviced by the sensor at all times that the zone is occupied.

vii. The CO_2 sensor(s) reading for each zone shall be displayed continuously, and shall be recorded on systems with digital direct controls (DDC) to the zone level.

E**. Occupant sensing ventilation control devices.** Occupant sensing ventilation controls are required for space-conditioning zones that are both permitted to have their ventilation air reduced to zero while in occupied-standby mode per Table 160.2-B and required to install occupant sensors to comply with Sections 160.5(b)4Cv, vi and vii. Occupant sensing ventilation control devices used to reduce the rate of outdoor air flow when occupants are not present shall comply with the following:

i. Occupant sensors shall meet the requirements in Section 110.9(b)4 and shall have suitable coverage and placement to detect occupants in the entire space ventilated.

ii. When occupant sensors controlling lighting are also used for ventilation, the ventilation signal shall be independent of daylighting, manual lighting overrides or manual control of lighting.

iii. When a single zone damper or a single zone system serves multiple rooms, there shall be an occupant sensor in each room and the zone shall not be considered vacant until all rooms in the zone are vacant.

iv. One hour prior to normal scheduled occupancy, the occupant sensor ventilation control shall allow preoccupancy purge as described in Section 160.2(c)5B.

v. When the zone is scheduled to be occupied and occupant sensing controls in all rooms and areas served by the zone indicate the spaces are unoccupied, the zone shall be placed in occupied- standby mode.

vi. In 5 minutes or less after entering occupied-standby mode, mechanical ventilation to the zone shall be shut off until the space becomes occupied or until ventilation is needed to provide space heating or conditioning. When mechanical ventilation is shut off to the zone, the ventilation system serving the zone shall reduce the system outside air rate by the amount of outside air required for the zone.

vii. Where the system providing space conditioning also provides ventilation to the zone, in 5 minutes or less after entering occupied-standby mode, space-conditioning zone setpoints shall be reset in accordance with Section 120.2(e)3.

6. **Ducting for zonal heating and cooling units.** Where a return plenum is used to distribute outdoor air to a zonal heating or cooling unit that then supplies the air to a space in order to meet the requirements of Section 160.2(c)3, the outdoor air shall be ducted to discharge either:

A. Within 5 feet of the unit; or

B. Within 15 feet of the unit, substantially toward the unit and at a velocity not less than 500 feet per minute.

7. **Design and control requirements for quantities of outdoor air**.

A. All mechanical ventilation and space-conditioning systems shall be designed with and have installed ductwork, dampers and controls to allow outside air rates to be operated at the minimum levels specified in Section

160.2(c)3 or the rate required for make-up of exhaust systems that are required for an exempt or covered process, for control of odors or for the removal of contaminants within the space.

B. All variable air volume mechanical ventilation and space-conditioning systems shall include dynamic controls that maintain measured outside air ventilation rates within 10 percent of the required outside air ventilation rate at both full and reduced supply airflow conditions. Fixed minimum damper position is not considered to be dynamic and is not an allowed control strategy.

C. Measured outdoor air rates of constant volume mechanical ventilation and space-conditioning systems shall be within 10 percent of the required outside air rate.

8. **Air classification and recirculation limitations.** Air classification and recirculation limitations of air shall be based on the air classification as listed in Table 160.2-B or Table 160.2-D, in accordance with the following:

A. Class 1 air is air with significant contaminant concentration, significant sensory-irritation intensity or offensive odor. Recirculation or transfer of Class 1 air to any space shall be permitted; [ASHRAE 62.1:5.16.3.1]

B. Class 2 air is air with moderate contaminant concentration, mild sensory-irritation intensity or mildly offensive odor (Class 2 air also includes air that is not necessarily harmful or objectionable but that is inappropriate for transfer or recirculation to spaces used for different purposes). Recirculation or transfer of Class 2 air shall be permitted in accordance with Sections 160.2(c)8Bi through 160.2(c)8Bv:

i. Recirculation of Class 2 air within the space of origin shall be permitted [ASHRAE 62.1:5.16.3.2.1].

ii. Recirculation or transfer of Class 2 to other Class 2 or Class 3 spaces shall be permitted, provided that the other spaces are used for the same or similar purpose or task and involve the same or similar pollutant sources as the Class 2 space [ASHRAE 62.1:5.16.3.2.2]; or

iii. Transfer of Class 2 air to toilet rooms [ASHRAE 62.1:5.16.3.2.3]; or

iv. Recirculation or transfer of Class 2 air to Class 4 spaces [ASHRAE 62.1:5.16.3.2.4]; or

v. Class 2 air shall not be recirculated or transferred to Class 1 spaces. [ASHRAE 62.1:5.16.3.2.5]

Exception to Section 160.2(c)8Bv: When using any energy recovery device, recirculation from leakage, carryover or transfer from the exhaust side of the energy recovery device is permitted. Recirculated Class 2 air shall not exceed 10 percent of the outdoor air intake flow.

C. Class 3 air is air with significant contaminant concentration, significant sensory-irritation intensity or offensive odor. Recirculation or transfer of Class 3 air shall be permitted in accordance with Sections 160.2(c)8Ci and 160.2(c)8Cii:

i. Recirculation of Class 3 air within the space of origin shall be permitted. [ASHRAE 62.1:5.16.3.3.1]

ii. Class 3 air shall not be recirculated or transferred to any other space. [ASHRAE 62.1:5.16.3.3.2].

Exception to Section 160.2(c)8Cii: When using any energy recovery device, recirculation from leakage, carryover or transfer from the exhaust side of the energy recovery device is permitted. Recirculated Class 3 air shall not exceed 5 percent of the outdoor air intake flow.

D. Class 4 air is air with highly objectionable fumes or gases or with potentially dangerous particles, bioaerosols or gases at concentrations high enough to be considered as harmful. Class 4 air shall not be recirculated or transferred to any space or recirculated within the space of origin. [ASHRAE 62.1:5.16.3.4]

E. Ancillary spaces. Redesignation of Class 1 air to Class 2 air shall be permitted for Class 1 spaces that are ancillary to Class 2 spaces. [ASHRAE 62.1:5.16.2.3]

F. Transfer. A mixture of air that has been transferred through or returned from spaces or locations with different air classes shall be redesignated with the highest classification among the air classes mixed. [ASHRAE 62.1:5.16.2.2]

G. Classification. Air leaving each space or location shall be designated at an expected air-quality classification not less than that shown in Table 160.2-B, 160.2-C or 160.2-D. Air leaving spaces or locations that are not

listed in Table 160.2-B, 160.2-C or 160.2-D shall be designated with the same classification as air from the most similar space or location listed in terms of occupant activities and building construction.

(d) **Parking garages.** Mechanical ventilation systems for enclosed parking garages in multifamily buildings shall comply with Section 120.6(c).

TABLE 160.2-B – Minimum Ventilation Rates for Multifamily Common Use Areas

Occupancy Category[3]	Area Outdoor Air Rate[1] R_a cfm/ft^2	Min Air Rate for DC cfm/ft^{2}V^2	Air Class	Notes
Daycare (through age 4)	0.21	0.15	2	
Multiuse assembly	0.50	0.15	1	F
Dining rooms	0.50	0.15	2	
Bars, cocktail lounges	0.50	0.20	2	
Kitchen (cooking)	0.15		2	
Break rooms	0.50	0.15	1	F
Coffee stations	0.50	0.15	1	F
Conference/meeting	0.50	0.15	1	F
Corridors	0.15		1	F
Occupiable storage rooms for liquids or gels	0.15		2	B
Laundry rooms, central	0.15		2	
Lobbies/pre-function	0.50	0.15	1	F
Breakrooms	0.50	0.15		
Occupiable storage rooms for dry materials	0.15			
Office space	0.15		1	
Reception areas	0.15		1	F
Telephone/data entry	0.15		1	F
Computer (not printing)	0.15			
Freezer and refrigerated spaces (<50°F)	-		1	F
Shipping/receiving	0.15			

TABLE 160.2-B – Minimum Ventilation Rates for Multifamily Common Use Areas (Continued)

Occupancy Category[3]	Area Outdoor Air Rate[1] R_a cfm/ft^2	Min Air Rate for DC cfm/ft^{2}V^2	Air Class	Notes
Gym, sports arena (play area)	0.50	0.15	2	E
Swimming (pool)	0.15		2	C
Swimming (deck)	0.50	0.15	2	C
Disco/dance floors	1.50	0.15	2	F
Health club/aerobics room/weight rooms	0.15		2	
Game arcades	0.68	0.15	1	
All others	0.15			

General:

1 R_a was determined as being the larger of the area method and the default per person method. The occupant density used in the per person method was assumed to be one half of the maximum occupant load assumed for egress purposes in the CBC.

2 If this column specifies a minimum cfm/ft^2 then it shall be used to comply with Section160.2(c)5E.

3 For spaces not included in this table, the spaces in Table 120.1-A shall apply.

Specific Notes:

A – RESERVED

B – Rate may not be sufficient where stored materials include those having potentially harmful emissions.

C – Rate does not allow for humidity control. “Deck area” refers to the area surrounding the pool that is capable of being wetted during pool use or when the pool is occupied. Deck area that is not expected to be wetted shall be designated as an occupancy category.

D – RESREVED.

E – Where combustion equipment is intended to be used on the playing surface or in the space, additional dilution ventilation, source control, or both shall be provided.

F – Ventilation air for this occupancy category shall be permitted to be reduced to zero when the space is in occupied-standby mode.

TABLE 160.2-C – Minimum Exhaust Rates
[ASHRAE 62.1: TABLE 6.5]

Occupancy Category[3]	Exhaust Rete, cfm/unit	Exhaust Rate, cfm/ft²	Air Class	Notes
Copy, printing rooms	-	0.50	2	
Janitor closets, trash rooms, recycling	-	1.00	3	
Kitchenettes	-	0.30	2	
Kitchens – commercial	-	0.70	2	
Locker rooms for athletic or industrial facilities	-	0.50	2	
All other locker rooms	-	0.25	2	
Shower rooms	20/50	-	2	G, H
Parking garages	-	0.75	2	C
Pet shops (animal areas)	-	0.90	2	
Soiled laundry storage rooms	-	1.00	3	F
Storage rooms, chemical	-	1.50	4	F
Toilets – private	25/50	-	2	E
Toilets – public	50/70	-	2	D

General:

[3]For spaces not included in this table, the spaces in Table 120.1-B shall apply.

Notes:

A –Reserved

B –Reserved

C – Exhaust shall not be required where two or more sides comprise walls that are at least 50% open to the outside.

D – Rate is per water closet, urinal, or both. Provide the higher rate where periods of heavy use are expected to occur. The lower rate shall be permitted to be used otherwise.

E – Rate is for a toilet room intended to be occupied by one person at a time. For continuous systems operation during hours of use, the lower rate shall be permitted to be used. Otherwise the higher rate shall be used.

F – See other applicable standards for exhaust rate.

G – For continuous system operation, the lower rate shall be permitted to be used. Otherwise the higher rate shall be used.

H – Rate is per showerhead.

TABLE 160.2-D – Airstreams or Sources
[ASHRAE 62.1:Table 5.16.1]

Description	Air Class
Commercial kitchen grease hoods	4
Commercial kitchen hoods other than grease	3
Hydraulic elevator machine room	2

Table 160.2-E: Demand-Controlled Local Ventilation Exhaust Airflow Rates and Capture Efficiency

Application	Compliance Criteria
Enclosed Kitchen or Nonenclosed Kitchen	Vented range hood, including appliance-range hood combinations shall meet either the capture efficiency (CE) or the airflow rate specified in Table 160.2-G as applicable.
Enclosed Kitchen	Other kitchen exhaust fans, including downdraft: 300 cfm (150 L/s) or a capacity of 5 ACH
Nonenclosed Kitchen	Other kitchen exhaust fans, including downdraft: 300 cfm (150 L/s)
Bathroom	50 cfm (25 L/s)

Table 160.2-F: Continuous Local Ventilation Exhaust Airflow Rates

Application	Airflow
Enclosed kitchen	5 ach, based on kitchen volume
Bathroom	20 cfm (10 L/s)

Table 160.2-G: Kitchen Range Hood Airflow Rates (cfm) and ASTM E3087 Capture Efficiency (CE) Ratings According to Dwelling Unit Floor Area and Kitchen Range Fuel Type

Dwelling Unit Floor Area (ft^2)	Hood Over Electric Range	Hood Over Natural Gas Range
>1500	50% CE or 110 cfm	70% CE or 180 cfm
>1000 - 1500	50% CE or 110 cfm	80% CE or 250 cfm
750 - 1000	55% CE or 130 cfm	85% CE or 280 cfm
<750	65% CE or 160 cfm	85% CE or 280 cfm

Table 160.2-H: Prescriptive Ventilation System Duct Sizing [ASHRAE 62.2:Table 5-3]

Fan Airflow Rating, cfm at minimum static pressure[f] 0.25 in. water (L/s at minimum 62.5 Pa)	≤50 (25)	≤80 (40)	≤100 (50)	≤125 (60)	≤150 (70)	≤175 (85)	≤200 (95)	≤250 (120)	≤350 (165)	≤400 (190)	≤450 (210)	≤700 (330)	≤800 (380)
Minimum Duct Diameter, in. (mm) [a,b] For Rigid duct	4 [e] (100)	5 (125)	5 (125)	6 (150)	6 (150)	7 (180)	7 (180)	8 (205)	9 (230)	10 (255)	10 (255)	12 (305)	12 [d] (305)
Minimum Duct Diameter, in. (mm) [a,b] For Flex duct [c]	4 (100)	5 (125)	6 (150)	6 (150)	7 (150)	7 (180)	8 (205)	8 (205)	9 (230)	10 (255)	NP	NP	NP

Footnotes for Table 150.0-H:

a. For noncircular ducts, calculate the diameter as four times the cross-sectional area divided by the perimeter.
b. NP = application of the prescriptive table is not permitted for this scenario.
c. Use of this table for verification of flex duct systems requires flex duct to be fully extended and any flex duct elbows to have a minimum bend radius to duct diameter ratio of 1.0.
d. For this scenario, use of elbows is not permitted.
e. For this scenario, 4 in. (100 mm) oval duct shall be permitted, provided the minor axis of the oval is greater than or equal to 3 in. (75 mm)
f. When a vented range hood utilizes a capture efficiency rating to demonstrate compliance with 160.2(b)2Avic2, a static pressure greater than or equal to 0.25 in. of water at the rating point shall not be required, and the airflow listed in the approved directory corresponding to the compliant capture efficiency rating point shall be applied to Table 160.2-H for determining compliance.

Note: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8, and 25943, Public Resources Code.

SECTION 160.3 – MANDATORY REQUIREMENTS FOR SPACE CONDITIONING SYSTEMS IN MULTIFAMILY BUILDINGS

Space conditioning systems serving multifamily dwelling units and common use areas shall comply with the applicable requirements of Sections 160.3(a) through 160.3(c).

(a) **Controls.** Space-conditioning systems serving dwelling units and common use areas in multifamily buildings shall comply with applicable requirements of Section 160.3(a)1 or 160.3(a)2.

1. **Dwelling unit thermostats.** All heating or cooling systems, including heat pumps, not controlled by a central energy management control system (EMCS) shall have a setback thermostat, as specified in Section 110.2(c).
2. **Common use area controls**. Heating or cooling systems serving common use areas of multifamily buildings shall comply with application requirements of Sections 160.3(a)2A through 160.3(a)2J.

   Exception to Section 160.3(a)2: Heating or cooling systems exclusively serving dwelling units and common use areas providing shared provisions for living, eating, cooking or sanitation to dwelling units that would otherwise lack these provisions may instead comply with Section 160.3(a)1.

   A. **Thermostatic controls for each zone.** The supply of heating and cooling energy to each space-conditioning zone shall be controlled by an individual thermostatic control that responds to temperature within the zone and that meets the applicable requirements of Section 160.3(a)2B. An energy management control system (EMCS) may be installed to comply with the requirements of one or more thermostatic controls if it complies with all applicable requirements for each thermostatic control.

      Exception to Section 160.3(a)2A: An independent perimeter heating or cooling system may serve more than one zone without individual thermostatic controls if:

      i. All zones are also served by an interior cooling system; and

      ii. The perimeter system is designed solely to offset envelope heat losses or gains; and

      iii. The perimeter system has at least one thermostatic control for each building orientation of 50 feet or more; and

      iv. The perimeter system is controlled by at least one thermostat located in one of the zones served by the system.

   B. **Criteria for zonal thermostatic controls.** The individual thermostatic controls required by Section 160.3(a)2A shall meet the following requirements as applicable:

      i. Where used to control comfort heating, the thermostatic controls shall be capable of being set, locally or remotely, down to 55°F or lower.

      ii. Where used to control comfort cooling, the thermostatic controls shall be capable of being set, locally or remotely, up to 85°F or higher.

      iii. Where used to control both comfort heating and comfort cooling, the thermostatic controls shall meet Items i and ii and shall be capable of providing a temperature range or deadband of at least 5°F within which the supply of heating and cooling energy to the zone is shut off or reduced to a minimum.

      Exception to Section 160.3(a)2Biii: Systems with thermostats that require manual changeover between heating and cooling modes.

      iv. Thermostatic controls for all single zone air conditioners and heat pumps shall comply with the requirements of Sections 110.2(c) and 110.12(a) and, if equipped with DDC to the zone level, with the automatic demand shed controls of Section 110.12(b).

      Exception to Section 160.3(a)2Biv: Package terminal air conditioners, package terminal heat pumps, room air conditioners and room air-conditioner heat pumps.

C. **Heat pump controls.** All heat pumps with supplementary electric resistance heaters shall be installed with controls that comply with Section 110.2(b).

D. **Shut-off and reset controls for space-conditioning systems.** Each space-conditioning system shall be installed with controls that comply with the following:

i. The control shall be capable of automatically shutting off the system during periods of nonuse and shall have:

a. An automatic time switch control device complying with Section 110.9, with an accessible manual override that allows operation of the system for up to 4 hours; or

b. An occupancy sensor; or

c. A 4-hour timer that can be manually operated.

ii. The control shall automatically restart and temporarily operate the system as required to maintain:

a. A setback heating thermostat setpoint if the system provides mechanical heating; and

Exception to Section 160.3(a)2Diia: Thermostat setback controls are not required in multifamily buildings in areas where the Winter Median of Extremes outdoor air temperature determined in accordance with Section **170.2(c)1C** is greater than 32°F.

b. A setup cooling thermostat setpoint if the system provides mechanical cooling.

Exception to Section 160.3(a)2Diib: Thermostat setup controls are not required in multifamily buildings in areas where the summer design dry-bulb 0.5-percent temperature determined in accordance with Section **170.2(c)1C** is less than 100°F.

iii. **Occupant sensing zone controls**. Where the system providing space conditioning also provides the ventilation required by Section 160.2(c)3 and includes occupant sensor ventilation control as specified in Section 160.2(c)5E, the occupant sensing zone controls shall additionally comply with the following:

a. Occupant sensing zone controls shall comply with the occupant sensor ventilation control device requirements of Section 160.3(c)5E and allow preoccupancy ventilation requirements of Section 160.3(c)5B; and

b. In 5 minutes or less after entering occupied-standby mode as described in Section 160.2(c)5:

I. Automatically set up the operating cooling temperature setpoint by 2°F or more and set back the operating heating temperature setpoint by 2°F or more; or

II. For multiple zone systems with Direct Digital Controls (DDC) to the zone level, set up the operating cooling temperature setpoint by 0.5°F or more and set back the operating heating temperature setpoint by 0.5°F or more.

c. In 5 minutes or less after entering occupied-standby mode, mechanical ventilation to the zone shall remain off whenever the space temperature is between the active heating and cooling setpoints.

Exception to Section 160.3(a)2Diii: Zones that are only ventilated by a natural ventilation system in accordance with Section 120.1(c)2.

Exception 1 to Sections 160.3(a)2Di, ii and iii: Where it can be demonstrated to the satisfaction of the enforcing agency that the system serves an area that must operate continuously.

Exception 2 to Sections 160.3(a)2Di, ii and iii: Systems with full load demands of 2 kW or less, if they have a readily accessible manual shut-off switch.

E. **Dampers for air supply and exhaust equipment.** Outdoor air supply and exhaust equipment shall be installed with dampers that automatically close upon fan shutdown.

Exception 1 to Section 160.3(a)2E: Equipment that serves an area that must operate continuously.

Exception 2 to Section 160.3(a)2E: Gravity and other nonelectrical equipment that has readily accessible manual damper controls.

Exception 3 to Section 160.3(a)2E: At combustion air intakes and shaft vents.

Exception 4 to Section 160.3(a)2E: Where prohibited by other provisions of law.

F. **Isolation area devices**. Each space-conditioning system serving multiple zones with a combined conditioned floor area of more than 25,000 square feet shall be designed, installed and controlled to serve isolation areas.

i. Each zone, or any combination of zones not exceeding 25,000 square feet, shall be a separate isolation area.

ii. Each isolation area shall be provided with isolation devices, such as valves or dampers that allow the supply of heating or cooling to be reduced or shut off independently of other isolation areas.

iii. Each isolation area shall be controlled by a device meeting the requirements of Section 160.3(a)2Di.

Exception to Section 160.3(a)2F: Zones designed to be conditioned continuously.

G. **Automatic demand shed controls.** See Section 110.12 for requirements for automatic demand shed controls.

H. **Economizer Fault Detection and Diagnostics (FDD).** All newly installed air handlers with a mechanical cooling capacity over 33,000 Btu/hr and an installed air economizer shall include a stand-alone or integrated Fault Detection and Diagnostics (FDD) system in accordance with Subsections 160.3(a)2Hi through 160.3(a)2Hviii.

i. The following temperature sensors shall be permanently installed to monitor system operation: outside air, supply air and, when required for differential economizer operation, a return air sensor; and

ii. Temperature sensors shall have an accuracy of ±2°F over the range of 40°F to 80°F; and

iii. The controller shall have the capability of displaying the value of each sensor; and

iv. The controller shall provide system status by indicating the following conditions:

a. Free cooling available;

b. Economizer enabled;

c. Compressor enabled;

d. Heating enabled, if the system is capable of heating; and

e. Mixed air low limit cycle active.

v. The unit controller shall allow manual initiation of each operating mode so that the operation of cooling systems, economizers, fans and heating systems can be independently tested and verified; and

vi. Faults shall be reported in one of the following ways:

a. Reported to an Energy Management Control System regularly monitored by facility personnel.

b. Annunciated locally on one or more zone thermostats, or a device within five feet of zone thermostat(s), clearly visible, at eye level and meeting the following requirements:

I. On the thermostat, the device or an adjacent written sign, display instructions to contact appropriate building personnel or an HVAC technician; and

II. In buildings with multiple tenants, the annunciation shall either be within property management offices or in a common space accessible by the property or building manager.

c. Reported to a fault management application that automatically provides notification of the fault to remote HVAC service provider.

vii. The FDD system shall detect the following faults:

a. Air temperature sensor failure/fault;

b. Not economizing when it should;

c. Economizing when it should not;

d. Damper not modulating; and

e. Excess outdoor air.

viii. The FDD system shall be certified by the Energy Commission as meeting the requirements of Sections 160.3(a)2Hi through 160.3(a)2Hvii in accordance with Section 110.0 and JA6.3.

Exception to Section 160.3(a)2Hviii: FDD algorithms based in direct digital control systems are not required to be certified to the Energy Commission.

I. **Direct Digital Controls (DDC).** Direct digital controls to the zone shall be provided as specified by Table 160.3-C.

i. The provided DDC system shall meet the control logic requirements of Sections 160.3(a)2E and 160.3(a)2G, and be capable of the following:

ii. Monitoring zone and system demand for fan pressure, pump pressure, heating and cooling;

iii. Transferring zone and system demand information from zones to air distribution system controllers and from air distribution systems to heating and cooling plant controllers;

iv. Automatically detecting the zones and systems that may be excessively driving the reset logic and generate an alarm or other indication to the system operator;

v. Readily allow operator removal of zone(s) from the reset algorithm;

vi. For new buildings, trending and graphically displaying input and output points; and

vii. Resetting heating and cooling setpoints in all noncritical zones upon receipt of a signal from a centralized contact or software point as described in Section 160.3(a)2G.

J. **Optimum start/stop controls.** Space-conditioning systems with DDC to the zone level shall have optimum start/stop controls. The control algorithm shall, as a minimum, be a function of the difference between space temperature and occupied setpoint, the outdoor air temperature, and the amount of time prior to scheduled occupancy. Mass radiant floor slab systems shall incorporate floor temperature onto the optimum start algorithm.

Exception to Section 160.3(a)2J: Systems that must operate continuously.

(b) **Dwelling unit space-conditioning and air distribution systems.**

1. **Building cooling and heating loads.** Building heating and cooling loads shall be determined using a method based on any one of the following, using cooling and heating loads as two of the criteria for equipment sizing and selection:

A. The ASHRAE Handbook, Equipment Volume, Applications Volume and Fundamentals Volume; or

B. The SMACNA Residential Comfort System Installation Standards Manual; or

C. The ACCA Manual J.

Note: Heating systems are required to have a minimum heating capacity adequate to meet the minimum requirements of the CBC.

2. **Design conditions.** Design conditions shall be determined in accordance with the following:

A. For the purpose of sizing the space-conditioning (HVAC) system, the indoor design temperatures shall be 68°F for heating and 75°F for cooling.

B. Outdoor design conditions shall be selected from Reference Joint Appendix JA2, which is based on data from the ASHRAE Climatic Data for Region X.

C. The outdoor design temperatures for heating shall be no lower than the Heating Winter Median of Extremes values.

D. The outdoor design temperatures for cooling shall be no greater than the 1.0 percent Cooling Dry Bulb and Mean Coincident Wet Bulb values.

3. **Outdoor condensing units**.

A. **Clearances.** Installed air conditioner and heat pump outdoor condensing units shall have a clearance of at least five feet (1.5 meters) from the outlet of any dryer vent.

B. **Liquid line drier.** Installed air conditioner and heat pump systems shall be equipped with liquid line filter driers if required, as specified by manufacturer's instructions.

4. **Central forced-air heating furnaces**.

A. **Temperature rise**. Central forced-air heating furnace installations shall be configured to operate in conformance with the furnace manufacturer's maximum inlet-to-outlet temperature rise specifications.

5. **Air-distribution and ventilation system ducts, plenums and fans.**

A. **CMC compliance.**

i. All air-distribution system ducts and plenums, including, but not limited to, mechanical closets and air-handler boxes, shall meet the requirements of the CMC Sections 601.0, 602.0, 603.0, 604.0 and 605.0 and ANSI/SMACNA-006-2006 HVAC Duct Construction Standards Metal and Flexible 3rd Edition, incorporated herein by reference.

ii. Portions of supply-air and return-air ducts and plenums of a space heating or cooling system shall be insulated in accordance with either Subsection a or b below:

a. Ducts shall have a minimum installed level of R-6.0, or

Exception to Section 160.3(b)5Aiia: Portions of the duct system located in conditioned space below the ceiling separating the occupiable space from the attic are not required to be insulated if all of the following conditions are met:

i. The noninsulated portion of the duct system is located entirely inside the building's thermal envelope as confirmed by visual inspection.

ii. At all locations where noninsulated portions of the duct system penetrate into unconditioned space, the penetration shall be draft stopped compliant with CFC Sections 703.1 and 704.1 and air-sealed to the construction materials that are penetrated, using materials compliant with CMC Section E502.4.2 to prevent air infiltration into the cavity. All connections in unconditioned space are insulated to a minimum of R-6.0 as confirmed by visual inspection.

b. Ducts do not require insulation when the duct system is located entirely in conditioned space. For buildings with three or fewer habitable stories, duct systems located entirely in conditioned space shall be confirmed through field verification and diagnostic testing in accordance with the requirements of Reference Residential Appendix RA3.1.4.3.8.

iii. Connections of metal ducts and the inner core of flexible ducts shall be mechanically fastened.

iv. Openings shall be sealed with mastic, tape, or other duct-closure system that meets the applicable requirements of UL 181, UL 181A or UL 181B or aerosol sealant that meets the requirements of UL 723. If mastic or tape is used to seal openings greater than 1/4 inch, the combination of mastic and either mesh or tape shall be used.

v. Building cavities, support platforms for air handlers, and plenums designed or constructed with materials other than sealed sheet metal, duct board or flexible duct shall not be used for conveying conditioned air. Building cavities and support platforms may contain ducts. Ducts installed in cavities and support platforms shall not be compressed to cause reductions in the cross-sectional area of the ducts.

Exception to Section 160.3(b)5A: Ducts and fans integral to a wood heater or fireplace.

B. **Factory-fabricated duct systems**.

i. All factory-fabricated duct systems shall comply with UL 181 for ducts and closure systems, including collars, connections and splices, and be labeled as complying with UL 181. UL 181 testing may be performed by UL laboratories or a laboratory approved by the Executive Director.

ii. All pressure-sensitive tapes, heat-activated tapes and mastics used in the manufacture of rigid fiberglass ducts shall comply with UL 181 and UL 181A.

iii. All pressure-sensitive tapes and mastics used with flexible ducts shall comply with UL 181 and UL 181B.

iv. Joints and seams of duct systems and their components shall not be sealed with cloth back rubber adhesive duct tapes unless such tape is used in combination with mastic and drawbands.

C. **Field-fabricated duct systems.**

i. Factory-made rigid fiberglass and flexible ducts for field-fabricated duct systems shall comply with UL 181. All pressure-sensitive tapes, mastics, aerosol sealants or other closure systems used for installing field-fabricated duct systems shall meet the applicable requirements of UL 181, UL 181A and UL 181B.

ii. Mastic sealants and mesh.

a. Sealants shall comply with the applicable requirements of UL 181, UL 181A and UL 181B, and be nontoxic and water resistant.

b. Sealants for interior applications shall be tested in accordance with ASTM C731 and D2202, incorporated herein by reference.

c. Sealants for exterior applications shall be tested in accordance with ASTM C731, C732 and D2202, incorporated herein by reference.

d. Sealants and meshes shall be rated for exterior use.

iii. Pressure-sensitive tape. Pressure-sensitive tapes shall comply with the applicable requirements of UL 181, UL 181A and UL 181B.

iv. Joints and seams of duct systems and their components shall not be sealed with cloth back rubber adhesive duct tapes unless such tape is used in combination with mastic and drawbands.

v. Drawbands used with flexible duct.

a. Drawbands shall be either stainless-steel worm-drive hose clamps or UV-resistant nylon duct ties.

b. Drawbands shall have a minimum tensile strength rating of 150 pounds.

c. Drawbands shall be tightened as recommended by the manufacturer with an adjustable tensioning tool.

vi. Aerosol-sealant closures.

a. Aerosol sealants shall meet the requirements of UL 723 and be applied according to manufacturer specifications.

b. Tapes or mastics used in combination with aerosol sealing shall meet the requirements of this section.

D. **Duct insulation R-value ratings.** All duct insulation product R-values shall be based on insulation only (excluding air films, vapor retarder or other duct components) and tested C-values at 75°F mean temperature at the installed thickness, in accordance with ASTM C518 or ASTM C177, incorporated herein by reference, and certified pursuant to Section 110.8.

E. **Duct insulation thickness.** The installed thickness of duct insulation used to determine its R-value shall be determined as follows:

i. For duct board, duct liner and factory-made rigid ducts not normally subjected to compression, the nominal insulation thickness shall be used**.**

ii. For duct wrap, installed thickness shall be assumed to be 75 percent (25 percent compression) of nominal thickness.

iii. For factory-made flexible air ducts, the installed thickness shall be determined by dividing the difference between the actual outside diameter and nominal inside diameter by two.

F. **Duct labeling.** Insulated flexible duct products installed to meet this requirement shall include labels, in maximum intervals of 3 feet, showing the thermal performance R-value for the duct insulation itself (excluding air films, vapor retarder or other duct components), based on the tests in Section 160.3(b)5D and the installed thickness determined by Section 160.3(b)5Eiii.

G. **Backdraft dampers.** All fan systems, regardless of volumetric capacity, that exchange air between the building conditioned space and the outside of the building shall be provided with backdraft or automatic dampers to prevent unintended air leakage through the fan system when the fan system is not operating.

H. **Gravity ventilation dampers.** All gravity ventilating systems that serve conditioned space shall be provided with either automatic or readily accessible, manually operated dampers in all openings to the outside except combustion inlet and outlet air openings and elevator shaft vents.

I. **Protection of insulation.** Insulation shall be protected from damage, including that due to sunlight, moisture, equipment maintenance and wind but not limited to the following: Insulation exposed to weather shall be suitable for outdoor service (e.g., protected by aluminum, sheet metal, painted canvas or plastic cover). Cellular foam insulation shall be protected as above or painted with a coating that is water retardant and provides shielding from solar radiation that can cause degradation of the material.

J. **Porous inner core flex duct.** Flexible ducts having porous inner cores shall have a nonporous layer or air barrier between the inner core and the outer vapor barrier.

K. **Duct system sealing and leakage testing.** When space-conditioning systems utilize forced air duct systems to supply conditioned air to an individual dwelling unit, the ducts shall be sealed, as confirmed through field verification and diagnostic testing, in accordance with all applicable procedures specified in Reference Residential Appendix RA3.1. Air handler airflow for calculation of duct leakage rate compliance targets shall be determined according to methods specified in Reference Residential Appendix RA3.1.4.2**.**

For multifamily dwellings with the air-handling unit installed and the ducts connected directly to the air handler, regardless of duct system location:

i. The total leakage of the duct system shall not exceed 12 percent of the air handler airflow as determined utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.1; or

ii. The duct system leakage to outside shall not exceed 6 percent of the air handler airflow as determined utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.4.

Exception 1 to Section 160.3(b)5K: The HERS Rater field verification and HERS Provider data registry requirements of Reference Residential Appendix RA2 and RA3 are not required for multifamily dwelling units in buildings four habitable stories and greater. The installer shall certify that diagnostic testing was performed in accordance with the applicable procedures.

Exception 2 to Section 160.3(b)5K: Multifamily dwelling units in buildings four habitable stories and greater in Climate Zones 1, 3, 5 and 7.

L. **System airflow rate and fan efficacy.** Space-conditioning systems that utilize forced air ducts to supply cooling to an individual dwelling unit shall:

i. **Static pressure probe.** Have a hole for the placement of a static pressure probe (HSPP), or a permanently installed static pressure probe (PSPP) in the supply plenum downstream of the air conditioning evaporator coil. The size, location and labeling of the HSPP or PSPP shall conform to the requirements specified in Reference Residential Appendix RA3.3.1.1 as confirmed by field verification and diagnostic testing; and

Exception to Section 160.3(b)5Li: Systems that cannot conform to the specifications for hole location in Reference Residential Appendix Figure RA3.3-1 shall not be required to provide holes as described in Figure RA3.3-1.

ii. **Single zone central forced air systems**. Demonstrate, in every control mode, airflow greater than or equal to 350 cfm per ton of nominal cooling capacity through the return grilles, and an air-handling unit fan efficacy less than or equal to the maximum W/cfm specified in Subsection a or b below. The airflow rate and fan efficacy requirements in this section shall be confirmed by field verification and diagnostic testing in accordance with the procedures given in Reference Residential Appendix RA3.3.

a. 0.45 W/cfm for gas furnace air-handling units.

b. 0.58 W/cfm for air-handling units that are not gas furnaces.

Exception 1 to Section 160.3(b)5Lii: Standard ducted systems without zoning dampers may comply by meeting the applicable requirements in Table 160.3-A or 160.3-B as confirmed by field verification and diagnostic testing in accordance with the procedures in Reference Residential Appendix Sections RA3.1.4.4 and RA3.1.4.5. The design clean-filter pressure drop requirements specified by Section 160.2(b)1Div for the system air filter(s) shall conform to the requirements given in Table 160.3-A or 160.3-B.

Exception 2 to Section 160.3(b)5Lii: Multispeed compressor systems or variable speed compressor systems shall verify airflow (cfm/ton) and fan efficacy (watt/cfm) for system operation at the maximum compressor speed and the maximum air handler fan speed.

Exception 3 to Section 160.3(b)5Lii: Gas furnace air-handling units manufactured prior to July 3, 2019 shall comply with a fan efficacy value less than or equal to 0.58 w/cfm as confirmed by field verification and diagnostic testing in accordance with the procedures given in Reference Residential Appendix RA3.3.

iii. **Zonally controlled central forced air systems.** Zonally controlled central forced air cooling systems shall be capable of simultaneously delivering, in every zonal control mode, an airflow from the dwelling, through the air handler fan and delivered to the dwelling, of greater than or equal to 350 cfm per ton of nominal cooling capacity, and operating at an air-handling unit fan efficacy of less than or equal to the maximum W/cfm specified in Subsection a or b below. The airflow rate and fan efficacy requirements in this section shall be confirmed by field verification and diagnostic testing in accordance with the applicable procedures specified in Reference Residential Appendix RA3.3.

a. 0.45 W/cfm for gas furnace air-handling units.

b. 0.58 W/cfm for air-handling units that are not gas furnaces.

Exception 1 to Section 160.3(b)5Liii: Multispeed or variable speed compressor systems, or single speed compressor systems that utilize the performance compliance approach, shall demonstrate compliance with the airflow (cfm/ton) and fan efficacy (watt/cfm) requirements of Section 160.3(b)5Liii by operating the system at maximum compressor capacity and system fan speed with all zones calling for conditioning, rather than in every zonal control mode.

Exception 2 to Section 160.3(b)5Liii: Gas furnace air-handling units manufactured prior to July 3, 2019 shall comply with a fan efficacy value less than or equal to 0.58 w/cfm as confirmed by field verification and diagnostic testing in accordance with the procedures given in Reference Residential Appendix RA3.3.

iv**. Small duct high velocity forced air systems.** Demonstrate, in every control mode, airflow greater than or equal to 250 cfm per ton of nominal cooling capacity through the return grilles, and an air-handling unit fan efficacy less than or equal to 0.62 W/cfm as confirmed by field verification and diagnostic testing in accordance with the procedures given in Reference Residential Appendix RA3.3.

Exception 1 to Section 160.3(b)5Liv: Standard ducted systems without zoning dampers may comply by meeting the applicable requirements in Table 160.3-A or 160.3-B as confirmed by field verification and diagnostic testing in accordance with the procedures in Reference Residential Appendix Sections RA3.1.4.4 and RA3.1.4.5. The design clean-filter pressure drop requirements specified by Section

160.2(b)1Div for the system air filter(s) shall conform to the requirements given in Table 160.3-A or 160.3-B.

Exception 2 to Section 160.3(b)5Liv: Multispeed compressor systems or variable speed compressor systems shall verify airflow (cfm/ton) and fan efficacy (watt/cfm) for system operation at the maximum compressor speed and the maximum air handler fan speed.

Exception 1 to Section 160.3(b)5L: The HERS Rater field verification and HERS Provider data registry requirements of Reference Residential Appendix RA2 and RA3 are not required for multifamily dwelling units in buildings four habitable stories and greater. The installer shall certify that diagnostic testing was performed in accordance with the applicable procedures.

Exception 2 to Section 160.3(b)5L: Multifamily dwelling units in buildings four habitable stories and greater in Climate Zone 1.

6. Piping for space-conditioning systems, solar water-heating system collector loop, and distribution piping for steam and hydronic heating system shall meet the requirements of Section 160.3(c)1.

(c) **Fluid distribution systems; common area space-conditioning systems.** Multifamily buildings shall comply with the applicable requirements of Section 160.3(a)1. Multifamily common areas shall comply with the applicable requirements of Sections 160.3(a)2A through 160.3(a)2J.

1. **Pipe insulation**. Multifamily buildings shall comply with the applicable requirements of Sections 160.3(c)1A through 160.3(c)1D.

   A. **General requirements.** The piping conditions listed below for space-conditioning systems with fluid normal operating temperatures listed in Table 160.3-D shall have at least the amount of insulation specified in Section 160.3(c)1D:

      i. **Space cooling systems.** All refrigerant suction, chilled water and brine fluid distribution systems.

      ii. **Space heating systems.** All refrigerant, steam, steam condensate and hot water fluid distribution systems.

      Exception to Section 160.3(c)1Aii: Heat pumps refrigerant vapor line shall be installed with a minimum of 0.75 inch thick or R-6.0 insulation. No insulation is required on the refrigerant liquid line.

   B. Insulation conductivity shall be determined in accordance with ASTM C335 at the mean temperature listed in Table 160.3-D, and shall be rounded to the nearest 1/100 Btu-inch per hour per square foot per °F. Fluid distribution systems include all elements that are in series with the fluid flow, such as pipes, pumps, valves, strainers, coil u-bends and air separators, but not including elements that are not in series with the fluid flow, such as expansion tanks, fill lines, chemical feeders and drains.

   C. **Insulation protection.** Pipe insulation shall be protected from damage due to sunlight, moisture, equipment maintenance and wind. Protection shall, at minimum, include the following:

      i. Pipe insulation exposed to weather shall be protected by a cover suitable for outdoor service. The cover shall be water retardant and provide shielding from solar radiation that can cause degradation of the material. Adhesive tape shall not be used to provide this protection.

      ii. Pipe insulation covering chilled water piping and refrigerant suction piping located outside the conditioned space shall include, or be protected by, a Class I or Class II vapor retarder. All penetrations and joints shall be sealed.

      iii. Pipe insulation buried below grade must be installed in a waterproof and noncrushable casing or sleeve.

   D. **Insulation thickness.**

      i. For insulation with a conductivity in the range shown in Table 160.3-D for the applicable fluid temperature range, the insulation shall have the applicable minimum thickness or R-value shown in Table 160.3-D.

ii. For insulation with a conductivity outside the range shown in Table 160.3-D for the applicable fluid temperature range, the insulation shall have a minimum R-value shown in Table 160.3-D or thickness as calculated with Equation 160.3-A:

$$T = PR\left[\left(1+\frac{t}{PR}\right)^{\frac{K}{k}}-1\right]$$

(Equation 160.3-A)

WHERE:

T = Minimum insulation thickness for material with conductivity K, inches.

PR = Pipe actual outside radius, inches.

t = Insulation thickness from TABLE 160.3-D, inches.

K = Conductivity of alternate material at the mean rating temperature indicated in TABLE 160.3-D for the applicable fluid temperature range, in Btu-inch per hour per square foot per °F.

k = The lower value of the conductivity range listed in TABLE 160.3-D for the applicable fluid temperature range, Btu-inch per hour per square foot per °F.

Exception 1 to Section 160.3(c)1: Factory-installed piping within space-conditioning equipment certified under Section 110.1 or 110.2.

Exception 2 to Section 160.3(c)1: Piping that conveys fluids with a design operating temperature range between 60°F and 105°F.

Exception 3 to Section 160.3(c)1: Where the heat gain or heat loss to or from piping without insulation will not increase building source energy use.

Exception 4 to Section 160.3(c)1: Piping that penetrates framing members shall not be required to have pipe insulation for the distance of the framing penetration. Metal piping that penetrates metal framing shall use grommets, plugs, wrapping or other insulating material to ensure that no contact is made with the metal framing.

2. **Requirements for air distribution system, ducts and plenum.** Multifamily common areas shall comply with the applicable requirements of Sections 160.3(c)2A through 160.3(c)2F.

A**. CMC compliance.** All air distribution system ducts and plenums, including, but not limited to, building cavities, mechanical closets, air-handler boxes and support platforms used as ducts or plenums shall meet the requirements of CMC Sections 601.0, 602.0, 603.0, 604.0 and 605.0, and ANSI/SMACNA-006-2006 HVAC Duct Construction Standards Metal and Flexible 3rd Edition, incorporated herein by reference. Connections of metal ducts and the inner core of flexible ducts shall be mechanically fastened. Openings shall be sealed with mastic, tape, aerosol sealant or other duct-closure system that meets the applicable requirements of UL 181, UL 181A or UL 181B. If mastic or tape is used to seal openings greater than 1/4 inch, the combination of mastic and either mesh or tape shall be used.

B. Portions of supply-air and return-air ducts conveying heated or cooled air located in one or more of the following spaces shall be insulated to a minimum installed level of R-8:

i. Outdoors; or

ii. In a space between the roof and an insulated ceiling; or

iii. In a space directly under a roof with fixed vents or openings to the outside or unconditioned spaces; or

iv. In an unconditioned crawl space; or

v. In other unconditioned spaces.

Portions of supply-air ducts that are not in one of these spaces, including ducts buried in concrete slab, shall be insulated to a minimum installed level of R-4.2 or be enclosed in directly conditioned space.

C. **Duct and plenum materials.**

i. **Factory-fabricated duct systems.**

a. All factory-fabricated duct systems shall comply with UL 181 for ducts and closure systems, including collars, connections and splices, and be labeled as complying with UL 181. UL 181 testing may be performed by UL laboratories or a laboratory approved by the Executive Director.

b. All pressure-sensitive tapes, heat-activated tapes and mastics used in the manufacture of rigid fiberglass ducts shall comply with UL 181 and UL 181A.

c. All pressure-sensitive tapes and mastics used with flexible ducts shall comply with UL 181 and UL 181B.

d. Ductwork and plenums with pressure class ratings shall be constructed to Seal Class A. Joints and seams of duct systems and their components shall not be sealed with cloth back rubber adhesive duct tapes unless such tape is used in combination with mastic and drawbands.

Exception to Section 160.3(c)2Cid: Ductwork located in occupied space and exposed to view.

ii. **Field-fabricated duct systems.**

a. Factory-made rigid fiberglass and flexible ducts for field-fabricated duct systems shall comply with UL 181. All pressure-sensitive tapes, mastics, aerosol sealants or other closure systems used for installing field-fabricated duct systems shall meet the applicable requirements of UL 181, UL 181A and UL 181B.

b. Mastic sealants and mesh.

I. Sealants shall comply with the applicable requirements of UL 181, UL 181A and UL 181B, and be nontoxic and water resistant.

II. Sealants for interior applications shall pass ASTM C731 (extrudability after aging) and D2202 (slump test on vertical surfaces), incorporated herein by reference.

III. Sealants for exterior applications shall pass ASTM C731, C732 (artificial weathering test) and D2202, incorporated herein by reference.

IV. Sealants and meshes shall be rated for exterior use.

c. Pressure-sensitive tape. Pressure-sensitive tapes shall comply with the applicable requirements of UL 181, UL 181A and UL 181B.

d. Ductwork and plenums with pressure class ratings shall be constructed to Seal Class A. Joints and seams of duct systems and their components shall not be sealed with cloth back rubber adhesive duct tapes unless such tape is used in combination with mastic and drawbands.

e. Drawbands used with flexible duct.

I. Drawbands shall be either stainless-steel worm-drive hose clamps or UV-resistant nylon duct ties.

II. Drawbands shall have a minimum tensile strength rating of 150 pounds.

III. Drawbands shall be tightened as recommended by the manufacturer with an adjustable tensioning tool.

f. Aerosol-sealant closures.

I. Aerosol sealants shall meet the requirements of UL 723 and be applied according to manufacturer specifications.

II. Tapes or mastics used in combination with aerosol sealing shall meet the requirements of this section.

D. All duct insulation product R-values shall be based on insulation only (excluding air films, vapor retarders or other duct components) and tested C-values at 75°F mean temperature at the installed thickness, in accordance with ASTM C518 or ASTM C177, incorporated herein by reference, and certified pursuant to Section 110.8.

E. The installed thickness of duct insulation used to determine its R-value shall be determined as follows:

i. For duct board, duct liner and factory-made rigid ducts not normally subjected to compression, the nominal insulation thickness shall be used.

ii. For duct wrap, installed thickness shall be assumed to be 75 percent (25 percent compression) of nominal thickness.

iii. For factory-made flexible air ducts, the installed thickness shall be determined by dividing the difference between the actual outside diameter and nominal inside diameter by two.

F. Insulated flexible duct products installed to meet this requirement must include labels, in maximum intervals of 3 feet, showing the thermal performance R-value for the duct insulation itself (excluding air films, vapor retarder or other duct components), based on the tests in Section 160.3(c)2D and the installed thickness determined by Section 160.3(c)2Eiii.

G. Insulation shall be protected from damage, including that due to sunlight, moisture, equipment maintenance and wind but not limited to the following: Insulation exposed to weather shall be suitable for outdoor service; e.g., protected by aluminum, sheet metal, painted canvas or plastic cover. Cellular foam insulation shall be protected as above or painted with a coating that is water retardant and provides shielding from solar radiation that can cause degradation of the material.

H. Duct systems shall be tested in accordance with i or ii below:

i. New duct systems that meet the criteria in Subsections a, b and c below or ductwork that is part of a system that meets the criteria of Section 180.2(b)2B shall be sealed to a leakage rate not to exceed 6 percent of the nominal air handler airflow rate as confirmed through field verification and diagnostic testing, in accordance with the applicable procedures in Reference Nonresidential Appendices NA1 and NA2.

a. The duct system provides conditioned air to an occupiable space for a constant volume, single zone, space-conditioning system; and

b. The space-conditioning system serves less than 5,000 square feet of conditioned floor area; and

c. The combined surface area of the ducts located in the following spaces is more than 25 percent of the total surface area of the entire duct system:

I. Outdoors; or

II. In a space directly under a roof that has a U-factor greater than the U-factor of the ceiling, or if the roof does not meet the requirements of Section 170.2(a)1; or

III. In a space directly under a roof that has fixed vents or openings to the outside or unconditioned spaces; or

IV. In an unconditioned crawl space; or

V. In other unconditioned spaces.

ii. All duct systems that do not meet the criteria in Section 160.3(c)2H shall meet the duct leakage testing requirements of CMC Section 603.9.2.

(d) **Mechanical acceptance testing.**

1. Common areas. Before an occupancy permit is granted, the following systems and equipment serving multifamily common areas shall be certified as meeting the Acceptance Requirements for Code Compliance, as specified by Reference Nonresidential Appendix NA7. These systems and equipment shall also comply with the applicable requirements of Section 160.3(d)3. A Certificate of Acceptance shall be submitted to the enforcement agency that certifies that the equipment and systems meet the acceptance requirements:
   A. Outdoor air ventilation systems shall be tested in accordance with NA7.5.1.
   B. Constant volume, single zone air conditioning and heat pump unit controls shall be tested in accordance with NA7.5.2.
   C. Duct systems shall be tested in accordance with NA7.5.3 where either:
      a. They are new duct systems; or
      b. They are part of an altered system.
   D. Air economizers shall be tested in accordance with NA7.5.4.

      Exception to Section 160.3(d)1D: Air economizers installed by the HVAC system manufacturer and certified to the Commission as being factory calibrated and tested are exempt from the Functional Testing section of the Air Economizer Controls acceptance test as described in NA7.5.4.2.
   E. Demand control ventilation systems required by Section 160.2(c)3 shall be tested in accordance with NA7.5.5.
   F. Supply fan variable flow controls shall be tested in accordance with NA7.5.6.
   G. Hydronic system variable flow controls shall be tested in accordance with NA7.5.7 and NA7.5.9.
   H. Boilers or chillers that require isolation controls as specified by Section 170.2(c)4Iii or 170.2(c)4Iiii shall be tested in accordance with NA7.5.7.
   I. Hydronic systems with supply water temperature reset controls shall be tested in accordance with NA7.5.8.
   J. Automatic demand shed controls shall be tested in accordance with NA7.5.10.
   K. Fault detection and diagnostics (FDD) for packaged direct expansion units shall be tested in accordance with NA7.5.11.
   L. Automatic fault detection and diagnostics (FDD) for air handling units and zone terminal units shall be tested in accordance with NA7.5.12.
   M. Distributed energy storage DX AC systems shall be tested in accordance with NA7.5.13.
   N. Thermal energy storage (TES) systems shall be tested in accordance with NA7.5.14.
   O. Supply air temperature reset controls shall be tested in accordance with NA7.5.15.
   P. Water-cooled chillers served by cooling towers with condenser water reset controls shall be tested in accordance with NA7.5.16.
   Q. When an energy management control system is installed, it shall functionally meet all of the applicable requirements of Part 6.
   R. Occupant sensing zone controls shall be tested in accordance with NA7.5.17.
2. Multifamily dwelling units. Before an occupancy permit is granted, the following systems and equipment serving multifamily dwelling units shall be certified as meeting the acceptance requirements for code compliance, as specified by the Reference Nonresidential Appendix NA7. These systems and equipment shall also comply with the applicable requirements of Section 160.3(d)3. A Certificate of Acceptance shall be submitted to the enforcement agency that certifies that the equipment and systems meet the acceptance requirements:
   A. In multifamily buildings with four or more habitable stories, dwelling unit ventilation systems shall be tested in accordance with NA7.18.1.

B. In multifamily buildings with four or more habitable stories, dwelling unit enclosure leakage shall be tested in accordance with NA7.18.2 when exhaust or supply ventilation systems are used for compliance with whole-dwelling unit ventilation requirements as specified in Section 160.2(b)2Aivb2.

C. Multifamily building central ventilation ducts in multifamily buildings with four or more habitable stories shall be leak tested in accordance with NA7.18.3.

D. Multifamily building central ventilation system heat recovery or energy recovery systems in multifamily buildings with four or more habitable stories shall be tested in accordance with NA7.18.4.

3. When certification is required by Title 24, Part 1, Section 10-103.2, the acceptance testing specified by Section 160.3(d)1 and 2 shall be performed by a Certified Mechanical Acceptance Test Technician (CMATT). If the CMATT is operating as an employee, the CMATT shall be employed by a Certified Mechanical Acceptance Test Employer. The CMATT shall disclose on the Certificate of Acceptance a valid CMATT certification identification number issued by an approved Acceptance Test Technician Certification Provider. The CMATT shall complete all Certificate of Acceptance documentation in accordance with the applicable requirements in Section 10-103(a)4.

TABLE 160.3-A: Return Duct Sizing for Single Return Duct Systems

Return duct length shall not exceed 30 feet and shall contain no more than 180 degrees of bend. If the total bending exceeds 90 degrees, one bend shall be a metal elbow.

Return grille devices shall be labeled in accordance with the requirements in Section 160.2(b)1Biv to disclose the grille's design airflow rate and a maximum allowable clean-filter pressure drop of 25 Pa (0.1 inches water) for the air filter when tested using ASHRAE Standard 52.2, or as rated in accordance with AHRI Standard 680 for the design airflow rate for the return grille.

System Nominal Cooling Capacity (Ton)*	Return Duct Minimum Nominal Diameter (inch)	Minimum Total Return Filter Grille Nominal Area ($inch^2$)
1.5	16	500
2.0	18	600
2.5	20	800

*****Not applicable to systems with nominal cooling capacity greater than 2.5 tons or less than 1.5 ton

TABLE 160.3-B: Return Duct Sizing for Multiple Return Duct Systems

Each return duct length shall not exceed 30 feet and shall contain no more than 180 degrees of bend. If the total bending exceeds 90 degrees, one bend shall be a metal elbow.

Return grille devices shall be labeled in accordance with the requirements in Section 160.2(b)1Biv to disclose the grille's design airflow rate and a maximum allowable clean-filter pressure drop of 25 Pa (0.1 inches water) for the air filter when tested using ASHRAE Standard 52.2, or as rated in accordance with AHRI Standard 680 for the design airflow rate for the return grille.

System Nominal Cooling Capacity (Ton)*	Return Duct 1 Minimum Nominal Diameter (inch)	Return Duct 2 Minimum Nominal Diameter (inch)	Minimum Total Return Filter Grille Nominal Area (inch^2)
1.5	12	10	500
2.0	14	12	600
2.5	14	14	800
3.0	16	14	900
3.5	16	16	1000
4.0	18	18	1200
5.0	20	20	1500

*****Not applicable to systems with nominal cooling capacity greater than 5.0 tons or less than 1.5 tons.

TABLE 160.3-C DDC Applications and Qualifications

Building Status	Applications	Qualifications
Newly Constructed Buildings	Air handling system and all zones served by the system	Individual systems supplying more than three zones and with design heating or cooling capacity of 300 kBtu/h and larger
Newly Constructed Buildings	Chilled water plant and all coils and terminal units served by the system	Individual plants supplying more than three zones and with design cooling capacity of 300 kBtu/h (87.9 kW) and larger
Newly Constructed Buildings	Hot water plant and all coils and terminal units served by the system	Individual plants supplying more than three zones and with design heating capacity of 300 kBtu/h (87.9 kW) and larger
Additions or Alterations	Zone terminal unit such as VAV box	Where existing zones served by the same air handling, chilled water, or hot water systems that have DDC
Additions or Alterations	Air handling system or fan coil	Where existing air handling system(s) and fan coil(s) served by the same chilled or hot water plant have DDC
Additions or Alterations	New air handling system and all new zones served by the system	Individual systems with design heating or cooling capacity of 300 kBtu/h and larger and supplying more than three zones and more than 75 percent of zones are new
Additions or Alterations	New or upgraded chilled water plant	Where all chillers are new and plant design cooling capacity is 300 kBtu/h (87.9 kW) and larger
Additions or Alterations	New or upgraded hot water plant	Where all boilers are new and plant design heating capacity is 300 kBtu/h (87.9 kW) and larger

TABLE 160.3-D PIPE INSULATION THICKNESS

Fluid Operating Temperature Range (°F)	Insulation Conductivity			Nominal Pipe Diameter (in inches)				
	Conductivity (in Btu·in/h·ft²·°F)	Mean Rating Temperature (°F)		< 1	1 to <1.5	1.5 to < 4	4 to < 8	8 and larger

			R-value	R 8.5	R 14	R 12	R 10	R 9

Footnote to TABLE 160.3-D:

1. **These thicknesses are based on energy efficiency considerations only. Issues such as water vapor permeability or surface condensation sometimes require vapor retarders or additional insulation.**

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8, and 25943, Public Resources Code.

SECTION 160.4 – MANDATORY REQUIREMENTS FOR WATER HEATING SYSTEMS

(a) Systems using gas or propane water heaters to serve individual dwelling units shall include the following components:

1. A dedicated 125 volt, 20 amp electrical receptacle that is connected to the electric panel with a 120/240 volt 3 conductor, 10 AWG copper branch circuit, within 3 feet from the water heater and accessible to the water heater with no obstructions. In addition, all of the following:
   A. Both ends of the unused conductor shall be labeled with the word “spare” and be electrically isolated; and
   B. A reserved single pole circuit breaker space in the electrical panel adjacent to the circuit breaker for the branch circuit in A above and labeled with the words “Future 240V Use”; and
2. A Category III or IV vent, or a Type B vent with straight pipe between the outside termination and the space where the water heater is installed; and
3. A condensate drain that is no more than 2 inches higher than the base of the installed water heater, and allows natural draining without pump assistance; and
4. A gas supply line with a capacity of at least 200,000 Btu/hr.

(b) Water-heating recirculation loops serving multiple dwelling units shall meet the requirements of Section 110.3(c)4.

(c) Solar water-heating systems and collectors shall be certified and rated by the Solar Rating and Certification Corporation (SRCC), the International Association of Plumbing and Mechanical Officials, Research and Testing (IAPMO R&T), or a listing agency that is approved by the Executive Director.

(d) Instantaneous water heaters with an input rating greater than 6.8 kBTU/hr (2kW) shall meet the requirements of Section 110.3(c)6.

(e) Commercial boilers

1. Combustion air positive shut-off shall be provided on all newly installed boilers as follows:
   A. All boilers with an input capacity of 2.5 MMBtu/h (2,500,000 Btu/h) and above, in which the boiler is designed to operate with a nonpositive vent static pressure.
   B. All boilers where one stack serves two or more boilers with a total combined input capacity per stack of 2.5 MMBtu/h (2,500,000 Btu/h).
2. Boiler combustion air fans with motors 10 horsepower or larger shall meet one of the following for newly installed boilers:
   A. The fan motor shall be driven by a variable speed drive, or
   B. The fan motor shall include controls that limit the fan motor demand to no more than 30 percent of the total design wattage at 50 percent of design air volume.
3. Newly installed boilers with an input capacity 5 MMBtu/h (5,000,000 Btu/h) and greater shall maintain excess (stack-gas) oxygen concentrations at less than or equal to 5.0 percent by volume on a dry basis over firing rates of 20 percent to 100 percent. Combustion air volume shall be controlled with respect to firing rate or flue gas oxygen concentration. Use of a common gas and combustion air control linkage or jack shaft is prohibited.

   Exception to Section 160.4(e)3: Boilers with steady state full-load thermal combustion efficiency 90 percent or higher.

(f) **Insulation for piping and tanks**

1. Piping for multifamily domestic hot water systems shall be insulated to meet the requirements of Table 160.4-A.

   Exception 1 to Section 160.4(f)1: Factory-installed piping within space-conditioning equipment certified under Section 110.1 or 110.2.

Exception 2 to Section 160.4(f)1: Piping that penetrates framing members shall not be required to have pipe insulation for the distance of the framing penetration. Piping that penetrates metal framing shall use grommets, plugs, wrapping or other insulating material to ensure that no contact is made with the metal framing. Insulation shall abut securely against all framing members.

Exception 3 to Section 160.4(f)1: Piping installed in interior or exterior walls shall not be required to have pipe insulation if all of the requirements are met for compliance with quality insulation installation (QII) as specified in Reference Residential Appendix RA3.5.

Exception 4 to Section 160.4(f)1: Piping surrounded with a minimum of 1 inch of wall insulation, 2 inches of crawl space insulation or 4 inches of attic insulation shall not be required to have pipe insulation.

TABLE 160.4-A PIPE INSULATION THICKNESS – Multifamily Domestic Hot Water

Fluid Operating Temperature Range (°F)	Insulation Conductivity			Nominal Pipe Diameter (in inches)				
	Conductivity (in Btu·in/h·ft^{2}· °F)	Mean Rating Temperature (°F)		< 1	1 to <1.5	1.5 to < 4	4 to < 8	8 and larger
Multifamily Domestic Hot Water Systems				**Minimum Pipe Insulation Required (Thickness in inches or R-value)**				
105-140[1]	0.22-0.28	100	Inches	1.0	1.5	2.0	2.0	2.0
			R-value	R 7.7	R 12.5	R 16	R 12.5	R 11

Footnote to TABLE 160.4-A:

1. Multifamily and hotel/motel domestic hot water systems with water temperature above 140°F shall use the row in table 120.3-A for the applicable water temperature.

2. **Insulation Protection.** Pipe Insulation shall be protected from damage due to sunlight, moisture, equipment maintenance and wind. Protection shall, at minimum, include the following:

   A. Pipe insulation exposed to weather shall be protected by a cover suitable for outdoor service. The cover shall be water retardant and provide shielding from solar radiation that can cause degradation of the material. Adhesive tape shall not be used to provide this protection.

   B. Pipe insulation covering chilled water piping and refrigerant suction piping located outside the conditioned space shall include, or be protected by, a Class I or Class II vapor retarder. All penetrations and joints shall be sealed.

   C. Pipe insulation buried below grade must be installed in a waterproof and noncrushable casing or sleeve.

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8 and 25943, Public Resources Code.

SECTION 160.5 – MANDATORY LIGHTING REQUIREMENTS FOR INDOOR AND OUTDOOR SPACES

The design and installation of all lighting systems and equipment in multifamily buildings within the scope of Section 100.0(a) shall comply with the applicable provisions of Section 160.5. All functional areas except dwelling units and common living areas shall comply with the applicable requirements of Sections 160.5(b) through 160.5(e).

(a) **Dwelling unit lighting.**

The design and installation of all lighting systems and equipment in multifamily dwelling units shall comply with Section 160.5(a). Multifamily dwelling units include dormitory and senior housing dwelling accommodations. Outdoor lighting attached to multifamily buildings and controlled from the inside of a dwelling unit shall comply with the lighting requirements of Section 160.5(a).

1. Luminaire requirements.

A. Luminaire efficacy**.** All installed luminaires shall meet the requirements in Table 160.5-A.
Exception 1 to Section 160.5(a)1A: **Integrated device lighting:** Lighting integral to exhaust fans, kitchen range hoods, bath vanity mirrors and garage door openers, and nonremovable lighting attached to ceiling fans.

Exception 2 to Section 160.5(a)1A: Navigation lighting: Night lights, step lights, path lights less than 5 watts.

Exception 3 to Section 160.5(a)1A: Cabinet lighting: Lighting internal to drawers, cabinetry and linen closets with an efficacy of 45 lumens per watt or greater.

B. Screw based luminaires. Screw based luminaires shall contain lamps that comply with Reference Joint Appendix JA8.

C. Recessed downlight luminaires. In addition to complying with Section 160.5(a)1A, luminaires recessed into ceilings shall meet all of the following requirements:

i. Shall not contain screw base lamp sockets; and

ii. Have a label that certifies the luminaire is airtight with air leakage less than 2.0 cfm at 75 Pascals when tested in accordance with ASTM E283. An exhaust fan housing with integral light shall not be required to be certified airtight; and

iii. Be sealed with a gasket or caulk between the luminaire housing and ceiling, and have all air leak paths between conditioned and unconditioned spaces sealed with a gasket or caulk, or be installed per manufacturer's instructions to maintain airtightness between the luminaire housing and ceiling; and

iv. Meet the clearance and installation requirements of California Electrical Code Section 410.116 for recessed luminaires.

Exception to Section 160.5(a)1Cii and Iii: Recessed luminaires marked for use in fire-rated installations, and recessed luminaires installed in noninsulated ceilings.

D. Light sources in enclosed or recessed luminaires. Lamps and other separable light sources that are not compliant with the JA8 elevated temperature requirements, including marking requirements, shall not be installed in enclosed or recessed luminaires.

E. Blank electrical boxes. The number of electrical boxes that are more than 5 feet above the finished floor and do not contain a luminaire or other device shall be no greater than the number of bedrooms. These electrical boxes must be served by a dimmer, vacancy sensor control, low voltage wiring or fan speed control.

2. Indoor lighting controls.

A. Lighting shall have readily accessible wall-mounted controls that allow the lighting to be manually turned ON and OFF.

Exception to Section 160.5(a)2A: Ceiling fans may provide control of integrated lighting via a remote control.

B. No controls shall bypass a dimmer, occupant sensor or vacancy sensor function where that dimmer or sensor has been installed to comply with Section 160.5(a)2.

C. Lighting controls shall comply with the applicable requirements of Section 110.9.

D. An energy management control system (EMCS) or a multiscene programmable controller may be used to comply with dimming, occupancy and lighting control requirements in Section 160.5(a)2 if it provides the functionality of the specified controls in accordance with Section 110.9 and the physical controls specified in Section 160.5(a)2A.

E. Automatic off controls.

iv. In bathrooms, garages, laundry rooms, utility rooms and walk-in closets, at least one installed luminaire shall be controlled by an occupancy or vacancy sensor providing automatic-off functionality.

v. For lighting internal to drawers and cabinetry with opaque fronts or doors, controls that turn the lighting off when the drawer or door is closed shall be provided.

F. Dimming controls. Lighting in habitable spaces, including but not limited to living rooms, dining rooms, kitchens and bedrooms, shall have readily accessible wall-mounted dimming controls that allow the lighting to be manually adjusted up and down. Forward phase cut dimmers controlling LED light sources shall comply with NEMA SSL 7A.

Exception 1 to Section 160.5(a)2F: Ceiling fans may provide control of integrated lighting via a remote control.
Exception 2 to Section 160.5(a)2F: Luminaires controlled by an occupancy or vacancy sensor providing automatic-off functionality.
Exception 3 to Section 160.5(a)2F: Navigation lighting such as night lights, step lights and path lights less than 5 watts; and lighting internal to drawers and cabinetry with opaque fronts or doors, or with automatic off controls.

G. Independent controls. Integrated lighting of exhaust fans shall be controlled independently from the fans. The following shall be controlled separately from ceiling-installed lighting such that one can be turned on without turning on the other:

v. Undercabinet lighting

vi. Undershelf lighting

vii. Interior lighting of display cabinets

viii. Switched outlets

3. **Outdoor lighting controls.** In addition to meeting the requirements of Section 160.5(a)1, luminaires providing residential outdoor lighting shall meet the following requirements, as applicable:

A. Outdoor lighting attached to a building and separately controlled from the inside of a dwelling unit shall meet the requirement in Item i and the requirements in either Item ii or Item iii:

i. Controlled by a manual ON and OFF control switch that permits the automatic actions of Item ii or iii below; and

ii. Controlled by a photocell and either a motion sensor or an automatic time switch control; or

iii. Controlled by an astronomical time clock control.

Controls that override to ON shall not be allowed unless the override automatically returns the automatic control to its normal operation within 6 hours. An energy management control system that provides the specified

lighting control functionality and complies with all requirements applicable to the specified controls may be used to meet these requirements.

TABLE 160.5-A CLASSIFICATION OF DWELLING UNIT HIGH LUMINOUS EFFICACY LIGHT SOURCES

Light sources in this column other than those installed in ceiling recessed downlight luminaires are classified as high luminous efficacy and are **not** required to comply with Reference Joint Appendix JA8	Light sources in this column are required to comply with Reference Joint Appendix JA8 and shall be certified and marked as required by JA8.
1. LED light sources installed outdoors. 2. Inseparable Solid State Lighting (SSL) luminaires containing colored light sources that are installed to provide decorative lighting. 3. Pin-based linear fluorescent or compact fluorescent light sources using electronic ballasts. 4. High intensity discharge (HID) light sources including pulse start metal halide and high pressure sodium light sources. 5. Luminaires with hardwired high frequency generator and induction lamp. 6. Ceiling Fan Light Kits subject to federal appliance regulations.	7. All light sources installed in ceiling recessed downlight luminaires. Note that ceiling recessed downlight luminaires shall not have screw base sockets regardless of lamp type as specified in Section 150.0(k)1C. 8. Any light source not otherwise listed in this table.

(b) **Common services area lighting.** Lighting systems and equipment in multifamily common services areas shall comply with the applicable provisions of Sections 160.5(b)1 through 160.5(b)4.

Exception to Section 160.5(b): Lighting systems in common use areas providing shared provisions for living, eating, cooking or sanitation to dwelling units that would otherwise lack these provisions may instead comply with Section 160.5(a).

Note: The requirements of Section 160.5(b) apply to newly constructed buildings. Sections 180.1 and 180.2 specify which requirements of Sections 160.5(b)1 through 160.5(e) also apply to additions and alterations to existing buildings.

1. **Luminaire classification and power**. Luminaires shall be classified, and their wattage determined as follows:

   A. Luminaire wattage shall be labeled as follows:

      i. The maximum rated wattage or relamping rated wattage of a luminaire shall be listed on a permanent, preprinted, factory-installed label, as specified by UL 1574, 1598, 2108 or 8750, as applicable; and

      ii. The factory-installed maximum rated wattage or relamping rated wattage label shall not consist of peel-off or peel-down layers or other methods that allow the rated wattage to be changed after the luminaire has been shipped from the manufacturer.

      Exception to Section 160.3(b)1Aii: Luminaires with a single lamp and an integrated ballast or transformer may use a peel-down label provided that they are layered such that the rated wattage reduces as successive layers are removed.

         a. Low-voltage luminaires (except low voltage track systems), ≤ 24 volts, with a maximum relamping rated wattage of 50 watts.

b. **C**ompact fluorescent luminaires, having an integral electronic ballast, with a maximum relamping rated wattage of 42 watts.

c. High intensity discharge luminaires, having an integral electronic ballast, with a maximum relamping rated wattage of 150 watts.

B. For luminaires with line voltage lamps not served by drivers, ballasts or transformers, the wattage of such luminaires shall be determined as the maximum rated wattage as labeled in accordance with Section 160.5(b)1A.

C. For luminaires with permanently installed or remotely installed ballasts, the wattage of such luminaires shall be the operating input wattage of the rated lamp/ballast combination published in the ballast manufacturer's catalogs based on independent testing lab reports as specified by UL 1598.

D. For inseparable SSL luminaires and SSL luminaires with remotely mounted drivers, the maximum rated wattage shall be the maximum rated input wattage of the SSL luminaire as specified in Section 160.5(b)1A when tested in accordance with UL 1598, 2108 or 8750, or IES LM-79.

E. For LED tape lighting and LED linear lighting with LED tape lighting components, the maximum rated wattage shall be the sum of the installed length of the tape lighting times its rated linear power density in watts per linear foot, or the maximum rated input wattage of the driver or power supply providing power to the lighting system, with tape lighting tested in accordance with UL 2108 or 8750, or IES LM-79.

F. For modular lighting systems that allow the addition or relocation of luminaires without altering the wiring of the system, wattage shall be determined as follows:

i. The wattage shall be the greater of:

a. 30 watts per linear foot of track or plug-in busway; or

b. the rated wattage of all of the luminaires included in the system, where the luminaire wattage is determined as specified in Section 160.5(b)1A; or

ii. For line-voltage lighting track and plug-in busway served by a track lighting integral current limiter or a dedicated track lighting supplementary overcurrent protection panel, the wattage shall be determined as follows:

a. The volt-ampere rating of current limiter as specified by UL 1077; or

b. The sum of the ampere (A) rating of all of the current protection devices times the branch circuit voltages for track lighting supplementary overcurrent protection panel.

iii. For other modular lighting systems with power supplied by a driver, power supply or transformer, including but not limited to low-voltage lighting systems, the wattage of the system shall be the maximum rated input wattage of the driver, power supply or transformer published in the manufacturer's catalogs, as specified by UL 2108 or 8750.

Exception to Section 160.5(b)1F: For power-over-Ethernet lighting systems, power provided to installed nonlighting devices may be subtracted from the total power rating of the power-over-Ethernet system.

G. For all other lighting equipment not addressed by Sections 160.5(b)1B through F, the wattage of the lighting equipment shall be the maximum rated wattage of the lighting equipment, or operating input wattage of the system, labeled in accordance with Section 160.5(b)1A, or published in manufacturer's catalogs, based on independent testing lab reports as specified by UL 1574, 1598, 2108, 8750, or IES LM-79.

2. **Lighting controls**. All lighting controls and equipment shall comply with the applicable requirements in Sections 110.9, 160.5(b) and 160.5(c), and shall be installed in accordance with any applicable manufacturer instructions.

3. **Energy Management Control System (EMCS)**. An EMCS may be installed to comply with the requirements of one or more lighting controls if it meets the following minimum requirements:

A. Provides all applicable functionality for each specific lighting control or system for which it is installed in accordance with Sections 110.9, 160.5(b) and 160.5(c); and

B. Complies with all applicable lighting control installation requirements in accordance with Section 160.5(e) for each specific lighting control or system for which it is installed; and

C. Complies with all applicable application requirements for each specific lighting control or system for which it is installed, in accordance with Part 6.

4. **Mandatory indoor lighting controls**. Multifamily common use areas shall comply with the applicable requirements of Sections 160.5(b)4A through 160.5(b)4F, in addition to the applicable requirements of Section 110.9.

A. **Manual area controls.** Each area enclosed by ceiling-height partitions shall provide lighting controls that allow the lighting in that area to be manually turned on and off. The manual control shall:

i. Be readily accessible; and

Exception to Section 160.5(b)4Ai: Restrooms having two or more stalls, parking areas, stairwells, corridors and areas of the building intended for access or use by the public may use a manual control not accessible to unauthorized personnel.

ii. Be located in the same enclosed area with the lighting it controls; and

Exception to Section 160.5(b)4Aii: For areas where placement of a manual area control poses a health and safety hazard, the manual area control may instead be located so that a person using the control can see the lights or area controlled by that control, or visually signal or display showing the current state of the controlled lighting.

iii. Provide separate control of general, floor display, wall display, window display, case display, ornamental, and special effects lighting, such that each type of lighting can be turned on or off without turning on or off other types of lighting. Scene controllers may comply with this requirement provided that at least one scene turns on general lighting only, and the control provides a means to manually turn off all lighting.

Exception to Section 160.5(b)4A: Up to 0.1 watts per square foot of indoor lighting may be continuously illuminated to allow for means of egress illumination consistent with California Building Code Section 1008. Egress lighting complying with this wattage limitation is not required to comply with manual area control requirements if:

i. The area is designated for means of egress on the plans and specifications submitted to the enforcement agency under Section 10-103(a)2 of Part 1; and

ii. The controls for the egress lighting are not accessible to unauthorized personnel.

B. **Multi-level lighting controls.** The general lighting of any enclosed area 100 square feet or larger with a connected lighting load that exceeds 0.5 watts per square foot shall provide multi-level lighting controls that allow the level of lighting to be adjusted up and down. The multi-level controls shall:

i. Provide the number of control steps specified in Table 160.5-B; and

ii. Meet the uniformity requirements specified in Table 160.5-B.

Exception 1 to Section 160.5(b)4B: An area enclosed by ceiling height partitions that has only one luminaire with no more than two lamps or has only one inseparable SSL luminaire.

Exception 2 to Section 160.5(b)4B: Restrooms.

C. **Automatic shut-OFF controls.** All installed indoor lighting shall be equipped with controls able to automatically reduce lighting power when the space is typically unoccupied.

i. In addition to lighting controls installed to comply with Sections 160.5(b)4A and B, all installed indoor lighting shall be equipped with controls that meet the following requirements:

a. Shall be controlled with an occupant sensing control, automatic time-switch control, or other control capable of automatically shutting OFF all of the lighting when the space is typically unoccupied; and

b. Separate controls for the lighting on each floor, other than lighting in stairwells; and

c. Separate controls for a space enclosed by ceiling height partitions not exceeding 5,000 square feet;

Exception 1 to Section 160.5(b)4Ci: Where the lighting is serving an area that is in continuous use, 24 hours per day/365 days per year.

Exception 2 to Section 160.5(b)4Ci: Lighting complying with Section 160.5(b)4Cv or vii.

Exception 3 to Section 160.5(b)4Ci: Up to 0.1 watts per square foot of lighting in any area within a building may be continuously illuminated, provided that the area is designated for means of egress on the plans and specifications submitted to the enforcement agency under Section 10-103(a)2 of Part 1. Lighting providing means of egress illumination, as the term is used in the California Building Code, shall be configured to provide no less than the amount of light required by California Building Code Section 1008 while in the partial-off mode.

Exception 4 to Section 160.5(b)4Ci: Electrical equipment rooms subject to Article 110.26(D) of the California Electrical Code.

Exception 5 to Section 160.5(b)4Ci: Illumination provided by lighting equipment that is designated for emergency lighting, connected to an emergency power source or battery supply, and intended to function in emergency mode only when normal power is absent.

ii. Countdown timer switches may be used to comply with the automatic shut-OFF control requirements in Section 160.5(b)4Ci only in closets less than 70 square feet. The maximum timer setting shall be 10 minutes for closets.

iii. If an automatic time-switch control, other than an occupant sensing control, is installed to comply with Section 160.5(b)4Ci, it shall incorporate a manual override lighting control that:

a. Complies with 160.5(b)4A; and

b. Allows the lighting to remain ON for no more than 2 hours when an override is initiated.

iv. If an automatic time-switch control, other than an occupant sensing control, is installed to comply with Section 160.5(b)4Ci, it shall incorporate an automatic holiday "shut-OFF" feature that turns OFF all loads for at least 24 hours, and then resumes the normally scheduled operation.

v**.** Occupant sensing controls are required for specified offices, multipurpose rooms, conference rooms and restrooms. In offices 250 square feet or smaller, multipurpose rooms of less than 1,000 square feet, conference rooms of any size and restrooms of any size, lighting shall be controlled with occupant sensing controls to automatically shut OFF all of the lighting in 20 minutes or less after the control zone is unoccupied.

In areas required by Section 160.5(b)4B to have multi-level lighting controls, the occupant sensing controls shall function either as:

a. a partial-ON occupant sensing control capable of automatically activating between 50 and 70 percent of controlled lighting power, or

b. a vacancy sensing control, where all lighting responds to a manual ON input only.

In areas not required by Section 160.5(b)4B to have multi-level lighting controls, the occupant sensing controls shall function either as:

a. an occupant sensing control; or

b. a partial-ON occupant sensing control, or

c. a vacancy sensing control, where all lighting responds to a manual ON input only.

In addition, controls shall be provided that allow the lights to be manually shut OFF in accordance with Section 160.5(b)4A regardless of the sensor status.

vi. Full or partial OFF occupant sensing controls are required for corridors and stairwells, and offices greater than 250 square feet. Lighting installed in the following areas shall meet the requirements below in addition to complying with Section 160.5(b)4Ci.

a. In corridors and stairwells, lighting shall be controlled by occupant sensing controls that separately reduce the lighting power in each space by at least 50 percent when the space is unoccupied. The occupant sensing controls shall be capable of automatically turning the lighting fully ON only in the separately controlled space and shall be automatically activated from all designed paths of egress.

b. In office spaces greater than 250 square feet, general lighting shall be controlled by occupancy sensing controls that meet all of the following:

I. The occupancy sensing controls shall be configured so that lighting shall be controlled separately in control zones not greater than 600 square feet. For luminaires with an embedded occupancy sensor that are capable of reducing power independently from other luminaires, each luminaire can be considered its own control zone; and

II. In 20 minutes ~~of~~ or less after the control zone is unoccupied, the occupancy sensing controls shall uniformly reduce lighting power in the control zone to by at least 80 percent of full power. Control functions that switch control zone lights completely off when the zone is vacant meet this requirement; and

III. In 20 minutes or less after the entire office space is unoccupied, the occupancy sensing controls shall automatically turn off lighting in all control zones in the space; and

IV. In each control zone, lighting shall be allowed to automatically turn on to any level up to full power upon occupancy within the control zone. When occupancy is detected in any control zone in the space, the lighting in other control zones that are unoccupied shall operate at no more than 20 percent of full power.

Exception to Section 160.5(b)4Cvi: Under-shelf or furniture-mounted task lighting controlled by a local switch and either a time switch or an occupancy sensor.

vii. Partial OFF occupant sensing controls are required for parking garages, parking areas, and loading and unloading areas. Lighting installed in the following areas shall meet the requirements below instead of complying with Section 160.5(b)4Ci.

a. Reserved

b. In parking garages, parking areas, and loading and unloading areas, general lighting shall be controlled by occupant sensing controls having at least one control step between 20 percent and 50 percent of design lighting power. No more than 500 watts of rated lighting power shall be controlled together as a single zone. A reasonably uniform level of illuminance shall be achieved in accordance with the applicable requirements in Table 160.5-B. The occupant sensing controls shall be capable of automatically turning the lighting fully ON only in the separately controlled space, and shall be automatically activated from all designed paths of egress.

Interior areas of parking garages are classified as indoor lighting for compliance with Section 160.5(b)4Cviib. Parking areas on the roof of a parking structure are classified as outdoor hardscape and shall comply with the applicable provisions in Section 160.5(c).

Exception to Section 160.5(b)4Cviib: Metal halide luminaires with a lamp plus ballast mean system efficacy of greater than 75 lumens per watt, used for general lighting in parking garages, parking areas, and loading and unloading areas, shall be controlled by occupant sensing controls having at least one control step between 20 percent and 60 percent of design lighting power.

D. **Automatic Daylighting Controls. The general lighting in** skylit daylit zones, primary sidelit daylit zones, and secondary sidelit daylit zones, as well as the general lighting in the combined primary and secondary sidelit daylit zones in parking garages, shall be provided with controls that automatically adjust the power of the installed general lighting up and down to keep the total light level stable as the amount of incoming daylight

changes. For skylights located in an atrium, the skylit daylit zones shall apply to the floor area directly under the atrium and the top floor area directly adjacent to the atrium.

i. All skylit daylit zones, primary sidelit daylit zones, secondary sidelit daylit zones and the combined primary and secondary sidelit daylit zones in parking garages shall be shown on the plans.

Note: Parking areas on the roof of a parking structure are outdoor hardscape, not skylit daylit areas.

ii. The automatic daylighting controls shall provide separate control for general lighting in each type of daylit zone. General lighting in overlapping skylit daylit zone and sidelit daylit zone shall be controlled as part of the skylit daylit zone. General lighting in overlapping primary and secondary sidelit daylit zone shall be controlled as part of the primary sidelit daylit zone. Linear LED luminaires and other solid state lighting (SSL) light sources in linear form may be treated as linear lamps in increments of 4 feet segment or smaller, and each segment is separately controlled based on the type of the daylit zone the segment is primarily located.

iii. The automatic daylighting controls shall:

   a. For spaces required to install multilevel controls under Section 160.5(b)4B, adjust lighting via continuous dimming or the number of control steps provided by the multilevel controls;

   b. For each space, ensure the combined illuminance from the controlled lighting and daylight is not less than the illuminance from controlled lighting when no daylight is available;

   c. For areas other than parking garages, ensure that when the daylight illuminance is greater than 150 percent of the illuminance provided by the controlled lighting system when no daylight is available, the controlled lighting power in that daylight zone shall be reduced by a minimum of 90 percent; and

   d. For parking garages, ensure that when daylight illuminance levels measured at the farthest edge of the secondary sidelit zone away from the glazing or opening are greater than 150 percent of the illuminance provided by the controlled lighting when no daylight is available, the controlled lighting power in the combined primary and secondary sidelit daylight zones shall be reduced by 100 percent.

iv. Photosensor shall be located so that they are not readily accessible to unauthorized personnel.

v. The location where calibration adjustments are made to the automatic daylighting controls shall be readily accessible to authorized personnel but may be inside a locked case or under a cover that requires a tool for access.

Exception 1 to Section 160.5(b)4D: Areas under skylights where it is documented that existing adjacent structures or natural objects block direct sunlight for more than 1,500 daytime hours per year between 8 a.m. and 4 p.m.

Exception 2 to Section 160.5(b)4D: Areas adjacent to vertical glazing below an overhang, where the overhang covers the entire width of the vertical glazing, no vertical glazing is above the overhang, and the ratio of the overhang projection to the overhang rise is greater than 1.5 for south, east and west orientations or greater than 1 for north orientations.

Exception 3 to Section 160.5(b)4D: Rooms where the combined total installed wattage of the general lighting in the skylit and primary sidelit zones is less than 120 watts are not required to have daylighting controls for those zones. Rooms where the total installed wattage of the general lighting in the secondary sidelit zones is less than 120 watts are not required to have daylighting controls for that zone.

Exception 4 to Section 160.5(b)4D: Parking garage areas where the total installed wattage of the general lighting in the primary and the secondary sidelit daylit zones is less than 60 watts do not require automatic daylighting controls in the daylit zones.

Exception 5 to Section 160.5(b)4D: Rooms that have a total glazing area of less than 24 square feet, or parking garage areas with a combined total of less than 36 square feet of glazing or opening.

Exception 6 to Section 160.5(b)4D: For parking garages, luminaires located in the daylight adaptation zone and luminaires for only dedicated ramps. Daylight adaptation zone and dedicated ramps are defined in Section 100.1.

Exception 7 to Section 160.5(b)4D: Luminaires in sidelit daylit zones in retail merchandise sales and wholesale showroom areas.

E. **Demand Responsive Controls.** See Section 110.12 for requirements for demand responsive lighting controls.

F. **Control interactions.** Each lighting control installed to comply with Section 160.5(b)4 shall permit or incorporate the functions of the other lighting controls required by this section.

i. For general lighting, the manual area control shall permit the level or amount of light provided while the lighting is on to be set or adjusted by the controls specified in Sections 160.5(b)4B, C, D, and E.

ii. The manual area control shall permit the shutoff control to turn the lighting down or off.

iii. The multi-level lighting control shall permit the automatic daylighting control to adjust the electric lighting level in response to changes in the amount of daylight in the daylit zone.

iv. The multi-level lighting control shall permit the demand responsive control to adjust the lighting during a demand response event and to return it to the level set by the multilevel control after the event.

v. The shutoff control shall permit the manual area control to turn the lighting on. If the on request occurs while an automatic time switch control would turn the lighting off, then the on request shall be treated as an override request consistent with Section160.5(c)4Ciii.

vi. The automatic daylighting control shall permit the multi-level lighting control to adjust the level of lighting.

vii. For lighting controlled by multi-level lighting controls and by occupant sensing controls that provide an automatic-on function, the controls shall provide a partial-on function that is capable of automatically activating between 50 and 70 percent of controlled lighting power.

viii. Reserved.

ix. For space-conditioning system zones serving only spaces that are required to have occupancy sensing controls as specified in Sections 160.5(b)4Cv, vi and vii, and where Table 120.1-A allows the ventilation air to be reduced to zero when the space is in occupied-standby mode, the space conditioning system shall be controlled by occupancy sensing controls as specified in Section 120.2(e)3.

TABLE 160.5-B MULTI-LEVEL LIGHTING CONTROLS AND UNIFORMITY REQUIREMENTS

Luminaire Type	Minimum Required Control Steps (percent of full rated power[1])	Uniform level of illuminance shall be achieved by:
LED luminaires and LED light source systems	Continuous dimming 10-100 percent	Continuous dimming 10-100 percent
Line-voltage sockets except GU-24	Continuous dimming 10-100 percent	Continuous dimming 10-100 percent
Low-voltage incandescent systems	Continuous dimming 10-100 percent	Continuous dimming 10-100 percent
Fluorescent luminaires	Continuous dimming 20-100 percent	Continuous dimming 20-100 percent

TABLE 160.5-B MULTI-LEVEL LIGHTING CONTROLS AND UNIFORMITY REQUIREMENTS (Continued)

GU-24 sockets rated for fluorescent ≤ 20 watts; Pin-based compact fluorescent ≤ 20 watts[2] Linear fluorescent and U-bent fluorescent ≤ 13 watts	Minimum one step between 30-70 percent	Continuous dimming; or Stepped dimming; or Switching alternate lamps in a luminaire, or Separately switching circuits in multi-circuit track with a minimum of two circuits.
Track Lighting	Minimum one step between 30-70 percent	Continuous dimming; or Stepped dimming; or Switching alternate lamps in a luminaire, or Separately switching circuits in multi-circuit track with a minimum of two circuits.
Linear fluorescent and U-bent fluorescent > 13 watts	Minimum one step in each range: 20-40 % 50-70 % 75-85 % 100 %	Stepped dimming; or Continuous dimming; or Switching alternate lamps in each luminaire, having a minimum of 4 lamps per luminaire illuminating the same area and in the same manner
Other light sources, including HID and induction	Minimum one step between 50 - 70 percent	Stepped dimming; or Continuous dimming; or Switching alternate lamps in each luminaire, having a minimum of 2 lamps per luminaire, illuminating the same area and in the same manner.

1. Full rated input power of driver, ballast and lamp, corresponding to maximum ballast factor
2. Includes only pin based lamps: twin tube, multiple twin tube, and spiral lamps

(c) **Outdoor lighting and control equipment.** Multifamily buildings shall comply with the applicable requirements of Sections 160.5(c)1 through 160.5(c)2.

1. **Luminaire shielding requirements.** All outdoor luminaires of 6,200 initial luminaire lumens or greater shall comply with Backlight, Uplight, and Glare (BUG) (in accordance with ANSI/IES TM-15-20, Annex A) requirements in accordance with Title 24, Part 11, Section 5.106.8.

   Exception 1 to Section 160.5(c)1: Signs.

   Exception 2 to Section 160.5(c)1: Lighting for building facades, public monuments, public art, statues and vertical surfaces of bridges.

   Exception 3 to Section 160.5(c)1: Lighting not permitted by a health or life safety statute, ordinance or regulation to be a cutoff luminaire.

   Exception 4 to Section 160.5(c)1: Temporary outdoor lighting**.**

Exception 5 to Section 160.5(c)1: Replacement of existing pole mounted luminaires in hardscape areas meeting all of the following conditions:

A. Where the existing luminaire does not meet the luminaire BUG requirements in Section 160.5(c)1; and

B. Spacing between existing poles is greater than six times the mounting height of the existing luminaires; and

C. Where no additional poles are being added to the site; and

D. Where new wiring to the luminaires is not being installed; and

E. Provided that the connected lighting power wattage is not increased.

Exception 6 to Section 160.5(c)1: Luminaires that illuminate the public right of way, including publicly maintained or utility-maintained roadways, sidewalks and bikeways.

Exception 7 to Section 160.5(c)1: Outdoor lighting attached to a multifamily building and separately controlled from the inside of a dwelling unit.

2. **Controls for outdoor lighting.** Outdoor lighting shall be independently controlled from other electrical loads, and the controls for outdoor lighting shall meet the following functional requirements:

Exception 1 to Section 160.5(c)2: Outdoor lighting not permitted by a health or life safety statute, ordinance or regulation to be turned OFF or reduced.

Exception 2 to Section 160.5(c)2: Lighting in tunnels required to be illuminated 24 hours per day and 365 days per year.

A. **Daylight availability.** All installed outdoor lighting shall be controlled by a photo control, astronomical time-switch control or other control capable of automatically shutting OFF the outdoor lighting when daylight is available.

B. **Automatic scheduling controls.**

i. Automatic scheduling controls shall be installed for all outdoor lighting. Automatic scheduling controls may be installed in combination with motion sensing controls or other outdoor lighting controls.

ii. Automatic scheduling controls shall be capable of reducing the outdoor lighting power by at least 50 percent and no more than 90 percent, and separately capable of turning the lighting OFF, during scheduled unoccupied periods.

iii. Automatic scheduling controls shall allow scheduling of a minimum of two nighttime periods with independent lighting levels, and may include an override function that turns lighting ON during its scheduled dim or OFF state for no more than two hours when an override is initiated.

C. **Motion sensing controls**.

i. Motion sensing controls shall be installed for the following luminaires. Motion sensing controls may be installed for other outdoor lighting and in combination with other outdoor lighting controls:

a. Outdoor luminaires other than those providing building façade, ornamental hardscape or outdoor dining lighting, where the bottom of the luminaire is mounted 24 feet above grade or lower; and

b. Outdoor wall-mounted luminaires installed for general hardscape parking lot lighting, located within one mounting height of a parking space, mounted 24 feet above grade or lower.

ii. Motion sensing controls shall be capable of reducing the outdoor lighting power of each controlled luminaire by at least 50 percent and no more than 90 percent, and separately capable of turning the luminaire OFF, during unoccupied periods.

iii. Motion sensing controls shall be capable of reducing the lighting to its dim or OFF state no longer than 15 minutes after the area has been vacated, and of returning the lighting to its ON state when the area becomes occupied.

iv. No more than 1,500 watts of lighting power shall be controlled by a single sensor or as a single zone.

Exception 1 to Section 160.5(c)2C: Luminaires with a maximum rated wattage of 40 watts each are not required to have motion sensing controls.

Exception 2 to Section 160.5(c)2C: Applications listed as exceptions to Section 170.2(e)2A are not required to have motion sensing controls.

Exception 3 to Section 160.5(c)2C: Lighting subject to a health or life safety statute, ordinance or regulation may have a minimum time-out period longer than 15 minutes or a minimum dimming level above 50 percent when necessary to comply with the applicable law.

(d) **Sign lighting controls.** All sign lighting shall meet the requirements below as applicable:

1. **Indoor signs.** All indoor sign lighting other than exit sign lighting shall be controlled with an automatic time-switch control or astronomical time-switch control.
2. **Outdoor signs.** Outdoor sign lighting shall meet the following requirements as applicable:
   A. All outdoor sign lighting shall be controlled with a photocontrol in addition to an automatic time-switch control, or an astronomical time-switch control.

      Exception to Section 160.5(d)2A: Outdoor signs in tunnels, and signs in large permanently covered outdoor areas that are intended to be continuously lit, 24 hours per day and 365 days per year.

   B. All outdoor sign lighting that is ON both day and night shall be controlled with a dimmer that provides the ability to automatically reduce sign lighting power by a minimum of 65 percent during nighttime hours. Signs that are illuminated at night and for more than 1 hour during daylight hours shall be considered ON both day and night.

      Exception to Section 160.5(d)2B: Outdoor signs in tunnels and large covered areas that are intended to be illuminated both day and night.
3. **Demand Responsive Electronic Message Center (EMC) control.** See Section 110.12 for requirements for demand responsive EMC controls.

(e) **Lighting control acceptance and installation certificate requirement.** Multifamily common **use** areas shall comply with the applicable requirements of Sections 160.5(e)1 through 160.5(e)3.

1. **Lighting control acceptance requirements.** Before an occupancy permit is granted, indoor and outdoor lighting controls serving the building, area or site and installed to comply with Section 160.5(b)4D, 160.5(b)4C, 160.5(b)4E, 160.5(c)2 or 170.2(e)1Aiij shall be certified as meeting the Acceptance Requirements for Code Compliance as specified by Reference Nonresidential Appendix NA7.6 and NA7.8. A Certificate of Acceptance shall be submitted to the enforcement agency under Section 10-103(a) of Part 1 that the equipment and systems meet the acceptance requirements:
   A. Reserved;
   B. Reserved;
   C. Automatic daylight controls shall be tested in accordance with Reference Nonresidential Appendix NA7.6.1;
   D. Lighting shut-OFF controls shall be tested in accordance with Reference Nonresidential Appendix NA7.6.2;
   E. Demand responsive lighting controls shall be tested in accordance with Reference Nonresidential Appendix NA7.6.3; and
   F. Outdoor lighting controls shall be tested in accordance with Reference Nonresidential Appendix NA7.8; and
   G. Lighting systems receiving the Institutional Tuning Power Adjustment Factor shall be tested in accordance with Reference Nonresidential Appendix NA7.6.4.
   H. Demand responsive controls required to control controlled receptacles shall be tested in accordance with Reference Nonresidential Appendix NA7.6.5.
2. **Lighting control installation certificate requirements.** To be recognized for compliance with Part 6, an Installation Certificate shall be submitted in accordance with Section 10-103(a) for any lighting control system, energy

management control system, interlocked lighting system, lighting power adjustment factor, or additional wattage available for a videoconference studio, in accordance with the following requirements, as applicable:

A. Certification that when a lighting control system is installed to comply with lighting control requirements in Part 6, it complies with the applicable requirements of Section 110.9 and complies with Reference Nonresidential Appendix NA7.7.1.

B. Certification that when an energy management control system is installed to function as a lighting control required by Part 6, it functionally meets all applicable requirements for each application for which it is installed, in accordance with Sections 110.9, 160, 170 and 180, and complies with Reference Nonresidential Appendix NA7.7.2.

C. Certification that interlocked lighting systems used to serve an approved area comply with Section 170.2(e)2A and comply with Reference Nonresidential Appendix NA7.7.4.

D. Certification that lighting controls installed to earn a lighting Power Adjustment Factor (PAF) comply with Section 170.2(e)2B and comply with Reference Nonresidential Appendix NA7.7.5.

E. Reserved.

3. When certification is required by Title 24, Part 1, Section 10-103.1, the acceptance testing specified by Section 160.5(e) shall be performed by a Certified Lighting Controls Acceptance Test Technician (CLCATT). If the CLCATT is operating as an employee, the CLCATT shall be employed by a Certified Lighting Controls Acceptance Test Employer. The CLCATT shall disclose on the Certificate of Acceptance a valid CLCATT certification identification number issued by an approved Acceptance Test Technician Certification Provider. The CLCATT shall complete all Certificate of Acceptance documentation in accordance with the applicable requirements in Section 10-103(a)4.

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8, and 25943, Public Resources Code.

SECTION 160.6 – MANDATORY REQUIREMENTS FOR ELECTRIC POWER DISTRIBUTION SYSTEMS

Multifamily buildings shall comply with the applicable requirements of Sections 160.6(a) through 160.6(e).

(a) **Service electrical metering**. Each electrical service or feeder that provides power to the common use areas (interior and exterior) shall have a permanently installed metering system that measures electrical energy use in accordance with Table 160.6-A.

Exception to **Section 160.6(a)**: Service or feeder for which the utility company provides a metering system for the multifamily building that indicates instantaneous kW demand and kWh for a utility-defined period.

TABLE 160.6-A MINIMUM REQUIREMENTS FOR METERING OR SUBMETERING OF ELECTRICAL LOAD

Metering Functionality	Electrical Services[1] rated 50 kVA or less	Electrical Services[1] rated more than 50kVA and less than or equal to 250 kVA	Electrical Services[1] rated more than 250 kVA and less than or equal to 1000kVA	Electrical Services[1] rated more than 1000kVA
Instantaneous (at the time) kW demand	Required	Required	Required	Required
Historical peak demand (kW)	Not required	Not required	Required	Required
Tracking kWh for a user-definable period.	Required	Required	Required	Required
kWh per rate period	Not required	Not required	Not required	Required

[1] *"Electrical Services" applies to the building service-entrance rating or to the submetering service. For a building with submetering, this applies to the submetering service size to the common use areas.*

(b) **Separation of electrical circuits for electrical energy monitoring**. Electrical power distribution systems shall be designed so that measurement devices can monitor the electrical energy usage of load types according to Table 160.6-B.

Exception 1 to Section 160.6(b): For each separate load type, up to 10 percent of the connected load may be of any type.

Exception 2 to Section 160.6(b): Submetered electrical power distribution systems that provide power to dwelling units.

TABLE 160.6-B MINIMUM REQUIREMENTS FOR SEPARATION OF ELECTRICAL LOAD

Electrical Load Type	Electrical Services[1] rated 50 kVA or less	Electrical Services[1] rated more than 50kVA and less than or equal to 250 kVA	Electrical Services[1] rated more than 250 kVA and less than or equal to 1000kVA	Electrical Services[1] rated more than 1000kVA
Lighting including exit and egress lighting and exterior lighting	Not required	All lighting in aggregate	All lighting disaggregated by floor, type or area	All lighting disaggregated by floor, type or area
HVAC systems and components including chillers, fans, heaters, furnaces, package units, cooling towers, and circulation pumps associated with HVAC	Not required	All HVAC in aggregate	All HVAC in aggregate and each HVAC load rated at least 50 kVA	All HVAC in aggregate and each HVAC load rated at least 50kVA
Domestic and service water system pumps and related systems and components	Not required	All loads in aggregate	All loads in aggregate	All loads in aggregate
Plug load including appliances rated less than 25 kVA	Not required	All plug load in aggregate Groups of plug loads exceeding 25 kVA connected load in an area less than 5000 sf	All plug load separated by floor, type or area Groups of plug loads exceeding 25 kVA connected load in an area less than 5000 sf	All plug load separated by floor, type or area All groups of plug loads exceeding 25 kVA connected load in an area less than 5000 sf
Elevators, escalators, moving walks, and transit systems	Not required	All loads in aggregate	All loads in aggregate	All loads in aggregate
Renewable power source (net or total)	Each group	Each group	Each group	Each group
Loads associated with renewable power source	Not required	All loads in aggregate	All loads in aggregate	All loads in aggregate
Charging stations for electric vehicles	All loads in aggregate	All loads in aggregate	All loads in aggregate	All loads in aggregate

[1] "Electrical Services" applies to the building service-entrance rating or to the submetering service. For a building with submetering, this applies to the submetering service size to the common use area.

(c) **Voltage drop**. The maximum combined voltage drop on both installed feeder conductors and branch circuit conductors to the farthest connected load or outlet shall not exceed 5 percent.

Exception to Section 160.6(c): Voltage drop permitted by California Electrical Code Sections 647.4, 695.6 and 695.7.

(d) **Circuit controls for 120-volt receptacles and controlled receptacles**. In all common areas, both controlled and uncontrolled 120 volt receptacles shall be provided in office areas, lobbies, conference rooms, kitchen areas in office spaces, and copy rooms. Controlled receptacles shall meet the following requirements, as applicable:

1. Install a control capable of automatically shutting OFF the controlled receptacles when the space is typically unoccupied, either at the receptacle or circuit level. When an automatic time switch control is installed it shall incorporate an override control that allows the controlled receptacle to remain ON for no more than 2 hours when an override is initiated and an automatic holiday "shut-OFF" feature that turns OFF all loads for at least 24 hours and then resumes the normally scheduled operation. Countdown timer switches shall not be used to comply with the automatic time switch control requirements; and
2. Install at least one controlled receptacle within 6 feet from each uncontrolled receptacle, or install a splitwired receptacle with at least one controlled and one uncontrolled receptacle. Where receptacles are installed in

modular furniture in open office areas, at least one controlled receptacle shall be installed at each workstation; and

3. Provide a permanent and durable marking for controlled receptacles or circuits to differentiate them from uncontrolled receptacles or circuits; and

NOTE: A hardwired power strip controlled by an occupant sensing control may be used to comply with Section 160.6(d). Plug-in strips and other plug-in devices shall not be used to comply with the requirements of this section.

Exception 1 to Section 160.6(d): Receptacles that are only for the following purposes:

A. Receptacles specifically for refrigerators and water dispensers in kitchen areas.

B. Receptacles located a minimum of six feet above the floor that are specifically for clocks.

C. Receptacles for network copiers, fax machines, A/V and data equipment other than personal computers in copy rooms.

D. Receptacles on circuits rated more than 20 amperes.

E. Receptacles connected to an uninterruptible power supply (UPS) that are intended to be in continuous use, 24 hours per day/365 days per year, and are marked to differentiate them from other uncontrolled receptacles or circuits.

Exception 2 to Section 160.6(d): Receptacles in common use areas providing shared provisions for living, eating, cooking or sanitation to dwelling units that would otherwise lack these provisions.

(e) **Demand responsive controls and equipment.** See Section 110.12 for requirements for demand responsive controls and equipment.

NOTE: Definitions of terms and phrases in Section 160.6 are determined as specified in Section 100.1(b). Terms and phrases not found in Section 100.1(b) shall be defined as specified in Title 24, Part 3, Article 100 of the California Electrical Code.

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8 and 25943, Public Resources Code.

SECTION 160.7 – MANDATORY REQUIREMENTS FOR COVERED PROCESSES

(a) **Elevators.** Elevators shall meet the requirements of **Section** 120.6(f).

(b) **Pool and spa systems.** Pool and spa systems available to multiple tenants or to the public shall comply with the applicable requirements of Section 110.4. Pool and spa systems installed for exclusive use by a single tenant shall comply with the applicable requirements of Section 150.0(p).

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8 and 25943, Public Resources Code.

SECTION 160.8 – MANDATORY REQUIREMENTS FOR SOLAR READY BUILDINGS

(a) **Solar ready buildings**. Newly constructed multifamily buildings shall meet the requirements of Section 110.10 applicable to the building project.

SECTION 160.9 – MANDATORY REQUIREMENTS FOR ELECTRIC READY BUILDINGS

(a) **Heat pump space heater ready.** Systems using gas or propane furnaces to serve individual dwelling units shall include the following:

1. A dedicated 240 volt branch circuit wiring shall be installed within 3 feet from the furnace and accessible to the furnace with no obstructions. The branch circuit conductors shall be rated at 30 amps minimum. The blank cover shall be identified as "240V ready." All electrical components shall be installed in accordance with the *California Electrical Code*.

2. The main electrical service panel shall have a reserved space to allow for the installation of a double pole circuit breaker for a future heat pump space heater installation. The reserved space shall be permanently marked as "For Future 240V use."

(b) **Electric cooktop ready.** Systems using gas or propane cooktops to serve individual dwelling units shall include the following:

1. A dedicated 240 volt branch circuit wiring shall be installed within 3 feet from the cooktop and accessible to the cooktop with no obstructions. The branch circuit conductors shall be rated at 50 amps minimum. The blank cover shall be identified as "240V ready." All electrical components shall be installed in accordance with the *California Electrical Code*.

2. The main electrical service panel shall have a reserved space to allow for the installation of a double pole circuit breaker for a future electric cooktop installation. The reserved space shall be permanently marked as "For Future 240V use."

(c) **Electric clothes dryer ready.** Clothes dryer locations with gas or propane plumbing shall include the following:

1. Systems serving individual dwelling units shall include:

   A. A dedicated 240 volt branch circuit wiring shall be installed within 3 feet from the clothes dryer location and accessible to the clothes dryer location with no obstructions. The branch circuit conductors shall be rated at 30 amps minimum. The blank cover shall be identified as "240V ready." All electrical components shall be installed in accordance with the *California Electrical Code*.

   B. The main electrical service panel shall have a reserved space to allow for the installation of a double pole circuit breaker for a future electric clothes dryer installation. The reserved space shall be permanently marked as "For Future 240V use."

2. Systems in common use areas shall include:

   A. Conductors or raceway shall be installed with termination points at the main electrical panel, via subpanels panels if applicable, to a location no more than 3 feet from each gas outlet or a designated location of future electric replacement equipment. Both ends of the conductors or raceway shall be labelled "Future 240V Use." The conductors or raceway and any intervening subpanels, panelboards, switchboards and busbars shall be sized to meet the future electric power requirements, at the service voltage to the point at which the conductors serving the building connect to the utility distribution system, as specified below. The capacity requirements may be adjusted for demand factors in accordance with the California Electric Code. Gas flow rates shall be determined in accordance with the California Plumbing Code. Capacity shall be one of the following:

      i. 24 amps at 208/240 volts per clothes dryer;

      ii. 2.6 kVA for each 10,000 Btu per hour of rated gas input or gas pipe capacity; or

iii. The electrical power required to provide equivalent functionality of the gas-powered equipment as calculated and documented by the responsible person associated with the project.

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8 and 25943, Public Resources Code.

SUBCHAPTER 11
MULTIFAMILY BUILDINGS - PERFORMANCE AND PRESCRIPTIVE COMPLIANCE APPROACHES

SECTION 170.0 – GENERAL

Multifamily buildings shall comply with the applicable requirements of Sections 170.0 through 170.2. Sections 170.0 through 170.2 apply to dwelling units and common use areas in multifamily buildings. Nonresidential occupancies in mixed occupancy buildings shall comply with nonresidential requirements in Sections 120, 130, 140 and 141.

(a) Multifamily buildings shall meet all of the following:

1. The applicable requirements of Sections 110.0 through 110.10.
2. The applicable requirements of Section 160.0 (mandatory features).
3. Either the performance standards Section 170.1 or the prescriptive standards Section 170.2 set forth in this subchapter for the climate zone in which the building is located. Climate zones are shown in Reference Joint Appendix JA2—Weather/Climate Data.

   Exception to Section 170.0 (a)3: If a single development falls in more than one climate zone, all buildings in the subdivision or tract may be designed to meet the performance or prescriptive standards for the climate zone that contains 50 percent or more of the dwelling units.

   NOTE: The Commission periodically updates, publishes and makes available to interested persons and local enforcement agencies precise descriptions of the climate zones, as specified in Reference Joint Appendix JA2—Weather/Climate Data.

NOTE: The requirements of Sections 170.1(a) through 170.2(e) apply to newly constructed buildings and Sections 180.1 and 180.2 specify changes to the requirements of Sections 170.1(a) through 170.2(e) that apply to additions or alterations.

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8 and 25943, Public Resources Code.

SECTION 170.1 – PERFORMANCE APPROACH

A building complies with the performance approach if the energy budget calculated for the proposed design building under Subsection (b) is no greater than the energy budget calculated for the standard design building under Subsection (a).

(a) **Energy budget for the standard design building.** The energy budget for the standard design building is expressed in terms of source energy and time-dependent valuation (TDV) energy, and they are determined by applying the mandatory and prescriptive requirements to the proposed design building. The source energy budget and the TDV energy budget is the sum of the TDV energy for space-conditioning, indoor lighting, mechanical ventilation, photovoltaic (PV) and battery storage system, service water heating and covered process loads.

(b) **Energy budget for the proposed design building.** The energy budget for a proposed design building is expressed in terms of source energy and time-dependent valuation (TDV) energy, and they are determined by calculating the source energy and TDV energy for the proposed design building. The source energy budget and the TDV energy budget is the sum of the energy for space-conditioning, indoor lighting, mechanical ventilation, photovoltaic (PV) and battery storage system, and service water heating and covered process loads. The proposed building shall separately comply with the source energy budget and the TDV energy budget.

Exception to Section 170.1(b): A community shared solar electric generation system, or other renewable electric generation system, and/or community shared battery storage system, that provides dedicated power, utility energy reduction credits or payments for energy bill reductions to the permitted building and is approved by the Energy Commission as specified in Title 24, Part 1, Section 10-115, may offset part or all of the solar electric generation system or battery storage system TDV energy required to comply with the standards, as calculated according to methods established by the Commission in the Nonresidential ACM Reference Manual.

(c) **Calculation of energy budget.** The TDV energy for both the standard design building and the proposed design building shall be computed by compliance software certified for this use by the Commission. The processes for compliance software approval by the Commission are documented in the ACM Approval Manual.

(d) **Compliance demonstration requirements for performance standards.**

1. Certificate of Compliance and Application for a Building Permit. The application for a building permit shall include documentation pursuant to Sections 10-103(a)1 and 10-103(a)2 that demonstrates, using an approved calculation method, that the building has been designed so that its source energy budget and TDV energy budget do not exceed the standard design for the applicable climate zone.
2. Field verification of individual dwelling unit systems. When performance of installed features, materials, components, manufactured devices or systems above the minimum specified in Section 170.2 is necessary for the building to comply with Section 170.1, or is necessary to achieve a more stringent local ordinance, field verification shall be performed in accordance with the applicable requirements in the following subsections, and the results of the verification(s) shall be documented on applicable Certificates of Installation pursuant to Section 10-103(a)3 and applicable Certificates of Verification pursuant to Section 10-103(a)5.
    A. EER/EER2/SEER/SEER2/CEER/HSPF/HSPF2 Rating. When performance compliance requires installation of a space-conditioning system with a rating that is greater than the minimum rating required by Table 170.2-K or specified for the standard design, the installed system shall be field verified in accordance with the procedures specified in the applicable sections of Reference Residential Appendix RA3.
    B. Variable capacity heat pump (VCHP) compliance option. When performance compliance requires installation of a heat pump system that meets all the requirements of the VCHP compliance option specified in the ACM Reference Manual, the system shall be field verified in accordance with the procedures in Reference Residential Appendix RA3.4.4.3.
    C. Low leakage air handler. When performance compliance requires installation of a low leakage air-handling unit, the installed air handling unit shall be field verified in accordance with the procedures specified in Reference Residential Appendix RA3.1.4.3.9.

D. Reserved.

E. Heat pump—rated heating capacity. When performance compliance requires installation of a heat pump system, the heating capacity values at 47°F and 17°F shall be field verified in accordance with the procedures specified in Reference Residential Appendix RA3.4.4.2.

F. Whole-house fan. When performance compliance requires installation of a whole-house fan, the whole-house fan ventilation airflow rate and fan efficacy shall be field verified in accordance with the procedures in Reference Residential Appendix RA3.9.

G. Central fan ventilation cooling system. When performance compliance requires installation of a central fan ventilation cooling system, the installed system shall be field verified in accordance with the procedures in Reference Residential Appendix RA3.3.4.

H. Dwelling unit enclosure air leakage. When performance compliance requires a building enclosure leakage rate that is lower than the standard design, the building enclosure shall be field verified in accordance with the procedures specified in Reference Residential Appendix RA3.8.

I. Quality insulation installation (QII). When performance compliance requires field verification of QII, the building insulation system shall be field verified in accordance with the procedures in Reference Residential Appendix RA3.5.

J. Precooling. When performance compliance requires field verification of the installation and programming of a precooling thermostat, it shall be field verified in accordance with the procedures in Reference Residential Appendix RA3.4.5.

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8, and 25943, Public Resources Code.

SECTION 170.2 – PRESCRIPTIVE APPROACH

Multifamily buildings, including both dwelling units and common use areas, that comply with the prescriptive standards shall be designed, constructed and equipped to meet all of the requirements for the appropriate climate zone shown in Table 170.2-A. In Table 170.2-A, NA (not allowed) means that feature is not permitted in a particular climate zone and NR (no requirement) means that there is no prescriptive requirement for that feature in a particular climate zone. Installed components shall meet the following requirements:

(a) **Envelope component requirements**.

1. **Exterior roofs and ceilings**. Exterior roofs and ceilings shall comply with each of the applicable requirements in this subsection:

   A. Roofing products. All roofing products shall meet the requirements of Section 110.8 and the applicable minimum aged solar reflectance and thermal emittance requirements of Table 170.2-A.

      Exception 1 to Section 170.2(a)1A: Building integrated photovoltaic panels and building integrated solar thermal panels are exempt from the minimum requirements for solar reflectance and thermal emittance or SRI.

      Exception 2 to Section 170.2(a)1A: Roof constructions with a weight of at least 25 lb/ft² are exempt from the minimum requirements for solar reflectance and thermal emittance or SRI.

   B. Roof insulation. roofs shall have an overall assembly U-factor no greater than the applicable value in Table 170.2-A, meeting i, ii, iii or iv below. Where required by Sections 110.8 and 160.1(a), insulation shall be placed in direct contact with a continuous roof or drywall ceiling.

      i. Option A: Reserved.

      ii. Option B: A minimum R-value of insulation installed between the roof rafters in contact with the roof deck and an additional layer of ceiling insulation located between the attic and the conditioned space when meeting Section 170.2(c)3Biia; or

      iii. Option C: A minimum R-value of ceiling insulation located between the attic and the conditioned space when meeting Section 170.2(c)3Biib.

      iv. Option D: A minimum U-factor for roof assemblies above conditioned space without attic space.

   C. Radiant barrier. A radiant barrier required in Table 170.2-A shall meet the requirements specified in Section 110.8(j) and shall meet the installation criteria specified in Reference Residential Appendix RA4**.**

2. **Wall insulation.**

   A. Exterior walls shall have an overall assembly U-factor no greater than the applicable value in Table 170.2-A.

   B. Demising walls shall meet the requirements of Section 160.1(b)7. Vertical windows in demising walls between conditioned and unconditioned spaces shall have an area-weighted average U-factor no greater than the applicable value in Table 170.2-A.

3. **Fenestration.**

   A. Vertical fenestration and glazed doors in exterior walls shall comply with Subsections i, ii and iii:

      i. Percent fenestration area shall be limited in accordance with the applicable requirements of a and b below:

         a. A total fenestration area no greater than 20 percent of the conditioned floor area; and

         b. A total fenestration area no greater than 40 percent of the gross exterior wall area.

         Note: Demising walls are not exterior walls, and therefore demising wall area is not part of the gross exterior wall area, and fenestration in demising walls is not part of the fenestration area limitation.

ii. Fenestration properties. Installed fenestration products, including glazed doors, shall have an area-weighted average U-factor, Relative Solar Heat Gain Coefficient (RSHGC), and Visual Transmittance (VT) meeting the applicable fenestration values in Table 170.2-A and shall be determined in accordance with Sections 110.6(a)2 and 110.6(a)3.

Vertical fenestration in demising walls between conditioned and unconditioned spaces is only required to comply with the area-weighted average U-factor requirement in Table 170.2-A.

Exception 1 to Section 170.2(a)3Aii: For each dwelling unit, up to 3 square feet of new glazing area installed in doors shall not be required to meet the U-factor and RSHGC requirements of Table 170.2-A.

Exception 2 to Section 170.2(a)3Aii: For fenestration containing chromogenic type glazing:

a. The lower-rated labeled U-factor and SHGC shall be used with automatic controls to modulate the amount of solar gain and light transmitted into the space in multiple steps in response to daylight levels or solar intensity;

b. Chromogenic glazing shall be considered separately from other fenestration; and

c. Area-weighted averaging with other fenestration that is not chromatic shall not be permitted and shall be determined in accordance with Section 110.6(a).

Exception 3 to Section 170.2(a)3Aii: For dwelling units containing unrated site-built fenestration that meets the maximum area restriction, the U-factor and SHGC can be determined in accordance with Nonresidential Reference Appendix NA6 or using default values in Table 110.6-A and Table 110.6-B.

Exception 4 to Section 170.2(a)3Aii: Fenestration in dwelling units of buildings that are three habitable stories or fewer in Climate Zones 1, 3, 5 and 16 is not required to comply with the RSHGC requirements.

Exception 5 to Section 170.2(a)3Aii: Fenestration in dwelling units of buildings that are three habitable stories or fewer is not required to comply with the VT requirements.

iii. Shading. Where Table 170.2-A requires a maximum RSHGC, the requirements shall be met with an area-weighted average RSHGC excluding the effects of interior shading, no greater than the applicable value in Table 170.2-A.

For the purposes of this paragraph, the RSHGC of a vertical window is:

a. The solar heat gain coefficient of the window; or

b. Relative solar heat gain coefficient is calculated using Equation 170.2-A, if the window has an overhang that extends beyond each side of the window jamb by a distance equal to the overhang's horizontal projection.

Exception 1 to Section 170.2(a)3Aiiib: An area-weighted average relative solar heat gain coefficient of 0.56 or less shall be used for windows:

I. That are in the first story of exterior walls that form a display perimeter; and

II. For which codes restrict the use of overhangs to shade the windows.

Exception 2 to Section 170.2(a)3Aiiib: For vertical glazing containing chromogenic type glazing:

I. the lower-rate labeled RSHGC shall be used with automatic controls to modulate the amount of heat flow into the space in multiple steps in response to daylight levels or solar intensity; and

II. chromogenic glazing shall be considered separately from other glazing; and

III. area-weighted averaging with other glazing that is not chromogenic shall not be permitted.

Note: Demising walls are not exterior walls, and therefore fenestration in demising walls is not subject to SHGC requirements.

$RSHGC = SHGC \times [1 + a \times (2.72^{-PF} - 1) \times (\sin(b \times Az) + c)]$ (Equation 170.2-A)

WHERE:

	a	b	c
Overhang	0.150	0.008727	5.67
Exterior Horizontal Slat	0.144	0.008727	5.13

RSHGC = Relative Solar Heat Gain Coefficient.
SHGC = Solar Heat Gain Coefficient of the vertical fenestration.
Az = Azimuth of the vertical fenestration I degrees.
PF = Projection factor as calculated by Equation 140.3-D.

iv. Vertical fenestration shall have an area-weighted average Visible Transmittance (VT) no less than the applicable value in Table 170.2-A, or Equation 170.2-B, as applicable.

Exception 1 to Section 170.2(a)3Aiv: When the window's primary and secondary sidelit daylit zones are completely overlapped by one or more skylit daylit zones, then the window need not comply with Section 170.2(a)3Aivw.

Exception 2 to Section 170.2(a)3Aiv: If the window's VT is not within the scope of NFRC 200 or ASTM E972, then the VT shall be calculated according to Reference Nonresidential Appendix NA6.

Exception 3 to Section 170.2(a)3Aiv: For vertical windows containing chromogenic type glazing:

a. The higher rated labeled VT shall be used with automatic controls to modulate the amount of light transmitted into the space in multiple steps in response to daylight levels or solar intensity;

b. Chromogenic glazing shall be considered separately from other glazing; and

c. Area-weighted averaging with other glazing that is not chromogenic shall not be permitted.

Exception 4 to Section 170.2(a)3iv: Fenestration in dwelling units of buildings that are three habitable stories or fewer is not required to comply with the VT requirements.

NOTE: Demising walls are not exterior walls, and therefore windows in demising walls are not subject to VT requirements.

$VT \geq 0.11/WWR$ (Equation 170.2-B)

where:

WWR = Window Wall Ratio, the ratio of (i) the total window area of the entire building to (ii) the total gross exterior wall area of the entire building. If the WWR is greater than 0.40, then 0.40 shall be used as the value for WWR in Equation 170.2-B.

VT = Visible Transmittance of framed window.

B. **Skylights shal**l:

i. Have an area no greater than 5 percent of the gross exterior roof area Skylight Roof Ratio (SRR); and

Exception 1 to Section 170.2(a)3Bi: Buildings with an atrium over 55 feet high shall have a skylight area no greater than 10 percent of the gross exterior roof area.

ii. Have an area-weighted performance rating U-factor no greater than the applicable value in Table 170.2-A.

Exception 2 to Section 170.2(a)3Bii: For each dwelling unit up to 16 square feet of new skylight area with a maximum U-factor of 0.55 and a maximum SHGC of 0.30.

iii. Solar heat gain coefficient. Have an area-weighted performance rating solar heat gain coefficient no greater than the applicable value in Table 170.2-A.

Exception to Sections 170.2(a)3Bii and 170.2(a)3Biii: For skylights containing chromogenic type glazing:

a. the lower-rated labeled SHGC shall be used with automatic controls to modulate the amount of heat flow into the space in multiple steps in response to daylight levels or solar intensity; and

b. chromogenic glazing shall be considered separately from other glazing; and

c. area-weighted averaging with other glazing that is not chromogenic shall not be permitted.

iv. Haze value. Have a glazing material or diffuser that has a measured haze value greater than 90 percent, determined according to ASTM D1003 or other test method approved by the Energy Commission.

Exception to Section 170.2(a)3Biv: Skylights designed and installed to exclude direct sunlight entering the occupied space by the use of fixed or automated baffles or the geometry of the skylight and light well.

4. All exterior doors, excluding glazed doors, that separate conditioned space from unconditioned space or from ambient air shall have a U-factor not greater than the applicable value in Table 170.2-A. Glazed doors must comply with the requirements of Section 170.2(a)3A.

Exception to Section 170.2(a)4: Swinging doors that are required to have fire protection are not required to meet the applicable door value in Table 170.2-A.

5. Floors shall meet the following requirements:

A. Raised floors shall be insulated such that the floor assembly has an assembly U-factor equal to or less than shown in Table 170.2-A, or shall be insulated between wood framing with insulation having an R-value equal to or greater than shown in Table 170.2-A.

B. All buildings with three habitable stories or fewer shall have slab floor perimeter insulation installed with a U-factor equal to or less than or R-value equal to or greater than shown in Table 170.2-A. The minimum depth of concrete slab floor perimeter insulation shall be 16 inches or the depth of the footing of the building, whichever is less.

Exception to Section 170.2(a)5: Raised-floor insulation may be omitted if the foundation walls are insulated to meet the wall insulation minimums shown in Table 170.2-A.

6. All buildings up to three habitable stories shall comply with the quality insulation installation (QII) requirements shown in Table 170.2-A. When QII is required, insulation installation shall meet the criteria specified in Reference Appendix RA3.5.

Exception to Section 170.2(a): The insulation requirements of Table 170.2-A and Table 170.2-B may be met by ceiling, roof deck, wall or floor assemblies that meet the required maximum U-factors using a U-factor calculation method that considers the thermal effects of all elements of the assembly and is approved by the Executive Director.

TABLE 170.2-A ENVELOPE COMPONENT PACKAGE – Multifamily Standard Building Design

Footnote requirements to TABLE 170.2-A:

1. Install the specified R-value with an air space present between the roofing and the roof deck. Such as standard installation of concrete or clay tile.
2. R-values shown for below roof deck insulation are for wood-frame construction with insulation installed between the framing members. Alternatives including insulation above rafters or above roof deck shall comply with the performance standards.
3. Assembly U-factors for exterior framed walls can be met with cavity insulation alone or with continuous insulation alone, or with both cavity and continuous insulation that results in an assembly U-factor equal to or less than the U-factor shown. Use Reference Joint Appendices JA4 Table 4.3.1, 4.3.1(a), or Table 4.3.4 to determine alternative insulation products to be less than or equal to the required maximum U-factor.
4. Mass wall has a heat capacity greater than or equal to 7.0 Btu/h-ft^2.
5. Product must be certified to meet the North American Fenestration Standard/Specification for an Architectural Window (AW).
6. Glazed doors must meet the fenestration requirements.

(b) **Minimum daylighting requirement for large enclosed spaces.** In Climate Zones 2 through 15, conditioned enclosed spaces and unconditioned enclosed spaces that are greater than 5,000 ft² and that are directly under a roof with ceiling heights greater than 15 feet shall meet the following requirements:

1. A combined total of at least 75 percent of the floor area, as determined in building floor plan (drawings) view, shall be within one or more of the following:
   A. Primary sidelight daylight zone in accordance with Section 160.5(b)4Dib, or
   B. The total floor area in the space within a horizontal distance of 0.7 times the average ceiling height from the edge of rough opening of skylights.
2. All skylit daylit zones and primary sidelit daylit zones shall be shown on building plans.
3. General lighting in daylit zones shall be controlled in accordance with Section 160.5(b)4D.
4. The total skylight area is at least 3 percent of the total floor area in the space within a horizontal distance of 0.7 times the average ceiling height from the edge of rough opening of skylights; or the product of the total skylight area and the average skylight visible transmittance is no less than 1.5 percent of the total floor area in the space within a horizontal distance of 0.7 times the average ceiling height from the edge of rough opening of skylights.
5. All skylights shall have a glazing material or diffuser that has a measured haze value greater than 90 percent, tested according to ASTM D1003 (notwithstanding its scope) or another test method approved by the Commission.

Exception 1 to Section **170.2(b)**: In buildings with unfinished interiors, future enclosed spaces for which there are plans to have:

A. A floor area of less than or equal to 5,000 square feet; or
B. Ceiling heights of less than or equal to 15 feet. This exception shall not be used for S-1 or S-2 (storage), or for F-1 or F-2 (factory) occupancies.

Exception 2 to Section 170.2(b): Enclosed spaces having a designed general lighting system with a lighting power density less than 0.5 watts per square foot.

Exception 3 to Section 170.2(b): Enclosed spaces where it is documented that permanent architectural features of the building, existing structures or natural objects block direct beam sunlight on at least half of the roof over the enclosed space for more than 1500 daytime hours per year between 8 a.m. and 4 p.m.

(c) **Space-conditioning systems.** All space heating, space cooling and ventilation equipment shall comply with minimum Appliance Efficiency Regulations as specified in Sections 110.0 through 110.2 and the applicable requirements of Subsections 1 through 4.

1. Sizing and equipment selection—common use areas. Mechanical heating and mechanical cooling equipment serving common use areas of multifamily buildings shall be the smallest size, within the available options of the desired equipment line, necessary to meet the design heating and cooling loads of the building, as calculated according to Subsection 2 below.

   Exception 1 to Section 170.2(c)1: Where it can be demonstrated to the satisfaction of the enforcing agency that oversizing will not increase building TDV energy use.

   Exception 2 to Section 170.2(c)1: Standby equipment with controls that allow the standby equipment to operate only when the primary equipment is not operating.

   Exception 3 to Section 170.2(c)1: Multiple units of the same equipment type, such as multiple chillers and boilers, having combined capacities exceeding the design load, if they have controls that sequence or otherwise optimally control the operation of each unit based on load.

2. **Calculations**—common use areas**.** In making equipment sizing calculations under Subsection (c)1, all of the following rules shall apply:

A. **Heating and cooling loads.** Heating and cooling system design loads shall be determined in accordance with the method in the 2017 ASHRAE Handbook, Fundamentals Volume, or as specified in a method approved by the Commission.

B. **Indoor design conditions.** Indoor design temperature and humidity conditions for comfort applications shall be determined using ASHRAE Standard 55 or the 2017 ASHRAE Handbook, Fundamentals Volume, except that winter humidification and summer dehumidification shall not be required.

C. **Outdoor design conditions.** Outdoor design conditions shall be in accordance with the design conditions from Reference Joint Appendix JA2, which is based on data from the ASHRAE Climatic Data for Region X. Heating design temperatures shall be no lower than the Heating Winter Median of Extremes values. Cooling design temperatures shall be no greater than the 0.5 percent Cooling Dry Bulb and Mean Coincident Wet Bulb values.

Exception to Section 170.2(c)2C: Cooling design temperatures for cooling towers shall be no greater than the 0.5 percent Cooling Design Wet Bulb values.

D**. Ventilation.** Outdoor air ventilation loads shall be calculated using the ventilation rates required in Section 160.2(c)3.

E**. Envelope**. Envelope heating and cooling loads shall be calculated using envelope characteristics, including square footage, thermal conductance, solar heat gain coefficient or shading coefficient, and air leakage, consistent with the proposed design.

F. **Lighting.** Lighting heating and cooling loads shall be based on actual design lighting levels or power densities as specified in Section 170.2(e)1.

G. **People.** Occupant density shall be based on the expected occupancy of the building and shall be the same as determined under Section 160.2(c)3A, if used. Sensible and latent heat gains shall be as listed in the 2017 ASHRAE Handbook—Fundamentals, Chapter 18.

H. **Process loads.** Loads caused by a process shall be based upon actual information on the intended use of the building.

I. **Miscellaneous equipment.** Equipment loads other than process loads shall be calculated using design data compiled from one or more of the following sources:

i. Actual information based on the intended use of the building; or

ii. Published data from manufacturers' technical publications or from technical societies, such as the ASHRAE Handbook, Applications Volume; or

iii. Other data based on the designer's experience of expected loads and occupancy patterns.

J. **Internal heat gains.** Internal heat gains may be ignored for heating load calculations.

K**. Safety factor.** Calculated design loads based on Sections 170.2(c)2A through K may be increased by up to 10 percent to account for unexpected loads or changes in space usage.

L. **Other loads.** Loads such as warm-up or cool-down shall be calculated from principles based on the thermal capacity of the building and its contents, the degree of setback, and desired recovery time; or may be assumed to be no more than 30 percent for heating and 10 percent for cooling of the steady-state design loads. In addition, the steady-state load may include a safety factor in accordance with Section 170.2(c)2K.

3. **Dwelling unit space-conditioning systems**.

A. **Heating** system type**.** Space-conditioning systems serving dwelling units shall meet i or ii. Systems that cannot meet the requirements of i or ii, including multi-zone systems and systems using central boilers or chillers, shall comply with the performance requirements of Section 170.1.

i. Multifamily buildings three habitable stories or fewer. For Climate Zones 1 through 15, the space-conditioning system shall be a heat pump. For Climate Zone 16, the space-conditioning system shall be an air conditioner with furnace. Additionally, balanced ventilation systems serving these dwelling units shall meet the applicable requirements of Section 170.2(c)3Bivc.

ii. Multifamily buildings four habitable stories or greater. For Climate Zones 2 through 15, the space-conditioning system shall be a heat pump. For Climate Zones 1 and 16, the space-conditioning system shall be a dual-fuel heat pump.

Exception to Section 170.2(c)3A: A supplemental heating unit may be installed in a space served directly or indirectly by a primary heating system, provided that the unit thermal capacity does not exceed 2 kW or 7,000 Btu/hr and is controlled by a time-limiting device not exceeding 30 minutes.

B. S**pace-conditioning and ventilation systems**. All space heating and space cooling equipment serving dwelling units shall comply with minimum Appliance Efficiency Regulations as specified in Sections 110.0 through 110.2 and meet all applicable requirements of Sections 160.3(b) and 170.2(c)2.

i. Refrigerant charge—systems serving individual dwelling units. When refrigerant charge verification or fault indicator display is shown as required by Table 170.2-K, the system shall comply with either Section 170.2(c), 170.2(c)3Bia or 170.2(c)3Bib:

a. Air-cooled air conditioners and air-source heat pumps, including but not limited to ducted split systems, ducted packaged systems, small duct high velocity systems and mini-split systems, shall comply with Subsections I, II and III, unless the system is of a type that cannot be verified using the specified procedures:

I. Have measurement access holes (MAH) installed according to the specifications in Reference Residential Appendix Section RA3.2.2.3; and

II. System airflow rate in accordance with Subsection A or B below shall be confirmed through field verification and diagnostic testing in accordance with all applicable procedures specified in Reference Residential Appendix Section RA3.3 or an approved alternative procedure as specified by RA1; and

A. For small duct high velocity systems, the system airflow rate shall be greater than or equal to 250 cfm per ton; or

B. For all other air-cooled air conditioner or air-source heat pump systems, the system airflow rate shall be greater than or equal to 350 cfm per ton.

III. The installer shall charge the system according to manufacturer's specifications. Refrigerant charge shall be verified according to one of the following options, as applicable:

A. The installer and rater shall perform the standard charge procedure as specified by Reference Residential Appendix Section RA3.2.2 or an approved alternative procedure as specified by RA1; or

B. The system shall be equipped with a fault indicator display (FID) device that meets the specifications of Reference Joint Appendix JA6. The installer shall verify the refrigerant charge and FID device in accordance with the procedures in Reference Residential Appendix Section RA3.4.2. The HERS Rater shall verify the FID device in accordance with the procedures in Section RA3.4.2; or

C. The installer shall perform the weigh-in charging procedure as specified by Reference Residential Appendix Section RA3.2.3.1, provided the system is of a type that can be verified using the RA3.2.2 standard charge verification procedure and RA3.3 airflow rate verification procedure or approved alternatives in RA1. The HERS Rater shall verify the charge using RA3.2.2 and RA3.3 or approved alternatives in RA1.

Exception to Section 170.2(c)3BiaI: Systems that cannot conform to the specifications for hole location in Reference Residential Appendix Figure RA3.2-1 shall not be required to provide holes as described in Figure RA3.2-1.

Exception to Section 170.2(c)3BiaII: Standard ducted systems without zoning dampers may comply with the minimum airflow rate by meeting the applicable requirements in Table 160.3-A and Table 160.3-B as confirmed by field verification and diagnostic testing in accordance with the procedures in Reference Residential Appendix Sections RA3.1.4.4 and RA3.1.4.5. The design clean-filter pressure

drop requirements of Section 160.2(b)1D for the system air filter device(s) shall conform to the requirements given in Table 160.3-A and Table 160.3-B.

Exception to Section 170.2(c)3BiaIII: When the outdoor temperature is less than 55 degrees F and the installer utilizes the weigh-in charging procedure in Reference Residential Appendix Section RA3.2.3.1 to verify the refrigerant charge, the installer may elect to utilize the HERS Rater verification procedure in Reference Residential Appendix Section RA3.2.3.2. If the HERS Rater verification procedure in Section RA3.2.3.2 is used for compliance, the system's thermostat shall conform to the specifications in Section 110.12. Ducted systems shall comply with the minimum system airflow rate requirement in Section 170.2(c)3BiaII.

b. For air-cooled air conditioners and air-source heat pumps, including but not limited to ducted split systems, ducted packaged systems, small duct high velocity systems and mini-split systems, which are of a type that cannot comply with the requirements of Section **170.2(c)3Bi:**

I. The installer shall confirm the refrigerant charge using the weigh-in charging procedure specified in Reference Residential Appendix Section RA3.2.3.1, as verified by a HERS Rater according to the procedures specified in Reference Residential Appendix Section RA3.2.3.2; and

II. Systems that utilize forced air ducts shall comply with the minimum system airflow rate requirement in Section 170.2(c)3BiaII, provided the system is of a type that can be verified using the procedures in RA3.3 or an approved alternative procedure in RA1.

Exception 1 to Section 170.2(c)3Bi: Packaged systems for which the manufacturer has verified correct system refrigerant charge prior to shipment from the factory are not required to have refrigerant charge confirmed through field verification and diagnostic testing. The installer of these packaged systems shall certify that the packaged system was precharged at the factory and has not been altered in a way that would affect the charge. Ducted systems shall comply with minimum system airflow rate requirement in Section **170.2(c)3Bib**, provided that the system is of a type that can be verified using the procedure specified in RA3.3 or an approved alternative in RA1.

Exception 2 to Section 170.2(c)3Bi: The HERS Rater field verification and HERS Provider data registry requirements of Reference Residential Appendix RA2 and RA3 are not required for multifamily dwelling units in buildings four habitable stories and greater. The installer shall certify that diagnostic testing was performed in accordance with the applicable procedures.

ii. Space-conditioning distribution systems. All space-conditioning systems shall meet all applicable requirements of a or b below:

a. High performance attics. Air handlers or ducts are allowed to be in ventilated attic spaces when the roof and ceiling insulation level meet Option B in Table 170.2-A.

b. Duct and air handlers located in conditioned space. Duct systems and air handlers of HVAC systems shall be located in conditioned space, and confirmed by field verification and diagnostic testing to meet the criterion of Reference Residential Appendix RA3.1.4.3.8.

Note: Gas heating appliances installed in conditioned spaces must meet the combustion air requirements of California Mechanical Code Chapter 7, as applicable.

iii. Central fan integrated ventilation systems—systems serving individual dwelling units. Central forced air system fans used to provide outside air shall have an air-handling unit fan efficacy less than or equal to the maximum W/cfm specified in a or b below. The airflow rate and fan efficacy requirements in this section shall be confirmed through field verification and diagnostic testing in accordance with all applicable procedures specified in Reference Residential Appendix RA3.3. Central Fan Integrated Ventilation Systems shall be certified to the Energy Commission as Intermittent Ventilation Systems as specified in Reference Residential Appendix RA3.7.4.2.

a. 0.45 W/cfm for gas furnace air-handling units; or

b. 0.58 W/cfm for air-handling units that are not gas furnaces.

iv. Balanced ventilation systems. When balanced ventilation systems are used to meet Section 160.2(b)2Aivb, they shall meet the applicable requirements of a, b or c below:

a. In Climate Zones 1, 2 and 11–16, balanced ventilation systems serving individual dwelling units shall:

1. Be an energy recovery ventilator (ERV) or heat recovery ventilator (HRV),

2. Have a minimum sensible recovery efficiency of 67 percent, rated at 32 degrees Fahrenheit (0 degrees Celsius), and

3. Have a fan efficacy less than or equal to 0.6 W per cfm.

These measures shall be confirmed through HERS field verification in accordance with the procedures in RA3.7.4.4 for buildings with three habitable stories or less, or the procedures in NA2.2.4.1.5 for buildings with four or more habitable stories.

b. In Climate Zones 1, 2 and 11–16, balanced ventilation systems serving multiple dwelling units in buildings with four or more habitable stories shall:

1. Be an ERV or HRV,

2. Have a minimum sensible recovery efficiency or effectiveness of 67 percent, rated at 32 degrees Fahrenheit (0 degrees Celsius),

3. Meet the fan power requirements of Section 170.2(c)4A, and

4. Have recovery bypass or control to directly economize with ventilation air based on outdoor air temperature limits specified in Table 170.2-G.

These measures shall be filed verified in accordance with NA7.18.4.

c. In buildings with three habitable stories or less in Climate Zones 4–10, when a heat pump space-conditioning system is installed to meet the requirements of Section 170.2(c)3Ai, balanced ventilation systems without an ERV or HRV shall have a fan efficacy less than or equal to 0.4 W/cfm.

Exception to Section 170.2(c)3B: The HERS Rater field verification and HERS Provider data registry requirements of Reference Residential Appendix RA2 and RA3 are not required for multifamily dwelling units in buildings four habitable stories and greater. The installer shall certify that diagnostic testing was performed in accordance with the applicable procedures.

C. HVAC system bypass ducts. Bypass ducts that deliver conditioned supply air directly to the space-conditioning system return duct airflow shall not be used.

4. **Common use area space-conditioning systems**. A building complies with this section by being designed with and having constructed and installed a space-conditioning system that meets the applicable requirements of Subsections A through O.

A. **Fan systems**. Each fan system moving air into, out of, or between spaces or circulating air for the purpose of conditioning air within a space shall meet the requirements of Items i, ii and iii below.

i. **Fan power budget.** For each fan system that includes at least one fan or fan array with fan electrical input power ≥ 1 kW, fan system electrical input power (Fan $kW_{design,system}$) determined per Section 170.2(c)4Aib at the fan system design airflow shall not exceed Fan kW_{budget} as calculated per Section 170.2(c)4Aia.

a. Calculation of fan power budget (Fan kW_{budget}). For each fan system:

I. Determine the fan system airflow and choose the appropriate table(s) for fan power allowance.

A. For single-cabinet fan systems, use the fan system airflow and the power allowances in both Tables 170.2-B and Table 170.2-C.

B. For supply-only fan systems, use the fan system airflow and power allowances in Table 170.2-B.

C. For relief fan systems, use the design relief airflow and the power allowances in Table 170.2-C.

D. For exhaust, return and transfer fan systems, use the fan system airflow and the power allowances in Table 170.2-C.

E. For complex fan systems, separately calculate the fan power allowance for the supply and return/exhaust systems and sum them. For the supply airflow, use supply airflow at the fan system design conditions, and the power allowances in Table 170.2-B. For the return/exhaust airflow, use return/exhaust airflow at the fan system design conditions, and the power allowances in Table 170.2-C.

II. For each fan system, determine the components included in the fan system and sum the fan power allowances of those components. All fan systems shall include the system base allowance. If, for a given component, only a portion of the fan system airflow passes through the component, calculate the fan power allowance for that component per this equation:

$$FPA_{adj} = \frac{Q_{comp}}{Q_{sys}} \times FPA_{comp}$$

Where:

FPA_{adj} = The correct/ed fan power allowance for the component in w/cfm

Q_{comp} = The airflow through component in cfm

Q_{sys} = The fan system airflow in cfm

FPA_{comp} = The fan power allowance of the component from Table 170.2-B or Table 170.2-C

III. Multiply the fan system airflow by the sum of the fan power allowances for the fan system.

IV. Divide by 1000 to convert to Fan kW_{budget}.

V. For building sites at elevations greater than 3,000 feet, multiply Fan kW_{budget} by the correction factor in Table 170.2-D.

b. Determining fan system electrical input power (Fan $kW_{design,system}$). Fan $kW_{design,system}$ is the sum of Fan kW_{design} for each fan or fan array included in the fan system with Fan $kW_{design} \geq 1$ kW. If variable speed drives are used, their efficiency losses shall be included. Fan input power shall be calculated with two times the clean filter pressure drop, which is the mean of the clean filter pressure drop and design final filter pressure drop. The Fan kW_{design} for each fan or fan array shall be determined using one of the following methods. There is no requirement to use the same method for all fans in a fan system:

I. Use the default Fan kW_{design} in Table 170.2-E-1 for one or more of the fans. This method cannot be used for complex fan systems.

II. Use the Fan kW_{design} at fan system design conditions provided by the manufacturer of the fan, fan array, or equipment that includes the fan or fan array calculated per a test procedure included in USDOE 10 CFR Part 430, USDOE 10 CFR Part 431, ANSI/AMCA Standard 208-2018, ANSI/AMCA Standard 210-2016, AHRI Standard 430-2020, AHRI Standard 440-2019 or ISO 5801-2017.

III. Use the Fan kW_{design} provided by the manufacturer, calculated at fan system design conditions per one of the methods listed in Section 5.3 of ANSI/AMCA 208-2018.

IV. Determine the Fan kW_{design} by using the maximum electrical input power provided on the motor nameplate.

ii. **VAV systems.**

a. Static pressure sensor location. Static pressure sensors used to control variable air volume fans shall be placed in a position such that the controller setpoint is no greater than one-third the total design fan static pressure, except for systems with zone reset control complying with Section 170.2(c)4Aiib. If this

results in the sensor being located downstream of any major duct split, multiple sensors shall be installed in each major branch with fan capacity controlled to satisfy the sensor furthest below its setpoint; and

b. Setpoint reset. For systems with direct digital control of individual zone boxes reporting to the central control panel, static pressure setpoints shall be reset based on the zone requiring the most pressure; i.e., the setpoint is reset lower until one zone damper is nearly wide open.

iii. **Fractional HVAC motors for fans.** HVAC motors for fans that are less than 1 hp and 1/12 hp or greater shall be electronically commutated motors or shall have a minimum motor efficiency of 70 percent when rated in accordance with NEMA Standard MG 1-2006 at full load rating conditions. These motors shall also have the means to adjust motor speed for either balancing or remote control. Belt-driven fans may use sheave adjustments for airflow balancing in lieu of a varying motor speed.

Exception 1 to Section 170.2(c)4Aiii: Motors in fan-coils and terminal units that operate only when providing heating to the space served.

Exception 2 to Section 170.2(c)4Aiii: Motors in space-conditioning equipment certified under Section 110.1 or 110.2.

Exception 1 to 170.2(c)4A: Fan **system power caused solely by process loads.**

TABLE 170.2-B: Supply Fan Power Allowances (watts/cfm)

	Multi-Zone VAV Systems ≤5,000 cfm	Multi-Zone VAV Systems >5,000 and ≤10,000 cfm	Multi-Zone VAV Systems >10,000 cfm	All Other Fan Systems ≤5,000 cfm	All Other Fan Systems >5,000 and ≤10,000 cfm	All Other Fan Systems >10,000 cfm

Footnote to TABLE 170.2-B

1. See FAN SYSTEM, MULTI-ZONE VARIABLE AIR VOLUME (VAV) in definition a Multi-Zone VAV System.
2. Filter fan power allowance can only be counted once per fan system.
3. RESERVED.
4. Power allowance requires further calculation by multiplying the actual in. wg. of the device/ component by the watts/ cfm in Table 170.2-B.
5. The 100% outdoor air system must serve 3 or more HVAC zones and airflow during non-economizer operating periods must not exceed 135% of minimum requirements in Section 120.1(c)(3).
6. Energy Recovery Ratio (ERR) calculated per ANSI/ASHRAE 84-2020.
7. A low-turndown single-zone VAV fan system must be capable of and configured to reduce airflow to 50 percent of design airflow and use no more than 30 percent of the design wattage at that airflow. No more than 10 percent of the design load served by the equipment shall have fixed loads.

TABLE 170.2-C: EXHAUST, RETURN, RELIEF, TRANSFER FAN POWER ALLOWANCES (WATT/CFM)

≥75 and ≤100	80.40	78.17

Footnote to TABLE 170.2-E-1:
1. This table cannot be used for Motor Nameplate Horsepower values greater than 100.
2. This table is to be used only with motors with a service factor ≤1.15. If the service factor is not provided, this table may not be used.

B. **Space-conditioning zone controls.** Each space-conditioning zone shall have controls designed in accordance with i or ii:

i. Each space-conditioning zone shall have controls that prevent:

a. Reheating; and

b. Recooling; and

c. Simultaneous provisions of heating and cooling to the same zone, such as mixing or simultaneous supply of air that has been previously mechanically heated and air that has been previously cooled either by cooling equipment or by economizer systems; or

ii. Zones served by variable air-volume systems that are designed and controlled to reduce, to a minimum, the volume of reheated, recooled or mixed air are allowed only if the controls meet all of the following requirements:

a. For each zone with direct digital controls (DDC), the volume of primary air that is reheated, recooled or mixed air supply shall not exceed the larger of:

I. 50 percent of the peak primary airflow; or

II. The design zone outdoor airflow rate as specified by Section 160.2(c)3.

b. The volume of primary air in the deadband shall not exceed the design zone outdoor airflow rate as specified by Section 160.2(c)3.

c. The first stage of heating consists of modulating the zone supply air temperature setpoint up to a maximum setpoint no higher than 95 F degrees F while the airflow is maintained at the deadband flow rate.

d. The second stage of heating consists of modulating the airflow rate from the deadband flow rate up to the heating maximum flow rate.

e. For each zone without DDC, the volume of primary air that is reheated, recooled or mixed air supply shall not exceed the larger of the following:

I. 30 percent of the peak primary airflow; or

II. The design zone outdoor airflow rate as specified by Section 160.2(c)3.

Exception 1 to Section 170.2(c)4B: Zones with special pressurization relationships or cross-contamination control needs.

Exception 2 to Section 170.2(c)4B: Zones served by space-conditioning systems in which at least 75 percent of the energy for reheating, or providing warm air in mixing systems, is provided from a site-recovered or site-solar energy source.

Exception 3 to Section 170.2(c)4B: Zones in which specific humidity levels are required to satisfy exempt process loads. Computer rooms or other spaces where the only process load is from IT equipment may not use this exception.

Exception 4 to Section 170.2(c)4B: Zones with a peak supply-air quantity of 300 cfm or less.

C. **Economizers**.

i. Each cooling air handler that has a design total mechanical cooling capacity over 33,000 Btu/hr, or chilled-water cooling systems without a fan or that use induced airflow that has a cooling capacity greater than the systems listed in Table 170.2-E-2, shall include either:

a. An air economizer capable of modulating outside-air and return-air dampers to supply 100 percent of the design supply air quantity as outside air; or

b. A water economizer capable of providing 100 percent of the expected system cooling load, at outside air temperatures of 50°F dry-bulb and 45°F wet-bulb and below.

Exception 1 to Section 170.2(c)4Ci: Where special outside air filtration and treatment, for the reduction and treatment of unusual outdoor contaminants, makes compliance infeasible.

Exception 2 to Section 170.2(c)4Ci: Where the use of outdoor air for cooling will affect other systems, such as humidification or dehumidification, so as to increase overall building TDV energy use.

Exception 3 to Section 170.2(c)4Ci: Systems serving dwelling units.

Exception 4 to Section 170.2(c)4Ci: Where comfort cooling systems have the cooling efficiency that meets or exceeds the cooling efficiency improvement requirements in Table 170.2-F.

Exception 5 to Section 170.2(c)4Ci: Fan systems primarily serving computer rooms. See Section 140.9(a) for computer room economizer requirements.

TABLE 170.2-E-2 CHILLED WATER SYSTEM COOLING CAPACITY

Climate Zones	Total Building Chilled Water System Capacity, Minus Capacity of the Cooling units with Air Economizers	
	Building Water-Cooled Chilled Water System	Air-Cooled Chilled Water Systems or District Chilled Water Systems
15	≥ 960,000 Btu/h (280 kW)	≥ 1,250,000 Btu/h (365 kW)
1-14	≥720,000 Btu/h (210 kW)	≥940,000 Btu/h (275 kW)
16	≥1,320,000 Btu/h (385 kW)	≥1,720,000 Bu/h (505 kW)

Footnote to TABLE 170.2-F

[a] If a unit is rated with an annualized or part-load metric, then to eliminate the required economizer, only the annualized or part-load minimum cooling efficiency of the unit must be increased by the percentage shown. If the unit is only rated with a full load metric, like EER or COP cooling, then that metric must be increased by the percentage shown. To determine the efficiency required to eliminate economizer, when the unit *equipment efficiency* is rated with an energy-input divided by work-output metric, the metric shall first be converted to COP prior to multiplying by the *efficiency* improvement percentage and then converted back to the rated metric.

ii. If an economizer is required by Section 170.2(c)4Ci, and an air economizer is used to meet the requirement, then it shall be:

a. Designed and equipped with controls so that economizer operation does not increase the building heating energy use during normal operation; and

Exception to Section 170.2(c)4Ciia: Systems that provide 75 percent of the annual energy used for mechanical heating from site-recovered energy or a site-solar energy source.

b. Capable of providing partial cooling even when additional mechanical cooling is required to meet the remainder of the cooling load.

c. Designed and equipped with a device type and high limit shut off complying with Table 170.2-G.

TABLE 170.2-G AIR ECONOMIZER HIGH LIMIT SHUT OFF CONTROL REQUIREMENTS

Device Type[a]	Climate Zones	Required High Limit (Economizer Off When):	Required High Limit (Economizer Off When):
		Equation[b]	Description
Fixed Dry Bulb	1, 3, 5, 11-16	T_{OA} > 75°F	Outdoor air temperature exceeds 75°F
Fixed Dry Bulb	2, 4, 10	T_{OA} > 73°F	Outdoor air temperature exceeds 73°F
Fixed Dry Bulb	6, 8, 9	T_{OA} > 71°F	Outdoor air temperature exceeds 71°F
Fixed Dry Bulb	7	T_{OA} > 69°F	Outdoor air temperature exceeds 69°F
Differential Dry Bulb	1, 3, 5, 11-16	T_{OA} > T_{RA}°F	Outdoor air temperature exceeds return air temperature
Differential Dry Bulb	2, 4, 10	T_{OA} > T_{RA}-2°F	Outdoor air temperature exceeds return air temperature minus 2°F
Differential Dry Bulb	6, 8, 9	T_{OA} > T_{RA}-4°F	Outdoor air temperature exceeds return air temperature minus 4°F
Differential Dry Bulb	7	T_{OA} > T_{RA}-6°F	Outdoor air temperature exceeds return air temperature minus 6°F
Fixed Enthalpy[c] + Fixed Drybulb	All	h_{OA} > 28 Btu/lb[c] or T_{OA} > 75°F	Outdoor air enthalpy exceeds 28 Btu/lb of dry air[c] or Outdoor air temperature exceeds 75°F

Footnote to TABLE 170.2-G:

[a] Only the high limit control devices listed are allowed to be used and at the setpoints listed. Others such as Dew Point, Fixed Enthalpy, Electronic Enthalpy, and Differential Enthalpy Controls, may not be used in any Climate Zone for compliance with Section **170.2(c)4Ci** unless approval for use is provided by the Energy Commission Executive Director.

[b] Devices with selectable (rather than adjustable) setpoints shall be capable of being set to within 2°F and 2 Btu/lb of the setpoint listed.

[c] At altitudes substantially different than sea level, the Fixed Enthalpy limit value shall be set to the enthalpy value at 75°F and 50% relative humidity. As an example, at approximately 6,000 foot elevation, the fixed enthalpy limit is approximately 30.7 Btu/lb.

iii. The air economizer and all air dampers shall have the following features:

a. **Warranty.** 5-year manufacturer warranty of economizer assembly.

b. **Damper reliability testing.** Suppliers of economizers shall certify that the economizer assembly, including but not limited to outdoor air damper, return air damper, drive linkage and actuator, has been tested and is able to open and close against the rated airflow and pressure of the system for 60,000 damper opening and closing cycles.

c. **Damper leakage.** Economizer outdoor air and return air dampers shall have a maximum leakage rate of 10 cfm/sf at 250 Pascals (1.0 in. of water) when tested in accordance with AMCA Standard 500-D. The economizer outside air and return air damper leakage rates shall be certified to the Energy Commission in accordance with Section 110.0.

d. **Adjustable setpoint.** If the high-limit control is fixed dry-bulb or fixed enthalpy + fixed dry-bulb then the control shall have an adjustable setpoint.

e. **Sensor accuracy.** Outdoor air, return air, mixed air and supply air sensors shall be calibrated within the following accuracies.

I. Drybulb and wetbulb temperatures accurate to ±2°F over the range of 40°F to 80°F;

II. Enthalpy accurate to ±3 Btu/lb over the range of 20 Btu/lb to 36 Btu/lb;

III. Relative humidity (RH) accurate to ±5 percent over the range of 20 percent to 80 percent RH.

f. **Sensor calibration data.** Data used for control of the economizer shall be plotted on a sensor performance curve.

g. **Sensor high limit control.** Sensors used for the high limit control shall be located to prevent false readings, including but not limited to being properly shielded from direct sunlight.

h. **Relief air system.** Relief air systems shall be capable of providing 100 percent outside air without over-pressurizing the building.

iv. The space-conditioning system shall include the following:

a. Unit controls shall have mechanical capacity controls interlocked with economizer controls such that the economizer is at 100 percent open position when mechanical cooling is on and does not begin to close until the leaving air temperature is less than 45 degree F.

b. Direct Expansion (DX) units greater than 65,000 Btu/hr that control the capacity of the mechanical cooling directly based on occupied space temperature shall have a minimum of two stages of mechanical cooling capacity.

c. DX units not within the scope of Section 170.2(c)4Ciib shall (i) comply with the requirements in Table 170.2-H, and (ii) have controls that do not false load the mechanical cooling system by limiting or disabling the economizer or by any other means except at the lowest stage of mechanical cooling capacity.

TABLE 170.2-H DIRECT EXPANSION (DX) UNIT REQUIREMENTS FOR COOLING STAGES AND COMPRESSOR DISPLACEMENT

Cooling Capacity	Minimum Number of Mechanical Cooling Stages	Minimum Compressor Displacement
≥ 65,000 Btu/h and < 240,000 Btu/h	3 stages	≤ 35% full load
≥ 240,000 Btu/h	4 stages	≤ 25% full load

v. Systems that include a water economizer to meet Section 170.2(c)4Ci shall include the following:

a. Maximum pressure drop. Precooling coils and water-to-water heat exchangers used as part of a water economizer shall either have a waterside pressure drop of less than 15 feet of water, or a secondary loop shall be installed so that the coil or heat exchanger pressure drop is not contributing to pressure drop when the system is in the normal cooling (non-economizer) mode.

b. Economizer systems shall be integrated with the mechanical cooling system so that they are capable of providing partial cooling even when additional mechanical cooling is required to meet the remainder of the cooling load. Controls shall not false load the mechanical cooling system by limiting or disabling the economizer or by any other means, such as hot gas bypass, except at the lowest stage of mechanical cooling.

D. **Supply air temperature reset controls.** Space-conditioning systems supplying heated or cooled air to multiple zones shall include controls that automatically reset supply-air temperatures. Air distribution systems serving zones that are likely to have constant loads shall be designed for the air flows resulting from the fully reset supply air temperature. Supply air temperature reset controls shall be:

i. In response to representative building loads or to outdoor air temperature; and

ii. At least 25 percent of the difference between the design supply-air temperature and the design room air temperature.

Exception 1 to Section 170.2(c)4D: Systems that meet the requirements of Section 170.2(c)3Bi, without using Exception 1 to that section.

Exception 2 to Section 170.2(c)4D: Where supply-air temperature reset would increase overall building energy use.

Exception 3 to Section 170.2(c)4D: Systems supplying zones in which specific humidity levels are required to satisfy process loads. Computer rooms or other spaces with only IT equipment may not use this exception.

E. **Electric-resistance heating.** Electric-resistance heating systems shall not be used for space heating.

Exception 1 to Section 170.2(c)4E: Where an electric-resistance heating system supplements a heating system in which at least 60 percent of the annual energy requirement is supplied by site-solar or recovered energy.

Exception 2 to Section 170.2(c)4E: Where an electric-resistance heating system supplements a heat pump heating system, and the heating capacity of the heat pump is more than 75 percent of the design heating load calculated in accordance with Section 170.2(c)1 at the design outdoor temperature specified in Section 170.2(c)2.

Exception 3 to Section 170.2(c)4E: Where the total capacity of all electric-resistance heating systems serving the entire building is less than 10 percent of the total design output capacity of all heating equipment serving the entire building.

Exception 4 to Section 170.2(c)4E: Where the total capacity of all electric-resistance heating systems serving the entire building, excluding those allowed under Exception 2, is no more than 3 kW.

Exception 5 to Section 170.2(c)4E: Heating systems serving as emergency backup to gas heating equipment.

F. **Heat rejection systems.** Heat rejection equipment used in comfort cooling systems such as air-cooled condensers, open cooling towers, closed-circuit cooling towers and evaporative condensers shall include the following:

i. **Fan speed control.** Each fan powered by a motor of 7.5 hp (5.6 kW) or larger shall have the capability to operate that fan at 2/3 of full speed or less, and shall have controls that automatically change the fan speed to control the leaving fluid temperature or condensing temperature or pressure of the heat rejection device.

Exception 1 to Section 170.2(c)4Fi: Heat rejection devices included as an integral part of the equipment listed in Table 110.2-A through Table 110.2-N.

Exception 2 to Section 170.2(c)4Fi: Condenser fans serving multiple refrigerant circuits.

Exception 3 to Section 170.2(c)4Fi: Condenser fans serving flooded condensers.

Exception 4 to Section 170.2(c)4Fi: Up to one-third of the fans on a condenser or tower with multiple fans where the lead fans comply with the speed control requirement.

ii. **Tower flow turndown. O**pen cooling towers configured with multiple condenser water pumps shall be designed so that all cells can be run in parallel with the larger of:

a. The flow that is produced by the smallest pump; or

b. 50 percent of the design flow for the cell.

iii. **Limitation on centrifugal fan cooling towers.** Open cooling towers with a combined rated capacity of 900 gpm and greater at 95°F condenser water return, 85°F condenser water supply and 75°F outdoor wet-bulb temperature shall use propeller fans and shall not use centrifugal fans.

Exception 1 to Section 170.2(c)4Fiii: Cooling towers that are ducted (inlet or discharge) or have an external sound trap that requires external static pressure capability.

Exception 2 to Section 170.2(c)4Fiii: Cooling towers that meet the energy efficiency requirement for propeller fan towers in Section 110.2, Table 110.2-F.

iv. **Multiple cell heat rejection equipment.** Multiple cell heat rejection equipment with variable speed fan drives shall:

a. Operate the maximum number of fans allowed that comply with the manufacturer's requirements for all system components, and

b. Control all operating fans to the same speed. Minimum fan speed shall comply with the minimum allowable speed of the fan drive as specified by the manufacturer's recommendation. Staging of fans is allowed once the fans are at their minimum operating speed.

v. **Cooling tower efficiency.** Axial fan, open-circuit cooling towers serving condenser water loops for chilled water plants with a total of 900 gpm or greater shall have a rated efficiency of no less than 60 gpm/hp when rated in accordance with the conditions as listed in Table 110.2-F.

Exception 1 to Section 170.2(c)4Fv: Replacement of existing cooling towers that are inside an existing building or on an existing roof.

Exception 2 to Section 170.2(c)4Fv: Cooling towers serving buildings in Climate Zone 1 or 16.

G. **Minimum chiller efficiency.** Chillers shall meet or exceed Path B from Table 110.2-D.

Exception 1 to Section 170.2(c)4G**:** Chillers with electrical service > 600 V.

Exception 2 to Section 170.2(c)4G: Chillers attached to a heat recovery system with a design heat recovery capacity > 40 percent of the design chiller cooling capacity.

Exception 3 to Section 170.2(c)4G: Chillers used to charge thermal energy storage systems where the charging temperature is < 40°F.

Exception 4 to Section 170.2(c)4G: In buildings with more than three chillers, only three chillers are required to meet the Path B efficiencies.

H. **Limitation of air-cooled chillers.** Chilled water plants shall not have more than 300 tons provided by air-cooled chillers.

Exception 1 to Section 170.2(c)4H: Where the water quality at the building site fails to meet manufacturer's specifications for the use of water-cooled chillers.

Exception 2 to Section 170.2(c)4H: Chillers that are used to charge a thermal energy storage system with a design temperature of less than 40°F (4°C).

I. **Hydronic system measures**.

i. **Hydronic variable flow systems.** HVAC chilled and hot water pumping shall be designed for variable fluid flow and shall be capable of reducing pump flow rates to no more than the larger of: a) 50 percent or less of the design flow rate; or b) the minimum flow required by the equipment manufacturer for the proper operation of equipment served by the system.

Exception 1 to Section 170.2(c)4I: Systems that include no more than three control valves.

Exception 2 to Section 170.2(c)4I: Systems having a total pump system power less than or equal to 1.5 hp.

ii. **Chiller isolation.** When a chilled water system includes more than one chiller, provisions shall be made so that flow through any chiller is automatically shut off when that chiller is shut off while still maintaining flow through other operating chiller(s). Chillers that are piped in series for the purpose of increased temperature differential shall be considered as one chiller.

iii**. Boiler isolation.** When a hot water plant includes more than one boiler, provisions shall be made so that flow through any boiler is automatically shut off when that boiler is shut off while still maintaining flow through other operating boiler(s).

iv. **Chilled and hot water temperature reset controls.** Systems with a design capacity exceeding 500,000 Btu/hr supplying chilled or heated water shall include controls that automatically reset supply water temperatures as a function of representative building loads or outside air temperature.

Exception to Section 170.2(c)4Iiv: Hydronic systems that use variable flow to reduce pumping energy in accordance with Section 170.2(c)4Ii.

v. **Water-cooled air conditioner and hydronic heat pump systems.** Water circulation systems serving water-cooled air conditioners, hydronic heat pumps or both, that have total pump system power exceeding 5 hp, shall have flow controls that meet the requirements of Section 170.2(c)4Ivi. Each such air conditioner or heat pump shall have a two-position automatic valve interlocked to shut off water flow when the compressor is off.

vi. **Variable flow controls.**

a. Variable speed drives. Individual pumps serving variable flow systems and having a motor horsepower exceeding 5 hp shall have controls or devices (such as variable speed control) that will result in pump motor demand of no more than 30 percent of design wattage at 50 percent of design water flow. The pumps shall be controlled as a function of required differential pressure.

b. Pressure sensor location and setpoint.

c. For systems without direct digital control of individual coils reporting to the central control panel, differential pressure shall be measured at the most remote heat exchanger or the heat exchanger requiring the greatest differential pressure.

d. For systems with direct digital control of individual coils with a central control panel, the static pressure setpoint shall be reset based on the valve requiring the most pressure, and the setpoint shall be no less than 80 percent open. Pressure sensors may be mounted anywhere.

Exception 1 to Section 170.2(c)4Ivi: Heating hot water systems.

Exception 2 to Section 170.2(c)4Ivi: Condenser water systems serving only water-cooled chillers.

vii. **Hydronic heat pump (WLHP) controls.** Hydronic heat pumps connected to a common heat pump water loop with central devices for heat rejection and heat addition shall have controls that are capable of providing a heat pump water supply temperature deadband of at least 20°F between initiation of heat rejection and heat addition by the central devices.

Exception to Section 170.2(c)4Ivii: Where a system loop temperature optimization controller is used to determine the most efficient operating temperature based on real-time conditions of demand and capacity, deadbands of less than 20°F shall be allowed.

J. Reserved.

K. **Fan control.** Each cooling system listed in Table 170.2-H shall be designed to vary the indoor fan airflow as a function of load and shall comply with the following requirements:

i. DX and chilled water cooling systems that control the capacity of the mechanical cooling directly based on occupied space temperature shall (i) have a minimum of two stages of fan control with no more than 66 percent speed when operating on stage 1; and (ii) draw no more than 40 percent of the fan power at full fan speed, when operating at 66 percent speed.

ii. All other systems, including but not limited to DX cooling systems and chilled water systems that control the space temperature by modulating the airflow to the space, shall have proportional fan control such that at 50 percent air flow the power draw is no more than 30 percent of the fan power at full fan speed.

iii. Systems that include an air side economizer to meet Section 170.2(c)4Ci shall have a minimum of two speeds of fan control during economizer operation.

Exception to Section 170.2(c)4K: Modulating fan control is not required for chilled water systems with all fan motors <1 HP, or for evaporative systems with all fan motors < 1 HP, if the systems are not used to provide ventilation air and all indoor fans cycle with the load.

L. **Mechanical system shut-off.** Any directly conditioned common use area space with operable wall or roof openings to the outdoors shall be provided with interlock controls that disable or reset the temperature setpoint to 55°F for mechanical heating and disable or reset the temperature setpoint to 90°F for mechanical cooling to that space when any such opening is open for more than 5 minutes.

Exception 1 to Section 170.2(c)4L: Interlocks are not required on doors with automatic closing devices.

Exception 2 to Section 170.2(c)4L: Any space without a thermostatic control (thermostat or a space temperature sensor used to control heating or cooling to the space).

M**. Exhaust system transfer air.** Conditioned supply air delivered to any space with mechanical exhaust shall not exceed the greater of:

i. The supply flow required to meet the space heating or cooling load; or

ii. The ventilation rate required by the authority having jurisdiction, the facility Environmental Health and Safety Department or Section 160.2(c)3; or

iii. The mechanical exhaust flow minus the available transfer air. Available transfer air shall be from another conditioned space or return air plenums on the same floor and same smoke or fire compartment, and that at their closest point are within 15 feet of each other.

Exception 1 to Section 170.2(c)4M: Spaces that are required by applicable codes and standards to be maintained at a positive pressure differential relative to adjacent spaces.

Exception 2 to Section 170.2(c)4M: Spaces where the highest amount of transfer air that could be used for exhaust makeup may exceed the available transfer airflow rate and where the spaces have a required negative pressure relationship.

N. **Dedicated outdoor air systems (DOAS).** HVAC systems utilizing a dedicated outdoor air system (DOAS) to condition, temper or filter 100 percent outdoor air separate from local or central space-conditioning systems serving the same space shall meet the following criteria:

i. Provide each space with one of the following configurations:

a. A DOAS unit and a separate independent space-conditioning system in which the independent space-conditioning system complies with the economizer requirements specified by Section 170.2(c)4Ci and the DOAS unit complies with the exhaust air heat recovery requirements specified in Section 170.2(c)4N.

b. A DOAS unit that meets or exceeds the following criteria and a separate space cooling system:

I. Provides at least the minimum ventilation air flow rate as specified in Section 120.1(c)3 and provides no less than 0.3 cfm/ft^2 during economizer operation.

II. Ventilation sensible energy recovery ratio of at least 60 percent or enthalpy recovery ratio of at least 50 percent at full flow cooling design conditions and heating design condition.

III. Energy recovery bypass or control to directly economize with ventilation air based on outdoor air temperature limits specified in Table 170.2-G.

c. DOAS units with airflow rate > 1,000 cfm must meet demand ventilation control requirements in accordance with Sections 160.2(c)5C, D and E**.**

Exception to Section 170.2(c)4Ni: Systems installed for the sole purpose of providing makeup air for exhausting toxic fumes, flammable materials, paint, corrosive fumes, dust, dryer exhaust, or commercial kitchen hoods used for collecting and removing grease vapors and smoke.

ii. Ventilation fan systems shall be capable of modulating fan speed control.

iii. Heating and cooling equipment fans, heating and cooling circulation pumps, and terminal unit fans shall cycle off, and terminal unit primary cooling air shall be shut off when there is no call for heating or cooling in the zone.

Exception to Section 170.2(c)4Niii: Fans used for heating and cooling using less than 0.12 watts per cfm may operate when space temperatures are within the thermostat deadband to provide destratification and air mixing in the space.

iv. The DOAS supply air shall be delivered directly to the occupied space or downstream of the terminal heating or cooling coils.

Exception 1 to Section 170.2(c)4Niv: Active chilled beam systems.

Exception 2 to Section 170.2(c)4Niv: Sensible only cooling terminal units with pressure-independent variable-airflow regulating devices limiting the DOAS supply air to the greater of latent load or minimum ventilation requirements.

Exception 3 to Section 170.2(c)4Niv: Terminal heating or cooling units that comply with the low fan power allowance requirements in Exception to Section 170.2(c)4Niii.

v. DOAS with mechanical cooling providing ventilation to multiple zones and operating in conjunction with zone heating and cooling systems shall not use heating or heat recovery to warm supply air above 60°F when representative building loads or outdoor air temperature indicate that the majority of zones require cooling.

vi. DOAS with a total fan system power less than 1 kW shall not exceed a total combined fan power of 1.0 W/cfm. DOAS with fan power greater than or equal to 1 kW shall meet the requirements of Section 170.2(c)4A.

O. **Exhaust air heat recovery.** Fan systems designed to operate to the criteria listed in either Table 170.2-I or Table 170.2-J shall include an exhaust air heat recovery system that meets the following:

i. A sensible energy recovery ratio of at least 60 percent or an enthalpy recovery ratio of at least 50 percent for both heating and cooling design conditions.

ii. Energy recovery bypass or control to disable energy recovery and to directly economize with ventilation air based on outdoor air temperature limits specified in Table 170.2-G. For energy recovery systems where the transfer of energy cannot be stopped, bypass shall prevent the total airflow rate of either outdoor air or exhaust air through the energy recovery exchanger from exceeding 10 percent of the full design airflow rate.

iii. For a DOAS unit and a separate independent space-conditioning system meeting the requirements of Section 170.2(c)4Nia, the design supply fan airflow rate shall be the total airflow of only the DOAS unit.

EXCEPTION 1 to Section 170.2(c)4Oii: DOAS units with the capability to shut off when a separate independent space-conditioning system meets the economizer requirements specified by section 170.2(c)4Cia is economizing.

Exception 1 to Section 170.2(c)4O: Systems meeting Section 140.9(c) prescriptive requirements for laboratory and factory exhaust systems.

Exception 2 to Section 170.2(c)4O: Systems serving spaces that are not cooled and that are heated to less than 60°F.

Exception 3 to Section 170.2(c)4O: Where more than 60 percent of the outdoor air heating energy is provided from site-recovered energy in Climate Zone 16.

Exception 4 to Section 170.2(c)4O: Sensible recovery ratio requirements at heating design conditions are exempted for Climate Zone 15.

Exception 5 to Section 170.2(c)4O: Sensible recovery ratio requirements at cooling design conditions are exempted for Climate Zone 1.

Exception 6 to Section 170.2(c)4O: Where the sum of the airflow rates exhausted and relieved within 20 feet of each other is less than 75 percent of the design outdoor airflow rate, excluding exhaust air that is either:

i. used for another energy recovery system;

ii. not allowed by the California Mechanical Code (Title 24, Part 4) for use in energy recovery systems with leakage potential; or

iii. of Class 4 as specified in Section 160.2(c)8.

Exception 7 to Section 170.2(c)4O: Systems expected to operate less than 20 hours per week.

TABLE 170.2-I: ENERGY RECOVERY REQUIREMENTS BY CLIMATE ZONE AND PERCENT OUTDOOR AIR AT FULL DESIGN AIRFLOW (<8,000 HOURS / YEAR)

Footnotes to TABLE 170.2-J:

1. Flow rates in Table 140.4-G represent the design supply fan airflow rate in CFM.
2. For a DOAS unit providing outdoor air to another space-conditioning system, the full design supply fan airflow rate shall be the total airflow of only the DOAS unit.

(d) **Water-heating systems.** Water-heating systems shall meet the requirements of either 1, 2, 3 or 4.

For recirculation distribution systems serving individual dwelling units, only demand recirculation systems with manual on/off control as specified in the Reference Appendix RA4.4.9 shall be used. Recirculation system serving multiple dwelling units shall meet the requirements of Sections 110.3(c)2 and 110.3(c)5, and shall be capable of automatically controlling the recirculation pump operation based on measurement of hot water demand and hot water return temperature:

1. For systems serving individual dwelling units, the water-heating system shall meet the requirement of either A, B or C, or shall meet the performance compliance requirements of Section 170.1:
   A. A single 240 volt heat pump water heater. In addition, meet the following:
      i. A compact hot water distribution system as specified in Reference Appendix RA4.4.6 in climate zones 1 and 16; and
      ii. A drain water heat recovery system that is field verified as specified in the Reference Appendix RA3.6.9 in Climate Zone 16.
   B. A single heat pump water heater that meets the requirements of NEEA Advanced Water Heater Specification Tier 3 or higher. In addition, for climate zone 16, a drain water heat recovery system that is field verified as specified in Reference Appendix RA3.6.9.
   C. A gas or propane instantaneous water heater with an input of 200,000 Btu per hour or less and no storage tank.
2. For heat pump water-heating systems serving multiple dwelling units, the water-heating system shall be installed according to the manufacturer's design and installation guidelines and meet the following requirements:
   A. The hot water return from the recirculation loop shall connect to a recirculation loop tank and shall not directly connect to the primary heat pump water heater inlet or the primary thermal storage tanks.
   B. The fuel source for the recirculation loop tank shall be electricity if auxiliary heating is needed. The recirculation loop heater shall be capable of multi-pass water-heating operation.

C. For systems with single pass primary heat pump water heater, the primary thermal storage tanks shall be piped in series if multiple tanks are used. For systems with multi-pass primary heat pump water heater, the primary thermal storage tanks shall be piped in parallel if multiple tanks are used.

D. The primary storage tank temperature setpoint shall be at least 135°F.

E. The recirculation loop tank temperature setpoint shall be at least 10°F lower than the primary thermal storage tank temperature setpoint such that hot water from the recirculation loop tank is used for the temperature maintenance load before engaging the recirculation loop tank heater.

F. The minimum heat pump water heater compressor cut-off temperature shall be equal to or lower than 40°F ambient air temperature.

G. A recirculation system.

Exception to Section 170.2(d)2G: Buildings with eight or fewer dwelling units.

H. Design documentation shall be provided in accordance with JA14.4.

3. For gas or propane systems serving multiple dwelling units, a central water-heating system that includes the following components shall be installed:

A. For Climate Zones 1 through 9, gas service water-heating systems with a total installed gas water-heating input capacity of 1 MMBtu/h or greater shall have gas service water-heating equipment with a minimum thermal efficiency of 90 percent. Multiple units are allowed to meet this requirement with an input capacity-weighted average of at least 90 percent.

Exception 1 to Section 170.2(d)3A: Individual gas water heaters with input capacity at or below 100,000 Btu/h shall not be included in the calculations of the total system input or total system efficiency.
Exception 2 to Section 170.2(d)3A: If 25 percent of the annual water-heating requirement is provided by site-solar energy or site-recovered energy.

B. A recirculation system.

Exception to Section 170.2(d)3B: Buildings with eight or fewer dwelling units.

C. A solar water-heating system meeting the installation criteria specified in Reference Residential Appendix RA4 and with a minimum solar savings fraction of either i or ii below:

i. A minimum solar savings fraction of 0.20 in Climate Zones 1 through 9 or a minimum solar savings fraction of 0.35 in Climate Zones 10 through 16; or

ii. A minimum solar savings fraction of 0.15 in Climate Zones 1 through 9 or a minimum solar savings fraction of 0.30 in Climate Zones 10 through 16. In addition, a drain water heat recovery system that is field verified as specified in the Reference Appendix RA3.6.9.

4. A water-heating system serving multiple dwelling units determined by the Executive Director to use no more energy than the one specified in Subsection 1, 2 or 3 above.

TABLE 170.2-K MECHANICAL COMPONENT PACKAGE – Multifamily Standard Building Design

Multifamily			Climate Zone															
			1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16

Water Heating	All Buildings		System Shall meet Section 170.2(d)															

Footnotes to TABLE 170.2-K:

1. Requirements only apply when using Balanced Ventilation to meet 160.2(b)2Aivb.
2. HSPF means "heating seasonal performance factor."
3. A supplemental heating unit may be installed in a space served directly or indirectly by a primary heating system, provided that the unit thermal capacity does not exceed 2 kilowatts or 7,000 Btu/hr and is controlled by a time-limiting device not exceeding 30 minutes.

(e) **Lighting.** Dwelling unit lighting shall meet the applicable mandatory requirements of Section 160.5(a). Common use area lighting shall meet the following requirements:

Exception to Section 170.2(e): Common use areas providing shared provisions for living, eating, cooking or sanitation to dwelling units that would otherwise lack these provisions may instead comply with Section 160.5(a).

1. **Interior common use area lighting.** A building complies with Section 170.2(e)1 if:

   A. The calculation of adjusted indoor lighting power of all proposed building areas combined, calculated under Subsection 170.2(e)2, is no greater than the calculation of allowed indoor lighting power, specific methodologies calculated under Subsection 170.2(e)4; and

   B. The calculation of allowed indoor lighting power, general rules comply with Subsection 170.2(e)3.

   The prescriptive limits on indoor lighting power are the smaller of the actual and allowed indoor lighting power values determined in accordance with Item i.

2. Calculation of Adjusted Indoor Lighting Power. The Adjusted Indoor Lighting Power of all proposed building areas is the total watts of all planned permanent and portable lighting systems in all areas of the proposed building; subject to the applicable adjustments under Subdivisions A through D of this subsection.

A. Two interlocked lighting systems: No more than two lighting systems may be used for an area, and if there are two they must be interlocked. Where there are two interlocked lighting systems, the watts of the lower wattage system may be excluded from the Adjusted Indoor Lighting Power if:

i. An installation certificate detailing compliance with Section 170.2(e)1A is submitted in accordance with Section 10-103 and Section 160.5(e); and

ii. The area (or areas) served by the interlocking systems is an auditorium, a conference room, a multipurpose room or a theater; and

iii. The two lighting systems are interlocked with a nonprogrammable double-throw switch to prevent simultaneous operation of both systems.

For compliance with Part 6, a nonprogrammable double-throw switch is an electrical switch commonly called a “single pole double throw” or “three-way” switch that is wired as a selector switch allowing one of two loads to be enabled. It can be a line voltage switch or a low voltage switch selecting between two relays. It cannot be overridden or changed in any manner that would permit both loads to operate simultaneously.

B. Reduction of wattage through controls. In calculating Adjusted Indoor Lighting Power, the installed watts of a luminaire providing general lighting in an area listed in Table **170.2-L may be reduced by the product of (i) the number of watts controlled as described in** Table **170.2-L, times (ii) the applicable** power adjustment factor **(PAF), if all of the following conditions are met:**

i. An installation certificate is submitted in accordance with Section 160.5(e)2; and

ii. Luminaires and controls meet the applicable requirements of Section 110.9 and Sections 160.5(b) through 160.6; and

iii. The controlled lighting is permanently installed general lighting systems and the controls are permanently installed nonresidential-rated lighting controls.

When used for determining PAFs for general lighting in offices, furniture mounted luminaires that comply with all of the following conditions shall qualify as permanently installed general lighting systems:

a. The furniture mounted luminaires shall be permanently installed no later than the time of building permit inspection; and

b. The furniture mounted luminaires shall be permanently hardwired; and

c. The furniture mounted lighting system shall be designed to provide indirect general lighting; and

d. Before multiplying the installed watts of the furniture mounted luminaire by the applicable PAF, 0.3 watts per square foot of the area illuminated by the furniture mounted luminaires shall be subtracted from installed watts of the furniture mounted luminaires; and

e. The lighting control for the furniture mounted luminaire complies with all other applicable requirements in Section 170.2(e)1Aii.

iv. At least 50 percent of the light output of the controlled luminaire is within the applicable area listed in **Table 170.2-L**. Luminaires on lighting tracks shall be within the applicable area in order to qualify for a PAF.

v. Only one PAF from **Table 170.2-L** may be used for each qualifying luminaire. PAFs shall not be added together unless allowed in **Table 170.2-L**.

vi. Only lighting wattage directly controlled in accordance with Section 170.2(e)1Aii shall be used to reduce the installed watts as allowed by Section 170.2(e)1Aii for calculating the Adjusted Indoor Lighting Power. If only a portion of the wattage in a luminaire is controlled in accordance with Section 170.2(e)1Aii, then only that portion of controlled wattage may be reduced in calculating Adjusted Indoor Lighting Power.

vii. Lighting controls used to qualify for a PAF shall be designed and installed in addition to manual, multilevel and automatic lighting controls required in Section **160.5(b)4**, and in addition to any other lighting controls required by any provision of Part 6. PAFs shall not be available for lighting controls required by Part 6.

viii. To qualify for the PAF for daylight continuous dimming plus OFF control, the daylight control and controlled luminaires shall comply with Sections 160.5(b)4D, 160.5(e)1C and 160.5(e)1G, and the controls shall be continuous dimming and shall additionally turn lights completely OFF when the daylight available in the daylit zone is greater than 150 percent of the illuminance received from the general lighting system at full power. The PAF shall apply to the luminaires in the primary sidelit daylit zone, secondary sidelit daylit zone and skylit daylit zone.

ix. To qualify for the PAF for an occupant sensing control controlling the general lighting in open plan office areas above workstations, in accordance with **Table 170.2-L**, the following requirements shall be met:

a. The open plan office area shall be greater than 250 square feet; and

b. This PAF shall be available only in office areas that contain workstations; and

c. Controlled luminaires shall only be those that provide general lighting directly above the controlled area, or furniture mounted luminaires that comply with Section 170.2(e)1Aii and provide general lighting directly above the controlled area; and

d. Qualifying luminaires shall be controlled by occupant sensing controls that meet all of the following requirements, as applicable:

I. Infrared sensors shall be equipped by the manufacturer, or fitted in the field by the installer, with lenses or shrouds to prevent them from being triggered by movement outside of the controlled area.

II. Ultrasonic sensors shall be tuned to reduce their sensitivity to prevent them from being triggered by movements outside of the controlled area.

III. All other sensors shall be installed and adjusted as necessary to prevent them from being triggered by movements outside of the controlled area.

x. To qualify for the PAF for an Institutional Tuning in **Table 170.2-L**, the tuned lighting system shall comply with all of the following requirements:

a. The lighting controls shall limit the maximum output or maximum power draw of the controlled lighting to 85 percent or less of full light output or full power draw; and

b. The means of setting the limit is accessible only to authorized personnel; and

c. The setting of the limit is verified by the acceptance test required by Section 160.5(e)1G; and

d. The construction documents specify which lighting systems shall have their maximum light output or maximum power draw set to no greater than 85 percent of full light output or full power draw.

xi. To qualify for the PAF for a demand responsive control in **Table 170.2-L**, the general lighting wattage receiving the PAF shall not be within the scope of Section 110.12(c) and a demand responsive control shall meet all of the following requirements:

a. The controlled lighting shall be capable of being automatically reduced in response to a demand response signal; and

b. General lighting shall be reduced in a manner consistent with uniform level of illumination requirements in Table 160.5-B.

xii. To qualify for the PAFs for clerestory fenestration, horizontal slats or light shelves in **Table 170.2-L**, the daylighting design shall meet the requirements in Section 140.3(d). The PAFs shall only apply to lighting in a primary or secondary sidelit daylit zone where continuous dimming daylighting controls meeting the requirements of Section 160.5(b)4D are installed.

C. Lighting wattage excluded. The watts of the following indoor lighting applications may be excluded from Adjusted Indoor Lighting Power:

i. Lighting installed by the manufacturer in walk-in coolers or freezers, vending machines and food preparation equipment.

ii. Lighting that is required for exit signs subject to the CBC. Exit signs shall meet the requirements of the Appliance Efficiency Regulations.

iii. Exit way or egress illumination that is normally off and that is subject to the CBC.

iv. Temporary lighting systems.

v. Lighting systems in qualified historic buildings, as defined in the California Historical Building Code (Title 24, Part 8), are exempt from the lighting power density allowances if they consist solely of historic lighting components or replicas of historic lighting components. If lighting systems in qualified buildings contain some historic lighting components or replicas of historic components, combined with other lighting components, only those historic or historic replica components are exempt. All other lighting systems in qualified historic buildings shall comply with the lighting power density allowances.

vi. Lighting for signs shall comply with Section 170.2(e)7.

vii. Lighting in elevators where the lighting meets the requirements in Section 120.6(f).

viii. Lighting connected to a Life Safety Branch or Critical Branch, as specified in Section 517 of the California Electrical Code.

D. Luminaire classification and power adjustment.

i. Luminaire classification and power shall be determined in accordance with Section 160.5(b)1.

ii. Small Aperture Tunable-White and Dim-to-Warm Luminaires Lighting Power Adjustment. For qualifying small aperture tunable-white and dim-to-warm LED luminaires, the adjusted indoor lighting power of these luminaires shall be calculated by multiplying their maximum rated wattage by 0.75. Qualifying luminaires shall meet all of the following:

a. Small aperture. Qualifying luminaires with a luminaire aperture length longer than 18 inches shall have a luminaire aperture no wider than four inches. Qualifying luminaires with a luminaire aperture length of 18 inches or less shall have a luminaire aperture no wider than 8 inches.

b. Color changing. Qualifying tunable-white luminaires shall be capable of a color change greater than or equal to 2000 Kelvin correlated color temperature (CCT). Qualifying dim-to-warm luminaires shall be capable of color change greater than or equal to 500 Kelvin CCT.

c. Controls. Qualifying luminaires shall be connected to controls that allow color changing of the luminaires.

iii. Tailored Method Display Lighting Mounting Height Lighting Power Adjustment. For wall display luminaires or floor display luminaires meeting the Tailored Method described in Sections 170.2(e)1Ciig and h and where the bottom of luminaires are 10 feet 7 inches and greater above the finished floor, the adjusted indoor lighting power of these luminaires shall be calculated by multiplying their maximum rated wattage and the appropriate mounting height adjustment factor from Table 170.2-O. Luminaire mounting height is the distance from the finished floor to the bottom of the luminaire. General lighting shall not qualify for a mounting height multiplier.

3. Calculation of allowed indoor lighting power: general rules.

A. The allowed indoor lighting power allotment for conditioned areas shall be calculated separately from the allowed lighting power allotment for unconditioned areas. Each allotment is applicable solely to the area to which it applies, and there shall be no trade-offs between conditioned and unconditioned area allotments.

B. The allowed indoor lighting power allotment shall be calculated separately from the allowed outdoor lighting power allotment. Each allotment is applicable solely to the area to which it applies, and there shall be no trade-offs between the separate indoor and outdoor allotments.

C. The allowed indoor lighting power allotment for general lighting shall be calculated as follows:

i. The Area Category Method, as described in Section 170.2(e)1Ci, shall be used either by itself for all common use areas in the building, or when some areas in the building use the Tailored Method described in Section 170.2(e)1Cii. Under the Area Category Method (either by itself or in conjunction with the Tailored Method), as described more fully in Section 170.2(e)1Ci, and subject to the adjustments listed there, the allowed indoor lighting power allotment for general lighting shall be calculated for each area in the building as follows:

a. For conditioned areas, by multiplying the conditioned square feet of the area times the applicable allotment of watts per square foot for the area shown in Table 170.2-M (or Table 170.2-N if the Tailored Method is used for that area).

b. For unconditioned areas, by multiplying the unconditioned square feet of the area times the applicable allotment of watts per square foot for the area shown in Table 170.2-M (or Table 170.2-N if the Tailored Method is used for that area).

The allowed indoor lighting power allotment for general lighting for one area for which the Area Category Method was used may be increased up to the amount that the allowed indoor lighting power allotment for general lighting for another area using the Area Category Method or Tailored Method is decreased, except that such increases and decreases shall not be made between conditioned and unconditioned space.

D. The Tailored Method, as described in Section 170.2(e)1Cii, shall be used either by itself for all areas in the building, or when some areas in the building use the Area Category Method described in Section 170.2(e)1Ci. Under the Tailored Method (either by itself or in conjunction with the Area Category Method) as described more fully in Section 170.2(e)1Cii, and subject to the adjustments listed there, allowed indoor lighting power allotment for general lighting shall be calculated for each area in the building as follows:

i. For conditioned areas, by multiplying the conditioned square feet of the area times the applicable allotment of watts per square foot for the area shown in Table 170.2-N (or Table 170.2-M if the Area Category Method is used for that area);

ii. For unconditioned areas, by multiplying the unconditioned square feet of the area times the applicable allotment of watts per square foot for the area shown in Table 170.2-L (or Table 170.2-M if the Area Category Method is used for that area).

E. The allowed indoor lighting power allotment for general lighting for one area for which the Tailored Method was used may be increased up to the amount that the allowed indoor lighting power for general lighting for another area is decreased, but only if the Tailored Method or Area Category Method was used for the other area, except that such increases and decreases shall not be made between conditioned and unconditioned space.

F. If the Area Category Method is used for an area, the Tailored Method may not be used for that area. If the Tailored Method is used for an area, the Area Category Method may not be used for that area.

4. Calculation of allowed indoor lighting power: specific methodologies. The allowed indoor lighting power for each common use primary function area shall be calculated using only one of the methods in Subsection i, ii or iii below as applicable.

A. Area Category Method. Requirements for using the Area Category Method include all of the following:

i. The Area Category Method shall be used only for primary function areas, as defined in Section 100.1, that are listed in Table 170.2-M. For primary function areas not listed, selection of a reasonably equivalent type shall be permitted.

ii. For purposes of compliance with Section 170.2(e)1Ci, an "area" shall be defined as all contiguous areas that accommodate or are associated with a single primary function area listed in Table 170.2-M.

iii. Where areas are bounded or separated by interior partitions, the floor area occupied by those interior partitions may be included in a primary function area.

iv. The allowed indoor lighting power for each primary function area is the Lighting Power Density value in Table 170.2-M times the square feet of the primary function area. The total allowed indoor lighting power for the building is the sum of all allowed indoor lighting power for all areas in the building.

v. In addition to the allowed indoor lighting power calculated according to Sections 170.2(e)1Cia through f, the building may add additional lighting power allowances for qualifying lighting systems as specified in the Qualifying Lighting Systems column in Table 170.2-M under the following conditions:

a. Only primary function areas having a lighting system as specified in the Qualifying Lighting Systems column in Table 170.2-M and in accordance with the corresponding footnote of the table shall qualify for the additional lighting power allowances; and

b. The additional lighting power allowances shall be used only if the plans clearly identify all applicable task areas and the lighting equipment designed to illuminate these tasks; and

c. Tasks that are performed less than two hours per day or poor quality tasks that can be improved are not eligible for the additional lighting power allowances; and

d. The additional lighting power allowances shall not utilize any type of luminaires that are used for general lighting in the building; and

e. The additional lighting power allowances shall not be used when using the Complete Building Method, or when the Tailored Method is used for any area in the building; and

f. The additional lighting power allowed is the smaller of:

I. the lighting power density listed in the "Allowed Additional Lighting LPD" column in Table 170.2-M, times the square feet of the primary function, or

II. the adjusted indoor lighting power of the applicable lighting; and

B. Tailored Method. Requirements for using the Tailored Method include all of the following:

i. The Tailored Method shall be used only for primary function areas listed in Table 170.2-N as defined in Section 100.1.

ii. Allowed indoor lighting power allotments for general lighting shall be determined according to Section 170.2(e)1Ciif, as applicable.

iii. For compliance with Section 170.2(e)1Cii, an "area" shall be defined as all contiguous areas that accommodate or are associated with a single primary function area listed in Table 170.2-N.

iv. Where areas are bounded or separated by interior partitions, the floor area occupied by those interior partitions may be included in a primary function area.

v. In addition to the allowed indoor lighting power allotments for general lighting calculated according to Section 170.2(e)1Ciif, as applicable, the building may add additional lighting power allowances for wall display lighting, task lighting and decorative/special effects lighting, according to Sections 170.20(e)1Ciig through j.

vi. Determine allowed indoor lighting power allotments for general lighting for primary function areas listed in Table 170.2-N as follows:

a. Use the general illumination level (lux) listed in column 2 of Table 170.2-N to determine the allowed general lighting power density allotments for the area.

b. Determine the room cavity ratio (RCR) for the area. The RCR shall be calculated according to the applicable equation in Table 170.2-P.

c. Find the allowed general lighting power density allotment in Table 170.2-Q that is applicable to the general illuminance level (lux) from column 2 of Table 170.2-N (as described in Item i) and the RCR determined in accordance with Table 170.2-P (as described in Item ii).

d. Determine the square feet of the area in accordance with Sections 170.2(e)1Ciic and d.

e. Multiply the allowed lighting power density allotment, as determined in accordance with Item iii by the square feet of each primary function area, as determined in accordance with Item iv. The product is the allowed indoor lighting power allotment for general lighting for the area.

vii. Determine additional allowed power for wall display lighting according to column 3 of Table 170.2-N for each primary function area as follows:

a. Qualifying wall lighting shall:

I. Be mounted within 10 feet of the wall having the wall display. When track lighting is used for wall display, and where portions of that lighting track are more than 10 feet from the wall and other portions are within 10 feet of the wall, portions of track more than 10 feet from the wall shall not be used for the wall display allowance.

II. Be a lighting system type appropriate for wall lighting. Lighting systems appropriate for wall lighting are lighting track adjacent to the wall, wall-washer luminaires, luminaires behind a wall valance or wall cove, or accent light. (Accent luminaires are adjustable or fixed luminaires with PAR, R, MR or AR, or luminaires providing directional display light.)

b. Additional allowed power for wall display lighting is available only for lighting that illuminates walls having wall displays. The length of display walls shall include the length of the perimeter walls, including but not limited to closable openings and permanent full height interior partitions. Permanent full height interior partitions are those that (I) extend from the

floor to within two feet of the ceiling or are taller than ten feet and (II) are permanently anchored to the floor.

c. For wall display lighting where the bottom of the luminaire is greater than 10 feet 6 inches above the finished floor, the mounting height adjustment factor from Table 170.2-O can be used to adjust the installed luminaire wattage as specified in Section 170.2(e)1Aivc.

d. The allowed power for wall display lighting shall be the smaller of:

I. the "wall display lighting power density" determined in accordance with Table 170.2-N, multiplied by the wall display lengths determined in accordance with Item iii; and

II. The Adjusted Indoor Lighting Power used for the wall display lighting systems.

e. Lighting internal to display cases that are attached to a wall or directly adjacent to a wall are counted as wall display lighting as specified in Section 170.2(e)1Ciig. All other lighting internal to display cases is counted as floor display lighting.

viii. Determine additional allowed power allotment for task lighting according to column 4 of Table 170.2-N for each primary function area as follows:

a. Additional allowed power for task lighting may be used by qualifying task lighting systems. For floor areas qualifying for task lighting power allowances, the additional allowed power shall be used only once for the same floor area, so that the allowance shall not be additive.

b. Qualifying task lighting shall:

I. Be located immediately adjacent to and capable of illuminating the task for which it is installed.

II. Be of a type different from the general lighting system.

III. Be separately switched from the general lighting system.

c. The square footage of task areas shall be determined in accordance with Sections 170.2(e)1ciic and d, except that any floor area designed to not have tasks, such as floor areas designated as a path of egress, shall not be included for the task lighting allowance.

d. The allowed power for task lighting for each applicable area shall be the smaller of:

I. The allowed task lighting power determined in accordance with Section 170.2(e)1ciih multiplied by the floor square footage determined in accordance with Section 170.2(e)1ciihIII; and

II. The adjusted indoor lighting power used for the task lighting systems.

ix. Determine additional allowed power for decorative/special effects lighting for each primary function area as follows:

a. Qualifying decorative/special effects lighting includes luminaires such as chandeliers, sconces, lanterns, neon and cold cathode, light emitting diodes, theatrical projectors, moving lights and light color panels when any of those lights are used in a decorative manner that does not serve as display lighting or general lighting.

b. Additional lighting power for decorative/special effects lighting shall be used only if allowed by column 5 of Table 170.2-N.

c. Additional lighting power for decorative/special effects lighting shall be used only in areas having decorative/special effects lighting. The square footage of the floor area shall be determined in accordance with Sections 170.2(e)1Ciic and d, and it shall not include floor areas not having decorative/special effects lighting.

d. The additional allowed power for decorative/special effects lighting for each applicable area shall be the smaller of:

I. The product of the "allowed decorative/special effects lighting power" determined in accordance with Section 170.2(e)1CiikII, multiplied by the floor square footage determined in accordance with Section 170.2(e)1CiikIII; and

II. The adjusted indoor lighting power of allowed ornamental/special effects lighting.

LIGHTING POWER ADJUSTMENT FACTORS (PAF)

TYPE OF CONTROL	TYPE OF AREA	FACTOR
1. Daylight Continuous Dimming plus OFF Control	Luminaires in skylit daylit zone or primary sidelit daylit zone	0.10
2. Occupant Sensing Controls in Office Spaces larger than 250 square feet	In open plan offices > 250 square feet: One sensor controlling an area that is: No larger than 125 square feet	0.30
	In open plan offices > 250 square feet: One sensor controlling an area that is: From 126 to 250 square feet	0.20
3.Institutional Tuning	Luminaires in non-daylit areas. Luminaires that qualify for other PAFs in this table may also qualify for this tuning PAF.	0.10
	Luminaires in daylit areas. Luminaires that qualify for other PAFs in this table may also qualify for this tuning PAF.	0.05
4. Demand Responsive Control	General lighting luminaires not in the scope of Section 110.12(c). Luminaires that qualify for other PAFs in this table may also qualify for this demand responsive control PAF	0.05
5. Clerestory Fenestration	Luminaires in daylit areas adjacent to the clerestory. Luminaires that qualify for daylight dimming plus OFF control may also qualify for this PAF.	0.05
6. Horizontal Slats	Luminaires in daylit areas adjacent to vertical fenestration with interior or exterior horizontal slats. Luminaires that qualify for daylight dimming plus OFF control may also qualify for this PAF.	0.05
7.Light Shelves	Luminaires in daylit areas adjacent to clerestory fenestration with interior or exterior light shelves. This PAF may be combined with the PAF for clerestory fenestration. Luminaires that qualify for daylight dimming plus OFF control may also qualify for this PAF	0.10

Footnote to TABLE 170.2-L:

a. To qualify for any of the Power Adjustment Factors in this table, the installation shall comply with the applicable requirements in Section 170.2(e)1Aii

b. Only one PAF may be used for each qualifying luminaire unless combined below.

c. Lighting controls that are required for compliance with Part 6 shall not be eligible for a PAF

TABLE 170.2-M AREA CATEGORY METHOD - LIGHTING POWER DENSITY VALUES (WATTS/FT²)

Primary Function Area	Allowed Lighting Power Density for General Lighting (W/ft²)	Additional Lighting Power Qualified Lighting Systems	Additional Lighting Power Additional Allowance (W/ft², unless noted otherwise)
Storage	0.45	-	-
Conference, Multipurpose and Meeting Area	0.75	Display/Decorative	0.30
Copy Room	0.50	-	-
Corridor Area	0.40	Decorative/Display	0.25

Electrical, Mechanical, Telephone Rooms	0.40	Detailed Task Work[1]	0.20
Exercise/Fitness Center and Gymnasium Area	0.50	-	-
Lobby, Main Entry	0.70	Display/Decorative	0.25
Locker Room	0.45	-	-
Lounge, Breakroom, or Waiting Area	0.55	Display/Decorative	0.25
Concourse and Atria Area	0.60	Display/Decorative	0.25

TABLE 170.2-M AREA CATEGORY METHOD - LIGHTING POWER DENSITY VALUES (WATTS/FT²) (Continue)

Primary Function Area		**Allowed Lighting Power Density for General Lighting (W/ft²)**	**Additional Lighting Power Qualified Lighting Systems**	**Additional Lighting Power Additional Allowance (W/ft², unless noted otherwise)**
Office Area	> 250 square feet	0.60	Decorative/Display and Portable lighting for office areas[5]	0.20
Office Area	≤ 250 square feet	0.65	Decorative/Display and Portable lighting for office areas[5]	0.20
Parking Garage Area	Parking Zone and Ramps	0.10	First ATM or Ticket Machine	100 W
Parking Garage Area	Parking Zone and Ramps	0.10	Additional ATM or Ticket machine	50 W each
Parking Garage Area	Daylight Adaptation Zones[3]	1.00	-	-
Laundry Area		0.45	-	-
Restrooms		0.65	Decorative/ Display	0.35
Stairwell		0.60	Decorative/ Display	0.35
All other		0.40	-	-
Aging Eye/Low-vision[6]	Lobby, Main Entry	0.85	Display/Decorative	0.30
Aging Eye/Low-vision[6]	Lobby, Main Entry	0.85	Transition Lighting OFF at night[7]	0.95
Aging Eye/Low-vision[6]	Stairwell	0.80	Display/Decorative	0.30
Aging Eye/Low-vision[6]	Corridor Area	0.70	Display/Decorative	0.30
Aging Eye/Low-vision[6]	Lounge/Waiting Area	0.80	Display/Decorative	0.30
Aging Eye/Low-vision[6]	Multipurpose Room	0.85	Display/Decorative	0.30
Aging Eye/Low-vision[6]	Dining	0.80	Display/Decorative	0.30
Aging Eye/Low-vision[6]	Restroom	1.00	Display/Decorative	0.20

Footnotes for this table are listed below.

1. Detailed task work – Lighting provides high level of visual acuity required for activities with close attention to small elements and/or extreme close up work.

2. RESERVED

3. Daylight Adaptation Zones shall be no longer than 66 feet from the entrance to the parking garage.

4. RESERVED

5. Portable lighting in office areas includes under shelf or furniture-mounted supplemental task lighting qualifies when controlled by a time clock or an occupancy sensor.

6. Aging Eye/Low-vision areas can be documented as being designed to comply with the light levels in ANSI/IES RP-28 and are or will be licensed by local or state authorities for either senior long-term care, adult day care, senior support, and/or people with special visual needs.

7. Transition lighting OFF at night. Lighting power controlled by astronomical time clock or other control to shut off lighting at night. Additional LPD only applies to area within 30 feet of an exit. Not applicable to lighting in daylit zones.

8. Tunable white luminaires capable of color change greater than or equal to 2000K CCT, or dim-to-warm luminaires capable of color change greater than or equal to 500K CCT, connected to controls that allows color changing of the luminaires.

TABLE 170.2-N TAILORED METHOD LIGHTING POWER ALLOWANCES

1	2	3		5
Primary Function Area	**General Illumination Level (Lux)**	**Wall Lighting Power Density (W/ft)**	**Task Lighting Power Density (W/ft)**	**Allowed Decorative/ Special Effect Lighting Power Density (W/ft²)**
Conference, Multipurpose, and Meeting Center Areas	300	2.00	0.25	0.35
Dining Areas	200	1.25	0.25	0.35
Lobby, Main Entry	200	3.50	0.25	0.35

TABLE 170.2-O TAILORED WALL AND FLOOR DISPLAY MOUNTING HEIGHT ADJUSTMENT FACTORSFACTORS

Height in feet above finished floor and bottom of luminaire(s)	Wall Display Mounting Height Adjustment Factor
< 10′-7″	1.00
10′-7″ to 14′-0″	0.85
>14′-0″ to 18′-0″	0.75
> 18′-0″	0.70

Table 170.2-P ROOM CAVITY RATIO (RCR) EQUATIONS

Determine the Room Cavity Ratio for Table 170.2-Q using one of the following equations.
Room cavity ratio for rectangular rooms $$RCR = \frac{5 \times H \times (L + W)}{L \times W}$$
Room cavity ratio for irregular-shaped rooms $$RCR = \frac{2.5 \times H \times P}{A}$$
Where: L =Length of room; W = Width of room; H =Vertical distance from the work plane to the centerline of the lighting fixture; P = Perimeter of room, and A = Area of room

TABLE 170.2-Q TAILORED METHOD GENERAL LIGHTING POWER ALLOWED – BY ILLUMINANCE *AND ROOM CAVITY RATIO*

General Lighting Power Density (W/ft²) for the following RCR values[b]

General Illuminance Level (lux)[a]	RCR ≤ 2.0	RCR > 2.0 and ≤ 3.5	RCR > 3.5 and ≤ 7.0	RCR > 7.0
150	0.35	0.40	0.50	0.65
200	0.40	0.50	0.65	0.85

600	0.90	1.05	1.40	2.00

Footnotes to TABLE 170.2-Q

[a] Illuminance values from Column 2 of TABLE 170.2-N.

[b] RCR values are calculated using applicable equations in TABLE 170.2-P.

5. **RESERVED.**

6. **Outdoor lighting.**

   A. A multifamily or mixed occupancy outdoor lighting installation complies with this section if it meets the requirements in Subsections 170.2(e)6B and C, and the actual outdoor lighting power installed is no greater than the allowed outdoor lighting power calculated under Subsection 170.2(e)6D. The allowed outdoor lighting shall be calculated according to outdoor lighting zone in Title 24, Part 1, Section 10-114.

   Exceptions to Section 170.2(e)6A: When more than 50 percent of the light from a luminaire falls within one or more of the following applications, the lighting power for that luminaire shall be exempt from Section 170.2(e)6:

   i. Temporary outdoor lighting.

   ii. Lighting required and regulated by the Federal Aviation Administration and the Coast Guard.

   iii. Lighting for public streets, roadways, highways and traffic signage lighting, including lighting for driveway entrances occurring in the public right-of-way owned or maintained by a local municipality or utility.

   iv. Lighting for sports and athletic fields, and children's playgrounds.

   v. Reserved.

   vi. Lighting of public monuments.

   vii. Lighting of signs complying with the requirements of Sections 160.5(d) and 170.2(e)7.

   viii. Lighting of stairs, wheelchair elevator lifts for American with Disabilities Act (ADA) compliance, and ramps that are other than parking garage ramps.

   ix. Landscape lighting.

   x. Reserved.

   xi. Lighting for outdoor theatrical and other outdoor live performances, provided that these lighting systems are additions to area lighting systems and are controlled by a multiscene or theatrical cross-fade control station accessible only to authorized operators.

   xii. Outdoor lighting systems for qualified historic buildings, as defined in the California Historic Building Code (Title 24, Part 8), if they consist solely of historic lighting components or replicas of historic lighting components. If lighting systems for qualified historic buildings contain some historic lighting components or replicas of historic components, combined with other lighting components, only those historic or historic replica components are exempt. All other outdoor lighting systems for qualified historic buildings shall comply with Section 170.2(e)6.

B. Outdoor lighting power trade-offs. Outdoor lighting power trade-offs shall be determined as follows:

   i. Allowed lighting power determined according to Section 170.2(e)6Di for general hardscape lighting allowance may be traded to specific applications in Section 170.2(e)6Dii, provided the hardscape area from which the lighting power is traded continues to be illuminated in accordance with Section 170.2(e)6Dia.

   ii. Allowed lighting power determined according to Section 170.2(e)2Dii for additional lighting power allowances for specific applications shall not be traded between specific applications, or to hardscape lighting in Section 170.2(e)6Di.

   iii. Trading off lighting power allowances between outdoor and indoor areas shall not be permitted.

C. Calculation of actual lighting power. The wattage of outdoor luminaires shall be determined in accordance with Section 160.5(b)1.

D. Calculation of allowed lighting power. The allowed lighting power shall be the combined total of the sum of the general hardscape lighting allowance determined in accordance with Section 170.2(e)2Di, and the sum of the additional lighting power allowance for specific applications determined in accordance with Section 170.2(e)6Dii.

i. General hardscape lighting allowance. Determine the general hardscape lighting power allowances as follows:

a. The general hardscape area of a site shall include parking lot(s), roadway(s), driveway(s), sidewalk(s), walkway(s), bikeway(s), plaza(s), bridge(s), tunnel(s) and other improved area(s) that are illuminated. Public roadway(s) that are illuminated by a lighting system owned or maintained by the local municipality or utility shall not be included in the area calculations. In plan view of the site, determine the illuminated hardscape area, which is defined as any hardscape area that is within a square pattern around each luminaire or pole that is ten times the luminaire mounting height with the luminaire in the middle of the pattern, less any areas that are within a building, beyond the hardscape area, beyond property lines or obstructed by a structure. The illuminated hardscape area shall include portions of planters and landscaped areas that are within the lighting application and are less than or equal to 10 feet wide in the short dimensions and are enclosed by hardscape or other improvement on at least three sides. Multiply the illuminated hardscape area by the Area Wattage Allowance (AWA) from Table 170.2-R for the appropriate lighting zone.

b. Determine the Initial Wattage Allowance (IWA) for general hardscape lighting from Table 170.2-R for the appropriate lighting zone. The hardscape area shall be permitted one IWA per site.

c. The general hardscape lighting allowance shall be the sum of the allowed watts determined from a and b above.

ii. Additional lighting power allowance for specific applications. Additional lighting power for specific applications shall be the smaller of the additional lighting allowances for specific applications determined in accordance with Table **170.2-S for the appropriate lighting zone, or the actual installed lighting power meeting the requirements for the allowance.**

TABLE 170.2-R GENERAL HARDSCAPE MULTIFAMILY LIGHTING POWER ALLOWANCE

Type of Power Allowance	Lighting Zone 0[2]	Lighting Zone 1[2]	Lighting Zone 2[2]	Lighting Zone 3[2]	Lighting Zone 4[2]
Area Wattage Allowance (AWA)	No allowance[1]	0.026 W/ft²	0.030 W/ft²	0.038 W/ft²	0.055 W/ft²
Initial Wattage Allowance (IWA)	No allowance[1]	300 W	350 W	400 W	450 W

Footnotes to TABLE 170.2-R

1 Continuous lighting is explicitly prohibited in Lighting Zone 0. A single luminaire of 15 Watts or less may be installed at an entrance to a parking area, trail head, fee payment kiosk, outhouse, or toilet facility, as required to provide safe navigation of the site infrastructure. Luminaires installed shall meet the maximum zonal lumen limits as specified in Section 160.5(c)1.

2 Narrow band spectrum light sources with a dominant peak wavelength greater than 580 nm – as mandated by local, state, or federal agencies to minimize the impact on local, active professional astronomy or nocturnal habitat of specific local fauna – shall be allowed a 2.0 lighting power allowance multiplier.

TABLE 170.2-S ADDITIONAL MULTIFAMILY LIGHTING POWER ALLOWANCE FOR SPECIFIC APPLICATIONS
All area and distance measurements in plan view unless otherwise noted.

Lighting Application	Lighting Zone 0	Lighting Zone 1	Lighting Zone 2	Lighting Zone 3	Lighting Zone 4
WATTAGE ALLOWANCE PER APPLICATION. Use all that apply as appropriate.					
Building Entrances or Exits. Allowance per door. Luminaires qualifying for this allowance shall be within 20 feet of the door.	Not applicable	9 watts	15 watts	19 watts	21 watts
Primary Entrances to Senior Care Facilities Allowance per primary entrance(s) only. Primary entrances shall provide access for the general public and shall not be used exclusively for staff or service personnel. This allowance shall be in addition to the building entrance or exit allowance above. Luminaires qualifying for this allowance shall be within 100 feet of the primary entrance.	Not applicable	20 watts	40 watts	57 watts	60 watts
ATM Machine Lighting. Allowance per ATM machine. Luminaires qualifying for this allowance shall be within 50 feet of the dispenser.	Not applicable	100 watts for first ATM machine, 35 watts for each additional ATM machine.			
WATTAGE ALLOWANCE PER HARDSCAPE AREA (W/ft²). May be used for any illuminated hardscape area on the site.					
Hardscape Ornamental Lighting. Allowance for the total site illuminated hardscape area. Luminaires qualifying for this allowance shall be rated for 50 watts or less as determined in accordance with Section 160.5(b)1 and shall be post-top luminaires, lanterns, pendant luminaires, or chandeliers.	Not applicable	No Allowance	0.007 W/ft²	0.013 W/ft²	0.019 W/ft²
WATTAGE ALLOWANCE PER SPECIFIC AREA (W/ft²). Use as appropriate provided that none of the following specific applications shall be used for the same area.					
Building Facades. Only areas of building façade that are illuminated shall qualify for this allowance. Luminaires qualifying for this allowance shall be aimed at the façade and shall be capable of illuminating it without obstruction or interference by permanent building features or other objects. This allowance calculation shall not include portions of the building facades within 20 feet of residence bedroom windows.	Not applicable	No Allowance	0.100 W/ft²	0.170 W/ft²	0.225 W/ft²
Canopies and Tunnels. Allowance for the total area within the drip line of the canopy or inside the tunnel. Luminaires qualifying for this allowance shall be located under the canopy or tunnel.	Not applicable	0.057 W/ft²	0.137 W/ft²	0.270 W/ft²	0.370 W/ft²
Student Pick-up/Drop-off zone. Allowance for the area of the student pick-up/drop-off zone, with or without canopy, for preschool through 12th grade school campuses. A student pick-up/drop off zone is a curbside, controlled traffic area on a school campus where students are picked-up and dropped off from vehicles. The allowed area shall be the smaller of the actual width or 25 feet, times the smaller of the actual length or 250 feet. Qualifying luminaires shall be within 2 mounting heights of the student pick-up/drop-off zone.	Not applicable	No Allowance	0.056 W/ft²	0.200 W/ft²	No Allowance

	Outdoor Dining. Allowance for the total illuminated hardscape of outdoor dining. Outdoor dining areas are hardscape areas used to serve and consume food and beverages. Qualifying luminaires shall be within 2 mounting heights of the hardscape area of outdoor dining.	Not applicable	0.004 W/ft²	0.030 W/ft²	0.050 W/ft²	0.075 W/ft²
	Special Security Lighting for Retail Parking and Pedestrian Hardscape. This additional allowance is for illuminated retail parking and pedestrian hardscape identified as having special security needs. This allowance shall be in addition to the building entrance or exit allowance.	Not applicable	0.004 W/ft²	0.005 W/ft²	0.010 W/ft²	No Allowance
	Security Camera. This additional allowance is for the illuminated general hardscape area. This allowance shall apply when a security camera is installed within 2 mounting heights of the general hardscape area and mounted more than 10 feet away from a building.	Not applicable	No Allowance	0.018 W/ft²	0.018 W/ft²	0.018 W/ft²

7. **Requirements for signs**. Section 170.2(e)7 applies to all internally illuminated and externally illuminated signs, unfiltered light emitting diodes (LEDs), and unfiltered neon, both indoor and outdoor. Each sign shall comply with either Subsection A or B, as applicable.

   A. **Maximum allowed lighting power.**

      i. For internally illuminated signs, the maximum allowed lighting power shall not exceed the product of the illuminated sign area and 12 watts per square foot. For double-faced signs, only the area of a single face shall be used to determine the allowed lighting power.

      ii. For externally illuminated signs, the maximum allowed lighting power shall not exceed the product of the illuminated sign area and 2.3 watts per square foot. Only areas of an externally lighted sign that are illuminated without obstruction or interference, by one or more luminaires, shall be used.

      iii. Lighting for unfiltered light emitting diodes (LEDs) and unfiltered neon shall comply with Section 170.2(e)7B.

   B. **Alternate lighting sources.** The sign shall be equipped with one or more of the following light sources:

      i. High pressure sodium lamps; or

      ii. Metal halide lamps that are:

         a. Pulse start or ceramic served by a ballast that has a minimum efficiency of 88 percent or greater; or

         b. Pulse start that are 320 watts or smaller, are not 250 watt or 175 watt lamps, and are served by a ballast that has a minimum efficiency of 80 percent.

         Ballast efficiency is the reference lamp power divided by the ballast input power when tested according to ANSI C82.6-2015.

      iii. Neon or cold cathode lamps with transformer or power supply efficiency greater than or equal to the following:

         a. A minimum efficiency of 75 percent when the transformer or power supply rated output current is less than 50 mA; or

         b. A minimum efficiency of 68 percent when the transformer or power supply rated output current is 50 mA or greater.

      The ratio of the output wattage to the input wattage is at 100 percent tubing load.

      iv. Fluorescent lighting systems meeting one of the following requirements:

         a. Use only lamps with a minimum color rendering index (CRI) of 80; or

b. Use only electronic ballasts with a fundamental output frequency not less than 20 kHz.

v. Light emitting diodes (LEDs) with a power supply having an efficiency of 80 percent or greater; or

Exception to Section 170.2(e)7Bv: Single voltage external power supplies that are designed to convert 120 volt AC input into lower voltage DC or AC output, and have a nameplate output power less than or equal to 250 watts, shall comply with the applicable requirements of the Appliance Efficiency Regulations (Title 20).

vi. Compact fluorescent lamps that do not contain a medium screw base socket (E24/E26).

Exception 1 to Section 170.2(e)7: Unfiltered incandescent lamps that are not part of an electronic message center (EMC), an internally illuminated sign or an externally illuminated sign.

Exception 2 to Section 170.2(e)7: Exit signs. Exit signs shall meet the requirements of the Appliance Efficiency Regulations.

(f) **Photovoltaic requirements—three habitable stories or fewer**. All multifamily buildings up to three habitable stories shall have a newly installed photovoltaic (PV) system or newly installed PV modules meeting the minimum qualification requirements specified in Joint Appendix JA11. The annual electrical output of the PV system shall be no less than the smaller of a PV system size determined using Equation 170.2-C, or the maximum PV system size that can be installed on the building's **solar access roof area** (SARA).

A. SARA includes the area of the building's roof space capable of structurally supporting a PV system, and the area of all roof space on covered parking areas, carports, and all other newly constructed structures on the site that are compatible with supporting a PV system per Title 24, Part 2, Section 1511.2.

B. SARA does NOT include:

i. Any roof area that has less than 70 percent annual solar access. Annual solar access is determined by dividing the total annual solar insolation, accounting for shading obstructions, by the total annual solar insolation if the same areas were unshaded by obstructions. For steep-sloped roofs, only shading from existing permanent natural or manmade obstructions that are external to the dwelling, including but not limited to trees, hills and adjacent structures, shall be considered for annual solar access calculations. For low slope roofs, all obstructions including those that are external to the dwelling unit, and obstructions that are part of the building design and elevation features, shall be considered for the annual solar access calculations.

ii. Occupied roof areas as specified by CBC Section 503.1.4.

iii. Roof area that is otherwise not available due to compliance with other building code requirements if confirmed by the Executive Director.

EQUATION 170.2-C ANNUAL PHOTOVOLTAIC ELECTRICAL OUTPUT

$$kW_{PV} = (CFA \times A)/1000 + (N_{DU} \times B)$$

where:

kW_{PV} = kW_{dc} size of the PV system.

CFA = Conditioned floor area.

N_{DU} = Number of dwelling units.

A = CFA adjustment factor from Table 170.2-T.

B = Dwelling unit adjustment factor from Table 170.2-T.

Exception 1 to Section 170.2(f): For steep slope roofs, SARA shall not consider roof areas with a northerly azimuth that lies between 300 degrees and 90 degrees from true north. No PV system is required if the SARA is less than 80 contiguous square feet.

Exception 2 to Section 170.2(f): No PV system is required when the minimum PV system size specified by Section 170.2(f) is less than 1.8 kW_{dc}.

Exception 3 to Section 170.2(f): Buildings with enforcement-authority-approved roof designs, where the enforcement authority determines it is not possible for the PV system, including panels, modules and components and supports and attachments to the roof structure, to meet the requirements of American Society of Civil Engineers (ASCE) Standard 7-16, Chapter 7, Snow Loads.

Exception 4 to Section 170.2(f): For buildings that are approved by the local planning department prior to January 1, 2020 with mandatory conditions of approval:

a. Shading from roof designs and configurations for steep slope roofs shall be considered for the annual solar access calculations; and

b. Roof areas that are not allowed to have PVs by the mandatory conditions of approval shall not be considered in determining the SARA.

Exception 5 to Section 170.2(f): PV system sizes determined using Equation 170.2-C may be reduced by 25 percent if installed in conjunction with a battery storage system. The battery storage system shall meet the qualification requirements specified in Joint Appendix JA12 and have a minimum usable capacity of 7.5 kWh.

TABLE *170.2-TCFA* AND DWELLING UNIT ADJUSTMENT FACTORS

CLIMATE ZONE	A—CFA	B—DWELLING UNITS
1	0.793	1.27
2	0.621	1.22
3	0.628	1.12
4	0.586	1.21
5	0.585	1.06
6	0.594	1.23
7	0.572	1.15
8	0.586	1.37
9	0.613	1.36
10	0.627	1.41
11	0.836	1.44
12	0.613	1.40
13	0.894	1.51
14	0.741	1.26
15	1.56	1.47
16	0.59	1.22

(g) **Photovoltaic requirements—more than three habitable stories.** All newly constructed building types specified in Table 170.2-U, or mixed occupancy buildings where one or more of these building types constitute at least 80 percent of the floor area of the building, shall have a newly installed photovoltaic (PV) system meeting the minimum qualification requirements of Reference Joint Appendix JA11. The PV size in kW_{dc} shall be not less than the smaller of the PV system size determined by Equation 170.2-D, or the total of all available Solar Access Roof Areas (SARA) multiplied by 14 W/ft^2.

1. SARA include the area of the building's roof space capable of structurally supporting a PV system, and the area of all roof space on covered parking areas, carports and all other newly constructed structures on the site that are compatible with supporting a PV system per Title 24, Part 2, Section 1511.2.

2. SARA does not include:

   A. Any area that has less than 70 percent annual solar access. Annual solar access is determined by dividing the total annual solar insolation (accounting for shading obstructions) by the total annual solar insolation if the same areas were unshaded by those obstructions. For all roofs, all obstructions

including those that are external to the building, and obstructions that are part of the building design and elevation features, may be considered for the annual solar access calculations.

B. Occupied roofs as specified by CBC Section 503.1.4.

C. Roof space that is otherwise not available due to compliance with other building code requirements if confirmed by the Executive Director.

EQUATION 170.2-D PHOTOVOLTAIC DIRECT CURRENT SIZE

$kW_{PVdc} = (CFA \times A)/1000$

where:

kW_{PVdc} = Size of the PV system in kW.

CFA = Conditioned floor area in square feet.

A = PV capacity factor specified in Table 170.2-U for the building type.

Where the building includes more than one of the space types listed in Table 170.2-U, the total PV system capacity for the building shall be determined by applying Equation 170.2-D to each of the listed space types and summing the capacities determined for each.

Exception 1 to Section 170.2(g): No PV system is required where the total of all available SARA is less than 3 percent of the conditioned floor area.

Exception 2 to Section 170.2(g): No PV system is required where the required PV system size is less than 4 kW_{dc}.

Exception 3 to Section 170.2(g): No PV system is required if the SARA contains less than 80 contiguous square feet.

Exception 4 to Section 170.2(g): Buildings with enforcement-authority-approved roof designs, where the enforcement authority determines it is not possible for the PV system, including panels, modules, components, supports and attachments to the roof structure, to meet ASCE 7-16, Chapter 7, Snow Loads.

Exception 5 to Section 170.2(g): Multi-tenant buildings in areas where a load serving entity does not provide either a Virtual Net Metering (VNEM) or community solar program.

Table 170.2-U – PV Capacity Factors

Building Type	**Factor A – Minimum PV Capacity (W/ft² of conditioned floor area)** **Climate Zones** **1, 3, 5, 16**	***Factor A – Minimum PV Capacity (W/ft² of conditioned floor area)*** **Climate Zones** **2, 4, 6-14**	**Factor A – Minimum PV Capacity (W/ft² of conditioned floor area)** **Climate Zone** **15**
Grocery	2.62	2.91	3.53

Retail	2.62	2.91	3.53
School	1.27	1.63	2.46
Warehouse	0.39	0.44	0.58
Auditorium, Convention Center, Hotel/Motel, Library, Medical Office Building/Clinic, Restaurant, Theater	0.39	0.44	0.58

(h) **Battery storage system requirements—more than three habitable stories.** All buildings that are required by Section 170.2(g) to have a PV system shall also have a battery storage system meeting the minimum qualification requirements of Reference Joint Appendix JA12. The rated energy capacity and the rated power capacity shall be not less than the values determined by Equation 170.2-E and Equation 170.2-F. Where the building includes more than one of the space types listed in Table 170.2-V, the total battery system capacity for the building shall be determined by applying Equations 170.2-E and 170.2-F to each of the listed space types and summing the capacities determined for each space type and equation.

EQUATION 170.2-E BATTERY STORAGE RATED ENERGY CAPACITY

$kWh_{batt} = kW_{PVdc} \times B / D^{0.5}$

WHERE:

kWh_{batt} = Rated usable energy capacity of the battery storage system in kWh.

kW_{PVdc} = PV system capacity required by Section 170.2(g) in kWdc.

B = Battery energy capacity factor specified in Table 170.2-V for the building type.

D = Rated single charge-discharge cycle AC to AC (round-trip) efficiency of the battery storage system.

EQUATION 170.2-F BATTERY STORAGE RATED POWER CAPACITY

$kW_{batt} = kW_{PVdc} \times C$

WHERE:

kW_{batt} = Power capacity of the battery storage system in kWdc

kW_{PVdc} = PV system capacity required by Section 170.2(g) in kWdc.

C = Battery power capacity factor specified in Table 170.2-V for the building type.

Exception 1 to Section 170.2(h): No battery storage system is required if the installed PV system size is less than 15 percent of the size determined by Equation 170.2-D.

Exception 2 to Section 170.2(h): No battery storage system is required in buildings with battery storage system requirements with less than 10 kWh rated capacity.

SUBCHAPTER 12
MULTIFAMILY BUILDINGS - ADDITIONS, ALTERATIONS, AND REPAIRS TO EXISTING MULTIFAMILY BUILDINGS

SECTION 180.0 – GENERAL

Additions, alterations and repairs to existing attached dwelling units and common use areas in multifamily buildings, existing outdoor lighting for these occupancies, and internally and externally illuminated signs shall meet the requirements specified in Sections 100.0 through 110.10, 160.1, and 160.3 through 170.2 that are applicable to the building project, and either the performance compliance approach (energy budgets) in Section 180.1(b) (for additions) or 180.2(c) (for alterations), or the prescriptive compliance approach in Section 180.1(a) (for additions) or 180.2(b) (for alterations), for the climate zone in which the building is located. Climate zones are shown in Figure 100.1-A.

Covered process requirements for additions, alterations and repairs to existing multifamily buildings are specified in Section 141.1.

Nonresidential occupancies in mixed occupancy buildings shall comply with nonresidential requirements in Sections 120.0 through 141.1.

NOTE: For alterations that change the occupancy classification of the building, the requirements specified in Section 180.2 apply to the occupancy after the alterations.

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8 and 25943, Public Resources Code.

SECTION 180.1 – ADDITIONS

Additions to existing multifamily buildings shall meet the applicable requirements of Sections 110.0 through 110.9; Sections 160.0, 160.1, and 160.2(c) and (d); Sections 160.3 through 160.7; and either Section 180.1(a) or 180.1(b).

Exception 2 to Section 180.1: Additions of 300 square feet or less are exempt from the roofing product requirements of Section 170.2(a)1A.

Exception 3 to Section 180.1: Existing inaccessible piping shall not require insulation as defined under Section **160.4(f)2**Aiii.

Exception 4 to Section 180.1: Space-conditioning system. When heating or cooling will be extended to an addition from the existing system(s), the existing heating and cooling equipment need not comply with Part 6. The heating system capacity must be adequate to meet the minimum requirements of CBC Section 1204.1.

Exception 5 to Section 180.1: Space-conditioning system ducts. When any length of duct is extended from an existing duct system to serve the addition, the existing duct system and the extended duct shall meet the applicable requirements specified in Sections 180.2(b)2Ai and 180.2(b)2Aii.

Exception 6 to Section 180.1: Photovoltaic and battery storage systems, as specified in Sections 170.2(f) through 170.2(h), are not required for additions.

Exception 7 to Section 180.1: Dwelling unit space heating system. New or replacement space heating systems serving an addition may be a heat pump or gas heating system.

(a) **Prescriptive approach.** The envelope and lighting of the addition; any newly installed space-conditioning or ventilation system, electrical power distribution system, or water-heating system; any addition to an outdoor lighting system; and any new sign installed in conjunction with an indoor or outdoor addition shall meet the applicable requirements of Sections 110.0 through 110.12**;** 160.0, 160.1, and 160.2(c) and (d); and 160.3 through 170.2.

1. **Envelope.**

   A. Additions that are greater than 700 square feet shall meet the requirements of Section 170.2(a), with the following modifications:

      i. Framed walls extension. Extensions of existing wood-framed walls may retain the dimensions of the existing walls and shall install cavity insulation of R-15 in a 2x4 framing and R-21 in a 2x6 framing.

      ii. The maximum allowed fenestration area shall be the greater of 175 square feet or 20 percent of the addition floor area.

      iii. When existing siding of a wood-framed wall is not being removed or replaced, cavity insulation of R-15 in a 2x4 framing and R-21 in a 2x6 framing shall be installed and continuous insulation is not required.

      iv. Additions that consist of the conversion of existing spaces from unconditioned to conditioned space shall not be required to perform the air sealing part of QII when the existing air barrier is not being removed or replaced.

   B. Additions that are 700 square feet or less shall meet the requirements of Section 170.2(a), with the following modifications.

      i. Roof and ceiling insulation in a ventilated attic shall meet one of the following requirements:
         a. In Climate Zones 1, 2, 4, and 8 through 16, achieve an overall assembly U-factor not exceeding 0.025. In wood framed assemblies, compliance with U-factors may be demonstrated by installing insulation with an R-value of R-38 or greater.

b. In Climate Zones 3 and 5 through 7, achieve an overall assembly U-factor not exceeding 0.031. In wood framed assemblies, compliance with U-factors may be demonstrated by installing insulation with an R-value of R-30 or greater.

ii. Radiant barrier. For buildings three habitable stories or less, radiant barriers shall be installed in attics with exposed attic deck undersides in Climate Zones 2–15.

iii. Extensions of existing wood-framed walls may retain the dimensions of the existing walls and shall install cavity insulation of R-15 in a 2x4 framing and R-21 in a 2x6 framing; and

iv. Fenestration products must meet the U-factor, RSGHC and VT requirements of Table 180.2-B.

v. Quality Insulation Installation (QII) requirements of Section 170.2(a)6 do not apply.

Exception to Section 180.1(a)1B: Insulation in an enclosed rafter ceiling shall meet the requirements of Section 160.1(a).

Exception to Section 180.1(a)1: Additions that increase the area of the roof by 2,000 square feet or less are exempt from the solar ready requirements of Section 160.8.

2. **Mechanical ventilation for indoor air quality.** Additions to existing buildings shall comply with Section 160.2 subject to the requirements specified in Subsections A and B below. When HERS field verification and diagnostic testing are required by Section 180.1(a)2, buildings with three habitable stories or less shall use the applicable procedures in the Residential Appendices, and buildings with four or more habitable stories shall use the applicable procedures in Nonresidential Appendices NA1 and NA2.

A. **Whole-dwelling unit mechanical ventilation**.

i. Dwelling units that meet the conditions in Subsection a or b below shall not be required to comply with the whole-dwelling unit ventilation airflow specified in Section 160.2(b)2Aiv or 160.2(b)2Av.

a. Additions to an existing dwelling unit that increase the conditioned floor area of the existing dwelling unit by less than or equal to 1000 square feet.

b. Junior Accessory Dwelling Units (JADU) that are additions to an existing building.

ii. Additions to an existing dwelling unit that increase conditioned floor area by more than 1,000 square feet shall have mechanical ventilation airflow in accordance with Section 160.2(b)2Aiv or 160.2(b)2Av, as applicable. The mechanical ventilation airflow rate shall be based on the conditioned floor area of the entire dwelling unit comprising the existing dwelling unit conditioned floor area plus the addition conditioned floor area.

iii. New dwelling units that are additions to an existing building shall have mechanical ventilation airflow provided in accordance with Section 160.2(b)2Aiv or 160.2(b)2Av as applicable. The mechanical ventilation airflow rate shall be based on the conditioned floor area of the new dwelling unit.

B. **Local mechanical exhaust**. Additions to existing buildings shall comply with all applicable requirements specified in Sections 160.2(b)2Avi and 160.2(b)2B.

3. **Water heater.** When additional water-heating equipment is installed to serve a dwelling unit as part of the addition, one of the following types of water heaters shall be installed:

A. A water-heating system that meets the requirements of Section 170.2(d); or

B. A water-heating system determined by the Executive Director to use no more energy than the one specified in Item A above.

(b) **Performance approach.** Performance calculations shall meet the requirements of **Sections** 170.0 through 170.2(a), pursuant to the applicable requirements in Items 1, 2 and 3 below.

1. **For additions alone.** The addition complies if the addition alone meets the energy budgets as specified in Section 170.1.

2. **Existing plus alteration plus addition.** The standard design for existing plus alteration plus addition energy use is the combination of the existing building's unaltered components to remain; existing building altered components that are the more efficient, in TDV energy, of either the existing conditions or the requirements of Section 180.2(c); plus the proposed addition's energy use meeting the requirements of Section 180.1(a). The proposed design energy use is the combination of the existing building's unaltered components to remain and the altered components' energy features, plus the proposed energy features of the addition.

   Exception to Section 180.1(b)2: Existing structures with a minimum R-11 insulation in framed walls showing compliance with Section 180.1(b) are exempt from showing compliance with Section 160.1(b).

3. **Mechanical ventilation for indoor air quality**. Additions to existing buildings shall comply with Section 160.2 subject to the requirements specified in Subsections A and B below. When HERS field verification and diagnostic testing are required by Section 180.1(b)3, buildings with three habitable stories or less shall use the applicable procedures in the Residential Appendices, and buildings with four or more habitable stories shall use the applicable procedures in Nonresidential Appendices NA1 and NA2.

   A. **Whole-dwelling unit mechanical ventilation**.

      i. Dwelling units that meet the conditions in Subsection a or b below shall not be required to comply with the whole-dwelling unit ventilation airflow specified in Section 160.2(b)2Aiv or 160.2(b)2Av.

         a. Additions to an existing dwelling unit that increase the conditioned floor area of the existing dwelling unit by less than or equal to 1000 square feet.

         b. Junior Accessory Dwelling Units (JADU) that are additions to an existing building.

      ii. Additions to an existing dwelling unit that increase the conditioned floor area of the existing dwelling unit by more than 1,000 square feet shall have mechanical ventilation airflow in accordance with Section 160.2(b)2Aiv or 160.2(b)2Av as applicable. The mechanical ventilation airflow rate shall be based on the conditioned floor area of the entire dwelling unit comprised of the existing dwelling unit conditioned floor area plus the addition conditioned floor area.

      iii. New dwelling units that are additions to an existing building shall have mechanical ventilation airflow provided in accordance with Section 160.2(b)2Aiv or 160.2(b)2Av as applicable. The mechanical ventilation airflow rate shall be based on the conditioned floor area of the new dwelling unit.

   B. **Local Mechanical Exhaust**. Additions to existing buildings shall comply with all applicable requirements specified in 160.2(b)2Avi and 160.2(b)2B.

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8, and 25943, Public Resources Code.

SECTION 180.2 – ALTERATIONS

Alterations to components of existing multifamily buildings, including alterations made in conjunction with a change in building occupancy to a multifamily occupancy, shall meet Item (a), and either Item (b) or (c) below:

Exception 1 to Section 180.2: When heating, cooling or service water heating for an alteration is provided by expanding existing systems, the existing systems and equipment need not comply with Sections 110.0 through 110.10; Sections 160.0 through 160.7; and Section 170.2(c) or 170.2(d).

Exception 2 to Section 180.2: When existing heating, cooling or service water-heating systems or components are moved within a building, the existing systems or components need not comply with Sections 110.0 through 110.10; Sections 160.0 through 160.7; and Section 170.2(c) or 170.2(d).

Exception 3 to Section 180.2: Where an existing system with electric reheat is expanded when adding variable air volume (VAV) boxes to serve an alteration, total electric reheat capacity may be expanded not to exceed 20 percent of the existing installed electric capacity in any one permit and the system need not comply with Section 170.2(b)4E. Additional electric reheat capacity in excess of 20 percent may be added subject to the requirements of Section 170.2(b)4E.

Exception 4 to Section 180.2: The requirements of Section 160.3(a)2H shall not apply to alterations of space-conditioning systems or components.

(a) **Mandatory requirements.** Altered components in a multifamily building shall meet the minimum requirements in this section.

1. **Roof/ceiling insulation.** The opaque portions of the roof/ceiling that separate conditioned spaces from unconditioned spaces or ambient air shall meet the requirements of Section 180.2(b)1B.
2. **Wall insulation. For the altered** opaque portion of walls separating conditioned spaces from unconditioned spaces or ambient air shall meet the applicable requirements of Items A through D below:
   A. **Metal building.** A minimum of R-13 insulation between framing members, or the area-weighted average U-factor of the wall assembly shall not exceed U-0.113.
   B. **Metal framed.** A minimum of R-13 insulation between framing members, or the area-weighted average U-factor of the wall assembly shall not exceed U-0.217.
   C. **Wood framed and others.** A minimum of R-11 insulation between framing members, or the area-weighted average U-factor of the wall assembly shall not exceed U-0.110.
   D. **Spandrel panels and curtain walls.** A minimum of R-4, or the area-weighted average U-factor of the wall assembly shall not exceed U-0.280.

   Exception to Section 180.2(a)2: Light and heavy mass walls.
3. **Floor insulation.** For the altered portion of raised floors that separate conditioned spaces from unconditioned spaces or ambient air shall meet the applicable requirements of Items A through B below:
   A. **Raised framed floors.** A minimum of R-11 insulation between framing members, or the area-weighted average U-factor of the floor assembly shall not exceed U-0.071.
   B. **Raised mass floors.** A minimum of R-6 insulation, or the area-weighted average U-factor of the floor assembly shall not exceed U-0.111.

(b) **Prescriptive approach.** The altered component and any newly installed equipment serving the alteration shall meet the applicable requirements of Sections 110.0 through 110.9 and all applicable requirements of Sections 160.0, 160.1, 160.2(c) and (d), 160.3(a) through 160.3(b)5J, 160.3(b)6, 160.3(c**)** and 160.5; and

1. **Envelope.**

A. **Roof alterations**. Existing roofs being replaced, recovered or recoated of a multifamily building shall meet the requirements of Section 110.8(i). For roofs with more than 50 percent of the roof area or more than 2,000 square feet of roof, whichever is less, being altered, the requirements of i and iii below apply:

i. Low-sloped roofs in Climate Zones 2, 4, and 6 through 15 shall have a minimum aged solar reflectance of 0.63 and a minimum thermal emittance of 0.75, or a minimum SRI of 75.

Exception to Section 180.2(b)1Ai: The aged solar reflectance requirement can be met by using insulation at the roof deck specified in Table 180.2-A.

Table 180.2-A Roof/Ceiling Insulation Tradeoff for Low-Sloped Aged Solar Reflectance

Minimum Aged Solar Reflectance	Roof Deck Continuous Insulation R-value (Climate Zones 6-7)	Roof Deck Continuous Insulation R-value (Climate Zones 2, 4, 8-15)
0.60	2	16
0.55	4	18
0.50	6	20
0.45	8	22
No requirement	10	24

ii. Steep-sloped roofs in Climate Zones 4 and 8 through 15 shall have a minimum aged solar reflectance of 0.20 and a minimum thermal emittance of 0.75, or a minimum SRI of 16.

Exception to Section 180.2(b)1Aii: The following shall be considered equivalent to Subsection ii:

a. Buildings with ceiling assemblies with a U-factor lower than or equal to 0.025 or that are insulated with at least R-38 ceiling insulation in an attic; or

b. Buildings with a radiant barrier in the attic, where the radiant barrier is not installed directly above spaced sheathing, meeting the requirements of Section 170.2(a)1C; or

c. Buildings that have no ducts in the attic in Climate Zones 2, 4, 9, 10, 12 and 14; or

d. Buildings with R-2 or greater continuous insulation above or below the roof deck.

Exception 1 to Sections 180.2(b)1Ai and ii: Roof area covered by building integrated photovoltaic panels and building integrated solar thermal panels is not required to meet the minimum requirements for solar reflectance, thermal emittance or SRI.

Exception 2 to Sections 180.2(b)1Ai and ii: Roof constructions with a weight of at least 25 lb/ft^2 are not required to meet the minimum requirements for solar reflectance, thermal emittance or SRI.

iii. For low-sloped roofs, the area of the roof recover or roof replacement shall be insulated to R-14 continuous insulation or a U-factor of 0.039 in Climate Zones 1, 2, 4, and 8 through 16.

Exception 1 to Section 180.2(b)1Aiii: Roof recovers with new R-10 insulation added above deck do not need to be insulated to meet R-14.

Exception 2 to Section 180.2(b)1Aiii: When existing mechanical equipment located on the roof will not be disconnected and lifted, insulation added may be limited to the greater of R-10 or the maximum installed thickness that will allow the distance between the height of the roof membrane surface to the top of the base flashing to remain in accordance with the manufacturer's instructions.

Exception 3 to Section 180.2(b)1Aiii: At the drains and other low points, tapered insulation with a thermal resistance less than R-14 may be used, provided that insulation thickness is increased at the high points of the roof so that the average thermal resistance equals or exceeds R-14.

Exception 4 to Section 180.2(b)1Aiii: The area of the roof recoat is not required to be insulated.

B. **Roof/ceiling insulation**.

i. **Attic roof**. Vented attics shall meet the following:

a. In Climate Zones 1 through 4 and 8 through 16, insulation shall be installed to achieve a weighted U-factor of 0.020 or insulation installed at the ceiling level shall result in an installed thermal resistance of R-49 or greater for the insulation alone; and

Exception to Section 180.2(b)1Bia: In Climate Zones 1, 3, 4 and 9, dwelling units with at least R-19 existing insulation installed at the ceiling level**.**

b. In Climate Zones 2 and 11 through 16, air seal all accessible areas of the ceiling plane between the attic and the conditioned space in accordance with Section 110.7; and

Exception 1 to Section 180.2(b)1Bib: Dwelling units with at least R-19 existing insulation installed at the ceiling level.

Exception 2 to Section 180.2(b)1Bib: Dwelling units with atmospherically vented space heating or water-heating combustion appliances located inside the pressure boundary of the dwelling unit.

c. In Climate Zones 1 through 4 and 8 through 16, recessed downlight luminaires in the ceiling shall be covered with insulation to the same depth as the rest of the ceiling. Luminaires not rated for insulation contact must be replaced or fitted with a fireproof cover that allows for insulation to be installed directly over the cover; and

Exception to Section 180.2(b)1Bic: In Climate Zones 1 through 4 and 8 through 10, dwelling units with at least R-19 existing insulation installed at the ceiling level.

d. Attic ventilation shall comply with the California Building Code requirements.

Exception 1 to Section 180.2(b)1Bi: Dwelling units with at least R-38 existing insulation installed at the ceiling level.

Exception 2 to Section 180.2(b)1Bi: Dwelling units where the alteration would directly cause the disturbance of asbestos unless the alteration is made in conjunction with asbestos abatement.

Exception 3 to Section 180.2(b)1Bi: Dwelling units with knob and tube wiring located in the vented attic.

Exception 4 to Section 180.2(b)1Bi: Where the accessible space in the attic is not large enough to accommodate the required R-value, the entire accessible space shall be filled with insulation, provided such installation does not violate Section 806.3 of Title 24, Part 2.5.

Exception 5 to Section 180.2(b)1Bi: Where the attic space above the altered dwelling unit is shared with other dwelling units and the requirements of Section 180.2(b)1Bi are not triggered for the other dwelling units.

C. Fenestration alterations other than repair shall meet the requirements below:

Note: Glass replaced in an existing sash and frame or sashes replaced in an existing frame are considered repairs. In these cases, Section 180.2(b) requires that the replacement be at least equivalent to the original in performance.

i. Fenestration products installed to replace existing fenestration products of the same total area shall meet either a or b:

a. The maximum U-factor, RSHGC and VT requirements of Table 180.2-B, or

b. The area-weighted U-factor and RSHGC of Table 170.2-A.

Exception 1 to Section 180.2(b)1Ci: In an alteration, where 150 square feet or less of the entire building's vertical fenestration is replaced, RSHGC and VT requirements of Table 180.2-B shall not apply.

ii. Alterations that add fenestration and skylight area shall meet the total fenestration area requirements of Section 170.2(a) and the U-factor, RSHGC and VT requirements of Table 180.2-B.

Exception 1 to Section 180.2(b)1Cii: Alterations that add fenestration area of up to 50 square feet shall not be required to meet the total fenestration area requirements of Sections 170.2(a), nor the U-factor, RSHGC and VT requirements of Table 180.2-B.

Exception 2 to Section 180.2(b)1Cii: Alterations that add up to 16 square feet of new skylight area per dwelling unit with a maximum U-factor of 0.55 and a maximum RSHGC of 0.30 shall not be required to meet the total fenestration area requirements of Section 170.2(a)3.

D. Exterior doors. Alterations that add exterior door area shall meet the U-factor requirement of Section 170.2(a)4.

Table 180.2-B Altered Fenestration Maximum U-Factor and Maximum RSHGC

Footnotes to TABLE 180.2-B

1. For fenestration installed in buildings with three or fewer habitable stories, there is no SHGC requirement in Climate Zones 1, 3, 5, and 16.
2. Minimum VT requirements to not apply to multifamily buildings 3 habitable stories or less.

2. **Space-conditioning systems**.

A. Space-conditioning systems serving dwelling units.

i. **Entirely new or complete replacement space-conditioning systems** installed as part of an alteration shall include all the system heating or cooling equipment, including but not limited to: condensing unit, cooling or heating coil, and air handler for split systems; or complete replacement of a packaged unit; plus entirely new or replacement duct system [Section 180.2(b)2Aiib]. Entirely new or complete replacement space-conditioning systems shall meet the requirements of Sections 160.2(a)1, 160.3(a)1, 160.3(b)1 through 3, 160.3(b)5, 160.3(b)6, 160.3(c)1, 170.2(c)3B, 180.2(b)2Av, and Table 180.2-C.

ii. **Altered duct systems—duct sealing**: In all climate zones, when more than 25 feet of new or replacement space-conditioning system ducts are installed, the ducts shall comply with the applicable requirements of Subsections a and b below. New ducts located in unconditioned space shall meet the applicable requirements of Sections 160.3(b)5A through J and the duct insulation requirements of Table 180.2-C, and

a. The altered duct system, regardless of location, shall be sealed as confirmed through field verification and diagnostic testing in accordance with all applicable procedures for duct sealing of altered existing duct systems as specified in Reference Residential Appendix RA3.1, utilizing the leakage compliance criteria specified in Subsection I or II below.

TABLE 180.2-C DUCT INSULATION R-VALUE

Climate Zone	3, 5 through 7	1, 2, 4, 8 through 16
Duct R-Value	R-6	R-8

I. **Entirely new or complete replacement duct system.** If the new ducts form an entirely new or complete replacement duct system directly connected to the air handler, the duct system shall meet one of the following requirements:

A. The total leakage of the duct system shall not exceed 12 percent of the air handler airflow as determined utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.1, or

B. The duct system leakage to outside shall not exceed 6 percent of the air handler airflow as determined utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.4.

Entirely new or complete replacement duct systems installed as part of an alteration are constructed of at least 75 percent new duct material, and up to 25 percent may consist of reused parts from the dwelling unit's existing duct system, including but not limited to registers, grilles, boots, air handler, coil, plenums and duct material, if the reused parts are accessible and can be sealed to prevent leakage.

Entirely new or complete replacement duct systems shall also conform to the requirements of Sections 160.2(a)1 and 160.3(b)5L. If the air handler and ducts are located within a vented attic, the requirements of Section 180.2(b)1Bi shall also be met.

II. **Extension of an existing duct system.** If the new ducts are an extension of an existing duct system serving multifamily dwellings, the combined new and existing duct system shall meet one of the following requirements:

A. The measured duct leakage shall be equal to or less than 15 percent of air handler airflow as confirmed by field verification and diagnostic testing utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.1; or

B. The measured duct leakage to outside shall be equal to or less than 10 percent of air handler airflow as confirmed by field verification and diagnostic testing utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.4; or

C. If it is not possible to meet the duct sealing requirements of either Section 180.2(b)2AiicI or II then all accessible leaks shall be sealed and verified through a visual inspection and a smoke test by a certified HERS Rater utilizing the methods specified in Reference Residential Appendix RA3.1.4.3.5.

Exception to Section 180.2(b)2AiiaII: duct sealing. Existing duct systems that are extended, which are constructed, insulated or sealed with asbestos.

Exception 1 to 180.2(b)2Aii: The HERS Rater field verification and HERS Provider data registry requirements of Reference Residential Appendix RA2 and RA3 are not required for multifamily dwelling units in buildings four stories and greater. The installer shall certify that diagnostic testing was performed in accordance with the applicable procedures.

iii. **Altered space-conditioning system—duct sealing.** In all climate zones, when a space-conditioning system serving a multifamily dwelling is altered by the installation or replacement of space-conditioning system equipment, including replacement of the air handler, outdoor condensing unit of a split system air conditioner or heat pump, or cooling or heating coil, the duct system that is connected to the altered space-conditioning system equipment shall be sealed, as confirmed through field verification and diagnostic testing in accordance with the applicable procedures for duct sealing of altered existing duct systems as specified in Reference Residential Appendix RA3.1 and the leakage compliance criteria specified in Subsection a, b or c below.

a. The measured duct leakage shall be equal to or less than 15 percent of air handler airflow as determined utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.1; or

b. The measured duct leakage to outside shall be equal to or less than 10 percent of air handler airflow as determined utilizing the procedures in Reference Residential Appendix Section RA3.1.4.3.4; or

c. If it is not possible to meet the duct sealing requirements of either Section 180.2(b)2Aiiia or b, then all accessible leaks shall be sealed and verified through a visual inspection and a smoke test by a certified HERS Rater utilizing the methods specified in Reference Residential Appendix RA3.1.4.3.5.

Exception 1 to Section 180.2(b)2Aiii: duct sealing. Duct systems that are documented to have been previously sealed as confirmed through field verification and diagnostic testing in accordance with procedures in Reference Residential Appendix RA3.1.

Exception 2 to Section 180.2(b)2Aiii: duct sealing. Duct systems with less than 40 linear feet as determined by visual inspection.

Exception 3 to Section 180.2(b)2Aiii: duct sealing. Existing duct systems constructed, insulated or sealed with asbestos.

Exception 4 to Section 180.2(b)2Aiii: The HERS Rater field verification and HERS Provider data registry requirements of Reference Residential Appendix RA2 and RA3 are not required for multifamily dwelling units in buildings four stories and greater. The installer shall certify that diagnostic testing was performed in accordance with the applicable procedures.

iv. Altered space-conditioning system mechanical cooling. When a space-conditioning system is an air conditioner or heat pump that is altered by the installation or replacement of refrigerant-containing system components such as the compressor, condensing coil, evaporator coil, refrigerant metering device or refrigerant piping, the altered system shall comply with the following requirements:

a. All thermostats associated with the system shall be replaced with setback thermostats meeting the requirements of Section 110.2(c).

b. In Climate Zones 2, 8, 9, 10, 11, 12, 13, 14 and 15, air-cooled air conditioners and air-source heat pumps, including but not limited to ducted split systems, ducted package systems, small duct high velocity air systems, and minisplit systems, shall comply with Subsections I and II, unless the system is of a type that cannot be verified using the specified procedures. Systems that cannot comply with the requirements of Section 180.2(b)2Aivb shall comply with Section 180.2(b)2Aivc.

Exception to Section 180.2(b)2Aivb: Entirely new or complete replacement packaged systems for which the manufacturer has verified correct system refrigerant charge prior to shipment from the factory are not required to have refrigerant charge confirmed through field verification and diagnostic testing. The installer of these packaged systems shall certify that the packaged system was pre-charged at the factory and has not been altered in a way that would affect the charge. Ducted systems shall comply with the minimum system airflow rate requirement in Section 180.2(b)2AivbI, provided that the system is of a type that can be verified using the procedure specified in RA3.3 or an approved alternative in RA1.

I. The minimum system airflow rate shall comply with the applicable Subsection A or B below as confirmed through field verification and diagnostic testing in accordance with the procedures specified in Reference Residential Appendix Section RA3.3 or an approved alternative procedure as specified in Section RA1.

A. Small duct high velocity systems shall demonstrate a minimum system airflow rate greater than or equal to 250 cfm per ton of nominal cooling capacity; or

B. All other air-cooled air conditioner or air-source heat pump systems shall demonstrate a minimum system airflow rate greater than or equal to 300 cfm per ton of nominal cooling capacity.

Exception 1 to Section 180.2(b)2AivbI: Systems unable to comply with the minimum airflow rate requirement shall demonstrate compliance using the procedures in Section RA3.3.3.1.5, and the system's thermostat shall conform to the specifications in Section 110.12.

Exception 2 to Section 180.2(b)2AivbI: Entirely new or complete replacement space-conditioning systems, as specified by Section 180.2(b)2Ai, without zoning dampers may comply with the minimum airflow rate by meeting the applicable requirements in Table 160.3-A or 160.3-B as confirmed by field verification and diagnostic testing in accordance with the procedures in Reference Residential Appendix Sections RA3.1.4.4 and RA3.1.4.5. The design clean-filter pressure drop requirements of Section 160.2(a)1C for the system air filter device(s) shall conform to the requirements given in Tables 160.3-A and 160.3-B.

II. The installer shall charge the system according to manufacturer's specifications. Refrigerant charge shall be verified according to one of the following options, as applicable.

A. The installer and rater shall perform the standard charge verification procedure as specified in Reference Residential Appendix Section RA3.2.2, or an approved alternative procedure as specified in Section RA1; or

B. The system shall be equipped with a fault indicator display (FID) device that meets the specifications of Reference Joint Appendix JA6. The installer shall verify the refrigerant charge and FID device in accordance with the procedures in Reference Residential Appendix Section RA3.4.2. The HERS Rater shall verify FID device in accordance with the procedures in Section RA3.4.2; or

C. The installer shall perform the weigh-in charging procedure as specified by Reference Residential Appendix Section RA3.2.3.1, provided the system is of a type that can be verified using the RA3.2.2 standard charge verification procedure and RA3.3 airflow rate verification procedure or approved alternatives in RA1. The HERS Rater shall verify the charge using RA3.2.2 and RA3.3 or approved alternatives in RA1.

Exception 1 to Section 180.2(b)2AivbII: When the outdoor temperature is less than 55 degrees F and the installer utilizes the weigh-in charging procedure in Reference Residential

Appendix Section RA3.2.3.1 to demonstrate compliance, the installer may elect to utilize the HERS Rater verification procedure in Reference Residential Appendix Section RA3.2.3.2. If the HERS Rater verification procedure in Section RA3.2.3.2 is used for compliance, the system's thermostat shall conform to the specifications in Section 110.12. Ducted systems shall comply with the minimum system airflow rate requirements in Section 180.2(b)2AivbI.

EXCEPTION 2 to Section 180.2(b)2Aivb: The HERS Rater field verification and HERS Provider data registry requirements of Reference Residential Appendix RA2 and RA3 are not required for multifamily dwelling units in buildings four stories and greater. The installer shall certify that diagnostic testing was performed in accordance with the applicable procedures.

v. **Altered Space-Heating System.** Altered or replacement space-heating systems shall not use electric resistance as the primary heat source.

EXCEPTION 1 to Section 180.2(b)2Av: Non-ducted electric resistance space heating systems if the existing space heating system is electric resistance.

EXCEPTION 2 to Section 180.2(b)2Av: Ducted electric resistance space heating systems if the existing space heating system is electric resistance and a ducted space cooling system is not being replaced or installed.

EXCEPTION 3 to Section 180.2(b)2Av: Electric resistance space heating systems, if the existing space heating system is electric resistance in Climate Zones 6, 7, 8, or 15.

B. **Common Use Area Space Conditioning Systems**

i. New or Replacement Space-Conditioning Systems or Components other than new or replacement space-conditioning system ducts shall meet the requirements of Sections 170.2(c)1, 2, and 4, applicable to the systems or components being altered. For compliance with Section 170.2(c)4A, additional fan power adjustment credits are available as specified in TABLE 180.2-D.

TABLE 180.2-D Fan Power Limitation Pressure Drop Adjustment

Airflow	Multi-Zone VAV Systems[1] ≤5,000 cfm	Multi-Zone VAV Systems[1] >5,000 and ≤10,000 cfm	Multi-Zone VAV Systems[1] >10,000 cfm	All Other Fan Systems ≤5,000 cfm	All Other Fan Systems >5,000 and ≤10,000 cfm	All Other Fan Systems >10,000 cfm
Supply Fan System Additional Allowance	0.135	0.114	0.105	0.139	0.12	0.107
Supply Fan System Additional Allowance In Unit with Adapter Curb	0.033	0.033	0.043	0.000	0.000	0.000
Exhaust/ Relief/ Return/ Transfer Fan System Additional Allowance	0.07	0.061	0.054	0.07	0.062	0.055
Exhaust/ Relief/ Return/ Transfer Fan System Additional Allowance In Unit with Adapter Curb	0.016	0.017	0.022	0.000	0.000	0.000

Footnotes to Table 180.2-D:

1. See FAN SYSTEM, MULTI-ZONE VARIABLE AIR VOLUME (VAV) for the definition of a Multi-Zone VAV System.

Exception 1 to Section 180.2(b)2Bi. Section 180.2(b)2Av does not apply to replacement of electric reheat of equivalent or lower capacity electric resistance space heaters when natural gas is not available.

Exception 2 to Section 180.2(b)2Bi: Section 170.2(c)4L is not applicable to new or replacement space-conditioning systems.

Exception 3 to Section 180.2(b)2Bi: Section 170.2(c)4Ci is applicable to systems, other than single package air-cooled commercial unitary air conditioners and heat pumps, with cooling capacity less than 54,000 Btu/h.

ii. **Altered duct systems.** When new or replacement space-conditioning system ducts are installed to serve an existing building, the new ducts shall meet the requirements of Section 160.3(c)2 and meet a or b below:

a. Reserved.

b. Entirely new or replacement duct systems installed as part of an alteration shall be leakage-tested in accordance with Section 160.2(c)2H. Entirely new or replacement duct systems installed as part of an alteration shall be constructed of at least 75 percent new duct material, and up to 25 percent may consist of reused parts from the building's existing duct system, including registers, grilles, boots, air handlers, coils, plenums, and ducts, if the reused parts are accessible and can be sealed to prevent leakage.

EXCEPTION 1 to Section 180.2(b)2Biib: When it is not possible to achieve the duct leakage criteria in Section 180.2(b)2Biib, all accessible leaks shall be sealed and verified through a visual inspection and a smoke test performed by a certified HERS Rater utilizing the methods specified in Reference Nonresidential Appendix NA2.1.4.2.2a.

EXCEPTION 2 to Section 180.2(b)2Biib: Duct Sealing. Existing duct systems that are extended, which are constructed, insulated or sealed with asbestos are exempt from the requirements of subsection 180.2(b)2Biib.

c. If the new ducts are an extension of an existing duct system, the combined new and existing duct system meets the criteria in Subsections I, II, and III below. The duct system shall be sealed to a leakage rate not to exceed 15 percent of the nominal air handler airflow rate as confirmed through field verification and diagnostic testing, in accordance with the applicable procedures in Reference Nonresidential Appendices NA1 and NA2:

I. The duct system provides conditioned air to an occupiable space for a constant volume, single zone, space-conditioning system; and

II. The space conditioning system serves less than 5,000 square feet of conditioned floor area; and

III. The combined surface area of the ducts located in the following spaces is more than 25 percent of the total surface area of the entire duct system:

A. Outdoors;

B. In a space directly under a roof that

C. Has a U-factor greater than the U-factor of the ceiling, or if the roof does not meet the requirements of Section 170.2(a)1B, or

D. Has fixed vents or openings to the outside or unconditioned spaces; or

E. In an unconditioned crawl space; or

F. In other unconditioned spaces.

iii. **Altered space-conditioning systems.** When a space-conditioning system is altered by the installation or replacement of space-conditioning system equipment (including replacement of the air handler, outdoor condensing unit of a split system air conditioner or heat pump, or cooling or heating coil:

a. For all altered units where the existing thermostat does not comply with the requirements for demand responsive controls specified in Section 110.12, the existing thermostat shall be replaced with a demand responsive thermostat that complies with Section 110.12. All newly installed space-conditioning systems requiring a thermostat shall be equipped with a demand responsive thermostat that complies with Section 110.12; and

b. The duct system that is connected to the new or replaced space-conditioning system equipment shall be sealed, if the duct system meets the criteria of Section 170.2(c)4Ji, as confirmed through field verification and diagnostic testing, in accordance with the applicable procedures for duct sealing of altered existing duct systems as specified in Reference Nonresidential Appendix NA2, and conforming to the applicable leakage compliance criteria in Section 180.2(b)2Bii.

Exception 1 to Section 180.2(b)2Biiib: duct sealing. Buildings altered so that the duct system no longer meets the criteria of Section 170.2(c)4Ji are exempt from the requirements of Subsection 180.2(b)2Biiib.

Exception 2 to Section 180.2(b)2Biiib: duct sealing. Duct systems that are documented to have been previously sealed as confirmed through field verification and diagnostic testing in accordance with procedures in the Reference Nonresidential Appendix NA2 are exempt from the requirements of Subsection 180.2(b)2Biiib.

Exception 3 to Section 180.2(b)2Biiib: duct sealing. Existing duct systems constructed, insulated or sealed with asbestos are exempt from the requirements of Subsection 180.2(b)2Biiib.

3. **Hot water systems**. Altered or replacement water-heating systems or components serving individual dwelling units shall meet the applicable requirements below:

   A. **Pipe insulation.** For newly installed piping and existing accessible piping, the insulation requirements of Section 160.4(f) shall be met.

   B. **Distribution system.** For recirculation distribution system serving individual dwelling units, only demand recirculation systems with manual on/off control as specified in Reference Appendix RA4.4.9 shall be installed.

   C. **Water-heating system.** The water-heating system shall meet one of the following:

      i. A natural gas or propane water-heating system; or

      ii. A single heat pump water heater. The storage tank shall not be located outdoors and shall be placed on an incompressible, rigid insulated surface with a minimum thermal resistance of R-10. The water heater shall be installed with a communication interface that either meets the requirements of Section 110.12(a) or has an ANSI/CTA-2045-B communication port; or

      iii. A single heat pump water heater that meets the requirements of NEEA Advanced Water Heater Specification Tier 3 or higher; or

      iv. If the existing water heater is an electric resistance water heater, a consumer electric water heater.

      v. A water-heating system determined by the Executive Director to use no more energy than the one specified in Sections 180.2(b)3Ci through iii above; or if no natural gas is connected to the existing water heater location, a water-heating system determined by the Executive Director to use no more energy than the one specified in Section 180.2(b)3Civ above.

4. **Lighting**.

   A. **Dwelling unit lighting.** The altered lighting system shall meet the lighting requirements of Section 160.5(a). The altered luminaires shall meet the luminaire efficacy requirements of Section 160.5(a) and Table 160.5-A. Where existing screw base sockets are present in ceiling-recessed luminaires, removal of these sockets is not required, provided that new JA8 compliant trim kits or lamps designed for use with recessed downlights or luminaires are installed.

   B. **Common use area—lighting, sign lighting, and electrical power distribution systems**.

      i. Spaces with lighting systems installed for the first time shall meet the applicable requirements of Sections 110.9, 160.5(b)1, 160.5(b)2, 160.5(b)3, 160.5(b)4, 160.5(c), 160.5(e), 170.2(b), and 170.2(e)1 through 170.2(e)6.

      ii. When the requirements of Section 160.5(b)4D are triggered by the addition of skylights to an existing building and the lighting system is not recircuited, the daylighting control need not meet the multi-level requirements in Section 160.5(b)4D.

      iii. New internally and externally illuminated signs shall meet the requirements of Sections 110.9, 160.5(d) and 170.2(e)7.

      iv. Altered indoor lighting systems. Alterations to indoor lighting systems that include 10% or more of the luminaires serving an enclosed space shall meet the requirements of a, b or c below:

         a. The alteration shall comply with the indoor lighting power requirements specified in Sections 170.2(e)1 through 4 and the lighting control requirements specified in Table 180.2-E; or

         b. The alteration shall not exceed 80% of the indoor lighting power requirements specified in Section 170.2(e)1 through 4, and shall comply with the lighting control requirements specified in Table 180.2-E; or

         c. The alteration shall be a one-for-one luminaire alteration within a building or tenant space of 5,000 square feet or less, the total wattage of the altered luminaires shall be at least 40%

lower compared to their total pre-alteration wattage and the alteration shall comply with the lighting control requirements specified in Table 180.2-E.

Alterations to indoor lighting systems shall not prevent the operation of existing, unaltered controls, and shall not alter controls to remove functions specified in Section 160.5(b)4.

Alterations to lighting wiring are considered alterations to the lighting system. Alterations to indoor lighting systems are not required to separate existing general, floor, wall, display or decorative lighting on shared circuits or controls. New or completely replaced lighting circuits shall comply with the control separation requirements of Sections 160.5(b)4Aiv and 160.5(b)4Cid.

Exception 1 to Section 180.2(b)4Biv: Alteration of portable luminaires, luminaires affixed to moveable partitions, or lighting excluded as specified in Section 170.2(e)2C.

Exception 2 to Section 180.2(b)4Biv: Any enclosed space with only one luminaire.

Exception 3 to Section 180.2(b)4Biv: Any alteration that would directly cause the disturbance of asbestos unless the alteration is made in conjunction with asbestos abatement.

Exception 4 to Section 180.2(b)4Biv: Acceptance testing requirements of Section 160.5(e) are not required for alterations where lighting controls are added to control 20 or fewer luminaires.

Exception 5 to Section 180.2(b)4Biv: Any alteration limited to adding lighting controls or replacing lamps, ballasts or drivers.

Exception 6 to Section 180.2(b)4Biv: One-for-one luminaire alteration of up to 50 luminaires either per complete floor of the building or per complete tenant space, per annum.

v. Alterations to existing outdoor lighting systems in a lighting application listed in Table 170.2-R or 170.2-S shall meet the applicable requirements of Sections 160.5(b)1, 160.5(b)2, 160.5(b)3, 160.5(c)1 and 160.5(e), and:

a. In alterations that increase the connected lighting load, the added or altered luminaires shall meet the applicable requirements of Section 160.5(c)2 and the requirements of Section 170.2(e)6 for general hardscape lighting or for the specific lighting applications containing the alterations; and

b. In alterations that do not increase the connected lighting load, where 10 percent or more of the existing luminaires are replaced in a general hardscape or a specific lighting application, the alterations shall meet the following requirements:

I. In parking lots and outdoor sales lots where the bottom of the luminaire is mounted 24 feet or less above the ground, the replacement luminaires shall comply with Section 160.5(c)2A and Section 160.5(c)2C;

II. For parking lots and outdoor sales lots where the bottom of the luminaire is mounted greater than 24 feet above the ground and for all other lighting applications, the replacement luminaires shall comply with Section 160.5(c)2A and either comply with Section 160.5(c)2B or be controlled by lighting control systems, including motion sensors, that automatically reduce lighting power by at least 40 percent in response to the area being vacated of occupants; and

Exception to Section 180.2(b)4Bvb: Alterations where less than 5 existing luminaires are replaced.

c. In alterations that do not increase the connected lighting load, where 50 percent or more of the existing luminaires are replaced in general hardscape or a specific application, the replacement luminaires shall meet the requirements of Subsection b above and the requirements of Section 170.2(e)6 for general hardscape lighting or specific lighting applications containing the alterations.

Exception 1 to Section 180.2(b)4Bvc: Alterations where the replacement luminaires have at least 40 percent lower power consumption compared to the original luminaires are not required to comply with the lighting power allowances of Section 170.2(e)6.

Exception 2 to Section 180.2(b)4Bvc: Alterations where less than 5 existing luminaires are replaced.

Exception 3 to Section 180.2(b)4Bv: Acceptance testing requirements of Section 160.5(e) are not required for alterations where controls are added to 20 or fewer luminaires.

vi. Alterations to existing internally and externally illuminated signs that increase the connected lighting load, replace and rewire more than 50 percent of the ballasts, or relocate the sign to a different location on the same site or on a different site shall meet the requirements of Section 170.2(e)7.

Exception to Section 180.2(b)4Bvi: Replacement of parts of an existing sign, including replacing lamps, the sign face or ballasts, that do not require rewiring or that are done at a time other than when the sign is relocated, is not an alteration subject to the requirements of Section 180.2(b)4Bvi.

vii. Alterations to existing electrical power distribution systems shall meet the applicable requirements of the following sections:

a. Service electrical metering. New or replacement electrical service equipment shall meet the requirements of Section 160.6(a) applicable to the electrical power distribution system altered; and

b. Separation of electrical circuits for electrical energy monitoring. For entirely new or complete replacement of electrical power distribution systems, the entire system shall meet the applicable requirements of Section 160.6(b); and

c. Voltage drop. For alterations of feeders and branch circuits where the alteration includes addition, modification or replacement of both feeders and branch circuits, the altered circuits shall meet the requirements of Section 160.6(c); and

Exception to Section 180.2(b)4Bviic: Voltage drop permitted by California Electrical Code Sections 647.4, 695.6 and 695.7.

d. Circuit controls for 120-volt receptacles and controlled receptacles. For entirely new or complete replacement of electrical power distribution systems, the entire system shall meet the applicable requirements of Section 160.6(d).

TABLE 180.2-E Control Requirements for Indoor Lighting System Alterations for Common Use Areas

Control Specifications	**Projects complying with Section 180.2(b)4Biva**	**Projects complying with Sections 180.2(b)4Bivb or 180.2(b)4Bivc**
Manual Area Controls 160.5(b)4Ai	Required	Required
Manual Area Controls 160.5(b)4Aii	Required	Required
Manual Area Controls 160.5(b)4Aii	Only required for new or completely replaced circuits	Only required for new or completely replaced circuits
Multi-Level Controls 160.5(b)4B	Required	Not Required
Automatic Shut Off Controls 160.5(c)4Ci	Required; 160.5(b)4Cid only required for new or completely replaced circuits	Required; 160.5(b)4Cid only required for new or completely replaced circuits
Automatic Shut Off Controls 160.5(c)4Cii	Required	Required
Automatic Shut Off Controls 160.5(c)4Cii	Required	Required
Automatic Shut Off Controls 160.5(c)4Civ	Required	Required
Automatic Shut Off Controls 160.5(b)4Cv	Required	Required
Automatic Shut Off Controls 160.5(b)4Cvi	Required	Required
Automatic Shut Off Controls 160.5(b)4Cvii	Required	Required
Daylighting Controls 160.5(b)4D	Required	Not Required
Demand Responsive Controls 160.5(b)4E	Required	Not Required

5. **Mechanical ventilation and indoor air quality for dwelling units.** Alterations to existing buildings shall comply with Subsections A and B below as applicable. When HERS field verification and diagnostic testing are required by Section 180.2(b)5, buildings with three habitable stories or less shall use the applicable procedures in the Residential Appendices, and buildings with four or more habitable stories shall use the applicable procedures in Nonresidential Appendices NA1 and NA2.

   A. **Entirely new or complete replacement ventilation systems.** Entirely new or complete replacement ventilation systems shall comply with all applicable requirements in Section 160.2(b)2. An entirely new or complete replacement ventilation system includes a new ventilation fan component and an entirely new duct system. An entirely new or complete replacement duct system is constructed of at least 75 percent new duct material, and up to 25 percent may consist of reused parts from the

dwelling unit's existing duct system, including but not limited to registers, grilles, boots, air filtration devices and duct material, if the reused parts are accessible and can be sealed to prevent leakage.

B. **Altered ventilation systems**. Altered ventilation system components or newly installed ventilation equipment serving the alteration shall comply with Section 160.2(b)2 as applicable subject to the requirements specified in Subsections i and ii below.

i. **Whole-dwelling unit mechanical ventilation**.

a. **Whole-dwelling unit airflow**. If the whole-dwelling ventilation fan is altered or replaced, then one of the following Subsections 1 or 2 shall be used for compliance as applicable.

1. Dwellings that were required by a previous building permit to comply with the whole-dwelling unit airflow requirements in Section 160.2(b)2, 120.1(b) or 150.0(o) shall meet or exceed the whole-dwelling unit mechanical ventilation airflow specified in Section 160.2(b)2Aiv or 160.2(b)2Av as confirmed through HERS field verification and diagnostic testing in accordance with the applicable procedures specified in Reference Appendix RA3.7 or NA2.2.

2. Dwellings that were not required by a previous building permit to have a whole-dwelling unit ventilation system to comply with Section 160.2(b)2, 120.1(b) or 150.0(o) shall not be required to comply with the whole-dwelling unit ventilation airflow specified in Section 160.2(b)2Aiv or 160.2(b)2Av.

b. **Replacement ventilation fans.** Whole-dwelling unit replacement ventilation fans shall be rated for airflow and sound in accordance with the requirements of ASHRAE 62.2 Sections 7.1 and 7.2. Additionally, when conformance to a specified whole-dwelling unit airflow rate is required for compliance, the replacement fans shall be rated at no less than the airflow rate required for compliance.

c. **Air filters**. If the air filtration device for a whole-dwelling unit ventilation system is altered or replaced, then one of the following Subsections 1 or 2 shall be used for compliance.

1. Dwellings that were required by a previous building permit to comply with the ventilation system air filtration requirements in Section 160.2(b)1, 120.1(b)1 or 150.0(m)12 shall comply with the air filtration requirements in Section 160.2(b)1.

2. Dwellings that were not required by a previous building permit to comply with the ventilation system air filtration requirements in Section 160.2(b)1, 120.1(b)1 or 150.0(m)12 shall not be required to comply with the air filtration requirements specified in Section 160.2(b)1.

ii. **Local mechanical exhaust**.

a. **Bathroom local mechanical exhaust**. Altered bathroom local mechanical exhaust systems shall comply with the applicable requirements specified in Section 160.0(b)2Avi.

b. **Kitchen local mechanical exhaust**. If the kitchen local ventilation fan is altered or replaced, then one of the following Subsections 1, 2 or 3 shall be used for compliance.

1. Dwellings that were required by a previous building permit to comply with the kitchen local exhaust requirements in Section 160.0(b)2Avi, 120.1(b)2vi or 150.0(o)1G shall meet or exceed the applicable airflow or capture efficiency requirements in Section 160.0(b)2Avi.

2. Dwellings that were required by a previous building permit to install a vented kitchen range hood or other kitchen exhaust fan shall install a replacement fan that meets or exceeds the airflow required by the previous building permit, or 100 cfm, whichever is greater.

3. Dwellings that were not required to have a kitchen local ventilation exhaust system according to the conditions in either Subsection 1 or 2 above shall not be required to comply with the requirements of Section 160.0(b)2Avi.

c. **Replacement ventilation fans.** New or replacement local mechanical exhaust fans shall be rated for airflow and sound in accordance with the requirements of ASHRAE 62.2 Section 7.1 and Title 24, Part 6, Section 160.0(b)2Avif. Additionally, when compliance with a specified exhaust airflow rate is required, the replacement fan shall be rated at no less than the airflow rate required for compliance.

(c) Performance approach. The altered component(s) and any newly installed equipment serving the alteration shall meet the applicable requirements of Subsections 1, 2 and 3 below.

1. The altered components shall meet the applicable requirements of Sections 110.0 through 110.9, 160.0, 160.1, 160.2(c) and (d), 160.3(a) through 160.3(b)5J, 160.3(b)6, 160.3(c), and 160.5. Entirely new or complete replacement mechanical ventilation systems as these terms are used in Section 180.2(b)5A shall comply with the requirements in Section 180.2(b)5A. Altered mechanical ventilation systems shall comply with the requirements of Sections 180.2(b)5B. Entirely new or complete replacement space-conditioning systems, and entirely new or complete replacement duct systems, as these terms are used in Sections 180.2(b)2Ai and 180.2(b)2Aiia, shall comply with the requirements of Sections 160.2(a)1 and 160.3(b)5L.
2. The standard design for an altered component shall be the higher efficiency of existing conditions or the requirements of Section 180.2(b). For components not being altered, the standard design shall be based on the unaltered existing conditions such that the standard and proposed designs for these components are identical. When the third-party verification option is specified, all components proposed for alteration for which the additional credit is taken shall be verified by a qualified third party.
3. The proposed design shall be based on the actual values of the altered components.

NOTES TO SECTION 180.2(c):

1. If an existing component must be replaced with a new component, that component is considered an altered component for the purpose of determining the standard design altered component energy budget and must meet the requirements of Section 180.2(c)2.
2. The standard design shall assume the same geometry and orientation as the proposed design.
3. The “existing efficiency level” modeling rules, including situations where nameplate data is not available, are described in the applicable Residential or Nonresidential ACM Approval Manual.

EXCEPTION 1 to Section 180.2(c): Any dual-glazed greenhouse or garden window installed as part of an alteration complies with the U-factor requirements in Section 170.2.

EXCEPTION 2 to Section 180.2(c): Where the space in the attic or rafter area is not large enough to accommodate the required R-value, the entire space shall be filled with insulation provided such installation does not violate Section 1203.2 of Title 24, Part 2.

Note: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8, and 25943, Public Resources Code.

SECTION 180.3 – REPAIRS

Repairs shall not increase the preexisting energy consumption of the repaired component, system or equipment.

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8 and 25943, Public Resources Code.

SECTION 180.4 – WHOLE BUILDING

Any addition or alteration may comply with the requirements of Title 24, Part 6 by meeting the requirements for the entire building.

NOTE: Authority: Sections 25213, 25218, 25218.5, 25402 and 25402.1, Public Resources Code. Reference: Sections 25007, 25008, 25218.5, 25310, 25402, 25402.1, 25402.4, 25402.5, 25402.8, and 25943, Public Resources Code.

C1 Introduction and Community Engagement

This appendix of the Housing Element details housing conditions, needs, and constraints in the City of Farmersville. The information in this appendix is supported by the regional analysis contained in Chapters 1 through 5.

C1.1 Relationship to Other General Plan Elements

State law requires that the Housing Element be consistent with all other elements of the jurisdiction's general plan. The policies and implementation programs in this Housing Element are consistent with the policies and implementation programs in all other elements of Farmersville's General Plan. If during the implementation of this Housing Element, any inconsistencies are identified, the City would amend the General Plan to maintain internal consistency.

> *"The Housing Element will help Farmersville to create housing for all income groups (including our neediest residents) that we are expecting over the next eight years."*
>
> - Tina Hernandez, Mayor of Farmersville

C1.2 Organization of the Housing Element

This appendix for Farmersville consists of the following seven sections:

1. **Chapter C1: Introduction and Community Engagement:** This section introduces Farmersville's jurisdiction-specific components of the Housing Element and details the community input specific to the city.
2. **Chapter C2: Housing Needs Assessment:** This section reviews the existing and projected housing needs in Farmersville and presents a profile of socio-demographic information for the city, including population characteristics, household information, housing stock, tenure, and housing affordability. The assessment also considers local special housing needs for seniors, farmworkers, homeless individuals, large households, and female-headed households with children.
3. **Chapter C3: Housing Constraints Analysis:** This section identifies and addresses governmental and non-government impediments to housing production, maintenance, and improvements across all income levels.
4. **Chapter C4: Housing Resources:** This section provides resources and an inventory of adequate sites that are suitably zoned and available to be developed with housing to meet Farmersville's fair share of the Regional Housing Needs Allocation (RHNA) during the planning period.
5. **Chapter C5: Affirmatively Furthering Fair Housing Analysis:** This section identifies and seeks to eliminate factors that contribute to the continuation of residential segregation and exclusion in Farmersville, including public and private policies and practices that restrict housing choice and housing mobility.

6. **Chapter C6: Review of Past Accomplishments:** This section reviews the goals, policies, and programs of the 5th cycle Housing Element and compares projected outcomes with actual achieved results.
7. **Chapter C7: Housing Plan:** This section provides a statement of the community's goals, policies, and quantified objectives designed to maintain, preserve, improve, and develop housing within Farmersville. It includes quantified objectives for new construction, rehabilitation, and conserved units by income category (i.e., very low, low, moderate, and above-moderate) to make sure that Farmersville's existing and projected housing needs are met, consistent with the RHNA. This section also presents specific actions with measurable metrics and timelines that Farmersville will employ to address the identified fair housing issues.

C1.3 Community Engagement

Each jurisdiction deployed a diverse range of public outreach methods to solicit input from stakeholders and community members including interviews, surveys, a project-specific website, community events, and public meetings. The City of Farmersville collaborated with the other participating jurisdictions to compile a list of local stakeholders and organizations that provide affordable housing, market rate housing, homeless and other non-profit services, economic development services, and other community services in Farmersville. These entities were included in all notifications associated with the Housing Element update, including the project website, community events, housing survey, and release of the public draft Housing Element. Detailed information on the public engagement program and copies of community engagement materials are provided in Chapter 1, *Regional Introduction and Community Engagement.*

C1.3.1 Public Noticing

In addition to the outreach conducted for the project described in Chapter 1, *Regional Introduction and Community Engagement,* Farmersville utilized the following notification method during the Housing Element update process to engage a diverse array of community members:

- Posts to the City's website announcing the housing needs survey.

C1.3.2 City Council Presentation

On March 13, 2023, City staff presented at a City Council meeting that was open to the public. City staff presented an introduction to the Housing Element, the RHNA, state legislation, and the project timeline. There were no public comments submitted at the meeting.

C1.3.3 Community Workshops

Farmersville held a virtual workshop on May 31, 2023, to help inform the Housing Element and to introduce new Housing Element goals and requirements to the community. Information on the workshop content is available in Chapter 1, *Regional Introduction and Community Engagement.*

Flyers advertising the workshops were posted on the City's website. No participants attended due to a technical issue. The recording of the presentation was made available on the City's website and the City encouraged residents to view and provide comments.

C1.3.4 Stakeholder Interviews

A series of virtual stakeholder interviews were hosted on March 21 and 23, and April 4, 2023, via Zoom. During the stakeholder interviews, there was no discussion of housing issues specific to Farmersville. However, many of the issues identified in the region apply to Farmersville. Information on the interviews is available in Chapter 1, *Regional Introduction and Community Engagement.*

C1.3.5 Public Comment Survey

The City of Farmersville collaborated with TCAG and the other participating jurisdictions on the release of an online survey about housing needs to help inform the Housing Element. Information on the survey and input on a regional level is available in Chapter 1, *Regional Introduction and Community Engagement.*

This section summarizes information collected from survey respondents who noted that they reside in Farmersville:

- Respondents selected "quality and size of housing," "affordability," and "close to a public transit stop" as most important when looking for housing.
- Overall, most respondents selected "cost of quality housing" as the largest barrier to affording desirable housing. Respondents also identified the low supply of housing and lack of rent-restricted housing as barriers to affording housing.
- The most urgent housing issues are affordability of desired housing, availability of desired housing, homelessness, and housing quality.
- The housing assistance programs most beneficial to Farmersville residents are rental assistance or housing choice vouchers (HCVs), homebuyer loan counseling services, and housing assistance for residents with special needs. Respondents also cited landlord/tenant mediation services as a beneficial program to assist with housing needs.
- "Housing with three or more bedrooms" was ranked as most needed in the region followed by "housing with 1-2 bedrooms."
- Twenty-three percent of respondents were interested in developing Accessory Dwelling Units (ADUs) on their existing or future property. No respondents already had an ADU on their property.
- Respondents from all jurisdictions identified a need for supportive housing programs for individuals experiencing homelessness.
- Respondents across jurisdictions expressed the need for median-income housing, "higher end" housing, and non-low-income housing to keep families in the region.

C1.3.6 Response to Community Input

During community outreach, community members identified the following overarching themes regarding housing in the region. Each one is discussed with how it is addressed in the Housing Element.

Need more housing options for both renters and buyers at all income levels.

How addressed: The City will encourage housing development and diversification of the City's housing stock to create additional housing for households of all income levels.

- Housing Program 5 directs the City to encourage the production of ADUs as an affordable housing option through permit streamlining, spreading awareness of available ADU resources, generating an ADU permitting checklist, and adopting pre-approved ADU plans. In addition, the City will

collaborate with neighboring jurisdictions to incentivize the development of ADUs, including outreach and education materials on the use of HCVs on ADUs, promoting ADU development grants, and reducing plan check and permit fees.

- Housing Program 6 directs the City to amend the Zoning Code to facilitate the development of a variety of housing types. The City will review and revise development standards, including parking. The City will also revise the Zoning Code to allow single-room occupancy housing, streamline the permitting process, and ensure ministerial permitting processes for multifamily and affordable housing development. In addition, the Zoning Code will be amended to comply with State density bonus law and reasonable accommodation requirements and to comply with state law and remove barriers for the development of transitional and supportive housing, emergency shelters and low barrier navigation centers, employee housing for agricultural workers, and residential care facilities of seven or more residents.
- Housing Program 9 directs the City to utilize a variety of development tools to expand affordable housing options for households of all income levels, including reviewing and revising the General Plan, applicable Specific Plans, and the Zoning Code and Zoning Map to remove barriers to housing production and facilitate the development of a variety of housing types. The City will amend the Zoning Code to offer regulatory concessions and incentives for affordable housing projects, in compliance with State law, including provisions for density bonuses, flexibility for on- and off-site improvement requirements, and expedited project application review. The City will develop a web-based Housing Development Toolkit for housing developers to outline the residential development process and identify funding programs and resources for housing development. The City will also pursue funding opportunities, such as the CDBG, CalHome, PLHA, and Project Homekey funds, to finance affordable housing and housing for households with special needs.

Need for financial assistance for low-income renter and homeowner households.

How addressed: The City will coordinate with local service providers and agencies that operate assistance programs for low-income households to spread awareness of available financial resources.

- Housing Program 11 directs the city to collaborate with Self-Helt Enterprises to fund housing rehabilitation assistance. The City will spread awareness of homeowner rehabilitation programs by publishing resources on the City's website and connect qualified property owners to Self-Help Enterprises.
- Housing Program 12 directs the City to facilitate the development of housing for low-income households in coordination with the Housing Authority of Tulare County (HATC), service providers, and affordable housing developers. The City will spread awareness of the HATC's HCV program and other available assistance programs through the City's website, social media pages, and in-person community events, as well as conduct educational HCV workshops for landlords.
- Housing Program 14 directs the City to spread awareness for existing homebuyer assistance programs by distributing flyers, attending local events, facilitating social media campaigns, and hosting educational workshops.

C2 Housing Needs Assessment

This chapter provides an individual assessment of housing needs for the City of Farmersville. This section summarizes demographic, employment, and housing characteristics. The main source of the information is the pre-approved data package for jurisdictions approved by the California Department of Housing and Community Development (HCD). This data is primarily sourced from the United States (U.S.) Census, the California Department of Finance (DoF), and American Community Survey (ACS) 2016-2020 5-year estimates. The data contained throughout this chapter may differ from the data included in Chapter C5, *Affirmatively Furthering Fair Housing*, due to the availability of data at the time of drafting. Tables and figures also include comparable data for Tulare County and the state where it is found most useful.

C2.1 Population Characteristics

Population characteristics, such as growth rate, age, and income levels, affect the type and amount of housing needed in a community. Residents' age and income, employment trends, and other factors influence the type of housing needed and the community's ability to afford housing. The following section analyzes Farmersville's population characteristics and trends.

C2.2 Population Growth

Table C2-1 analyzes population change from 2000 to 2020. Farmersville experienced a population increase of 21.2 percent from 2000 to 2010, and decrease of 1.8 percent from 2010 to 2020. Farmersville's population fell by 191 people between 2010 and 2020, while the countywide and statewide population grew.

Table C2-1 Population Change (2000 - 2020)

Jurisdiction	2000	2010	2020	Percent Change 2000-2010	Percent Change 2010-2020
Farmersville	8,737	10,588	10,397	21.2%	-1.8%
Tulare County	368,021	442,179	463,955	20.2%	4.9%
California	33,971,648	37,253,956	39,346,023	9.7%	5.6%

Source: U.S. Census Bureau, Census 2000, 2010; Social Explorer tables for Census 2020.

C2.3 Age Characteristics

Table C2-2 shows a breakdown of population by age group and each group's percentage of the total population. The age groups include preschool (under five years), school-age students (five to 17 years), college-age students (18 to 24 years), young adults (25 to 44 years), middle-aged adults (45 to 64 years), and seniors (65 years and over). In Farmersville, the largest age group is the young adult category, representing 27.9 percent of the total population, which is similar to the county (26.9 percent) and state (28.6 percent). The second largest age group in Farmersville is school age students at 22.8 percent, which is similar in the county (22.8 percent) and state (16.6 percent).

Table C2-2 Population by Age Group (2020)

Jurisdiction	Under 5 years (Preschool)	5 to 17 years (School-age Students)	18 to 24 years (College-age Students)	25 to 44 (Young Adults)	45 to 64 (Middle-aged Adults)	65 years and over (Seniors)	Total Population
Farmersville	877	2,470	1,331	3,024	2,433	707	10,842
Percent	8.1%	22.8%	12.3%	27.9%	22.4%	6.5%	
Tulare County	36,942	105,835	46,977	124,822	96,553	52,826	463,955
Percent	8.0%	22.8%	10.1%	26.9%	20.8%	11.4%	
California	2,409,082	6,547,559	3,724,239	11,241,816	9,778,830	5,644,497	39,346,023
Percent	6.1%	16.6%	9.5%	28.6%	24.9%	14.4%	

Source: U.S. Census Bureau, ACS16-20 (5-year Estimates), Table B01001.

C2.4 Race and Ethnicity

Table C2-3 shows race and ethnicity of residents in Farmersville, Tulare County, and California. In Farmersville, a majority of the population identifies as Hispanic/Latino (any race) at 88.7 percent, considerably higher than countywide (65.1 percent) or across the state (39.1 percent). The second largest racial/ethnic group is white (not Hispanic/Latino) representing 9.4 percent of the total population in Farmersville. This is much lower than Tulare County (27.8 percent) and the state (36.5 percent).

Table C2-3 Population by Race

Jurisdiction	Asian, not Hispanic	Black, not Hispanic	White, not Hispanic	Other race, not Hispanic*	Hispanic/Latino (any race)	Total Population:
Farmersville	14	86	1,014	115	9,613	10,842
Percent of Population	0.1%	0.8%	9.4%	1.1%	88.7%	
Tulare County	15,857	5,923	128,751	11,505	301,919	463,955
Percent of Population	3.4%	1.3%	27.8%	2.5%	65.1%	
California	5,743,983	2,142,371	14,365,145	1,713,595	15,380,929	39,346,023
Percent of Population	14.6%	5.4%	36.5%	4.4%	39.1%	

*Note: Other race includes American Indian and Alaskan Native, Native Hawaiian and Pacific Islander, Two or More Races, and Some Other Race.

Source: U.S. Census Bureau, ACS16-20 (5-year Estimates), Table B01001.

C2.5 Economic Characteristics

Employment

Understanding employment and occupation patterns can provide insight into present housing needs. Table C2-4 shows employment by industry for Farmersville. 840 people, or 19 percent of the workforce in Farmersville, are employed in the educational services and health care and social assistance sector. This is similar to the county average of 21.6 percent and the state average of 21.2 percent. The second largest industry in Farmersville is agriculture, forestry, fishing, hunting, and mining with 16.5 percent, higher than the county average of 15.6 percent and the statewide total of 2.1 percent.

Table C2-4 Employment by Industry (2020)

	Farmersville	Percent	Tulare County	Percent	California	Percent
Educational Services, And Health Care And Social Assistance	840	19.0%	39,809	21.6%	3,960,265	21.2%

Source: U.S. Census Bureau, ACS16-20 (5-year Estimates), Table C24050.

Income Definitions and Income Limits

The State and Federal governments classify household income into several categories based upon the relationship to the county area median income (AMI), adjusted for household size. The U.S. Department of Housing and Urban Development (HUD) estimate of AMI is used to set income limits for eligibility in federal housing programs. The income categories include:

- Acutely low-income households, which earn up to 15 percent AMI;
- Extremely low-income households, which earn up to 30 percent AMI;
- Very low-income households, which earn between 31 and 50 percent AMI;
- Low-income households, which earn between 51 and 80 percent AMI; and
- Moderate income households, which earn between 80 and 120 percent AMI.

For all income categories, income limits are defined for various household sizes based on a four-person household as a reference point. Income limits for larger or smaller households are calculated by HUD (see Table C2-5). According to HUD, the AMI for a four-person household in Tulare County was $80,300 in 2022.

Table C2-5 HUD Income Limits by Person per Household (dollars)

Household Size:	1	2	3	4	5	6	7	8
Acutely Low Income	$8,450	$9,650	$10,850	$12,050	$13,000	$14,000	$14,950	$15,900
Extremely Low Income	$16,350	$18,700	$23,030	$27,750	$32,470	$37,190	$41,910	$46,630
Very Low Income	$27,300	$31,200	$35,100	$38,950	$42,100	$45,200	$48,300	$51,450
Low Income	$43,650	$49,850	$56,100	$62,300	$6,730	$72,300	$77,300	$82,250
Median Income	$56,200	$64,250	$72,250	$80,300	$84,730	$93,150	$99,550	$106,000
Moderate Income	$67,450	$77,100	$89,700	$96,350	$104,050	$111,750	$119,450	$127,200

Source: U.S. Department of Housing and Urban Development (HUD), 2022.

HCD uses the income categories shown in Table C2-6 to determine eligibility for state housing programs. HCD's methodology for calculating AMI is slightly different from HUD's methodology, and therefore the AMI and income limits vary.

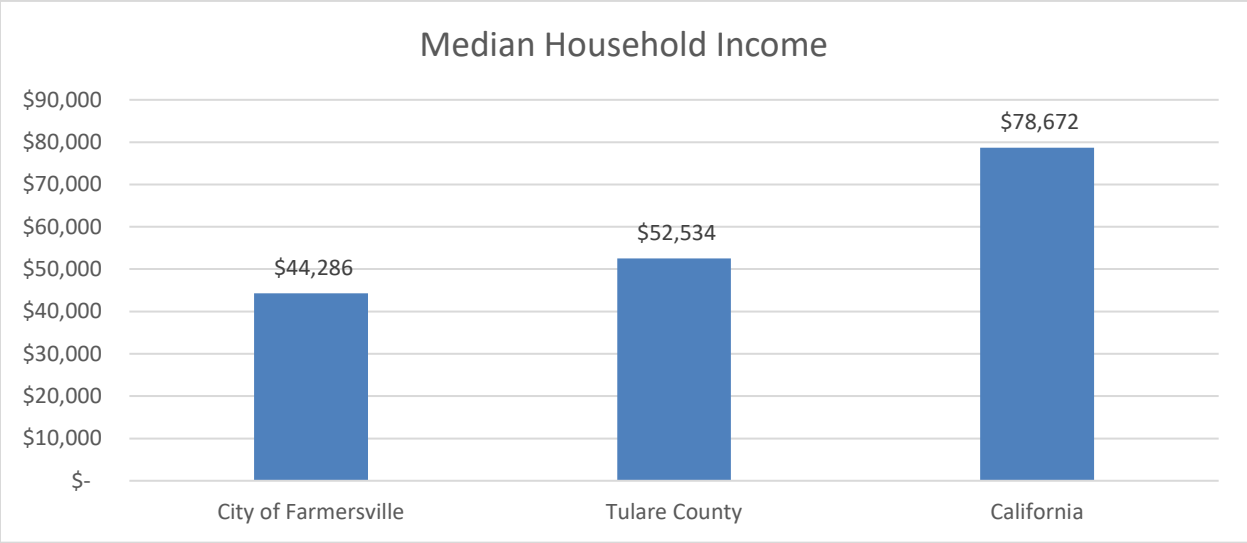
Table C2-6 State of California Income Categories

Income Category	Percent of County Area Median Income (AMI)
Extremely Low	0-30% AMI
Very Low	31%-50% AMI
Low	51%-80% AMI
Moderate	81%-120% AMI
Above Moderate	120% AMI or greater

Source: Section 50093 of the California Health and Safety Code.

Figure C2-1 shows actual median household income in Farmersville as reported by the 2016- 2020 ACS. This median income is for all households, regardless of household size. The median household income in Farmersville was $44,286 in 2020, which was lower than in Tulare County ($52,534) and significantly lower than the statewide median household income ($78,672).

Figure C2-1 Median Household Income



Source: U.S. Census Bureau, ACS16-20 (5-year Estimates), Table B19013.

Table C2-7 shows the median household income by race in 2020. In Farmersville, of the categories listed, "some other race" had the highest median income of $55,299. Hispanic/Latino households had the second highest median income of $46.346; however, limited data was available for the City of Farmersville due to the low numbers of Black/African American, American Indian/Alaskan Native, Native Hawaiian/Other Pacific Islander and two or more races households.

Table C2-7 Median Household Income by Race/Ethnicity (dollars)

Jurisdiction	White, alone	Black/African American, alone	American Indian and Alaskan Native, alone	Asian, alone	Native Hawaiian and Other Pacific Islander, alone	Some Other Race, alone	Two or More Races, alone	Hispanic/ Latino, Any Race
Farmersville	$35,417	N/A	N/A		N/A	$55,299	N/A	$46,346
Tulare County	$64,453	$44,708	$37,632	$67,396	N/A	$47,520	$62,159	$46,063
California	$90,496	$54,976	$60,182	$101,380	$81,682	$59,287	$76,733	$62,330

Source: U.S. Census Bureau, ACS16-20 (5-year Estimates), Table B19013.

Overpayment and Housing Cost Burdens

Table C2-8 lists the number of owner-occupied, renter-occupied, and total households overpaying (spending more than 30 percent of income on housing) in Farmersville. Generally, renters are more affected by overpayment than owners. As shown, 52.4 percent of renter-occupied households are overpaying in Farmersville, which is higher than the county average and lower than the state average.

Table C2-8 Overpayment by Tenure

Jurisdiction	Owner-Occupied Overpaying	Renter-Occupied Overpaying	Total Overpaying
Farmersville	557		1,067
Percent	29.5%	52.4%	
Tulare County	23,773	28,894	52,667
Percent	30.0%	48.4%	
California	2,237,292	3,019,235	5,256,527
Percent	31.0%	51.5%	

Source: U.S. Census Bureau, ACS 06-10, 11-15, 16-20 (5-year Estimates), Table B25070.

Comprehensive Housing Affordability Strategy (CHAS) data provided by HUD provides information on cost burden based on the HUD Area Median Family Income (HAMFI). This data is included in Table C2-9 below. While the totals do not align exactly with 2020 ACS data presented above, the CHAS data identifies the level at which cost burdened households are overpaying for housing. In Farmersville, 34.5 percent of households spend at least 30 percent of their income on housing (cost burden), which is less than in the county and state. Further, 15.3 percent of households are spending more than 50 percent of their income on housing, which is also less than in the county and state.

Table C2-9 Cost Burdened Households

Jurisdiction	Cost Burden <= 30%	Cost Burden >30% to <=50%	Cost Burden >50%	Cost Burden Not Calculated	Total Occupied Units
Farmersville	1,868	549	438	-	2,855

Source: U.S. Department of Housing and Urban Development, CHAS 2015-19 (5-Year Estimates), Table 7.

C2.6 Household Characteristics

Table C2-10 provides information on household types. Of the 2,862 households in Farmersville, 1,408 are married-couple households with or without children and 230 are cohabitating couple households with or without children.

Table C2-10 Households by Type

	Married-Couple Household			Cohabitating Couple Household			
Jurisdiction	Total	Children	No Children	Total	Children	No Children	Total Households
Farmersville	1,408	590	818	230	151	79	2,862

Percent	49.7%	21.2%	28.4%	6.8%	2.5%	4.3%	

Source: U.S. Census Bureau, ACS16-20 (5-year Estimates), Table B11012

C2.7 Large Households

Table C2-11 provides information on large households (households with five or more people) by tenure. As shown, 29.9 percent of households in Farmersville consist of five or more people, which is greater than both the county (21.3 percent) and state (13.7 percent). In Farmersville, owner-occupied 5-person households (10.9 percent), owner-occupied 6-person households (8.8 percent), and renter-occupied 5-person households (5.2 percent) make up the largest percentage of large households, while there were no reported renter-occupied 6-person households. Additionally, both Farmersville and Tulare County have higher percentages of owner-occupied 6- and 7-person households than in California (13.7 percent).

Table C2-11 Large Households by Tenure

Jurisdiction	Total	Owner-Occupied Large Households			Renter-Occupied Large Households		
		5-Person	6-Person	7-or-More Person	5-Person	6-Person	7-or-More Person

C2.8 Overcrowding

Table C2-12 provides information on overcrowding (more than 1.0 people per room) by tenure in Farmersville. There are 441 overcrowded households in the city, of which 160 are owner-occupied households, and 281 are renter-occupied.

Table C2-12 Overcrowding Severity by Tenure

Jurisdiction	Owner-Occupied			Renter-Occupied		
	Total	1.0 to 1.5 Occupants per Room	More than 1.5 Occupants per Room	Total	1.0 to 1.5 Occupants per Room	More than 1.5 Occupants per Room
Farmersville	1,888	119	41	974	145	136
Percent		6.3%	2.2%		14.9%	14.0%

Source: U.S. Census Bureau, ACS 06-10, 11-15, 16-20 (5-year Estimates), Table B25014.

C2.9 Special Needs Groups

Special needs populations include individuals with a disability, elderly, large households, single-parent households, farmworkers, and individuals experiencing homelessness. These needs can make it difficult for members of these groups to locate suitable housing. The following subsections identify and discuss these special housing needs groups.

Seniors

Table C2-13 identifies senior households by tenure in Farmersville, Tulare County, and California. The percentage row identifies the percent of the specified age range within the owner-occupied or renter-occupied tenure. There are far more owner-occupied senior households in Farmersville (335 total) than renter-occupied senior households (93 total), which is similar to the county and state. As shown, 54.6 percent of senior owner-occupied households and 48.4 percent of senior renter-occupied households are made up of seniors between the ages of 65 and 74.

Table C2-13 Senior Households by Tenure

Jurisdiction	Owner-Occupied			Renter-Occupied		
	65 to 74	75 to 84	85 and over	65 to 74	75 to 84	85 and over

Table C2-14 shows the rate of housing cost burden by elderly family type and tenure in Farmersville based on data extracted through HUD's CHAS (note that the CHAS data defines senior or elderly as age 62 and over, as opposed to the ACS that reports seniors as age 65 and older). Of all elderly persons in lower-income categories (less than or equal to 80 percent HAMFI), 30.6 percent of all senior-owner households and 76.5 percent of all senior-renter households in Farmersville had a housing cost burden of 30 percent or greater.

Table C2-14 Housing Cost Burden by Elderly Family Type and Tenure

	Owners		Renters

Resources for Senior-Headed Households

Table C2-15 contains an inventory of the 88 senior rental units in Farmersville. As shown in Table C2-14, there are 170 total senior rental-occupied households, of which 150 are lower-income and 130 are experiencing cost burdens. Based on this data, there is resource need of 42 units for lower-income seniors who rent.

Table C2-15 Inventory of Senior Housing

Housing Development	Address	Number of Units	Description
Village Grove Apartments	675 S Farmersville Blvd, Farmersville, CA 93223	48	Rental units for seniors or individuals 55 and older with a disability.
Palomar Court Apartments	833 S Farmersville Blvd, Farmersville, CA 93223	40	Rental units for seniors or individuals 55 and older with a disability.

Persons with Disabilities (including Developmental Disabilities)

Table C2-17 identifies the number of residents with one or more disabilities. In Farmersville, 5.9 percent of the total population has one type of disability, while 7.1 percent report two or more disabilities. The total share of population with a disability is greater in Farmersville than the county and state averages. Among those with a disability, 45.4 percent have one disability, while 44.6 percent have two or more types of disability.

Table C2-17 Population by Number of Disabilities

Jurisdiction	Total	With One Type of Disability	With two or More types of Disability	No Disability
Farmersville	10,842	638	767	9,437

Housing Plan Program 9 directs the City to support the development of affordable housing for residents with special needs, including those with a disability, by implementing permit streamlining and pursuing funding to facilitate affordable housing development.

Large Households

Table C2-11 above provides information on large households by tenure across all county jurisdictions See Section 2-6, *Large Households* for more information. As shown, there are 857 large households in Farmersville, and 75.5 percent are owner-occupied while the remaining 24.5 percent are renter-occupied.

Resources for Large Households

Table C2-21 compares the number of large households to the number of large units. Units with five or more rooms provide housing options for large households and work to lessen overcrowding. As shown, there are five units in Farmersville with five or more bedrooms but 857 large households, leaving a resource gap of 852 units. Extending the analysis to include units with four or more bedrooms (650 units), there is a resource gap of more than 200 units.

Table C2-21 Large Families by Tenure and Unit Size

Total Occupied Housing Units	Total Large Households	Renter Occupied Large Households	Units with 4 Bedrooms	Units with 5 or more Bedrooms	Total Units with 4 or More Bedrooms
Farmersville	857	210	650	5	655

Source: U.S. Census Bureau, ACS 16-20 (5-year Estimates), Tables B25042, B25009.

Female-Headed Households

Table C2-22 identifies single female-headed households with their own children under age 18. The table values do not include female-headed households with unrelated dependents. Farmersville has a total of 759 single female-headed households with their own children under 18, representing 26.5 percent of total households. This percentage is greater than in the County (24.3 percent) and smaller than the State (26.2 percent).

Table C2-22 Single Female-Headed Households

Jurisdiction	Total Households	Single Female-Headed Households*	Percent
Farmersville	2,862	759	26.5%
Tulare County	139,044	33,727	24.3%
California	13,103,114	3,430,426	26.2%

* Single Female-Headed Households with own children under age 18, does not include unrelated dependents.

Source: U.S. Census Bureau, ACS16-20 (5-year Estimates), Table B11012.

Table C2-23 compares female-headed households with children by poverty status. In Farmersville, 30.1 percent of female-headed households have an income below the poverty line. This percentage is lower than the average in Tulare County (36.3 percent) but higher than the statewide average (21.5 percent).

Table C2-23 Female-Headed Family Households with No Spouse Present, by Poverty Status

	City of Farmersville	Percent	Tulare County	Percent	California	Percent
Below Poverty Line	184	30.1%	8,689	36.3%	364,236	21.5%

Resources for Single-Parent and Female-Headed Households

Tulare County CSET operates family resource centers located in the city of Tulare and Earlimart that provide families with access to services ranging from nutrition and health education to housing and utility assistance to employment training. Each Resource Center has established partnerships and referral processes with local agencies, food pantries, and the faith-based community to be able to provide assistance to families.

Core services of the Tulare County Family Resource Network include family advocacy, parenting education, ongoing intensive family support services, resource, and referrals to partner agencies, family health and wellness, home visitation and child development services.

Table C2-25 provides information on resources for single parents located throughout Tulare County and are available to all Farmersville residents.

Table C2-25 Single-Parent Resources

Organization	Phone	Address

Extremely Low-Income Residents

Table C2-26 identifies extremely low-income households by tenure in Farmersville. Renter-occupied households make up a larger percentage of total extremely low-income households with 55.3 percent. There are 548 extremely low-income households in Farmersville, comprising 19.1 percent of the total households in the city.

Table C2-26 Extremely Low-Income Households by Tenure

	Income <=30% HAMFI		
Jurisdiction	Owner-Occupied	Renter-Occupied	Total
Farmersville	245	303	548
Percent	44.7%	55.3%	19.1% of total households

Analyzing the overlap between special needs groups and extremely low-income households can provide a deeper understanding of each population. The CHAS dataset used to analyze extremely low-income households above, also provides data on senior households, households with a disability and large households. Table C2-28 compares the number of extremely low-income households among the total population, seniors, and residents with a disability. As shown, among the 548 extremely low-income households, 165 are senior households, 525 are households where the householder has at least one disability, and 104 are large households.

Table C2-28 Extremely Low-Income Households

	Total	Senior Households	Householders with a Disability	Large Households
Farmersville	548	165	525	104
Percent	100.0%	30.1%	95.8%	19.0%

Source: US Housing and Urban Development, CHAS 2015-19 (5-Year Estimates), Tables 6 and 7.

The CHAS dataset does not include data for female-headed households with children, however, as shown in Table C2-24 there are 184 female-headed family households with incomes below the poverty line.

Resources for Extremely Low-Income Households

Table C2-29 includes an inventory of affordable housing in Farmersville. As shown, there are 176 affordable units in the city. These units serve households earning less than 80 percent of the AMI. Based on the identified need (548 extremely low-income renter households experiencing housing cost burden) there is a need for additional units affordable to extremely low-income households in the city.

Table C2-29 Inventory of Public Assisted Complexes, Farmersville

Name	Address	City	Zip	Affordable Units

The Housing Authority of Tulare County (HATC) provides assistance to lower and moderate-income families in need of housing through the Housing Choice Voucher (HCV) program throughout the county. HATC currently administers approximately 700 public housing units, 3,100 HCV units, and 860 units of local, non-traditional housing.[1] According to HATC, 70 households use HCVs in Farmersville. Through Housing Plan Program 9, the City will facilitate development of housing for extremely low-income households.

Farmworkers

The U.S. Department of Agriculture (USDA) provides countywide farmworker population data generated through the Census of Agriculture. The most recent Census of Agriculture data (2017) identified 23,233 farmworkers in the county.

Table C2-30 provides ACS data for the total farmworker population in Farmersville and Tulare County in 2020. Farmersville had 730 farm workers in 2020, representing 2.6 percent of the total farmworker population across the county.

[1] U.S. Department of Housing and Urban Development, Housing Authority of Tulare County, https://www.hud.gov/program_offices/public_indian_housing/programs/ph/mtw/tulare accessed June 2023.

Table C2-30 Farmworker Population

Jurisdiction	Farmworkers
Farmersville	730
Percent	2.6%
Total Tulare County	**28,627**

Source: U.S. Census Bureau, ACS16-20 (5-year Estimates), Table C24050.

Resources for Farmworkers

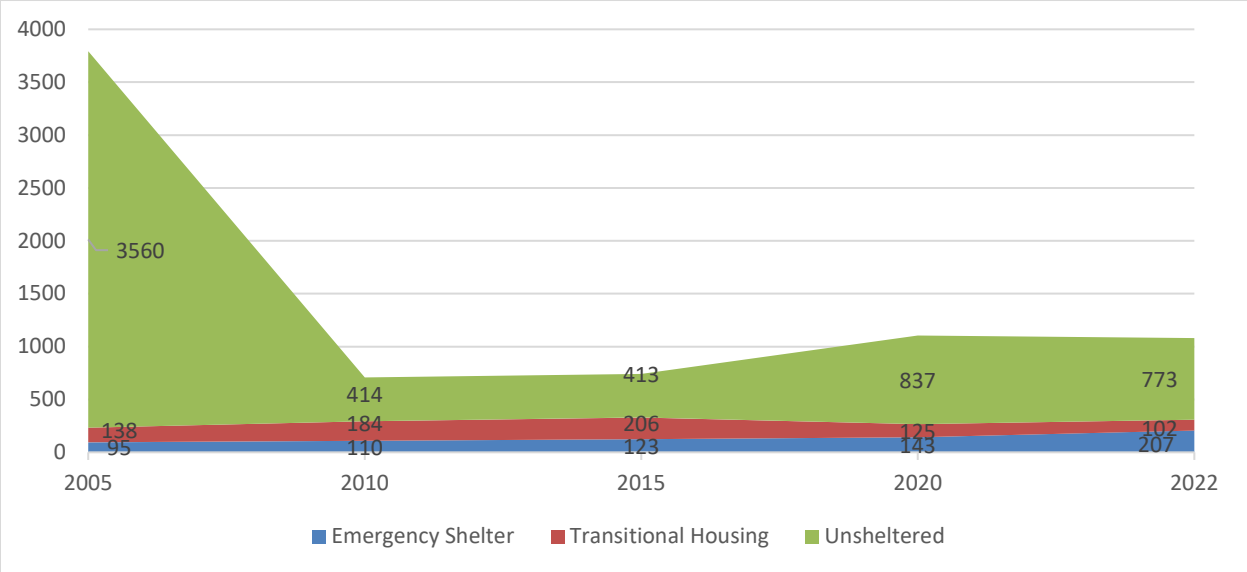
To meet the need of farm workers, the Tulare County Housing Authority operates 191 housing units at the Linnel Farm Labor Center, situated on Walnut Avenue and Road 156, immediately west of Farmersville city limits. The Housing Authority also operates 175 units for farmworkers at the Woodville Farm Labor Center, approximately 15 miles south of Farmersville near the unincorporated community of Woodville. The Housing Authority requires low-income farm worker families to pay 30 percent of their adjusted gross income towards rent. Any additional rent is paid for by the USDA Rural Development program. As reported in Table C2-30, there were 730 farmworkers living in Farmersville in 2020. Despite the housing opportunities in the unincorporated county listed above, there is a significant gap in housing resources for farmworkers in the city.

To address the needs of farmworkers, the City will implement Housing Plan Programs 6 and 9 to support affordable housing development and remove constraints to development of housing types that may fit the needs of farmworkers, such as employee housing.

Persons Experiencing Homelessness

Figure C2-2 shows total households experiencing homelessness by living situation between 2005 to 2022. As shown, 2005 had the highest reported number of households (3,793) within the Continuum of Care (CoC), the majority of which were unsheltered. Data for 2022 indicates that 1,082 households were experiencing homelessness, including 773 that were reported as unsheltered.

Figure C2-2 Homelessness by Type Over Time, Households, Kings/Tulare CoC



Source: U.S. HUD, CoC Homeless Populations and Subpopulations Reports (2005, 2010, 2015, 2020, 2022).

CoC data identifies persons experiencing homelessness by type and race across the regions CoC for the year 2020. Among those counted, 92 percent identified as white, nine percent as Black/African American, and seven percent as American Indian or Alaska Native. In regard to ethnicity, 45 percent identify as Hispanic or Latino (of any race).

The Kings Tulare Homeless Alliance conducted a point-in-time count in 2023. Data from the point-in-time count is reported for Porterville, Visalia, Tulare, and the balance of the county. Among those counted, there were a total of 1,053 people experiencing homelessness in Tulare County and 97 percent of this population lives in either Porterville, Tulare, or Visalia, while the remaining three percent (36 residents) live throughout all other jurisdictions including Farmersville. Table C2-31 identifies those counted in 2023.

Table C2-31 Homelessness by Type (2023)

Jurisdiction	Emergency Shelter	Transitional Housing	Unsheltered	Total
Balance of County, including Farmersville	5	0	31	36
Porterville	56	16	227	299
Tulare	21	36	227	284
Visalia	83	57	294	434

Kings/Tulare Homeless Alliance, *2023 Point in Time Report,* July 7, 2023.

Resources for Persons Experiencing Homelessness

There are no emergency shelters in Farmersville; however, there are two shelters in nearby Visalia approximately seven miles from Farmersville. Visalia Rescue Mission has locations on NE First Avenue and N Burke Avenue and provides 50 beds to men aged 18 years and older and an additional 40 beds to women and children. Additionally, the Tulare Cares Temporary Shelter, located 13 miles from Farmersville on E Walnut Avenue in Tulare, is an active temporary emergency shelter with capacity for up to 178 guests. Emergency housing is permitted by-right in Farmersville in the RM zone.

To address the needs of homeless individuals, the City will implement Housing Plan Programs 1 and 6 to support the development of shelter housing and supportive services for people experiencing homelessness.

C2.10 Housing Stock Characteristics

A community's housing stock is defined as the collection of all housing units located within the jurisdiction. The characteristics of the housing stock, including growth, type, age, condition, tenure, vacancy rates, housing costs, and affordability are important in determining the housing needs for the community. The following sections detail the housing stock characteristics of Farmersville to identify how well the current housing stock meets the needs of current and future residents.

C2.11 Housing Growth

Table C2-32 summarizes the growth of the housing stock in Farmersville by providing the total number of units between 1980 and 2020. The largest growth rate occurred between 1990 and 2000 with a 31 percent change during this 10-year period. Between 1980 and 2010 the housing stock grew on average by 18.9 percent each decade. Between 2010 and 2020, however, production slowed significantly. During this time the number of housing units in the city grew by just 7.2 percent.

Table C2-32 Total Housing Units Over Time (1980 to 2020)

Jurisdiction	1980	1990	2000	2010	2020
Farmersville	1,640	1,732	2,269	2,726	2,921
Percent Change		+5.6%	+31.0%	+20.1%	+7.2%

C2.12 Housing Type and Tenure

Table C2-33 identifies the total housing units by type in Farmersville, Tulare County, and California. Single-family detached homes comprise the majority of the housing stock, with 78.2 percent of total units. This is greater than the county with 75.0 percent and the state with 57.7 percent. The second most common housing type are three- or four-unit complexes, providing 5.2 percent of the total units in Farmersville.

Table C2-33 Total Housing Units by Type

C2.13 Vacancy Rate

Table C2-35 provides data on vacancy status by type for all vacant units. The City's vacancy rate is 2.0 percent, lower than the county average (7.4 percent). Of the total vacant units in Farmersville, other vacant units make up the largest percentage of total vacant units with 76.3 percent, greater than both the county (42.6 percent) and the state (28.2 percent). By comparison to the county and state, Farmersville had no vacant units for seasonal, recreational, or occasional use, far less than the county (27.2 percent) and state (34.1 percent).

Table C2-35 Vacancy Status by Type for Total Vacant Units

C2.14 Housing Unit Size

Table C2-36 provides housing unit size data for Farmersville, Tulare County, and California. In Farmersville, three-bedroom units (49.3 percent) are the most common housing type, followed by four-bedroom (22.7 percent) and two-bedroom (16.9 percent) units. This is similar to the statewide and countywide housing unit size trend, however, there is a notably larger stock of three-bedroom units in Farmersville and Tulare County when compared to the state.

Table C2-36 Housing Unit Size

Jurisdiction	Total	Studio	1 Bedroom	2 Bedroom	3 Bedroom	4 Bedroom	5 of More Bedroom
Farmersville	2,862	138	176	483	1,410	650	5

Source: U.S. Census Bureau, ACS 16-20 (5-year Estimates), Table B25042

C2.15 Age and Condition of Housing Stock

Table C2-37 provides data on the total occupied housing units by year built. Farmersville saw the most growth between 1970 and 1979. During this period, 745 units were constructed, representing 20.3 percent of the housing stock. Similarly, growth trends for Tulare County and California indicate that the largest percentage of units were constructed during the 1970s. During this time, 20.3 percent of the housing stock in Tulare County and 17.5 percent of the housing stock in California was constructed. Notably more than half (53.6 percent) of the housing stock in Farmersville was built prior to 1980 and is more than 40 years old.

Table C2-37 Total Occupied Housing Units by Year Built

Jurisdiction	Total	2014 or later	2010 to 2013	2000 to 2009	1990 to 1999	1980 to 1989	1970 to 1979	1960 to 1969	1950 to 1959	1940 to 1949	1939 or earlier

Source: U.S. Census Bureau, ACS 16-20 (5-year Estimates), Table B25036

Table C2-38 provides information on substandard housing units. In Farmersville, there are 42 substandard units, and 30 units (1.1 percent of total units) are lacking plumbing facilities. There is a greater percentage of units lacking plumbing facilities compared to the county (0.4 percent) and the state (0.4 percent).

The City's Code Enforcement Division estimates that approximately two percent of units (57 units) require major rehabilitation and fewer than one percent of units (28 units) citywide are beyond the point of repair. Concentrated areas of substandard housing in the city are primarily in the southern part of the city. Enforcement staff regularly distribute information about the City's home rehabilitation program to property owners undergoing enforcement.

Table C2-38 Substandard Housing Units

Jurisdiction	Total	Lacking Plumbing Facilities	Lacking Kitchen Facilities
Farmersville	2,862	30	12
Percent		1.1%	0.4%

C2.16 Housing Costs

Median Home Sale Price

Table C2-39 provides information on the median housing value in Farmersville and comparable jurisdictions from 1980 to 2020. Prices rose steadily from 1980 to 2000, before experiencing a large increase in value from 2000 to 2010. Median home values increased by 95 percent during this period. Increases in value have slowed since 2010, with growth between 2010 and 2020 at 14.9 percent. Each jurisdiction listed in the table experienced a similar pattern of growth in home values, including an extreme spike in value between 2000 and 2010. Porterville is the only jurisdiction listed that saw a decrease in value during any decade (0.6 percent decrease between 2010 and 2020).

Table C2-39 Median Housing Value Over Time (1980 to 2020)

Jurisdiction	1980	1990	2000	2010	2020
Farmersville	36,000	49,100	77,600	151,300	173,800

C2.17 Distribution of Owner-Occupied Units

Table C2-40 compares data on the number of owner-occupied housing units by race In Farmersville, Tulare County, and California. In Farmersville, most owner-occupied units are occupied by residents that identify as white (55.7 percent). This is lower than in Tulare County (73.6 percent) and California (66.7 percent).

Considering ethnicity, 87.2 percent of owner-occupied units are occupied by Hispanic/Latino residents of any race. This percentage is significantly higher than in Tulare County (48.8 percent) and in California (24.0 percent).

Table C2-40 Owner Occupied Units by Race

Jurisdiction	White	Black	American Indian and Alaska Native	Asian	Native Hawaiian and Other Pacific Islander	Some Other Race	Two or More Races	Hispanic/ Latino of any Race
Farmersville	1,051	9	25	10	4	522	267	1,647

Source: U.S. Census Bureau, ACS 16-20 (5-year Estimates), Table B25003.

C2.18 Housing Rents

According to 2016-2020 ACS estimates, the median gross rent in Farmersville was $846 per month (Table C2-41). This was slightly lower than the median for the county ($974) and significantly lower than the state average ($1,586).

Table C2-41 Median Gross Rent, Farmersville, 2020

	City of Farmersville	Tulare County	City % of County	California	City % of State
Median Gross Rent	$846	$974	86.9%	$1,586	53.3%

Source: U.S. Census Bureau, ACS 16-20 (5-year Estimates), Table B25064.

Table C2-42 below provides data on median gross rent from 1980 to 2020 in Farmersville. Median gross rent has grown from $198 per month in 1980 to $846 in 2020. Between 2000 and 2010 rents in the city grew by 45.1 percent. From 2010 to 2020 rents grew at a slower rate of 23.5 percent.

Table C2-42 Median Gross Rent Over Time, Farmersville, 2020

	1980	1990	2000	2010	2020
Median Gross Rent	$198	$367	$472	$685	$846

U.S. Census Bureau, ACS 18-22 (5-year Estimates), Table B25064.

* Median rent data for Farmersville is unavailable. The median rent values presented in the table uses ACS 2022 5-year data.

C2.19 Housing Affordability

Table C2-44 shows the maximum amount that a household can pay for housing each month without incurring a cost burden (overpayment) for Farmersville. A summary of each income category's ability to pay for housing is provided below the table.

Table C2-44 Housing Affordability Matrix – Farmersville (2021)

	Annual Income Limits	Affordable Monthly Housing Costs	Rental Utility Allowance (2020)	Taxes, Insurance, Homeowners Association Fees	Affordable Rent	Affordable Home Price
Extremely Low Income (0-30% AMI)						
1-Person (Studio)	$13,286	$332	$181	$116	$151	$58,814
2-Person (1 BR)	$14,950	$374	$202	$131	$172	$65,602

2-Person	$59,801	$1,495	$202	$523	$1,293	$262,407
3-Person	$66,424	$1,661	$227	$581	$1,434	$289,477
4-Person	$73,082	$1,827	$263	$639	$1,564	$316,628
5-Person	$78,500	$1,962	$298	$687	$1,664	$330,630

Assumptions:

1. Income limits are the 2021 HCD limits for Tulare County.

2. Affordable housing costs are 30 percent of gross household income.

3. Utility costs are based on Tulare County Housing Authority Utility Allowance Schedule for 2022.

4. Taxes, insurance, private mortgage insurance, and homeowners association dues are calculated at 35 percent of monthly affordable cost.

5. Affordable home price assumes a 30-year fixed mortgage with a 7 percent interest rate and 10 percent down payment.

6. Taxes and insurance costs apply to owners only.

Sources: 2022 HCD Income Limits, Tulare County Housing Authority Utility Allowance Schedule, 2022.

Extremely Low-income Households

Extremely low-income households earn 30 percent or less of the county AMI. According to HCD estimates, extremely low-income households in Farmersville have an annual income of $13,286 or below for a one-person household and $23,550 or below for a five-person household. Extremely low-income households cannot afford market-rate rental or ownership housing in Farmersville. After deductions for utilities, an extremely low-income household can afford to pay approximately $151 to $291 in monthly rent. Given the cost of housing in Farmersville, extremely low-income households could not afford to purchase a home, as the affordable home price for extremely low-income households ranges from $58,814 to $99,189 depending on household size.

Very Low-income Households

Very low-income households earn between 31 and 50 percent of the county AMI, up to $22,143 for a one-person household and up to $32,708 for a five-person household. A very low-income household can generally afford homes offered at prices between $98,023 and $137,763, adjusting for household size. After deductions for utilities, a very low-income household can afford to pay approximately $373 to $520 in monthly rent, depending on household size. Given the cost of housing in Farmersville, very low-income households could not afford to purchase a home or rent an adequately sized unit.

Low-income Households

Low-income households earn between 51 and 80 percent of the county AMI, up to $35,429 for a one-person household and up to $52,333 for a five-person household. A low-income household can generally afford homes offered at prices between $156,836 and $220,420, adjusting for household size. After deductions for utilities, a low-income household can afford to pay approximately $705 to $1,010 in monthly rent, depending on household size. Finding appropriately sized market-rate rental housing in Farmersville can be challenging to households in this income group.

Median-Income Households

Median-income households earn between 80 and 100 percent of the county's AMI – up to $44,286 for a one-person household and up to $65,416 for a five-person household. The affordable home price for a moderate-income household ranges from $196,045 to $275,525. After deductions for utilities, a one-person median-income household could afford to pay up to $926 in rent per month and a five-person low-income household could afford to pay as much as $1,337. Finding appropriately sized market-rate rental housing in Farmersville can be challenging to households in this income group.

Moderate-Income Households

Moderate-income households earn between 100 and 120 percent of the county's AMI, up to $53,143 for a one-person household and up to $78,500 for a five-person household. The maximum affordable home price for a moderate-income household is $235,254 for a one-person household and $330,630 for a five-person family. Moderate-income households in Farmersville could afford to purchase the median priced home; however, finding an affordable adequately sized home could present a challenge for households earning incomes at the lower end of the middle/upper category. The maximum affordable rent payment for moderate-income households is between $1,148 and $1,664 per month. Appropriately sized market-rate rental housing in Farmersville is generally affordable to households in this income group.

Workforce Housing

Federal guidelines define workforce housing as housing that is affordable to households earning incomes within the range of 60 to 120 percent of the AMI (in Tulare County, that range is $50,580 to $101,160). A broader definition of workforce housing is housing that is affordable to people who work in the county. A four-person household with an annual income of $84,300 could afford monthly rent of $1,845 for a three-bedroom housing unit and a home purchase price of $304,998 without being burdened by housing costs. As noted in Table C2-41, the average monthly rental price for a three-bedroom unit is $1,720, just below the affordable rent for the AMI for the county.

As noted in Table C2-4, the salary for the largest number of workers located in Tulare County (educational services, healthcare and social assistance) receives an annual median income of approximately $52,534. At this median income level, a household of two would be considered low-income; if there were two children, then that household would be considered a low-income household.

Cost Burden

Table C2-45 and Table C2-46 identify cost-burdened households by tenure overtime in Farmersville. There has been a decrease in the number of owner-occupied cost-burdened households from 588 households in 2010 to 502 households in 2020. Cost-burdened renter-occupied households have decreased significantly from 636 in 2010 to 368 in 2020.

Table C2-45 Cost Burdened Owner-Occupied Households Over Time

Jurisdiction	1980	1990	2000	2010	2020
Farmersville	121	162	418	588	502

CHAS data provided by HUD provides information on cost burden by income category based on the HAMFI. This data is included in Table C2-47 below. While the totals do not align exactly with 2020 ACS data presented above, the CHAS data gives insight into which income categories are currently experiencing costs burdens in the city. As shown, households with income less than 50 percent of HAMFI experience a high rate of cost burden, including 488 of 548 extremely low-income households and 324 of 584 very low-income households.

Table C2-47 Cost Burden by Income and Tenure

Row Labels	Owner occupied	Renter occupied	Grand Total
Household income is <= to 30% of HAMFI (extremely low income)	**245**	**303**	**548**

US Housing and Urban Development, CHAS 2015-19 (5-Year Estimates), Table 7.

C2.20 Assisted Housing Units

Assisted housing units are those that are restricted for use by occupants with limited household incomes. These units are assisted under federal, state, and/or local programs, including HUD programs, state and local bond programs, former redevelopment agency (RDA) programs, density bonus, or direct assistance programs.

At-Risk Housing Units

The California Housing Partnership maintains an affordable housing database to monitor changes in affordable housing and to identify units or housing developments that are at risk of converting to market-rate uses. Assisted units in the preservation data base are classified by the following risk categories:

- **Low Risk:** affordable housing units that are at risk of converting to market rate in 10+ years and/or are owned by a large/stable non-profit, mission-driven developer.
- **Moderate Risk:** affordable housing units that are at risk of converting to market rate in the next 5-10 years that do not have a known overlapping subsidy that would extend affordability and are not owned by a large/stable non-profit, mission-driven developer.
- **High Risk:** affordable housing units that are at risk of converting to market rate in the next 1-5 years that do not have a known overlapping subsidy that would extend affordability and are not owned by a large/stable non-profit, mission-driven developer.

Table C2-48 shows assisted units in Farmersville by estimated affordability end date. As shown, there are 321 assisted units in the city, and 19 are at risk of conversion in the planning period at Shasta Village Apartments. Based on conversations with the owner of Shasta Village Apartments, the owner desires to extend affordability for these units beyond 2024. The City is assisting the owner to achieve the extension.

Table C2-48 Inventory of Public Assisted Complexes – Farmersville

Name	Address	City	Zip	Affordable Units	Total Units	Active Program(s)	Estimated Affordability End Year/Date	Risk Level

Costs of Replacement Versus Preservation

To understand the significance if these at-risk units in Shasta Village Apartments are lost from the supply of affordable housing, it is critical to identify the cost of construction of new regulated housing to replace these at-risk units if they are converted to market-rate units, as well as to compare this cost to the potential costs to preserve these units. The cost of developing housing depends upon a variety of factors, including density, size of the units (i.e., square footage and number of bedrooms), location, land costs, and type of construction, as discussed in Chapter C3, *Housing Constraints Analysis* under Non-Governmental Constraints. The typical cost of construction for below market-rate housing in Tulare County in 2022 was $337,540 per unit. Based on this per unit cost, the total cost to replace the 19 high-risk affordable units with new construction would be approximately $6.4 million.

With the high cost of development, the cost of preserving these units is much less than the cost of new construction. The area median income in Farmersville is $44,286. Based on this, a lower-income household making 80 percent of the area median income can afford to pay $10,629 for housing annually without a housing cost burden, which equates to $886 per month. As shown in Table C2-43, the median market rent for a three-bedroom unit in the city is $1,058 monthly. Based on the difference between the affordable rent and current market rate, the cost of preserving such a unit is approximately $172 per month, or $2,067 per year. Using this total, the cost of preserving the 19 units at Shasta Villa Apartments would be approximately $39,273 per year.

Funding Sources for Assisted Housing

There are a variety of funding sources for affordable housing, preservation, and rehabilitation from federal, state, and local sources. HCDHUD administers grants which can assist developers, local governments, and non-profits in constructing housing units.

Permanent Local Housing Allocation (State)

The 2017-18 Regular Session of the California State Legislature passed one bill (of many other housing-related legislation) sought to generate, and distribute directly to cities, funds for new affordable housing production. The Building Homes and Jobs Act (SB 2, Atkins 2017) established a permanent source of funding for affordable housing through a $75 fee on real estate document filings. The City has an agreement with the State for approximately $254,000 in PHLA funds, paid in increments over several years.

Affordable Housing and Sustainable Communities Program (State)

The statewide Greenhouse Gas Reduction Fund's Affordable Housing and Sustainable Communities program is a competitive funding program that encourages collaboration between affordable housing developers, jurisdictions, and transit agencies to fund affordable housing development and transportation infrastructure and amenities. City planning staff will continue to work with their colleagues in various departments to best position affordable housing and sustainable infrastructure planning to align with this program. Additionally, staff will continue seeking partnerships with area technical assistance programs, affordable housing developers, and area transit agencies to collaborate in an application for funding when a viable and competitive housing and transportation development is ready to move forward.

State Low Income Housing Tax Credits (State)

The federal government through the Internal Revenue Service enacted the Low Income Housing Tax Credit Program in 1986. This program has been the largest producer of affordable multifamily rental housing since its inception. Each state has a financing agency that administers the LIHTC Program, and in California that is the Tax Credit Allocation Committee (TCAC). Institutional investors or syndicates are incentivized to invest in long term affordable rental housing projects to receive tax credits. Nonprofit and private developers are eligible to apply for State LIHTC for acquisition, new construction and/or rehabilitation of affordable rental housing.

HOME

This program was created under Title II of the Cranston-Gonzales National Affordable Housing Act enacted on November 28, 1990. For Farmersville, HOME funds are made available on an annual, competitive basis through HCD's HOME Investment Partnerships Program. Farmersville uses HOME funds primarily for first-time homebuyers (down payment assistance) and to offset the costs of impact fees. The City also provides funding from the HOME program for housing rehabilitations and this program is administered through Self Help Enterprises. It should be noted that the 2018 HOME program was frozen for all agencies. The City intends to apply for the next round of funds in 2024.

CDBG Funding (Locally controlled federal funds)

The City is considered a non-entitlement city, as it has a population of under 50,000, a criterion defined by HUD for agencies seeking assistance with CDBG funds. The City received approximately $540,541 from the State administered HUD funds in 2022. Farmersville utilizes Community Development Block Grant (CDBG) funds for owner housing rehabilitation activities, downpayment assistance, infrastructure, public facilities and public services. The balance in the fund as of this writing was $518,725.

C3 Housing Constraints Analysis

Constraints to the development of adequate and affordable housing include market, governmental, infrastructure, and environmental factors. These constraints may result in housing that is not affordable to low- and moderate-income households and may render residential construction economically infeasible for developers. Constraints to housing production significantly impact households with low and moderate incomes and special needs.

According to Government Code Section 65583, local governments are required to analyze governmental and non-governmental constraints to the production, maintenance, and improvement of housing for persons of all income levels and those with special needs and, where appropriate and legally possible, remove governmental constraints to the maintenance, improvement, and development of housing as part of the housing element update. Where constraints to housing production are related to the city's regulations or land use controls, the city must identify appropriate programs to mitigate these constraints, particularly ones that impact the production of affordable housing or housing for special needs populations.

The following chapter outlines non-governmental, governmental, environmental and infrastructure constraints and was used in the development of specific policies and actions included in the Housing Plan to remove barriers to housing and to incentivize housing production, specifically targeting housing production at all income levels and housing for persons with special needs.

C3.1 Summary of Local Housing Constraints

- The costs of developing housing, including land costs and construction costs, are rising rapidly. There is a lack of federal, state, and local funding and the funding that is available is increasingly competitive. The time and effort needed to identify, compete for, and layer affordable housing funds is a major constraint to development of affordable housing.
- Loan denial rates in Tulare County were higher for Hispanic/Latino applicants (18 percent) compared to non-Hispanic/Latino applicants (16 percent). Although discrimination in mortgage lending is prohibited by the federal Fair Housing Act, other factors may contribute to a potential homebuyer's ability to secure safe financing, such as credit history, savings, and education regarding the home-buying process. The higher denial rate in for Hispanic/Latino applicants indicates a financial constraint to purchasing a home which puts higher pressure on the rental markets.
- Although Farmersville's development regulations allow for a variety of densities throughout the city, development standards are not sufficiently flexible. Residential parking requirements, and Zoning Code provisions restricting residential care homes in residential zones pose constraints to development. Additionally, use permit regulations for small group homes in certain zoning districts could pose a constraint to housing for individuals with special needs.
- Farmersville's development review and impact fees are higher than in other small cities in the region, which may be a constraint to development.

C3.2 Non-Governmental Constraints

The availability of housing is affected by a complex set of interrelated market factors including but limited to cost of land, cost of construction, and availability of financing. These factors contribute to

determining a new home's sale price or the rents required to make a project feasible. Non-governmental constraints include factors outside of direct governmental control that directly impact housing prices. The cost of construction and the availability of financing contribute to the cost of housing and can hinder the production of affordable housing. The following analysis accounts for these non-governmental constraints.

C3.2.1 Land Costs

The cost of land can impede the production of affordable housing. Land costs are influenced by many variables, including land scarcity and developable density (both of which are indirectly controlled through governmental land use regulations), location, site constraints, and the availability of public utilities.

Table C3-1 provides the average price per acre for listed land for sale throughout Farmersville in June 2023. The average price per acre for all plots listed for sale was $360,611. The average price per acre was significantly higher for smaller lots at $621,233 per acre. However, only one property listed was less than ten acres. The price for larger lots listed for sale was $100,000 per acre, on average. Only two properties over ten acres were listed for sale in June 2023.

Table C3-1 Listed Land Prices – Farmersville

Lot Size	Average Price per Acre (Listed)
Less than 10 acres	$621,223.79
10 or more acres	$100,000.00
Average $/acre	$360,611.90

Source: Zillow, Inc., 2023.

Table C3-2 provides the average price per acre for land sold in 2022 and 2021 in Farmersville. The average price per acre for all plots was $133,237, lower than the average list price. The average sales price per acre was higher for smaller lots at $230,240 per acre. The price per acre was less for larger lots, averaging $36,233, which is significantly less than the average price per acre for currently listed properties.

Table C3-2 Sold Land Prices – Farmersville

Lot Size	Average Price per Acre (Listed)
Less than 10 acres	$230,240.78
10 or more acres	$36,233.97
Average $/acre	$133,237.38

Source: Zillow, Inc., 2023.

Conclusion

Land costs in Farmersville are consistent with neighboring cities and are not considered a constraint to development.

Recommended Action

None required.

C3.2.2 Construction Costs

Construction costs can be broken down into two primary categories: materials and labor. A major component of the cost of housing is the cost of building materials, including wood and wood-based products, cement, asphalt, roofing materials, and pipe. The availability and demand for such materials affect prices for these goods.

Another major cost component of new housing is labor. The cost of labor in Tulare County is comparatively low because the area's cost of living is relatively low compared to other areas in California. However, labor for government subsidized housing work is additionally costly for the Central Valley, as wages are rooted in the required State Labor Standards based on higher northern and southern California prevailing wages.

Table C3-3 shows the estimated cost of constructing a basic 2,000 square foot single-family home in Tulare County to be around $337,540. The estimate includes direct and indirect (e.g., insurance, permits, utilities, plans) construction costs, including material, labor, and equipment costs, but does not include the price of land or development impact fees.

Table C3-3 Estimated Construction Cost

Item	Cost
Material	$204,226
Labor	$126,001
Equipment	$7,313
Total	**$337,540**

Source: Promatcher.com, 2023.

There is little that municipalities can do to mitigate the impacts of high construction costs except by avoiding local amendments to uniform building codes that unnecessarily increase construction costs without significantly adding to health, safety, or construction quality. Because construction costs are similar across jurisdictions in Tulare County, the cost of construction is not considered a major constraint to housing production in Farmersville.

C3.2.3 Availability of Financing

Mortgage interest rates have a large influence over housing affordability. Higher interest rates increase a homebuyer's monthly payment and decrease the range of housing that a household can afford. Lower interest rates result in lower costs and monthly payments for the homebuyer.

When interest rates rise, housing prices typically fall to compensate. Similarly, when interest rates decrease, housing prices begin to rise. There is often a lag in the market, causing housing prices to remain high when interest rates rise, until the market catches up. Lower-income households often find it most difficult to purchase a home during this time period.

Where financing is available, construction capital seems to be directed at the best transactions, or those with large, established, and well-capitalized sponsors. Given recent trends of increasing interest rates, the availability of financing is likely to be more of a constraint on new housing construction during this housing element planning period than it has been in the recent past.

Market-Rate Development Financing

As discussed in *Land Costs and Construction Costs*, above market-rate development is generally financed by investors, and the cost to build a project must be recovered by revenue from sales or rents, which drives up the ultimate rent or sales prices of new housing as the component costs increase. A market in which housing supply is limited and demand is high can support higher housing prices, but lower-income segments of the community are priced out. Therefore, it is difficult for the private sector, for-profit developers, and market-rate housing to meet the housing needs of all community members.

Affordable Housing Financing

A description of available funding sources for affordable development is provided in Chapter *C2 Housing Needs Assessment.*

Mortgage and Rehabilitation Financing

The availability of financing affects the ability of residents to purchase or improve a home. Under the Home Mortgage Disclosure Act (HMDA), lending institutions are required to disclose information on the disposition of loan applications and the income, gender, and race of loan applicants. The primary purpose of reviewing the lending activity is to determine whether home financing is available to city residents. The data presented in this section includes the disposition of loan applications submitted to financial institutions for home mortgages, home improvement, and refinance loans.

Lending activity data provides information regarding home financing availability for city residents. The most recent data set available for the County of Tulare from 2022 shows that 18,154 households applied for a home financing loan which includes loans for home purchase, home improvement, and refinancing. As discussed in Chapter 3, *Regional Housing Constraints Analysis*, of the total applications received for home purchase 54 percent of the loans originated while 6 percent were denied.

Conventional loans are made by the private sector (banks, mortgage companies, etc.) and are not guaranteed or insured by the United States (U.S.) government. Conversely, government-backed loans, such as those issued by the Federal Housing Administration, Department of Veterans Affairs, and the Rural Housing Services/Farm Service Agency, are completely or partially insured by the U.S. government. Within the county, 12,849 of the applications received were for conventional loans and 5,305 were for government backed loans. As discussed in Chapter 3, Regional Housing Constraints, 49 percent of the conventional loans were originated, and 18 percent of the applications were denied. Additionally, 43 percent of the government backed loans were originated and 10 percent of the applications were denied.

County data shows that the white racial group had the highest number of loan applications with 5,463 applications. Per racial group, white applicants also had the highest percentage of loans originated out of applications received (56 percent). In terms of ethnicity, Hispanic/Latino applicants comprised 38 percent of the total number of loan applications while non-Hispanic or Latino residents comprised 29 percent. However, of the loan applications made by Hispanic/Latino applicants, only 53 percent of loans originated compared to 56 percent for non-Hispanic/Latino applicants. Hispanic/Latino applicants also had a higher loan denial rate (18 percent) compared to non-Hispanic/Latino applicants (15.5 percent).

Construction Financing Timing

The timing between project approval and requests for building permits affects project viability. Project delays may result from developers' inability to secure financing for construction. In Farmersville, the average time between project approval and request for building permit is typically three to nine months

but varies by type of project. Some projects take years to pull building permits and secure financing. Single-family homes usually experience the least delay (three to nine months). Multifamily housing construction tends to be more complex and usually requires more time between entitlement and building permit issuance (six to nine months).

Conclusion

Although discrimination in mortgage lending is prohibited by the federal Fair Housing Act, other factors may contribute to a potential homebuyer's ability to secure safe financing, such as credit history, savings, and education regarding the home-buying process. Federal Financial Institutions Examination Council (FFIEC) HMDA data, by itself, does not provide insight into these other factors. Therefore, it is important that the city supports housing education and opportunities for all residents.

Recommended Action

The City will implement Housing Plan Program 12 to support moderate-income homeownership by advertising homeownership programs, such as Homes for Heroes and other moderate-income loan opportunities on the City's website.

C3.2.4 Requests for Lower Development Densities

Requests for lower development densities in Farmersville are not common. The City has received one request on a small infill lot zoned for multifamily residential wherein the property owner is interested in building a single-family home.

C3.3 Governmental Constraints

Although local governments have little influence on market factors such as interest rates, local policies and regulations can impact where, how much, and what type of residential development is built. Land use controls, site improvement requirements, fees and exactions, and permit processing procedures, among other policies and regulations, may constrain the maintenance, development, and improvement of housing.

C3.3.1 Land Use Controls

Land use controls provided in the General Plan and the Zoning Code influence housing production in several ways. The permitted and conditionally permitted uses in each district guide new development and provide both developers and the public with an understanding of how vacant land will develop in the future. This includes the density of development that will occur within a particular zone, the compatibility of planned uses in each area, and the range and type of buildings and uses that will be located throughout Farmersville.

C3.3.1.1 General Plan

Farmersville adopted its current General Plan in 2002. The Land Use Element of the City's General Plan sets forth the vision, goals, and policies for the city's urban form and land use patterns, including residential development.

The General Plan Land Use Element establishes land use categories that define the allowable uses and building densities/intensities throughout the city. The various types of housing units allowed in the city include single-family dwellings, multifamily dwellings, townhomes, condominiums, and mobile homes.

Residential densities in Farmersville cover a wide spectrum that promotes the development of various housing types.

The Farmersville General Plan contains the following residential land use designations:

- **Low Density:** maximum of 5 units per acre, or 14 persons per acre.
- **Medium Density:** maximum of 15 units per acre, or 42 persons per acre.
- **Medium-High Density:** maximum of 29 units per acre, or 84 persons per acre.

In addition, the Mixed Use Overlay designation encourages flexibility in new development by allowing for the combination of residential, office and commercial uses on one site, as well as by allowing densities consistent with the RM-2.5 zone, which allows one unit per 1,700 square feet of lot area.

The City has started work on a comprehensive update of the General Plan, expected to be complete in 2025.

Conclusion

The General Plan includes residential land use designations with a density range from one to 29 dwelling units per acre. The density ranges are sufficiently high to allow the development of affordable housing for all income levels. However, the persons per acre standard could be a constraint to development.

Recommended Action

The City will implement Housing Plan Program 7, to revise the Land Use Element to remove the standard for persons per acre for residential land use designations.

C3.3.1.2 Zoning Code

The City regulates the type, location, density, and scale of residential development primarily through the Zoning Code, as well as specific plan development codes. A zoning district is assigned to every parcel in the city and the Zoning Code identifies compatible uses. In general, the City's zoning regulations are designed to balance the goal of providing a mix of residential and commercial land use types while protecting the health and safety of residents and preserving the character of existing neighborhoods. Additionally, development standards such as setbacks, height limits, lot coverage, open space requirements, and parking identified for each zoning district. Some zoning districts may allow similar uses but have different development standards. Development standards may be considered a constraint to the development of housing units if they are too restrictive or reduce the development potential on a specific parcel.

The City's Zoning Code allows residential uses in the following zoning districts:

- **Urban Reserve Zone (U-R):** The purpose of the U-R district is to preserve an agricultural or open space use, land suited to eventual development in other uses until such time as streets, utilities, and other community facilities may be provided or programmed so as to ensure the orderly and beneficial conversion of these lands to non-agricultural use, and to provide appropriate areas for certain predominantly open uses of land which are not injurious to agricultural uses. The U-R district allows for single family dwellings as a permitted use. The minimum site area is 2.5 acres.
- **Single Family Residential Zone (R-1):** The purpose of the R-1 district is to provide living areas where development is limited to low-density housing; to ensure adequate light, air, privacy, and open space for each dwelling; to provide space for community facilities needed to complement urban

residential areas and for institutions which require a residential environment. The R-1 district allows for single family dwellings as a permitted use. The minimum site area is 6,000 square feet.

- **Multiple Family Residential Zone (RM):** The purpose of the RM district is to provide residential areas which can accommodate a suitable mixture of more intensive land uses, including multiple family dwellings, community facilities and offices, compatible with the surrounding area and consistent with the General Plan. This district provides for two multiple family residential base zones: RM-2.5 and RM-4.0. The R-M districts allow for multifamily and single-family development as a permitted use. The minimum site area is 9,000 square feet for apartments and 8,400 square feet for duplexes.

Additionally, boarding and rooming houses are permitted in C-C (Central Commercial) and C-G (General Commercial) Zones.

The P-D (Planned Development) overlay zone may be applied with a CUP to parcels of land of any size in any zone which are found to be suitable for the proposed development. In the P-D overlay zone, all uses shall conform to the area, height, lot width and yard regulations required in the underlying zone except where the total development will be improved by a deviation from such regulations. Maximum increased density shall not exceed twenty-five percent of the standard density permitted in the zone, except as otherwise permitted by state law.

Conclusion

The City's Zoning Code provides for a range of densities and is consistent with the General Plan land use designations.

Recommended Action

None required.

C3.3.2 Residential Development Standards

Table C3-4 shows the development standards for residential zones. The minimum parcel area for residential zones ranges from 6,000 square feet to 2.5 acres. The front setback requirement ranges from 15 to 35 feet for all residential districts and 15 to 35 feet for all non-residential districts. Side setback requirements range from 5 to 12 feet for residential and nonresidential districts. Rear setback requirements range from 10 to 40 feet for all residential and nonresidential districts. The maximum height standard is 18 feet for the R-1 district and 30 feet for all districts. Maximum site coverage is 70 percent for the RM districts and no requirements were provided for the R-1 and U-R districts. Maximum density ranges from 0.4 units per acre in the U-R districts up to 25.62 units per acre in the RM-2.5 district. In cases where residential developers request reductions in lot size or modifications to development standards such as setbacks, the City is able to accommodate these requirements through the use of a Planned Development (PD) overlay.

Table C3-4 Residential Development Standards

Zoning District	Minimum Parcel Area	Minimum Setback (in feet)			Maximum Height (feet)	Maximum Height (Accessory Structure)	Maximum Site Coverage (percent of lot)	Maximum Density (du/acre)
		Front (feet)	Side (feet)	Rear (feet)				
U-R	2.5 acres	35	10 to 20	40	30	30	No standard	0.4
O-S	–	35	10 to 25	45	30	–	–	–
R-1	6,000 sq. ft.	25	5 to 7.5	10	18	18	No standard	7.26
RM-2.5	8,400 to 9,000 sq. ft.	15	5 to 10	10	30	30	70	25.62
RM-4.0	8,400 to 9,000 sq. ft.	15	5 to 10	10	30	30	70	10.89

Notes:

Developments on a corner lot in the U-R district require a setback of 20 feet on the street side.

In the O-S district, interior side set back is 10 feet and street side corner lot setback is 25 feet.

Two story homes in the R-1 district require a side setback of 7.5 feet.

In the RM districts, duplexes require 8,400 square foot parcel areas and apartments require 9,000 square feet.

Developments over one story in the R-M districts require a setback of 10 feet.

Source: Farmersville Zoning Code.

Conclusion

Development standards related to parcel area, setbacks, site coverage, and density do not constrain residential development. The City can accommodate requests for concessions on development standards through use of the Planned Development process. However, limiting maximum height to 30 feet in the RM-2.5 zone is a potential constraint to achieving the maximum density of 25.62 du/ac.

Recommended Action

The City will implement Housing Plan Program 6 to increase the maximum allowable height in the RM-2.5 zone to accommodate the maximum allowable density.

C3.3.2.1 Parking

According to the Terner Center for Housing Innovation at UC Berkeley, parking can cost $25,000 to $75,000 per space to construct. However, given the age of data and the increased cost of land and construction costs discussed above, the costs per parking space are likely much higher.[1] Parking provided in underground or structured parking facilities, or if required to be covered or enclosed, can significantly increase the cost of housing and could affect the feasibility of various housing projects in the city. In addition, requirements for parking space locations and maximum distances from dwelling units may also increase the cost of housing and affect the feasibility of housing projects. Requiring less parking not only reduces the project budget but can allow for more space to build additional housing units.

Table C3-5 provides the residential parking requirements in Farmersville.

[1] Terner Center for Housing Innovation at UC Berkeley, 2016. Available at: http://ternercenter2.berkeley.edu/proforma/

Table C3-5 Residential Parking Requirements

Residential Use		Required Parking Spaces
Single-family units		2 per unit
Multifamily units	Duplexes	2 per unit
	Apartments	1.5 per unit
Senior residential units		1 per unit

Spaces for single family units require a garage or carport.

Multi-family units require one guest parking space per five dwelling units.

Source: Farmersville Zoning Code.

Conclusion

The residential parking requirements, which are standard per unit and not related to the number of bedrooms, may pose a constraint to residential development. The requirement of more than one parking space per unit for one-bedroom and studio multifamily units can be cost prohibitive to the development of such units.

Recommended Action

The City will implement Housing Plan Program 6 to revise parking requirements related to studios and one-bedroom multi-family units to require no more than one space per unit.

C3.3.2.2 Open Space and Park Requirements

Under Chapter 13.36 of the municipal code, the city requires that every person who subdivides land shall dedicate a portion of such land, pay a fee, or both, for the purposes of providing park and recreational facilities to serve future residents of the subdivision. The amount of land required to be dedicated by the subdivider is 0.003 acre per inhabitant which the subdivision is designed to accommodate. The number of subdivision inhabitants shall be determined using a formula of three and one-half persons per single-family dwelling unit or two persons per multifamily dwelling unit or mobile home. The City adopted the following open space impact fees in 2022:

- Detached Dwelling Unit: $6,267 per unit
- Attached Dwelling Unit: $5,410 per unit
- Mobile Home Unit: $4,601 per unit

Where private open space for park and recreational purposes is provided in a proposed subdivision and such space is to be privately owned and maintained by the future residents of the subdivision, such areas shall be credited against the requirement of dedication for park and recreation purposes or the payment of fees in lieu thereof, provided the City Council finds it is in the public interest to do so.

During the fourth and fifth housing element cycles, the City received a number of new applications for residential subdivisions, all of which met the City's park land dedication or in-lieu fee requirements. These recent trends indicate that the City's dedication requirements do not impose undue financial constraints on development.

Conclusion

Open space and park requirements do not pose a constraint to residential development.

Recommended Action

None required.

C3.3.2.3 Density Bonus

Density Bonus provisions are regulated in Chapter 17.88.050 of the Farmersville Municipal Code.

The City provides a density bonus and other incentives or concessions to applicants for residential projects who agree to provide affordable or senior housing pursuant to the provisions of Government Code Sections 65915 through 65918 or successor statute.

Allowed Density Bonuses

The amount of the density bonus granted shall be determined pursuant to state law. The City may choose to grant a density bonus greater than provided in the provisions of Government Code Sections 65915 through 65918 or successor statute for a development that exceeds the requirements of state law. The granting of a density bonus shall not be interpreted, in and of itself, to require a General Plan amendment, zoning change or other discretionary approval separate from the discretionary approval otherwise required for the project.

An application for a density bonus may be made to the planning department on a form prescribed by the department. The application must be accompanied by a fee set by resolution of the City Council.

Government Code Section 65915 indicates that when an applicant seeks a density bonus for a housing development, the density bonus requirements are triggered when the residential development sets aside at least ten percent of the total units as affordable to low-income households; or at least five percent of the total units as affordable to very low-income households; at least ten percent of the total units as affordable for moderate-income households in a common-interest for sale development. Further a density bonus request may be made when at least ten percent of the units are designed as large family household units or all units are reserved for senior citizens, or for a mobile home park restricted to senior citizen residents. Finally, a density bonus can be requested when a developer of affordable housing provides a site of at least one acre for the development of housing for target groups.

Development concessions or incentives that may be provided by the City of Farmersville include a reduction in site development standards; a modification of Zoning Code requirements (including a reduction in setbacks, square footage requirements, or parking spaces; or architectural design requirements which exceed the minimum building standards); approval of mixed use zoning in conjunction with the housing project if commercial, office, industrial, or other land uses will reduce the cost of the housing development, and if such nonresidential uses are compatible with the project; or other regulatory incentives or concessions proposed by the developer or the City of Farmersville which result in identifiable cost reductions. The number of incentives will be based on the following project affordability factors:

- For projects with at least five percent very low income, ten percent lower income, ten percent moderate income units, or ten percent large family units, one incentive or concession is required.
- For projects with at least ten percent very low income, twenty percent lower income, twenty percent moderate income units, or twenty percent large family units, two incentives or concessions are required.
- For projects with at least fifteen percent very low income, thirty percent lower income, thirty percent moderate income units, or thirty percent large family units, three incentives or concessions are required.

Processing of Density Bonus and Incentive Request

The Planning Department prepares a report on the density bonus application, which is reviewed by the Planning Commission. Within 10 days of adopting a resolution on the density bonus, the Planning Department forwards the Planning Commission's recommendation to the City Council and transmits a copy of the commission's resolution to the applicant. The City Council can approve, approve with modifications, or deny the density bonus application. The target units must be compatible in floor plan, furnishings, and exterior design to non-designated units. Further, the target units must be reasonably dispersed throughout the development. Each density bonus project shall record an affordable housing agreement and resale and/or rental restrictive covenant, or other equivalent document approved as to form by the City attorney.

Assembly Bill 1287 Additional Density Bonus for Very Low- to Moderate-income Units

California Assembly Bill 1287, signed into law on June 21, 2023, requires that a city, county, or city and county grant an additional density bonus. Additional density bonuses are to be administered when housing development conforms to specified requirements and provides 24 percent of the total units to lower income households, conforms to specified requirements and provides 15 percent of the total units to very low-income households, or conforms to specified requirements and provides 44 percent of the total units to moderate-income units.

State Density Bonus law prohibits a local government from conditioning the submission, review, or approval of an application pursuant to the Density Bonus Law on the preparation of an additional report or study that is not otherwise required by state law, but provides that this provision does not prohibit a local government from requiring an applicant to provide reasonable documentation to establish eligibility for a requested density bonus, incentives or concessions, waivers or reductions of development standards, and parking rations, as specified.

Conclusion

Chapter 17.88.050: *Density Bonuses* was last updated in 2015. The Zoning Code should be updated to equally provide for density bonuses in all zoning districts where residential uses are permitted and to include provisions relative to density bonuses, incentives, and concessions as required by state law.

Recommended Action

The City will implement Housing Plan Program 6, which requires the City to revise the Zoning Code to refer to State Density Bonus Law.

C3.3.2.4 On/Off Site Improvement Standards

The typical improvements required by the city for development of property include curb, gutter, sidewalk, and street improvements. Extension of necessary utilities is also generally required as new subdivisions are developed. As stated in HUD's study of Subdivision Requirements as a Regulatory Barrier, such requirements can reasonably be considered regulatory barriers to affordable housing if Farmersville determines that the requirements are greater (and hence, more costly) than those necessary to achieve health and safety requirements in the community.[2] Farmersville requires that the subdivider installs improvements in accord with the general requirements set forth in the City's Zoning

[2] U.S. HUD. 2007. Study of Subdivision Requirements as a Regulatory Barrier. https://www.huduser.gov/portal/publications/commdevl/subdiv_report.html

Code; however, the city engineer may require changes in typical sections and details if unusual conditions appertain to the subdivision or arise during the construction to warrant such change.

The Zoning Code states that all developers are responsible for improvements to underground utilities, including sanitary sewers and storm drains, streets and highways, structures, sidewalks, curbs, gutters, driveway approaches, water mains, fire hydrants, street signs, access barricades, streetlights, railroad crossings, and monuments. All required improvements must be constructed under the inspection of the director of public works and/or the city engineer. The cost of inspection of work is to be paid by the subdivider in an amount sufficient to pay for the inspection and no less than two percent of the estimated cost of improvements.

Public improvement requirements for housing projects in Farmersville are consistent with most other cities in the region. For single-family residential subdivisions, Farmersville requires the subdivider to install curbs, gutter, sidewalks, and roadways; extend sewer and water lines; and provide for storm drainage and park facilities. Multifamily housing projects, in addition to providing the above improvements, are required to provide on-site parking, landscaping and irrigation, and trash enclosures.

Improvement Standards

Public improvement standards and approximate values are listed below.

- Local Street – 58-60-foot right of-way with 36 feet of paving, though 32-foot-wide streets have been allowed in planned unit development projects. 2 inches A.C. over 6 inches compacted aggregate. Value: $155 per lineal foot.
- Curb and Gutter – 30 inches from asphalt pavement to back of curb, 7 ½ inches concrete over compacted native soil. Value: $11.50 per linear foot, dependent upon method of construction.
- Sidewalk – 60 inches from back of curb, 4 inches concrete over compacted native soil. Value: range between $4.00 to $5.00/sf.
- Sewer Lateral – 4-inch PVC (dependent upon depth) with minimum slope of ¼-inch per foot. Value: $35 per lineal foot.
- 1-inch Water Service – 1 inch CTS polyethylene pipe, meter boxes, bronze saddles, straps, and bolts. Value: $1,400 each.

Conclusion

On/off site improvement standards for the City of Farmersville are typical of small cities and comparable to surrounding jurisdictions. It should be noted that once the improvements are completed, they are typically granted to the City which will be responsible for operating, maintaining, repairing, and replacing the improvements in perpetuity. The city does not consider the requirements to be greater than those necessary to achieve health and safety requirements.

Recommended Action

None required.

C3.3.2.5 Provision of a Variety of Housing Types

Housing Element law specifies that jurisdictions must identify adequate sites that are zoned to encourage the development of a variety of housing types available to all economic segments of the population. People and households of different ages, types, incomes, and lifestyles have a variety of housing needs and preferences that evolve over time and in response to changing life circumstances.

This includes single-family homes, multifamily housing, accessory dwelling units, mobile homes, agricultural employee housing, homeless shelters, and transitional housing, among others. Table C3-6 summarizes the housing types permitted and conditionally permitted for the City of Farmersville.

Table C3-6 Residential Use Matrix

Residential Use	U-R	O-S	R-1	R-M
Agricultural employee housing	P		P	P
Apartments and Multifamily dwellings				P
Boarding and rooming houses				C
Duplexes				P
Emergency housing				P
Foster homes			C	C
Guest houses	P		P	P
Manufactured and/or mobile homes	P		P	P
Mobile home parks	C		C	C
Nursing and convalescent homes				C
Caretaker residence	P		P	
Attached ADU			P	
Detached ADU			P	
Single-family dwellings	P		P	P
Residential care homes (up to 6)			P	P
Residential care homes (7 to 14 persons)			C	C
Single room occupancy				P
Supportive housing			P	P
Transitional housing			P	P

P = permitted by right
C = Conditional use permit required.
If left blank the use is not permitted.
Source: Farmersville Zoning Code.

Manufactured Housing

Manufactured housing is permitted by right in the R-1, RM, and U-R districts. Manufactured housing is permitted by right as long as the unit is occupied only for residential purposes, the unit conforms to all the residential use development standards for single family structures applicable to the zone, the unit is certified under the National Manufactured Housing Construction and Safety Standards Act of 1974 and has been constructed after June 15, 1976, and the unit is attached to a permanent foundation system approved by the city building inspection division.

Conclusion

Farmersville's manufactured housing requirements are not a constraint to development of this housing type.

Recommended Action

None required.

Accessory Dwelling Units

In recent years, several bills have added requirements for local governments related to accessory dwelling unit (ADU) regulation. Updates to state law in 2016 and 2017 included changes pertaining to the allowed size of ADUs, permitting ADUs by right in at least some areas of a jurisdiction, and reduced parking requirements related to ADUs. More recent bills reduce the time to review and approve ADU applications to 60 days and remove lot size and replacement parking space requirements. AB 68 allows an ADU and a junior ADU (JADU) to be built on a single-family lot, if certain conditions are met. The State has also removed owner-occupancy requirements for ADUs, created a tiered permit fee structure for ADUs based on their size and location, and prohibits fees on units of less than 750 square feet. In addition, AB 671 requires the Housing Element to include plans to incentivize and encourage affordable ADU rentals.

In 2022, two laws were passed that affect ADU law and came into effect in 2023. SB 897 increases the existing height limit for attached and detached ADUs that meet certain conditions. AB 2221 clarifies existing ADU law to close procedural and permitting loopholes for approving ADUs, including the requirement for approving or denying applications within 60 days of application submittal and providing a full set of comments and remedies to applicants with denied applications. Additionally, AB 2221 adds front setbacks to the list of local development standards that local governments cannot impose if they would preclude construction of an attached or detached ADU of at least 800 square feet, that is at least 16 feet in height and that has at least four-foot side and rear yard setbacks.

Farmersville adopted a second unit ordinance in 2006. This ordinance allows the development of second dwelling units on R-1 zoned lots (Single Family Residential) that contain at least 6,000 square feet, the minimum lot size in the R-1 zone.

Farmersville allows the development of attached and detached ADUs by-right in the R-1 district and requires that ADUs do not exceed 25 percent of the existing living area. ADUs are not permitted in any other residential district.

Conclusion

The City of Farmersville does not allow multiple ADUs on residential parcels and does not allow ADUs in multifamily and mixed-use zones, as required by state law.

Recommended Action

The City will implement Housing Plan Program 5, which directs the City to amend the Zoning Code to be in compliance with state law and promote the development of ADUs.

Multifamily

Duplexes, apartments, and multifamily dwellings are permitted by-right in the RM-2.5 and RM-4.0 districts.

Conclusion

Multifamily development requirements are not a constraint to residential development. However, allowing single-family residences by-right in multifamily zones potentially constrains the development of multifamily housing.

Recommended Action

The City will implement Housing Plan Program 6 to amend the Zoning Code provisions for RM districts to prohibit single-family uses.

Group Homes/Residential Care Facilities

Farmersville defines residential care homes as State authorized, certified, or licensed family care homes or foster homes serving six or fewer mentally disordered or otherwise handicapped persons or dependent and neglected children on a twenty-four-hour basis. Residential care homes of up to six residents are permitted by-right in the R-1 and RM districts, in accordance with state law. Residential care homes with more than six residents require a Conditional Use Permit (CUP) in the R-1 and RM districts. There are no restrictions on groupings or concentrations of such homes in the Zoning Code. Further, the Zoning Code does not require improvements beyond those required for permitted uses in the zone (i.e., setbacks, parking, etc.).

Conclusion

Group homes/residential care facility requirements are not a constraint to development of facilities with six or fewer residents. Facilities with seven or more residents should be allowed by-right in all residential zones.

Recommended Action

The City will implement Housing Plan Program 6 to allow care facilities of seven or more residents in all zones that permit residential uses, approved with objectivity and certainty, and subject only to the requirements of residential uses of similar type and form.

Emergency Shelters

The City of Farmersville defines "emergency housing" as housing with minimal supportive services for homeless persons that is limited to occupancy of six months or less by a homeless person. Emergency shelters are allowed by-right in the R-M zone, which also allows residential uses. Emergency shelters must provide minimal supportive services for homeless persons that is limited to occupancy of six months in which no individual or household may be denied emergency shelter because of an inability to pay. Emergency housing is a permitted use in the RM zoning districts and is subject to development standards that apply to other residential uses in those zones. Development standards for emergency shelters housing are as follows:

- Off-street parking: one parking space for every ten beds, plus one space per employee on the maximum shift.

This requirement is not compliant with AB 2339 which requires cities to only require sufficient parking to accommodate all staff working in the emergency shelter, provided that the standards do not require more parking for emergency shelters than other residential or commercial uses within the same zone.

In 2019, AB 101 was passed requiring that a Low Barrier Navigation Center development be a use by right in mixed-use zones and nonresidential zones permitting multifamily uses. A Low Barrier Navigation Center is a low barrier, temporary, service-enriched shelter that helps homeless individuals and families obtain permanent housing. The City will need to amend its Zoning Code to explicitly allow the development of Low-Barrier Navigation Centers, by right, in residential use and mixed-use zones, as well as nonresidential zones permitting multifamily uses.

AB 2339 was passed in 2022 and went into effect January 1, 2023. AB 2339 requires that jurisdictions identify zoning designations where emergency shelters are allowed to include sites that meet at least one of the following:

- Vacant and zoned for residential use;
- Vacant and zoned for nonresidential use and located near amenities and services for homeless individuals;
- Nonvacant and is suitable for use as a shelter in the current planning period.

Zoning designations identified to allow emergency shelters as a permitted use without a discretionary permit must also allow residential uses. The City permits emergency shelters by-right in the R-M zone which also permits residential development, which satisfies that requirement of AB 2339.

Identified sites with the R-M zone must have a minimum area of 200 square feet per unsheltered person to accommodate the number of people experiencing homelessness and the zoning designations identified to allow emergency shelters as a permitted use without a discretionary permit must allow residential uses. Additionally, AB 2339 requires that emergency shelters can only be subject to parking requirements such that the jurisdiction can require sufficient parking to accommodate all staff working in the emergency shelter, provided that the standards do not require more parking for emergency shelters than other residential or commercial uses within the same zone.

The Kings/Tulare County Point-in-time count estimated that 1,053 people experienced homelessness in Tulare County in 2023, including 299 in Porterville, 284 in Tulare, and 434 in Visalia and 36 in the remainder of the county areas including Farmersville. To meet the requirements of AB 2339, 200 square feet per person, totaling 0.17 acres of appropriately zoned land, would be needed to potentially support emergency shelter uses. Table C3-7 lists the parcels that are zoned R-M that are within 0.5 miles of a public transit stop. These parcels have the potential capacity for 1,724 individuals in the R-M zone, which is significantly more than the 36 individuals counted in 2023. There are sufficient parcels that could provide space for potential emergency shelters to meet the requirements of AB 2339.

Table C3-7 Potential Emergency Shelter Capacity Analysis

APN	Acreage	Realistic Capacity (beds)	Vacant/Non-Vacant
130120005	0.48	104	Vacant
130132003	0.84	182	Non-vacant
130120021	1.15	250	Vacant
130120024	0.95	208	Non-vacant
130142016	0.35	76	Vacant
130132024	1.06	230	Vacant
130141009	0.42	91	Non-vacant
130050009	0.42	92	Vacant
130143008	0.25	55	Non-vacant
128330001	4.46	972	Vacant
Total for vacant sites	**7.92**	**1,724**	

Source: City of Farmersville and Tulare County, 2023

Conclusion

The maximum stay requirements set forth for emergency shelters pose a constraint to housing access for residents experiencing homelessness. In addition, the definition of an emergency shelter is restrictive and Farmersville requires more parking than directed by state law.

Recommended Action

The City will implement Housing Plan Program 6 to revise the emergency housing definition in the Zoning Code and remove maximum stay requirements; revise the Zoning Code to be consistent with AB 2339, expanding the definition of emergency shelters to include other interim interventions, including but not limited to, navigation centers, bridge housing, and respite or recuperative care and ensure that emergency shelters are only subject to objective development standards that apply to residential or commercial development within the same zone; and revise parking requirements for emergency shelters to comply with AB 2339.

Transitional and Supportive Housing

"Transitional housing" is defined as buildings configured as rental housing operating under program requirements that require the termination of assistance and recirculation of the assisted unit to another eligible program recipient at some predetermined future point in time, which shall be no less than six months from the beginning of the assistance. Transitional housing units are residential uses subject only to those requirements and restrictions that apply to other residential uses of the same type in the same zone.

"Supportive housing" is defined as housing with no limit on length of stay that is occupied by the target population and that is linked to on-site or off-site services that assist the supportive housing resident in retaining permanent housing, health services, and employment, as needed. Supportive housing units are residential uses subject only to those requirements and restrictions that apply to other residential uses of the same type in the same zone. AB 2162, which went into effect on January 1, 2019, requires that cities allow supportive housing with up to 50 units by-right in multi-family and mixed-use zones and precludes cities from imposing parking requirements on supportive housing developments located within 0.5-mile of a public transit stop.

The City requires that transitional housing be operated under program requirements that call for the termination of assistance and recirculation of the assisted unit to another eligible program recipient at some predetermined future point in time, which shall be no less than six months. Transitional housing is permitted by right in the R-1 and RM districts.

Supportive housing is required to have no limit on length of stay and provides residents with on-site or off-site services that assist the resident in retaining the housing, improving his or her health status, and maximizing his or her ability to live and, when possible, work in the community. This housing can include apartments, single-room occupancy residents or single-family homes. Supportive housing is a permitted use in the R-1 and RM zones, subject to development standards that apply to other residential uses in those zones.

Conclusion

Transitional and supportive housing is permitted by-right in accordance with all other residential dwelling types in compliance with state law. The City complies with AB 2126.

Recommended Action

None required.

Farmworker Housing/Employee Housing

The Employee Housing Act (Health & Safety Code Section 17021.6) requires that any employee housing consisting of no more than 36 beds in a group quarters or 12 units or spaces designed for use by a single family or household shall be deemed an agricultural land use. For all local ordinances, employee housing shall not be deemed a use that implies that the employee housing is an activity that differs in any other way from an agricultural use. No conditional use permit, zoning variance, or other zoning clearance shall be required of employee housing that is not required of any other agricultural activity in the same zone. The permitted occupancy in employee housing in a zone allowing agricultural uses shall include agricultural employees who do not work on the property where the employee housing is located.

In Farmersville, housing for agricultural employees is allowed by-right in agricultural and residential zones (U-R, R-1, and R-M), subject only to the requirements of residential uses. However, agricultural employee housing is not permitted in other zones that allow agricultural uses, including the O-S and I zones.

Conclusion

The Zoning Code does not comply with state law regarding agricultural employee housing.

Recommended Action

The City will implement Housing Plan Program 6 to amend the Zoning Code to ensure compliance with the Employee Housing Act (Health & Safety Code Section 17021.6).

Single Room Occupancy Units (SROs)

SROs are defined as a living or efficiency unit by California Health and Safety Code section 17958.1, intended or designed to be used as a primary residence by not more than two persons for a period of more than 30 consecutive days and having either individual bathrooms and kitchens or shared bathrooms and/or kitchens. Farmersville requires that all Single Room Occupancy (SRO) units provide a minimum floor area of 150 square feet and a maximum floor area of 400 square feet. These units may have kitchen or bathroom facilities and shall be offered monthly or longer. SROs are allowed by right in the RM district.

Conclusion

Requirements for SROs are not a constraint to the development of this type of housing in residential zones; however, this unit type is not allowed in zones that permit hotel or motel uses. Recent development trends indicate that older hotel or motel uses are good candidates for redevelopment as SRO units.

Recommended Action

The City will implement Housing Plan Program 6 to revise the Zoning Code to allow for the development of SROs in zones allowing hotel or motel uses.

C3.3.3 Housing for Persons with Disabilities

California Government Code Section 65583 requires local jurisdictions to analyze potential and actual government constraints on the maintenance, improvement, and development of housing for people with disabilities. This is to ensure that persons with either physical or mental disabilities are provided reasonable accommodation for access to and the enjoyment of all facilities, including housing. Government Code Section 65583(c)(3) also requires housing elements to provide a program to "…address, and where appropriate and legally possible, remove governmental constraints to the maintenance, improvement, and development of housing for persons with disabilities."

This section analyzes if the zoning policies and permitting procedures in Farmersville impose any constraints to persons with disabilities accessing appropriate and adequate housing in the city.

C3.3.3.1 Definition of Family

Local jurisdictions may restrict access to housing for households that do not meet the jurisdiction's definition for "family." A restrictive definition of "family" that limits the number of individuals living together may illegally limit the development and siting of group homes for persons with disabilities, but not for housing families that are similarly sized or situated. The City of Farmersville's definition of family is as follows:

> "Family" means one or more persons occupying a premises and living as a single housekeeping unit, as distinguished from a group occupying a boarding house, lodging house, or hotel, as defined in the Zoning Code.

Conclusion

The City's definition of "family" is not restrictive.

Recommended Action

None required.

C3.3.3.2 Reasonable Accommodation Process

The federal Fair Housing Act and the California Fair Employment and Housing Act require that cities and counties provide reasonable accommodation where such accommodation may be necessary to afford individuals with disabilities equal housing opportunities. Cities and counties must also consider requests for accommodations related to housing for people with disabilities and provide the accommodation when it is determined to be "reasonable" based on fair housing laws and the case law interpreting the statutes.

Reasonable accommodation is one of the tools intended to further housing opportunities for people with disabilities. These accommodations require that local jurisdictions make modifications or exceptions in their zoning laws and other land-use regulations when accommodations are necessary to afford individuals with disabilities an equal opportunity to use and enjoy a dwelling. For example, it may be a reasonable accommodation to waive a setback requirement so that a paved path of travel can be provided to residents with mobility impairments.

Reasonable accommodation enables developers and providers of housing for people with disabilities a means of requesting from the local government flexibility in the application of land use and zoning regulations or, in some instances, even a waiver of certain restrictions or requirements because it is necessary to achieve equal access to housing.

Farmersville requires that people with disabilities are provided flexibility in the application of land use and zoning regulations and procedures, or even waiving certain requirements, when necessary to eliminate barriers to housing opportunities. This may include yard area modifications for ramps, handrails, or other accessibility improvements; hardscape additions, such as widened driveways, parking area or walkways; building additions for accessibility; tree removal; or reduced off-street parking where the disability clearly limits the number of people operating vehicles. Reasonable accommodation does not include accommodation which would impose an undue financial or administrative burden on the city or require a fundamental alteration in the nature of the city's land use and zoning program.

Requests for reasonable accommodation are reviewed by the City Planner, using the criteria set forth in subsection 17.100.090(E). The City Planner shall issue a written decision on a request for reasonable accommodation within thirty days of the date of the application and may either grant, grant with modifications, or deny a request for reasonable accommodation in accordance with the required findings set forth in subsection 17.100.090(E).

Required Findings

1. The written decision to grant, grants with modifications, or deny a request for reasonable accommodation shall be consistent with fair housing laws and based on the following factors:
    a. Whether the housing, which is the subject of the request for reasonable accommodation, will be used by an individual with disabilities protected under fair housing laws.
    b. Whether the requested accommodation is necessary to make housing available to an individual with disabilities protected under the fair housing laws.
    c. Whether the requested accommodation would impose an undue financial or administrative burden on the city and.
    d. Whether the requested accommodation would require a fundamental alteration in the nature of the city's land use and zoning or building program.
    e. In granting a request for reasonable accommodation, the reviewing authority may impose any conditions of approval deemed reasonable and necessary to ensure that the reasonable accommodation will comply with these findings including the following:
        i. Inspection of the property periodically, as specified, to verify compliance with this section and any conditions of approval.
        ii. Removal of the improvements, where removal could not constitute an unreasonable financial burden, when the need for which the accommodation was granted no longer exists.
        iii. Time limits and/or expiration of the approval if the need for which the accommodation was granted no longer exists.
        iv. Recordation of a deed restriction requiring removal of the accommodating feature once the need for it no longer exists.
        v. Measures to reduce the impact on surrounding uses.
        vi. Measures in consideration of the physical attributes of the property and structures.
        vii. Other reasonable accommodations that may provide an equivalent level of benefit and that will not result in an encroachment into required setbacks, exceed the maximum height, lot coverage, or floor area ratio requirement specified for the zone district; and
        viii. Other conditions necessary to protect the public health, safety, and welfare.

Conclusion

Farmersville provides an appropriate reasonable accommodation procedure. However, the City's Reasonable Accommodation Policy is not easily accessible on the city's website.

Recommended Action

The City will implement Housing Plan Program 8 to provide a link to its Reasonable Accommodations policy on the Housing page of the City's website with contact information for city staff who manage the application process.

C3.3.4 Planning and Development Fees

The City charges various fees and assessments to cover the cost of processing permits and providing certain services and utilities. Fees for a site plan review, variance, zone change, lot line adjustment, or annexation are higher than most other similarly sized jurisdictions in Tulare County, such as Exeter, Woodlake, and Dinuba. Table C3-8 describes some of the residential development planning fees for both single- and multifamily development.

Table C3-8 Residential Development Planning Fees

Fee Title	Amount
Conditional Use Permit	$1,780
CUP Amendment	$955
CUP Extension	$830
Site Plan Review	$2,210
Minor Deviation	$240
Variance	$1,780
Zone Change	$2,275
General Plan Amendment	$2,275
Specific Plan Review/Amendment	$2,275
Combined GP Amend/Zone Change Map	$2,765
Combined Tent Tract/Planned Dev	$4,765
Tentative Parcel Map	$3,015
Tentative Tract Map	$6,060
Lot Merger	$1,515
Lot Line Adjustment	$2,210
Annexation	$9,125
Categorical Exemption	$315
Environmental Impact Report	Actual
Time Extension	$830

Source: Farmersville Service Fee Schedule, dated January 1, 2022.

Table C3-9 shows development impact fees for single-family and multifamily developments, set into effect in July 2022.

The following information is provided on recent residential development in Farmersville. Self Help Enterprises (SHE) has completed Phase 1 and is nearing completion of Phase 2 of an affordable

multifamily housing project called Los Arroyos. The project contains a total of 107 dwelling units (plus a manager's unit).

According to SHE, the total hard cost construction of Los Arroyos I was $16,071,958 in addition to $1 million for land and solar combined ($212,500 land and $836,034 solar) and $1 million for fees and permits ($625,555 fees and $400,000 permits) for a total of approximately $18.1 million.

Farmersville received one application for a single-family residential development over the past 10 years, although that development was never completed. As such, data for single-family development is not available. However, costs are expected to be similar to neighboring smaller jurisdictions such as Woodlake, Exeter and Lindsay.

Table C3-9 Residential Development Fees

	Cost Per Unit	
Number of Units	**Multifamily**	**Single Family**
Law enforcement facilities	$2,318	$1,698
Fire Rescue facilities	$1,870	$1,466
Circulation system facilities	$411	$760
Storm drainage facilities	$861	$2,623
Water distribution facilities	$1,554	$2,097
Wastewater collection facilities	$759	$808.00
General government facilities	$1,122	$1,122
Library collection and computers	$37	$44
Community center facilities	$2,058	$2,384
Park land and park improvements	$5,410	$6,267
Total per Unit	**$16,400.00**	**$19,269**

Source: City of Farmersville, Adopted Summary of Development Impact Fees, July 1, 2022.

According to a 2019 National Impact Fees Survey of 37 jurisdictions in California, the average impact fees are $37,471 per single family unit and $21,703 per multifamily unit[3]. Farmerville's fees for a single-family unit and multifamily are less than the survey average.

Single-family and multifamily development fees in Farmersville are higher than similarly sized cities in the county, such as Exeter, Lindsay, and Woodlake. Fees for a single-family unit are approximately $19,269 in Farmersville and range from $12,009 to $16,482 in the cities of Exeter, Lindsay, and Woodlake. Similarly, fees for a multifamily unit are approximately $16,400.00 per multifamily unit in Farmersville and range from $11,478 to $15,486.67 per unit in other cities. Table C3-10 below shows a comparison of development fees in other Tulare County jurisdictions.

[3] National Impact Fee Survey, 2019. Available at http://www.impactfees.com/publications%20pdf/2019survey.pdf

Table C3-10 Residential Development Fee Comparison

Jurisdiction	Total Cost Per Unit	
	Multifamily	Single Family
Dinuba	$32,796 to $33,962	$37,059 to $38,888
Exeter	$10,495.25	$16,482
Farmersville	$16,400.00	$19,269
Lindsay	$40,342.88	$12,009
Porterville	$12,000 to $14,500	$17,000 to $20,000
Tulare	$17,781	$18,677
Woodlake	$11,478	$14,607

Conclusion

Planning and development fees are higher than similarly sized cities and therefore may be a constraint to development.

Recommended Action

The City will implement Housing Plan Program 8 to review planning and development fees and revise fees to be competitive with other cities in the county.

C3.3.5 Permit Types

The City of Farmersville provides the full range of services relating to the development of property within its city boundaries and Sphere of Influence. Subdivision maps, parcel maps, conditional use permits, and building plans are all processed by the city.

Site Plan Review

For Site Plan Review, the site plan may only be denied if the project does not comply with city codes, standards, policies, or California Environmental Quality Act (CEQA) requirements. The Site Plan Review process follows objective approval standards and is not considered a constraint to development. The Site Plan Review Committee reviews the application and approves or denies a project within 15 days and provides recommendation to the Planning Commission. The Planning Commission decides on the project (although this decision is not subject to a public hearing). The decision can be appealed to the City Council.

The findings for Site Plan Review are:

1. All applicable provisions of the Zoning Code are complied with.
2. The following are so arranged that traffic congestion is avoided and pedestrian and vehicular safety and welfare are protected and there will be no adverse effect on surrounding property:
    a. Facilities and improvements
    b. Vehicular ingress, egress and internal circulation
    c. Setbacks
    d. Location of service
    e. Walls and Landscaping

3. Proposed lighting is deflected away from traffic areas and adjacent residential areas.
4. On-site signs will not interfere with visibility or traffic circulation.
5. The required findings shall conform to all established policies and regulations of the city.

Conditional Use Permits

The CUP review process consists of an analysis to verify consistency of the project with the City's Zoning Code and General Plan, and requirements of CEQA. A conditional use permit requires a public hearing and approval by the city's Planning Commission. The Planning Commission may impose reasonable conditions upon a project, subject to appeal to the City Council. The Planning Commission may impose reasonable conditions upon a project, subject to appeal to the City Council.

To be able to approve the CUP, the Planning Commission must be able to make the following findings:

1. That there are circumstances or conditions applicable to the land, structure or use which makes the granting of a use permit necessary for the preservation and enjoyment of a substantial property right.
2. That the proposed location of the conditional use and the conditions under which it would be operated or maintained will not be detrimental to the public health, safety or welfare, or materially injurious to, or inharmonious with, properties or improvements in the vicinity.
3. That the proposed location of the conditional use is in accordance with the objectives of the Code and the purposes of the district in which the site is located.
4. That the proposed use will comply with each of the applicable provisions of this ordinance. A use permit may be revocable, may be granted for a limited time period, or may be granted subject to such conditions as the Planning Commission may prescribe.

Requirements related to neighborhood character ("inharmonious with properties or improvements in the vicinity") are subjective.

Variances

An applicant must request a variance when seeking an exception to specific requirements of the Zoning Code, Parking Regulations, and Sign Regulations, if those requirements would result in a hardship due to physical conditions of a property. The Planning Director or the Planning Commission acts on variance requests. Administrative action on a variance request takes place two to four weeks after the application is deemed complete; additional time is necessary if Planning Commission review is required.

General Plan Amendment and Zone Change

Projects that are not consistent with the General Plan or Zoning Code may require approval of a General Plan Amendment or a Zone Change. Approval of these types of proposals is discretionary, subject to CEQA, and requires public hearings before the Planning Commission and City Council.

Conclusion

Findings for discretionary permits that require projects not to be "inharmonious with properties or improvements in the vicinity" are subjective.

Recommended Action

The City will implement Housing Plan Program 6 to revise findings for discretionary permits to be objective.

C3.3.6 Permit Procedures and Processing Times

Farmersville contracts with consultants for planning and engineering services and contracts with Tulare County for building plan check and inspection services.

Processing of applications usually begins within days of receiving the application. A typical single family residential subdivision will require four to six months to process, from submittal of application to filing of final subdivision map with the Tulare County Recorder's Office. Each processing phase of a typical residential subdivision is listed below along with the amount of time required to process each phase. Subdivision applications that require an annexation typically add four months to the processing time. The average number of days from entitlement to building permit is 199 days, or approximately 6 to 7 months, based on a review of projects from the past 18 months.

Table C3-11 Timelines for Permit Procedures

Type of Approval or Permit	Typical Processing Time	Approval Body
Site Plan Review/Design Plan Review	4 - 6 weeks	Planning Commission (PC)
Minor Modifications	1 day	City Staff
Conditional Use Permit	4 - 8 weeks	PC
Variance	4 - 8 weeks	PC
Zone Change	3 - 5 months	PC and City Council (CC)
General Plan Amendment	3 - 5 months	PC and CC
Tentative Subdivision Map	3 - 5 months	PC, CC
Final Subdivision Map	4 - 6 weeks	CC
Tentative Parcel Map	4 - 8 weeks	PC, CC if easements
Final Parcel Map	4 - 6 weeks	CC
Negative Declaration	2 months	PC and CC
Environmental Impact Report	4 - 6 months	PC and CC
Single Family Unit/Bldg. Permit Review	3 - 4 weeks	Building Official

Source: Farmersville Zoning Code

Table C3-12 shows the typical processing procedures by project type for Farmersville. As shown, single-family units have the shortest estimated processing times (one week) while planned unit development has the longest (3-4 months). Farmerville's permit processing times are consistent with typical permit processing times for cities in Tulare County.

Table C3-12 Typical Processing Procedures by Project Type

	One Single-Family Unit	Subdivision	Multifamily Units	Planned Unit Development
			Site Plan Review	
		Tentative Map	Conditional Use Permit	Conditional Use Permit
		Environmental Assessment	Environmental Assessment	Environmental Assessment
		Final Map		
		Final Map		
Estimated Processing Time	1 week	2 - 3 months	2 months	3 - 4 months

Source: Farmersville Zoning Code

Building Permits

Building permit review timelines for all projects are as follows depending on complexity and scope of work:

- First review: 1 to 20 working days
- Second review: 1 to 15 working days
- Third review: 1 to 15 working days
- Fourth review: 1 to 10 working days
- Fifth review: 1 to 10 working days

Conclusion

Permit procedures and processing times are not considered a constraint to development.

Recommended Action

None Required.

State Streamlining

Under the 5th Cycle Housing Element reporting period (2015-2023), the City of Farmersville has made insufficient progress toward its Above Moderate income RHNA and is subject to SB 35 streamlining provisions for projects that include at least 10 percent affordability. SB 35 requires that eligible projects be reviewed for compliance and consistency with the city's objective standards and are not subject to discretionary processes, such as CEQA environmental review and public hearings. Eligible projects with 150 units or fewer must be approved within 90 days and projects with more than 150 units must be approved within 180 days.

The City has not adopted procedures for processing SB 35 applications nor has it created a checklist for SB 35 applications. There have been no projects approved through SB 35 ministerial approval in Farmersville.

Conclusion

The lack of permit procedures and resources for SB 35 applicants may be a constraint to development.

Recommended Action

The City will implement Housing Plan Program 6 to establish written procedures for the processing of SB 35 and SB 330 projects pursuant to State law.

C3.3.7 Short-Term Housing Rentals

Farmersville does not have a short-term housing rental program that regulates short-term vacation rentals in the jurisdiction. As of July 2023, there were no active VRBO and Airbnb rentals in the city. Therefore, short-term rentals do not pose a constraint to long-term rental housing supply.

Conclusion

Short-term rentals are not considered a constraint.

Recommended Action

None Required.

C3.3.8 Code Enforcement

Building codes regulate the physical construction of dwellings and include, for example, the plumbing, electrical, and mechanical codes. Farmersville follows the 2013 Uniform Building Code (UBC) as established by state law and as such, has little control over State standards. There have been no local amendments to the UBC.

Building codes are enforced by the city through inspections. Inspections normally occur because of building permits for new construction, remodels, or rehabilitations. Other inspections may result from requests from individuals for assessments of building quality or from enforcement complaints or when the inspector notices construction occurring without permits. The City contracts with the Tulare County Building Department for plan check and inspection services.

The City has the power to inspect and declare unsafe any structure or piece of equipment, be it existing or under construction, that does not meet specific Municipal Code standards. These include, but are not limited to, structures with insufficient modes of egress; structures that are unsafe or that have been made structurally unsound due to fire, earthquake, or other natural disaster; buildings that are deemed a public nuisance; and buildings that have been constructed or maintained in violation of local or state law. Once a building has been declared unsafe, the building official may issue notice that the structure be repaired, vacated, or demolished within a reasonable amount of time and with the appropriate permits.

The enforcement of building codes in the city is centered on the inspection of new construction and remodels or renovations requiring building permits. However, for existing structures, City staff prioritize code enforcement complaints according to the severity of the violation on the community and individuals. Situations that appear to pose a serious risk to health and safety are given top priority; others are pursued in the order in which they are received, as resources are available. In most cases for non-emergency complaints, a warning letter or courtesy notice is sent to the alleged violator to verify the status of the potential compliant and to obtain compliance.

Conclusion

The City has not adopted the most recent (2022) California Building Code.

Recommended Action

The City will implement Program 11 to adopt the most recent version of the California Building Code in the Zoning Code.

C3.3.9 Transparency in the Development Process

To increase transparency in the development process, the City's website publishes resources that help developers and homeowners navigate the residential development and home improvement processes. Information pertaining to planning and building is spread across multiple department webpages on the City's website. The City's Departments webpage (http://www.cityoffarmersville-ca.gov/196/Departments), Planning & Development webpage (http://www.cityoffarmersville-ca.gov/201/Planning-Development), and the Code Enforcement Division of the Fire Department webpage (http://www.cityoffarmersville-ca.gov/198/Code-Enforcement) provide links to planning and building permit resources, including permit information, online permit submittal, fee estimate calculator, and staff contacts. The zoning map and permit application checklists are available on the City's website; however, links to these documents are broken and can only be accessed by directly searching for them.

Conclusion

While the City's website provides information on permit processing, application checklists, zoning, and staff contacts, this information can be difficult to locate and is not easily accessible.

Recommended Action

The City will implement Housing Plan Program 8 to evaluate its compliance with the new transparency requirements per Government Code Section 65940.1(a)(1) and make changes as necessary, as well as update the City's website to provide clear links to planning and building resources, applications, and checklists.

C3.3.9.1 Cumulative Impact of Development Standards

The housing element must analyze the cumulative effect of development standards on the development of housing and/or achieving densities after considering how all standards and/or ordinances relate to each other. In Farmersville, overly restrictive density requirements, parking requirements, height limits, multifamily requirements, together with comparably high development impact fees, may constrain development of multifamily housing.

C3.4 Environmental Constraints

A community's environmental setting affects the feasibility and cost of developing housing. Environmental issues range from the availability of water to the suitability of land for development due to potential exposure to seismic, flooding, wildfire, and other hazards. If not properly recognized and accommodated in residential design, these environmental features could potentially endanger lives and property. This section summarizes environmental constraints to housing development in the city.

C3.4.1 Floodplains

Maps prepared by the Federal Emergency Management Agency indicate that portions of the city are within the 100-year and 500-year flood plains. Most of the 100-year flood plain area is situated west of

Farmersville Boulevard, south of Walnut Avenue. Most of this area is fully developed. Much of the remaining area of the community including future growth areas are either in the 500-year flood zone or in areas of minimal or no flooding. The City has enacted measures to mitigate flood risk including elevated building pads and foundations above the known flood level. Complying with flood plain requirements (such as elevating building pads) does generate an added cost but is not a constraint.

C3.4.2 Seismic Zones

While Farmersville is in proximity to major California fault lines there is no specific threat or hazard from seismic ground shaking to residential development within the county, and all new construction will comply with current local and state building codes. Between the minimal historical hazard of earthquakes in the city and the use of the most current building codes and construction techniques, earthquakes pose a less than significant danger to residential development.

C3.4.3 Wildfire

The California Department of Forestry and Fire Prevention (CAL FIRE) has designated the entire city of Farmersville and surrounding area as "Local Responsibility Area Unzoned." The City of Farmersville Fire Department is responsible for wildfire prevention activities in the city. While there are no fire severity zones within the city boundaries, the City ensures that developments comply with California Fire and Building Code requirements for health and safety though the city's site plan review process.

C3.4.4 Soil

Agricultural uses may contaminate sites due to the use of pesticides and other chemicals. Soil contamination may be a concern if a Phase One Environmental Site Assessment determines there is a potential for soil contamination and contamination is substantiated by a Phase Two study. The City ensures that the necessary steps are taken to clean up residual hazardous wastes on any contaminated sites proposed for redevelopment or reuse. Soil evaluations are required as needed to ensure that risks are assessed, and appropriate remediation is provided. Developing housing on these sites can involve costs to remediate contaminated soil or groundwater. The remediation cost would typically be on the developer to address the clean-up and potential site contamination is not considered a constraint.

Conclusion

Environmental conditions in Farmersville are not considered a constraint to development.

Recommended Action

None required.

This page intentionally left blank.

C4 Farmersville Housing Resources

This section documents the methodology and results of the Site Inventory analysis conducted to demonstrate the City of Farmersville's ability to meet the 6th cycle Regional Housing Needs Allocation (RHNA). Infrastructure, services, and financial and administrative resources that are available for the development, rehabilitation, and preservation of housing in the City of Farmersville are also discussed in this chapter. Background information on regional development trends and analysis are included in Chapter 4, *Regional Housing Resources.*

The Site Inventory was developed through the analysis of development trends, the identification of vacant land, and community input. Community engagement events included an online, interactive community survey, where residents identified areas for potential future residential development throughout Farmersville, and a virtual community workshop held via Zoom on May 31, 2023.

C4.1 Regional Housing Needs Allocation (RHNA)

This Housing Element covers the planning period of December 2023 through December 2031 (also referred to as the 6th housing cycle). The Tulare County Association of Governments (TCAG), as the Metropolitan Planning Agency for the Tulare County region, is responsible for preparing the RHNA for the region based on recent growth trends, income distribution, and capacity for future growth. This methodology must align with state objectives, including but not limited to:

- Promoting infill, equity, and environmental protection
- Ensuring jobs-housing balance
- Affirmatively furthering fair housing

Farmersville must identify adequate land with appropriate zoning and development standards to accommodate its RHNA or assigned share of the region's housing need. Farmersville's RHNA is 654 units, which is distributed among five income categories, as shown below in Table C4-1.

Table C4-1 Farmersville 2023-2031 RHNA

Income Category (Percent of Tulare County Area Median Income [AMI])	Number of Units	Percent of Total Units
Extremely Low (< 30% of AMI)*	68	10.4%
Very Low (30 to 50% of AMI)	67	10.2%
Low (51 to 80% of AMI)	83	12.7%
Moderate (81% to 120% of AMI)	121	18.5%
Above Moderate (> 120% of AMI)	315	48.2%
Total	**654**	**100%**

* The RHNA does not project the need for extremely low-income units, but pursuant to state law (AB 2634), the City must project its extremely low-income housing needs based on Census income distribution or assume 50 percent of the very low-income units required by the RHNA as extremely low-income units. The City's very low-income requirement is 135 units. The number of extremely low-income units that the City must plan for shown here was projected using Census data. According to the Comprehensive Housing Affordability Strategy (CHAS), data developed by HUD, 40.5 percent of households in the city earned less than 50 percent of the AMI. Among these households, 50.4 percent earned incomes below 30 percent (extremely low-income). Therefore, the City's RHNA allocation of 135 very low-income units was distributed as 68 extremely low-income (50.4 percent of the 135 very low-income units required by the RHNA) and 67 very low-income units. However, for purposes of identifying adequate sites for the RHNA allocation, state law does not mandate the separate accounting for the extremely low-income category.

Source: TCAG, 2022. Final Regional Housing Needs Plan.

C4.2 Meeting the RHNA

Each jurisdiction must identify adequate land with appropriate zoning and development standards to fulfill its required RHNA. Jurisdictions can use planned and/or approved projects, estimated accessory dwelling unit (ADU) production, and vacant and/or underutilized sites to accommodate the RHNA. In some cases, rezoning must occur to ready sites for future residential development.

Once the City has demonstrated In the Housing Element that it has the development capacity to accommodate the RHNA, it has two implementation-related obligations during the planning period:

1. Maintain a "no net loss" policy of its residential development capacity over the housing element planning period, meaning that sites listed in the adopted Housing Element land inventory may not be down-zoned to a lower-density residential zone or rezoned to a nonresidential zone, unless the City up-zones or rezones alternative sites prior to the density reduction or rezone on the inventoried site.
2. Continue to allocate available funding resources to and facilitate the development of affordable housing.

C4.2.1 RHNA Credits

The City may use units in approved and/or permitted residential developments which will be completed within the planning period, and anticipated ADU production, as credit towards fulfillment of its RHNA.

Planned and Approved Projects

Residential developments approved and permitted, but not yet built (also called "pipeline projects") can be credited towards the City's RHNA provided it can be demonstrated that the units can be built by the end of the 6th cycle planning period. Similarly, units that have not yet received a building permit as of June 30, 2023, can also be credited towards the RHNA. Affordability (the income category in which the units are counted) is based on the actual or projected sale prices, rent levels, or other mechanisms establishing affordability of the units within the project. Pipeline projects that can count toward the City's 6th cycle RHNA are listed in Table C4-2. All pipeline projects are affordable to low-, moderate-, and above moderate-income households.

Figure C4-1 shows the locations of pipeline projects. For the purposes of analysis in this Housing Element, the city is divided into four neighborhoods:

- East Farmersville
- North Farmersville
- South Farmersville
- West Farmersville

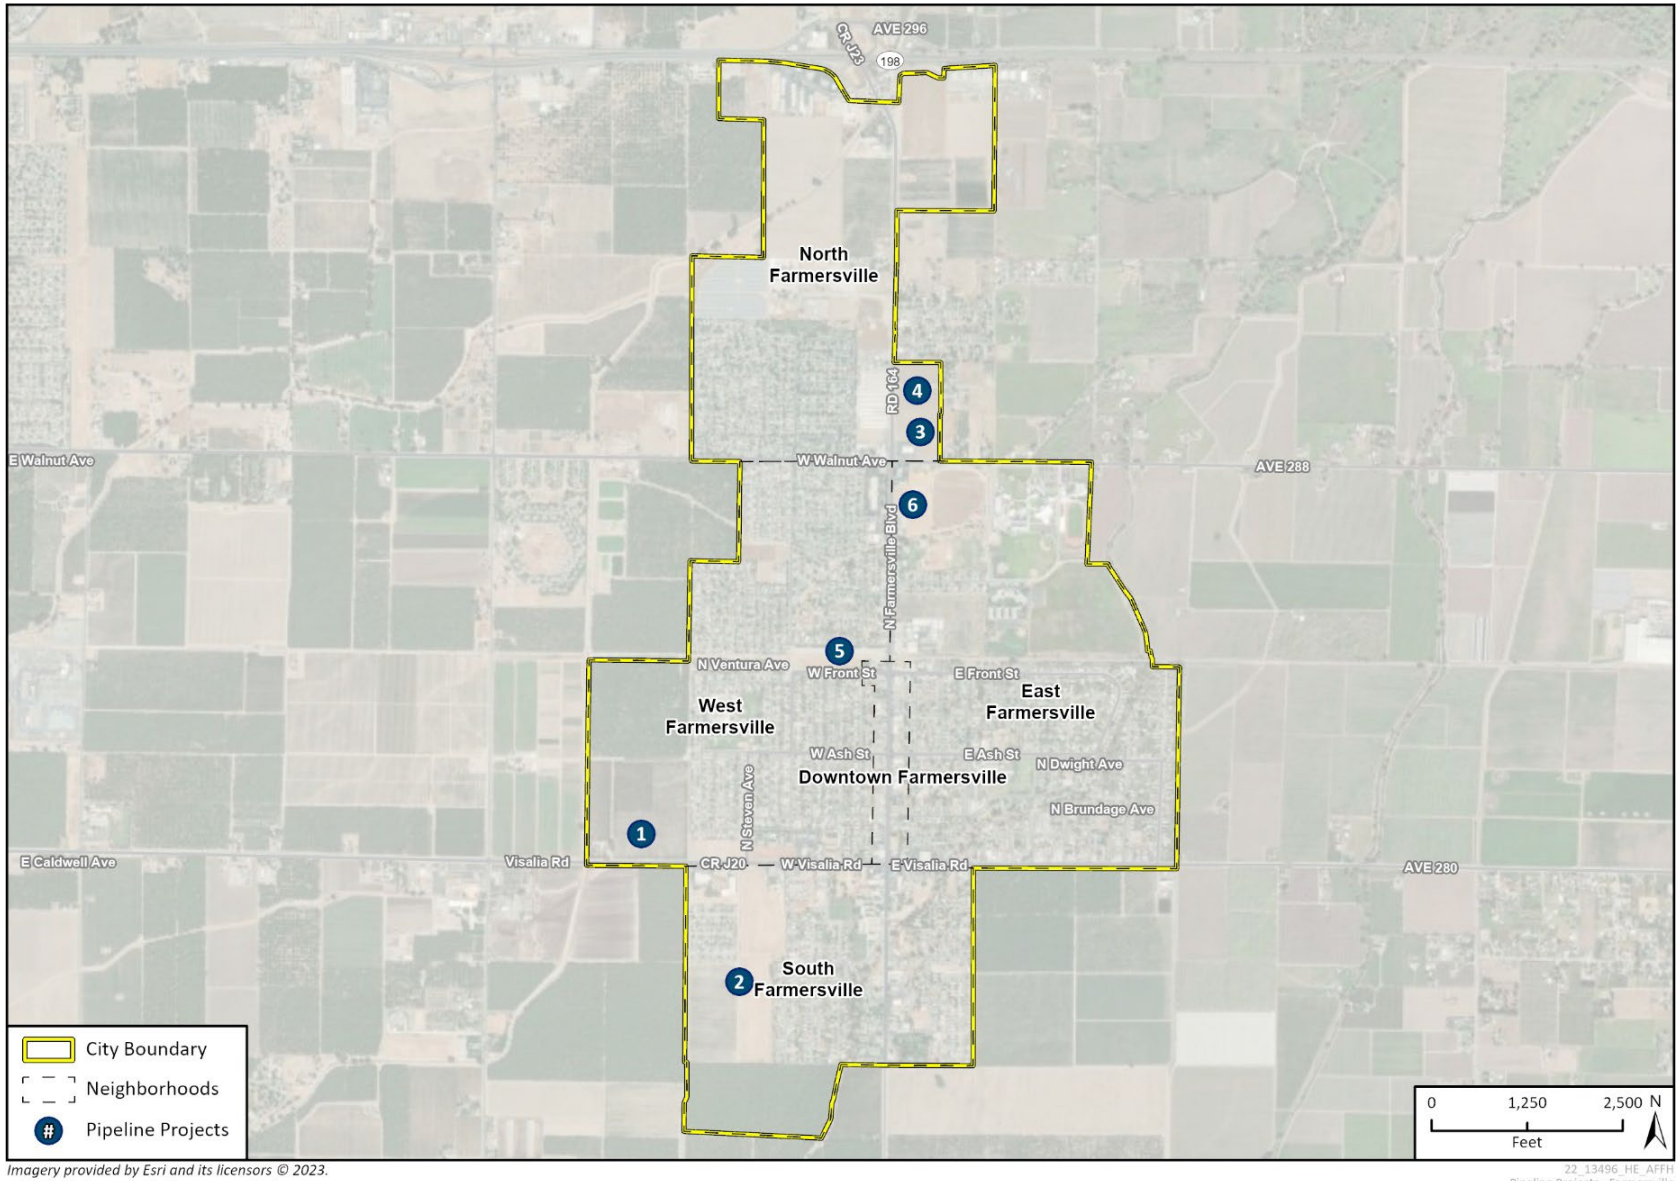
These pipeline projects are mostly concentrated in North and West Farmersville and consist of single-family and multifamily projects. The projects Cameron Creek and Eagle Meadows both include moderate-income units available through financing from the United States Department of Agriculture (USDA) and the Federal Housing Administration. The Gardenia Courtyard apartments and Los Arroyos are able to achieve all low-income units through tax credits. Based on the status of these projects, all units are expected to receive Certificates of Occupancy during the 2023-2031 planning period. There are no known barriers that would preclude development of these projects.

Table C4-2 Pipeline Projects

Map ID	Project Name	Assessor's Parcel Number (APN)[1]	Very Low-Income Units	Low-Income Units	Moderate-Income Units	Above Moderate-Income Units	Total Units	Status
1	Cameron Creek	128320001, -003	38	0	75	38	151	Application submitted. Construction to begin in 2024.
2	Eagle Meadows	130040014, -020	60	0	121	61	242	Application submitted. Construction is expected to begin in 2025.
3	Camino Castaneda	111290002, -014	0	0	0	24	24	Approved by the City Council on 2/13/2023. Construction to begin in 2024.
4	Gardenia Courtyards	111290015	0	142	0	0	142	Application submitted. Construction to begin in 2025.
5	Petunia Estates	128040026	0	0	0	18	18	Final subdivision map approved.
6	Los Arroyos	129010082	107	0	0	0	107	Construction completed in 2024.
Total			**205**	**142**	**196**	**141**	**684**	

[1] An assessor's parcel number is a series of numbers/digits that are used as a file number to inventory or identify property. Each parcel is assigned an APN that corresponds to a location on a page in a book of maps maintained by the County Assessor's Office.

Figure C4-1 Pipeline Projects



C4.3 Summary of RHNA Credits

The City can satisfy 52 percent of its RHNA requirement with planned and approved units. Since no ADU permits were recorded during the previous planning period, ADUs are not assumed to contribute to the overall share of RHNA. To achieve the remaining RHNA, the City must demonstrate the availability of sites with appropriate zoning and development standards that allow and encourage the development of 352 units. This unit count is broken down by household income level. As shown on Table C4-3, Farmersville has a remaining RHNA of 339 units affordable to very low-income households and 315 units affordable to above moderate-income households. The City's RHNA obligation for low- and moderate-income units is accommodated through pipeline projects, resulting in a remaining RHNA of zero for these income categories.

Table C4-3 Remaining Share of RHNA

Affordability Category (Percent of AMI)	RHNA Allocation	Units Pending or Approved or under Construction	Estimated ADUs	Remaining RHNA
Very-Low	135	205	0	0
Low	83	142	0	0
Moderate	121	196	0	0
Above Moderate	315	0	0	315
Total	**654**	**543**	**0**	**315**

C4.4 Nonvacant Sites

Nonvacant sites included in the Site Inventory have comparable predevelopment characteristics to developed residential projects in the region. As discussed in Chapter 4*, Regional Housing Resources*, residential development in Tulare County has occurred primarily on vacant sites and sites used for agriculture.

The Housing Element must analyze the extent to which existing uses may impede additional residential development. The City's Site Inventory accommodates approximately 38 percent of its lower-income RHNA, 100 percent of its moderate-income RHNA, and none of its above moderate-income RHNA on vacant sites. The remaining 62 percent of lower-income RHNA and 100 percent of above moderate-income RHNA are proposed on sites currently being used for agriculture.

C4.4.1 Redevelopment of Existing Uses

Of the 15 sites included in the City's Site Inventory, nine are vacant and six are on sites with current agricultural uses. Of the six nonvacant sites, all sites are currently zoned for residential. The City anticipates development of these sites to accommodate medium and medium high-density residential uses. The City does not consider existing uses in these areas to impede housing development, as regional development trends indicate that sites zoned for residential with agricultural uses are likely to be redeveloped with residential projects.

C4.4.2 Adequacy of Nonvacant Sites

In considering sites, the City identified agricultural land with residential zoning to facilitate the development of a variety of housing types. All identified nonvacant sites were selected for high potential

for redevelopment and probability of turnover from agriculture to residential uses, as supported by development trends discussed in Section C4.5, below.

C4.5 Development Trends

As discussed in detail in Chapter 4.4, *Regional Housing Resources, Development Trends*, the development characteristics in the region indicate that most of the recently developed residential projects, or projects that are planned to be developed, are on vacant land or land zoned for agricultural use. Approximately one-third of the regional development trend projects include housing affordable to very low- and low-income households. The densities of these projects range from 2.63 to 60.00 dwelling units per acre due to the various zoning requirements per jurisdiction and use of state density bonus. The average density of projects is approximately 16 dwelling units per acre, with 99 percent density achieved. Projects located in low density residential zones averaged 92 percent density achieved, projects located in medium density residential zones averaged 96 percent density achieved, and projects high density residential zones achieved 105 percent of allowable density.

Of the projects discussed in Chapter 4.4, *Regional Housing Resources, Development Trends*, one of the recently approved residential developments is in Farmersville. Los Arroyos is a multifamily affordable housing complex with an achieved density of 73 percent, as seen in Table C4-4. The planned projects listed in Table C4-2 will achieve an average density of 16.31 units per acre and an average density achievement of 161 percent of allowable density.

Table C4-4 Farmersville Development Trends

Project Name	Total Units	Acreage	Density	Zoning District	Zoning District Density (du/ac)	Number of Units Allowed	Percent Density Achieved
Los Arroyos	108	5.81	18.59	Multifamily	25.62	148.87	73%
Farmersville Average			**18.59**				**73%**
Regional Average			**16.18**				**99%**

C4.5.1 Realistic Development Capacity

To create a realistic development assumption, the City assumes that the development capacity on each site will be less than the full development capacity allowed by the parcel's zoning or land use designation. Sites do not always develop to their full capacity potential due to factors such as site-specific conditions and development standards such as open space or parking requirements. To determine a realistic development achievement on the sites in the Site Inventory, the City reviewed the development achievement of pipeline and recently developed projects in the region. On average, the pipeline and recent projects in Farmersville, as shown in Table C4-2, achieved an average density of 148 percent of the maximum density allowed on the site based on the site's zoning and development standards. As discussed in Chapter 4.4, *Regional Housing Resources, Development Trends*, the average percentage of achieved maximum density for projects collectively in the region is 99 percent. Based on the local and regional trends, the City conservatively assumes the realistic capacity of each site would be 75 percent of the maximum density allowed under the applicable zoning or General Plan designation.

The Site Inventory includes parcels in three residential zoning districts with varying allowable densities and development standards. The City's Zoning Code classifies each site into the following zones:

- Single-Family Residential (R-1): This district allows single-family residential uses with a maximum residential density of 7.26 dwelling units per acre.
- Multifamily Residential (RM-4.0): This district allows multifamily residential units with one unit per 4,000 square feet of lot area, equal to a maximum density of 10.89 units per acre.
- Multifamily Residential (RM-2.5): This district allows multifamily residential units with one unit per 1,700 square feet of lot area, equal to a maximum density of 25.62 units per acre.

Table C4-5 details the realistic capacity of available sites by zoning district.

Table C4-5 Realistic Capacity of Sites by Zoning District

Zoning District	Total Acreage	Maximum Density	Realistic Density	Lower-Income Units	Moderate-Income Units	Above Moderate-Income Units	Total Units
R-1	92.37	7.26	5.45	0	0	501	501
RM-2.5	5.92	5.92	20	209	37	0	246
Total	**170.56**			**209**	**37**	**501**	**747**

C4.6 Site Inventory

A description of development capacity by neighborhood is provided below. Sites are listed in Table C4-6 and shown geographically on Figure C4-2.

The table of sites includes the following items in the column heading order from left to right:

- Map Identification number (a unique reference number assigned by the City to reference the parcel on each map)
- Address or nearest cross street
- APN (Government Code Section 65583.2(b)1))
- Size in acres (Government Code Section 65583.2(b)(2))
- General Plan land use designation (Government Code Section 65583.2(b)(2))
- Zoning designation (Government Code Section 65583.2(b)(2))
- Description of existing uses (Government Code Section 65583.2(b)(3))
- Minimum allowable density by zone
- Maximum allowable density by zone
- Inventoried income level (units appropriate for lower-, moderate-, above moderate-income households) (Government Code Section 65583.2(c))
- Total number of units realistically assumed on the site
- Opportunity category as designated by the California Tax Credit Allocation Committee (TCAC)[1]

C4.6.1 East Farmersville

East Farmersville is bounded by Avenue 288 to the north, Visalia Road to the south, city boundaries to the east, and Farmersville Boulevard to the west. This neighborhood consists primarily of single-family

[1] Resource levels designated by TCAC/HCD denote access to economic and educational opportunities such as low-cost transportation, jobs, and high-quality schools and the quality of environmental factors in the area such as proximity to hazards and air quality. TCAC has a composite opportunity score for each census tract. Source: https://www.treasurer.ca.gov/ctcac/opportunity/2023/methodology.pdf

residential, with a large portion of the northern end zoned for schools. East Farmersville is designated as an Urban Unzoned Fire Hazard[2] area and in an area of minimal flood hazard[3]. This neighborhood can accommodate one site with an assumed capacity of 67 above-moderate-income units. The site located in this neighborhood is currently used for agricultural purposes and designated as an area of High Segregation and Poverty by TCAC.

C4.6.2 North Farmersville

North Farmersville is bounded by city boundaries to the north, east, and west, and Avenue 288 to the south. This area primarily consists of industrial and commercial uses, with some single-family residential. North Farmersville is designated as Non-Wildland/Non-Urban Fire Hazard area and in an area of minimal flood hazard. This neighborhood has a modest capacity for residential units. North Farmersville cannot accommodate housing opportunity sites.

C4.6.3 South Farmersville

South Farmersville is bounded by city boundaries to the south, east, and west, and Visalia Road to the north. This neighborhood primarily consists of single-family and multifamily (RM-2.5) residential and commercial space. Most of the sites in South Farmersville are designated as an Urban Unzoned Fire Hazard area, with one site identified in a Non-Wildland/Non-Urban Fire Hazard area and in an area of minimal flood hazard. Based on community input highlighting the opportunity for housing development along West Visalia Road and west of Farmersville Junior High, residentially zoned parcels 130-142-016, 130-143-008, 130-120-005, 130-132-003 (shown as Sites 3 through 10 respectively in Figure C4-2) in South Farmersville have been included in the Site Inventory. South Farmersville has the second largest development potential in the city. South Farmersville can accommodate 11 sites with an assumed capacity of 79 units lower-income units, 37 moderate-income units, and 153 above moderate-income units. This area is beneficial for low-income units due to its proximity to Snowden Elementary School and commercial uses along Visalia Road and Farmersville Boulevard. The sites identified in this area are currently vacant, with one property currently used for agricultural purposes. Both sites are located in areas designated by TCAC as Moderate Resource areas or High Segregation and Poverty.

C4.6.4 West Farmersville

West Farmersville is bounded by Avenue 288 to the north, Visalia Road to the south, city boundaries to the west, and Farmersville Boulevard to the east. This neighborhood primarily consists of single-family residential. West Farmersville is designated as a Non-Wildland/Non-Urban Fire Hazard area in an area of minimal flood hazard. Based on community input highlighting the opportunity for housing development southeast of West Visalia Road and Farmersville Boulevard. West Farmersville has the highest development potential in the city. West Farmersville can accommodate four sites with an assumed capacity of 130 units affordable to lower-income households and 281 units affordable to above moderate-income households. This area is beneficial for low-income units due to its proximity to Farmersville Junior High School and commercial uses along Visalia Road and Farmersville Boulevard. All sites identified in this area are currently used for agricultural purposes and are in TCAC-designated Moderate Resource areas of the city.

[2] The Urban Unzoned Fire Hazard is defined as an urban area that does not have a severity assigned because it does not have the same degree of risk for wildfire than other zones fire hazard areas. https://osfm.fire.ca.gov/divisions/community-wildfire-preparedness-and-mitigation/wildfire-preparedness/fire-hazard-severity-zones/

[3] The City has the Flood Hazard designation of "X" and "AH". Zone X is the area determined to be outside the 500-year flood and protected by levee from 100- year flood. Zone AH means that the area has a one percent annual chance of shallow flooding, usually in the form of a pond, with an average depth ranging from 1 to 3 feet. These areas have a 26% chance of flooding over the life of a 30-year mortgage.

C4.6.5 Sites Used in Previous Planning Periods

In accordance with Government Code Section 65583, vacant parcels from both the 4th and 5th RHNA cycles and non-vacant parcels from the 5th RHNA cycle may be reused in this Housing Element to accommodate lower-income housing, provided they are rezoned to allow projects that have at least 20 percent of the units set aside as affordable for lower-income households to be allowed by-right (i.e., can be approved administratively without requiring Planning Commission or City Council approval). A total of two sites identified in the Site Inventory are subject to this by-right requirement, as shown on Table C4-7. The City will update the Zoning Code to address by-right approval requirements for these sites, as specified in Housing Plan Program 3.

Table C4-7 Sites Used in Previous Planning Periods

Address	APN	Acres	Land Use	Zoning	Existing Use	Total Units
208 S Magnolia Ave	130132003	0.84	MHDR	RM-2.5	Vacant	16
Avenue 280 & S Virginia Ave	128320003	2.5	MHDR	RM-2.5	Agriculture	50
Total		**3.34**				**66**

C4.6.6 Adequacy of Residential Site Inventory in Meeting RHNA

The Site Inventory identifies 290 lower-income units, 37 moderate-income units, and 501 above moderate-income units on 15 sites. No sites smaller than 0.5-acre in size are used to accommodate lower-income housing.

Of the identified sites, nine are vacant and six are located on land currently used for agriculture. All sites are in a residential zone and would not require rezoning to allow for housing development. Since the land is currently zoned for residential uses, the existing agricultural uses are not subject to the Williamson Act. Regional trends indicate the high likelihood of redevelopment of sites with agricultural uses to residential development; therefore, existing uses on these sites are not considered an impediment to redevelopment.

The Site Inventory includes a surplus of 338 lower-income units, giving the city a 155 percent buffer for this income category. The summary of the residential Site Inventory is presented in Table C4-8.

Table C4-8 Adequacy of Residential Site Inventory

	Lower-Income	Moderate-Income	Above Moderate-Income	Total
RHNA Allocation	**218**	**121**	**315**	**654**
Planned and Approved Units	347	196	0	543

Percent Buffer over RHNA	**155%**	**93%**	**59%**	**202%**

C4.7 Availability of Infrastructure and Services

The City's Public Works Department ensures the continued maintenance and improvement of the City's infrastructure. This includes all public utilities provided by the City: domestic water, refuse/recycling collection, wastewater treatment, sanitary sewer services, and street and signal maintenance. The City will ensure adequate capacity of all infrastructure and utilities to accommodate the housing growth discussed in this Housing Element. The City has a Comprehensive Infrastructure Master Plan that guides the installation of infrastructure in greenfield areas. All sites identified in the inventory have existing and available infrastructure that can support residential development. Within one week of adoption, the City will provide a copy of the adopted 2023-2031 Housing Element to the City's Public Works Department, pursuant to Government Code Section 65589.7.

C4.7.1 Wastewater System

The Farmersville Department of Public Works is responsible for the safe collection, transportation, and treatment of all wastewater generated by residential, industrial, and commercial customers in the City of Farmersville. In 2021, the City opened a new wastewater treatment facility to meet the growing demand. With this new facility, there are no capacity issues anticipated with new development. The City confirms there is sufficient wastewater capacity to serve the capacity of the Site Inventory.

C4.7.2 Potable Water System

The City of Farmersville provides water service to developed properties in its city limits. The City pumps groundwater from seven wells (with an additional well out of service) located throughout the community, that produce up to two million gallons of water per day.

The City prepared a Comprehensive Infrastructure Master Plan (CIMP) in 2012 which served to amend and update previous utility master plans. The CIMP establishes programs to upgrade and expand the water system with future wells, distribution lines, and a storage tank. Although a new well site is recommended to increase the water production to accommodate peak hour demands with more development, the City confirms there is sufficient water supply to serve the capacity of the Site Inventory.

C4.7.3 Storm Water and Drainage

Storm drainage infrastructure within the community is provided by the City of Farmersville. The City is divided into 26 individual drainage sub-areas. Most of these sub areas discharge drainage water into one of the canals or creeks running through the city. Several discharge into retention basins. The City has adopted a storm drainage master plan that identifies improvements that will be necessary to serve future development in the planning area. This master plan was augmented with preparation of the Comprehensive Infrastructure Master Plan in 2012, which prescribes future improvements to the system. As with other utilities, project developers are responsible for installing storm drainage improvements to serve their site. Existing and planned storm drainage and infrastructure is sufficient for development of the Site Inventory.

C4.7.4 Dry Utilities

Dry utilities are defined as electricity, natural gas, cable, and telephone services. In Farmersville, each dry utility has one provider: Southern California Edison supplies electricity, Southern California Gas provides natural gas service, and Spectrum provides telecom services. The City does not anticipate any limitations on the provision of dry utility service to the sites in the inventory.

C4.8 Environmental Considerations

Environmental constraints to housing development in Farmersville include risk of wildfire, earthquakes, landslides and erosion, and flooding, as discussed in C3, *Housing Constraints Analysis*. The sites identified in the Site Inventory are all located outside of identified wildfire and flood zones. The City does not anticipate environmental remediation to be needed on sites currently used for agriculture.

C4.8.1 Opportunities for Energy Conservation

Farmersville has established, and will continue implementation of, the following programs related to energy conservation:

1. Amending the Subdivision Ordinance to require solar orientation of streets.
2. Weatherization programs for senior and low-income households. The rehabilitation of housing units using Community Development Block Grant (CDBG) funds.
3. Implementation of a solar program, adopting reduced building permit fees for the installation of residential solar power systems.
4. Rehabilitation Program with Self Help Enterprises by rehabilitating housing units using CDBG funds to include energy conservation improvements.

Additionally, the City has partnered with Southern California Edison and Valley Innovative Energy Watch to make cost-effective and lasting changes to the way the city uses energy. Southern California Edison also offers Demand Response Programs. These programs allow customers to reduce energy consumption during peak demand hours.

C5 Affirmatively Furthering Fair Housing Analysis

C5.1 Introduction

This section of the Housing Element analyzes issues relating to fair housing for the City of Farmersville. This analysis is based on the directives from State Assembly Bill (AB) 686. Background information on AB 686, countywide fair housing services, data sources, and analysis of the regional Affirmatively Furthering Fair Housing (AFFH) issues are included in Chapter 5, *Regional Affirmatively Furthering Fair Housing Analysis*. The data contained throughout this chapter may differ from the data included in Chapter C2, *Housing Needs Assessment*, based on HCD recommended data sources for AFFH analyses and the availability of data at the time the document was written.

C5.2 Methodology

This local AFFH analysis evaluates fair housing issues on the following topics:

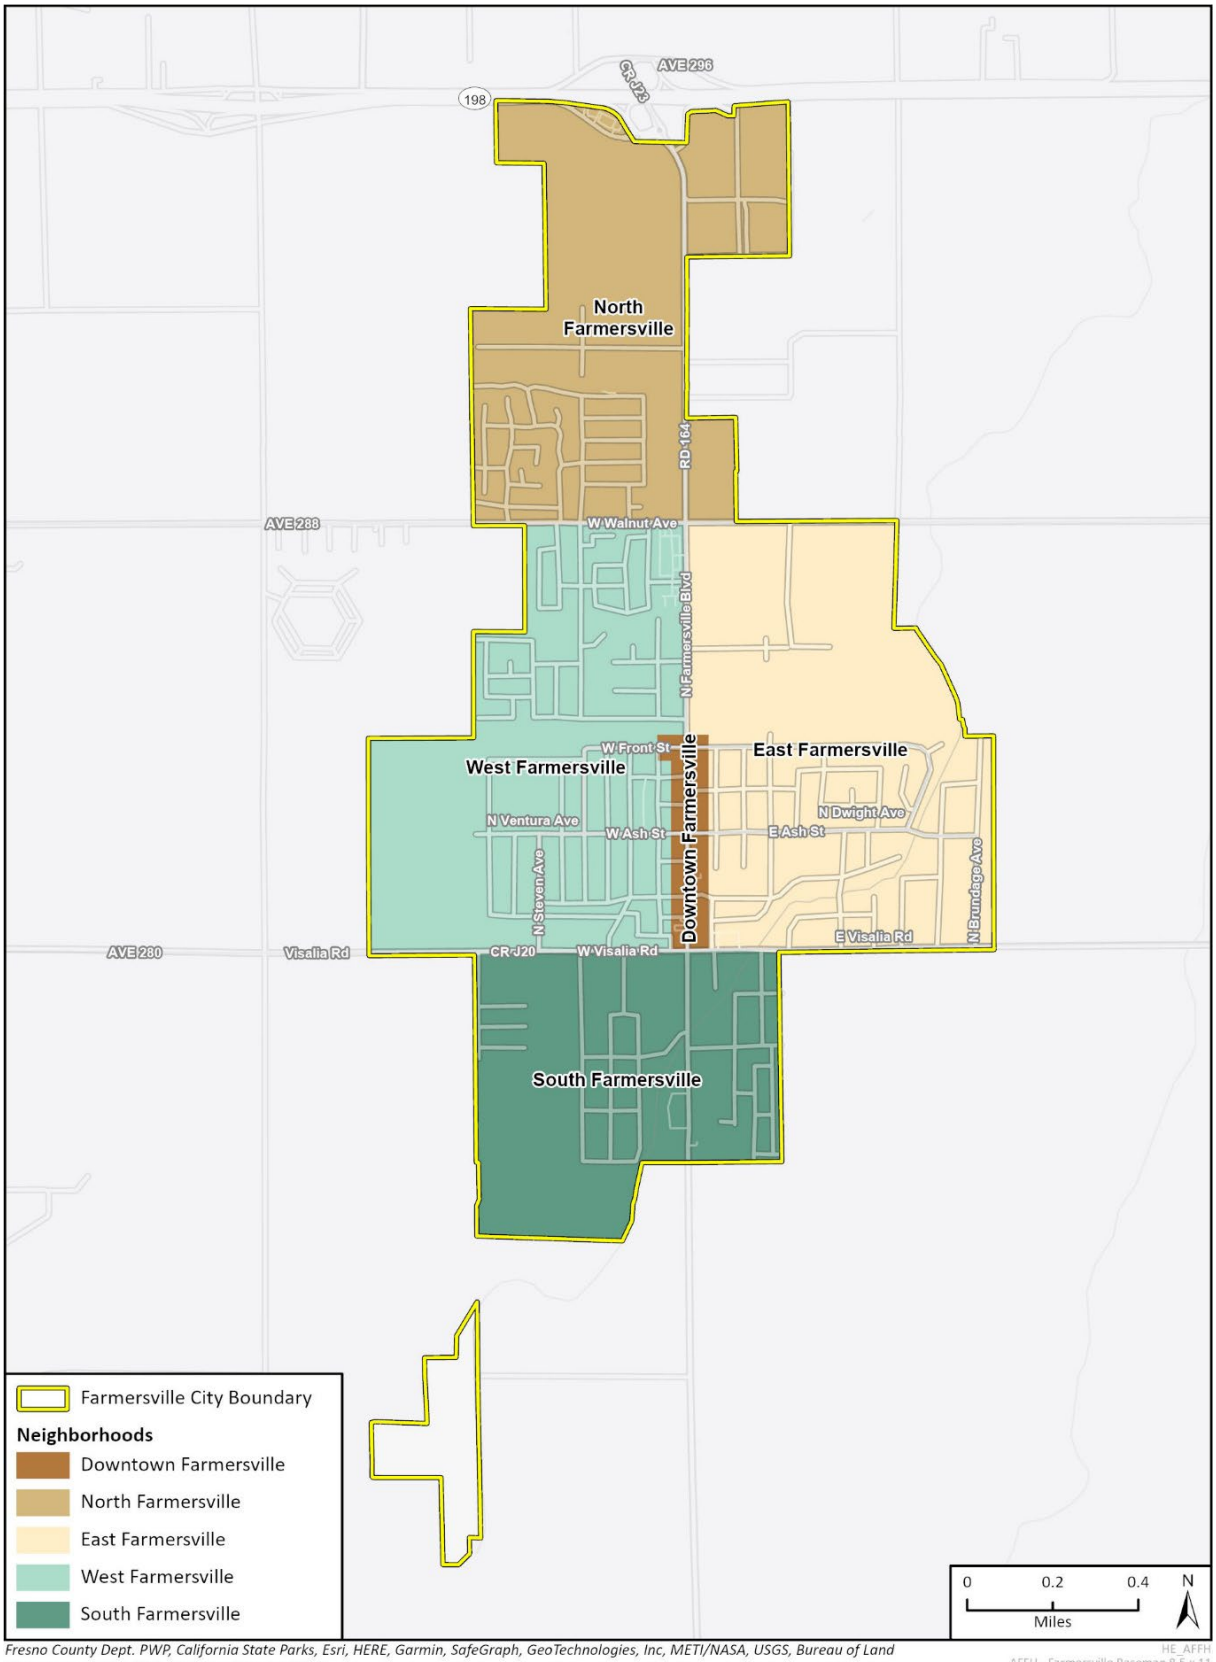
- Fair Housing Enforcement and Outreach Capacity
- Integration and Segregation Patterns and Trends
- Racially and Ethnically Concentrated Areas of Poverty
- Disparities in Access to Opportunity
- Disproportionate Housing Needs
- Local Area Knowledge and Stakeholder and Community Input
- Other Relevant Factors
- Analysis of Housing Site Inventory Using AFFH Indicators

This analysis identifies patterns and trends at the local level. Where appropriate, the analysis refers to the regional AFFH analysis provided in Chapter 5, *Regional Affirmatively Furthering Fair Housing Analysis,* which analyzes patterns and trends of the county and Tulare County/Kings County/Fresno County tri-county area.

For the purposes of this analysis, the city is divided into five neighborhoods: North, South, East, West, and Downtown Farmersville (Figure C5-1). These neighborhoods were based on the City's planning documents, including the General Plan, as well as local knowledge from City staff. Most of the geographic analysis of fair housing issues in Farmersville is based on the California Department of Housing and Community Development (HCD) AFFH Data Viewer described in Chapter 5, *Regional Affirmatively Furthering Fair Housing Analysis*. The AFFH Data Viewer relies on information provided by the United States (U.S.) Census and other data sources at the census tract and block group level. The data contained throughout this chapter may differ from the data included in Chapter C2, *Housing Needs Assessment*, due to the availability of data at the time of drafting.

For reference, the area south of the main city limits (south of South Farmersville) that is not connected to the rest of the city consists entirely of the Farmersville Wastewater Treatment Plant. This area does not contain any existing housing units and residential uses are not allowed so this area is not included in this analysis. While the Wastewater Treatment Plant is shown on figures throughout the analysis, it is part of a larger census tract that includes portions of East and South Farmersville and unincorporated parts of the county.

Figure C5-1 Farmersville Neighborhoods



There are three census tracts in the city, two of which overlap large areas within the unincorporated part of the county (Census Tracts 06107001602 and 06107001400). Downtown, East, West, and South Farmersville are all comprised of parts of Census Tracts 06107001601 and 06107001602, while North Farmersville is comprised of Census Tract 06107001400.

C5.3 Summary of AFFH Analysis Findings

Similar to other cities in Tulare County, Farmersville has a high percentage of non-white residents (92 percent of all residents) and low-income households (66 percent of all households). Overall, rates of overcrowding and cost burden are high among homeowners and renters. In addition, the California Tax Credit Allocation Committee (TCAC) opportunity mapping, which identifies areas with characteristics shown by research to support positive economic, educational, and health outcomes for low-income families, indicates low access to economic, educational, and environmental opportunities throughout most of the city. Compared to other areas of the city, North Farmersville has a slightly lower percentage of non-white households, lower poverty rates, slightly higher median income, and newer housing units. North Farmersville is also the only part of the city that is considered a high resource area. While North Farmersville has slightly more positive income characteristics and a lower percentage of non-white residents, it is largely similar to the rest of the city with a high percentage of Hispanic/Latino residents and high percentage of low- and moderate-income (LMI) populations.

Below is a summary of AFFH analysis findings by neighborhood in Farmersville.

North Farmersville

- Slightly lower percentage of non-white residents
- Lower percentage of LMI residents and lowest percentage of residents living below the poverty line
- Highest median household income
- Lowest percentage of renters
- Lowest percentage of overcrowding and lowest percentage of homeowners experiencing overpayment
- Highest resource areas

East and Downtown Farmersville

- High concentration of non-white residents, LMI populations, residents living below the poverty line
- Lowest household median income
- High rates of overcrowding and overpayment
- Highest percentage of older structures
- Low-income residents are at risk of displacement
- Area of high segregation and poverty

West and South Farmersville

- High concentration of non-white residents and residents living below the poverty line
- Lower percentage of LMI residents
- Lowest household median income
- High percentage of overcrowding and high percentage of homeowners experiencing overpayment
- Area of high segregation and poverty and moderate resource areas

C5.4 Data Sources

To conduct this analysis, the City utilized data from a variety of sources discussed in Chapter 5, *Regional Affirmatively Furthering Fair Housing Analysis*. The Community Development Block Grant (CDBG) Consolidated Plan and Analysis of Impediments (AI) were used to identify issues that impede fair housing choice. Additionally, the analysis includes a discussion of historic land use and segregation patterns and input from sources of local knowledge, including advocates for people with special needs,

housing development and advocacy organizations, housing and social services providers, and low-income residents. The data contained throughout this chapter may differ from the data included in Chapter C2, *Housing Needs Assessment*, based on HCD recommended data sources for AFFH analyses and the availability of data at the time the documents were written.

C5.5 Fair Housing Resources

Enforcement and Outreach Capacity

The City of Farmersville works with the Fair Housing Council of Central California (FHCCC), a nonprofit organization, to provide fair housing information and resources to residents and housing providers. The FHCCC investigates complaints involving housing discrimination and predatory lending practices to ensure compliance with federal and state housing laws. The City also works with the Housing Authority of Tulare County (HATC) and Self-Help Enterprises to respond to complaints of housing discrimination for rental housing and homeownership opportunities.

Compliance with Existing State and Federal Fair Housing Laws

The fair housing assessment should include a description of state and local fair housing laws and how the City complies with those laws. These laws include the following:

- California Fair Employment and Housing Act (FEHA) (Part 2.8 (commencing with Section 12900) of Division 3 of Title 2)
- FEHA Regulations (California Code of Regulations (CCR), Title 2, Sections 12005-12271)
- Government Code Section 65008 covers actions of a city, county, city and county, or other local government agency, and makes those actions null and void if the action denies an individual or group of individuals the enjoyment of residence, landownership, tenancy, or other land use in the state because of membership in a protected class, the method of financing, and/or the intended occupancy.
- For example, a violation under Government Code Section 65008 may occur if a jurisdiction applied more scrutiny to reviewing and approving an affordable development as compared to market-rate developments, or multifamily housing as compared to single-family homes.
- Government Code Section 65008, subdivision (e), authorizes preferential treatment of affordable housing.
- Government Code Section 8899.50 requires all public agencies to administer programs and activities relating to housing and community development in a manner to affirmatively further fair housing and avoid any action that is materially inconsistent with its obligation to affirmatively further fair housing.
- Government Code §11135 et seq. requires full and equal access to all programs and activities operated, administered, or funded with financial assistance from the state, regardless of one's membership or perceived membership in a protected class.
- Density Bonus Law (Gov. Code, §65915.)
- Housing Accountability Act (Gov. Code, § 65589.5.)
- No-Net-Loss Law (Gov. Code, § 65863)
- Least Cost Zoning Law (Gov. Code, § 65913.1)
- Excessive subdivision standards (Gov. Code, § 65913.2.)

- Limits on growth controls (Gov. Code, § 65302.8.)
- Housing Element Law (Gov. Code, § 65583, esp. subds. (c)(5), (c)(10).)

The City of Farmersville ensures compliance with these laws through the City's daily operations, with any complaints referred to the City Attorney and/or the City Manager for investigation and action, as appropriate. Further analysis of the City's compliance with fair housing laws is also provided in the Constraints chapter of this Housing Element.

C5.6 Ability to Address Complaints

The City is limited in its ability to address fair housing complaints directly. The City refers fair housing issues and complaints to FHCCC, the HATC, and the State Department of Fair Employment and Housing. The Department of Fair Employment and Housing (DFEH) maintains a record of housing discrimination complaints filed in local jurisdictions.

Fair housing complaints based on discrimination are also reported to the U.S. Department of Housing and Urban Development's (HUD) Office of Fair Housing and Equal Opportunity (FHEO). Based on data provided by HUD, one FHEO inquiry was reported in Farmersville between 2013 and 2021. This inquiry was not considered an official case and did not provide a basis for understanding fair housing issues.

C5.7 Segregation and Integration Patterns and Trends

Race and Ethnicity

Farmersville has a significantly larger Hispanic/Latino population than Tulare County and the tri-county area. The percentage of residents that identify as Hispanic/Latino are as follows:

- Farmersville: 90%
- Tulare County: 66%
- Tri-County Area: 58%

Farmersville has a greater percent of Hispanic/Latino residents than most of Tulare County and the Tulare County/Fresno County/Kings County tri-county area. Hispanic/Latino residents comprise nearly 90 percent of the city's residents, which is a greater percentage than every city in the county except the city of Woodlake. Throughout most of the city, between 61 and 80 percent of residents identify as non-white, as shown in Figure C5-2. In small portions of North Farmersville, between 41 and 60 percent of residents identify as non-white. However, this census tract overlaps with parts of North Farmersville that includes large areas of the unincorporated county, and it is likely that the trends presented in these areas may not accurately represent the population in this neighborhood.

Over the past decade, the percent of Hispanic/Latino residents increased in Farmersville, while the percent of non-Hispanic/Latino white residents decreased (Table C5-1). The percentage of all other races and ethnicities only saw small increases or decreases, and remained small, between zero and one percent.

Table C5-1 Population by Racial Group (City of Farmersville)

Race	Percent of Population	
	2011	2021
Hispanic/Latino	81.7%	89.7%
Not Hispanic/Latino		
White	16.4%	8.3%
Black/African American	0.0%	0.7%
Asian/Pacific Islander	0.0%	0.0%
Native American/Native Alaskan	1.1%	0.3%
Other or Multiple Races	0.9%	0.1%

Source: U.S. Census Bureau, American Community Survey 5-Year Data (2007-2011, 2017-2021), Table DP05.

The AFFH Data Viewer identifies the degree to which areas have a predominant racial/ethnic majority. The predominant racial/ethnic group in each census tract is that with the largest population. Throughout the entire city, the racial/ethnic majority is Hispanic/Latino (Figure C5-3). Downtown and East Farmersville and portions of West and South Farmersville have the greatest majority of Hispanic/Latino residents. North Farmersville has the smallest majority of Hispanic/Latino residents. However, as previously stated, North and South Farmersville are included in census tracts that also include large portions of unincorporated county lands, and the AFFH Data Viewer may not accurately represent the population living in those neighborhoods of Farmersville.

According to Othering and Belonging Institute (OBI) racial segregation/integration data, most of Farmersville has a low-medium level of segregation based on race/ethnicity (neither highly segregated nor integrated) (Figure C5-4). North Farmersville is considered racially integrated (i.e., racial demographics do not differ greatly from the surrounding region) and at least 20 percent of the population is Black/African American and Hispanic/Latino.

Persons with Disabilities

As referenced in Chapter C2, *Housing Needs Assessment*, approximately 13 percent of the population in Farmersville (1,174 residents) reported living with one or more disabilities, slightly less than the percent of residents living with a disability in Tulare County (12 percent) and the tri-county area (12 percent). The most common disability in the city is ambulatory difficulty, defined as having serious difficulty walking or climbing stairs (Figure C5-5). Disabilities are most prevalent among senior residents. Approximately 33 percent of residents aged 65 and over have a disability, whereas five percent of residents under 65 years old have a disability. In addition, Asian American/Pacific Islander and Black/African American residents reported the highest rates of disability by racial/ethnic group, at 80 percent and 51 percent, respectively.

Throughout the entire city, between 10 to 20 percent of the population has a disability (Figure C5-6). There are no concentrated areas of residents living with a disability in Farmersville.

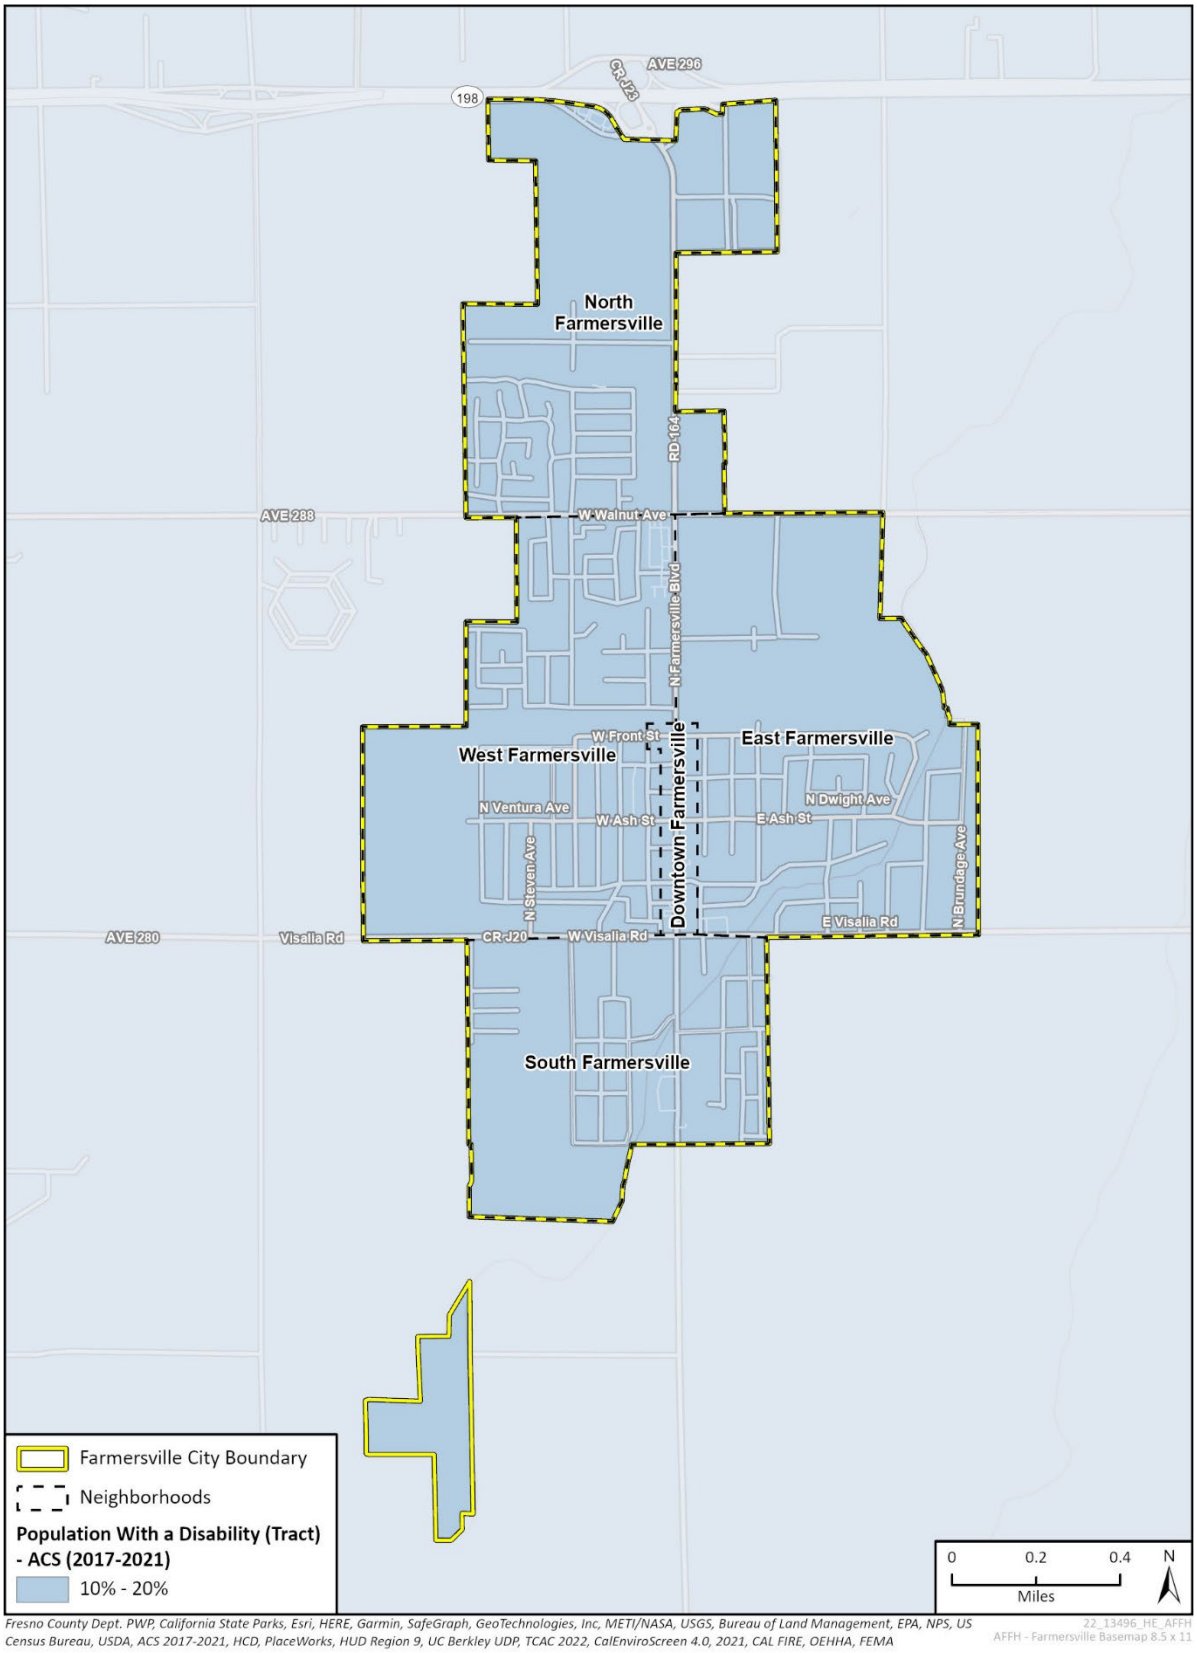
Figure C5-6 Percent of Population with a Disability (City of Farmersville)



Source: AFFH Data Viewer, 2023.

Familial Status

As described in Chapter C2, *Housing Needs Assessment,* familial status refers to the presence of children under the age of 18 and the marital status of the head of the household. Families with children may face housing discrimination by landlords who fear that children will cause property damage. Examples of differential treatment that are potentially discriminatory include limiting the number of children in an apartment complex or confining households with children to a specific location. Single-parent households are also protected by fair housing law.

Household composition in Farmersville is similar to that of the county. As of 2021 (latest available data), households with children comprised approximately 38 percent of the total households in the city. Married-couple families with children comprised the largest share of households with children (58 percent), followed by female, single-parent households (35 percent). Male householders with children comprised seven percent of all households with children. Single-parent, female-headed households are more likely to rent than own, comprising approximately 32 percent of all renter-occupied households in the city but only two percent of owner-occupied households (Table C5-2).

Table C5-2 Tenure by Household Type and Presence of Children (City of Farmersville)

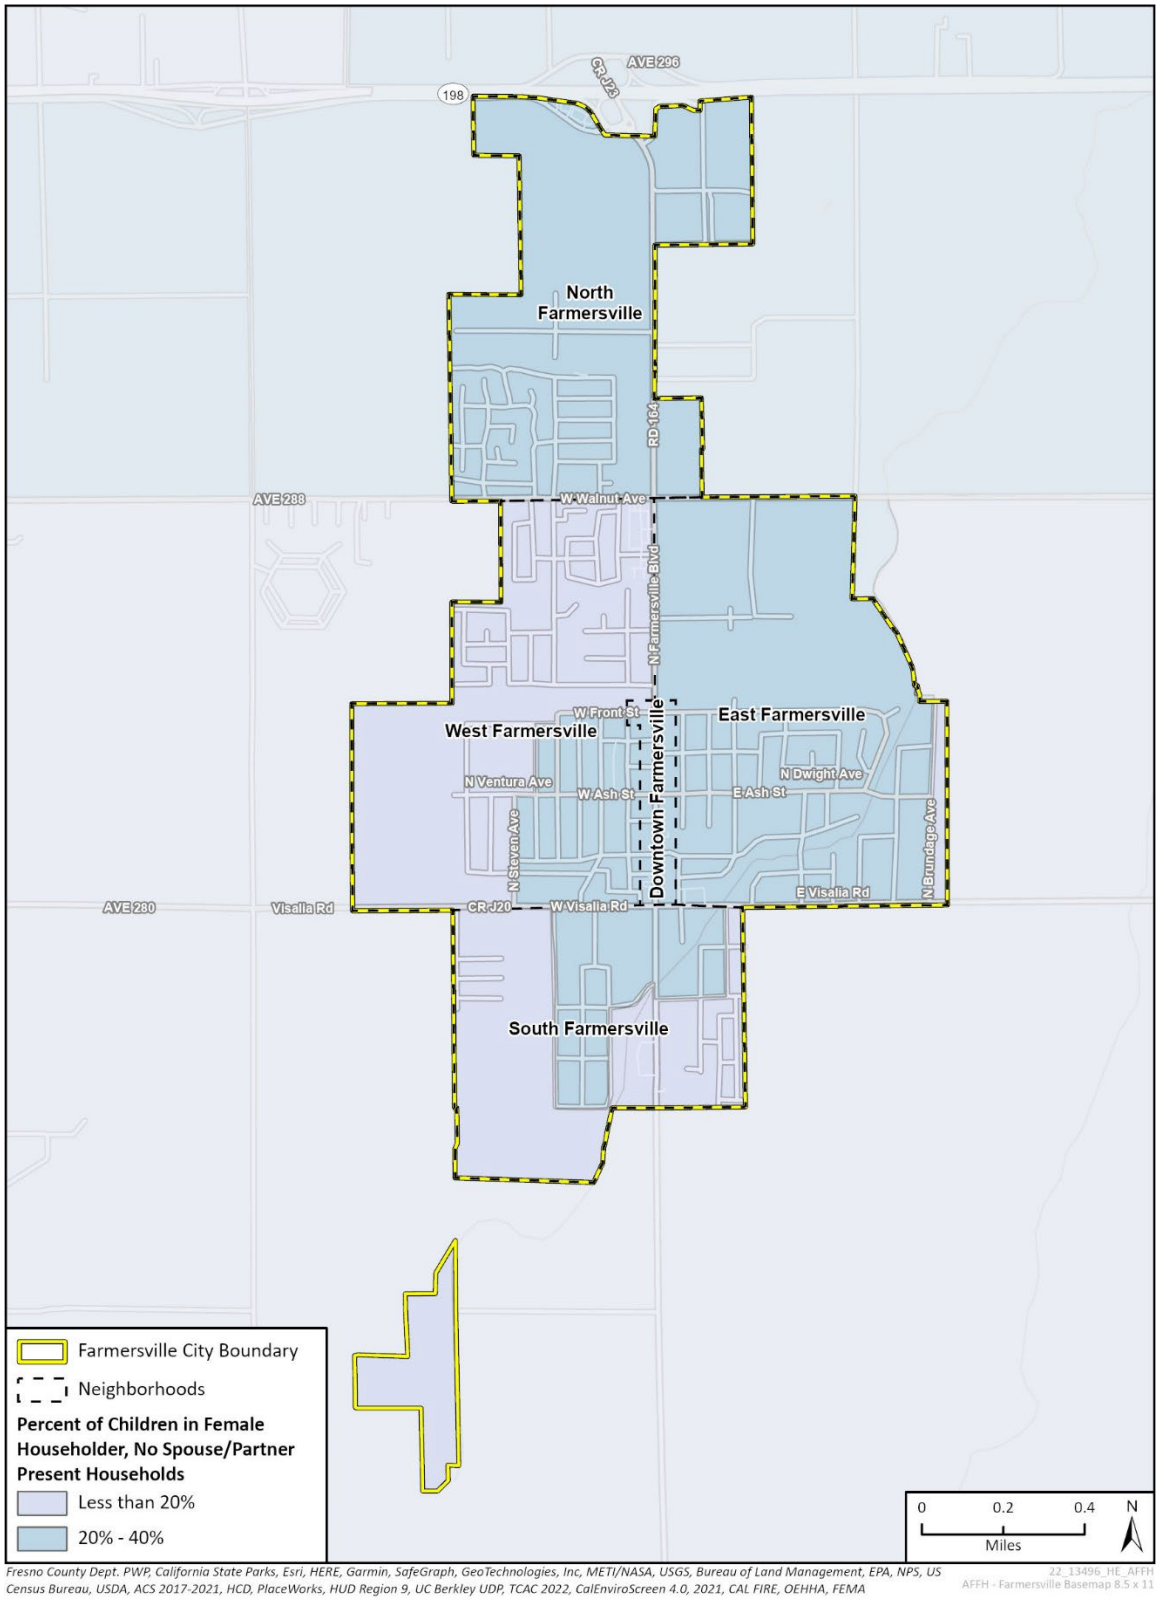
Household Type	Residing in Owner-Occupied Household	Percent of Total Owner-Occupied Households	Residing in Renter-Occupied Household	Percent of Total Renter-Occupied Households	Percent of Households with Children
Married Couple Family, with Children Present	225	22.4%	386	21.7%	58%
Single-Parent, Male Householder, no Spouse Present	34	3.4%	42	2.4%	7%
Single Parent, Female Householder, No Spouse Present	323	32.2%	41	2.3%	35%
Total Households with Children Present	582	58.0%	469	26.4%	
Total Households	1,004		1,775		

Source: U.S. Bureau of the Census, American Community Survey (ACS), Table B25115 Tenure by Household Type and Presence and Age of own Children, 2017-2021 Estimates.

East, Downtown, North, and parts of West and South Farmersville have the highest percentage of children living in female-headed, single-parent households (Figure C5-7). In most of West and South Farmersville less than 10 percent of children live in female-headed, single-parent households.

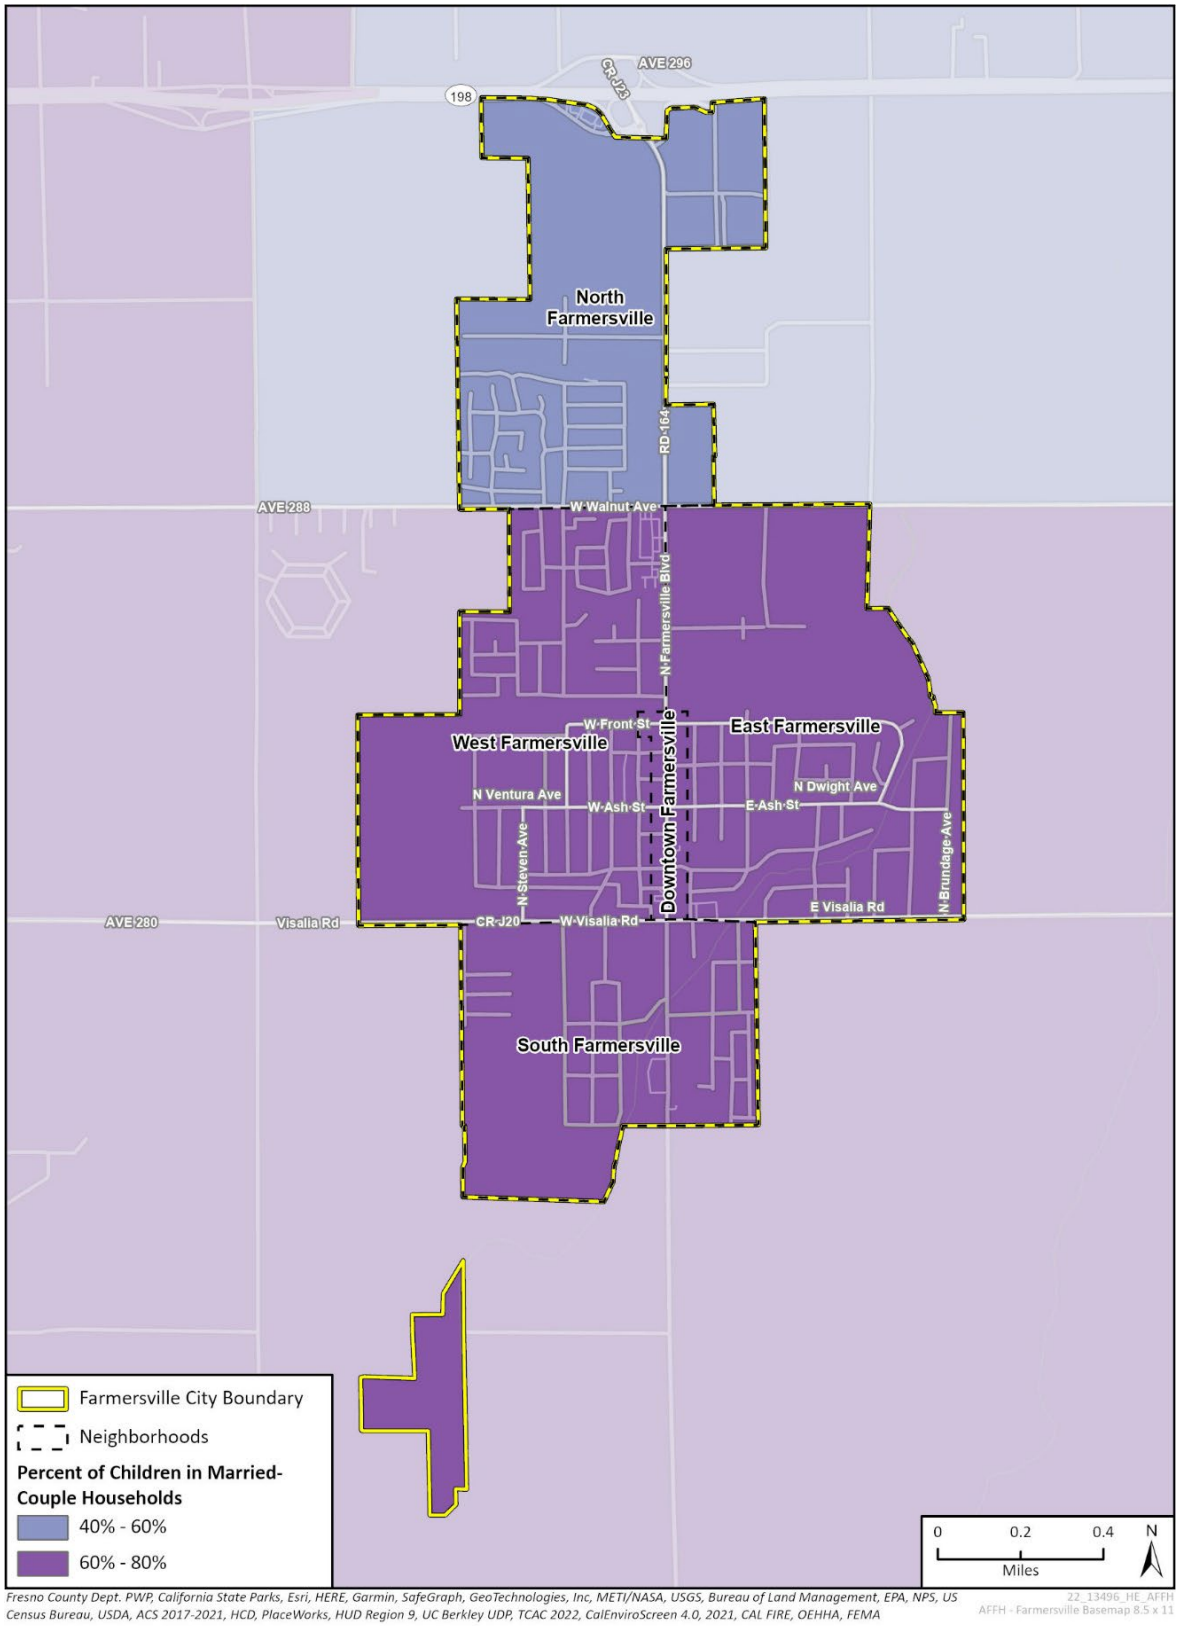
The percentage of children residing in married-couple households is lowest in North Farmersville, where between 40 and 60 percent of children live in married-couple households (Figure C5-8). Throughout the rest of the city, between 60 and 80 percent of children live in married-couple households.

Figure C5-7 Children in Female-Headed Households, No Spouse/Partner Present (City of Farmersville)



Source: AFFH Data Viewer, 2023.

Figure C5-8 Children in Married-Couple Households (City of Farmersville)



Source: AFFH Data Viewer, 2023.

Household Income

Household income is directly connected to the ability to afford housing. Higher-income households are more likely to own rather than rent housing. As household income decreases, households tend to pay a disproportionate amount of their income for housing and the number of persons occupying unsound and overcrowded housing increases. To achieve fair housing objectives, people in low-income households must have choice in housing opportunities, that is, when they are able to locate units that are affordable and well maintained in all parts of a jurisdiction and region.

This section identifies household income disparities using data based on median household income and LMI geographies. HUD defines an LMI area as a census tract or block group where over 51 percent of the population is LMI. The definition of low or moderate income is based on HUD income definitions of up to 80 percent of the area median income (AMI). Data for this analysis is from the HUD Low and Moderate Income Summary based on the 2011-2015 American Community Survey.[1]

As of 2021 (most recent available data), Farmersville had a median household income of $47,957 per year, 18 percent less than the county's median income of $57,394 and much less than the state median household income of $87,100.

Households in North Farmersville has the highest median household income in the city, approximately $86,676 per year (Figure C5-9). In comparison, throughout the rest of the city median household income is less than $55,000 per year, significantly lower than the state average. North Farmersville is part of a larger census tract that encompasses large portions of unincorporated county lands, and the AFFH Data Viewer may not accurately represent the population living in this neighborhood. However, North Farmersville's residential area has one main residential neighborhood primarily comprised of single-family homes that are relatively newer and larger than in other neighborhoods in Farmersville. One 48-unit rental multifamily complex is located in North Farmersville.

LMI populations are prevalent throughout Farmersville and generally follow the same patterns as median household income. Across the city, more than 25 percent of residents are LMI. Downtown, East, West, and portions of South Farmersville have a higher percentage of LMI residents compared to other areas of the city (Figure C5-10). The areas with the highest percentage of LMI residents in the city are West and South Farmersville, where 78 percent of the population is considered LMI.

Racially and Ethnically Concentrated Areas of Poverty

To identify racially and ethnically concentrated areas of poverty (known as R/ECAPs), TCAC includes a poverty concentration and racial segregation filter that aligns with HUD's R/ECAP methodology.

TCAC categorizes census tracts that have both a poverty rate of over 30 percent and that are designated as being racially segregated (overrepresentation of people of color relative to the county) as areas of high segregation and poverty. There is one census tract of high poverty and segregation in Farmersville, located in East Farmersville and portions of West and South Farmersville (Figure C5-11). This census tract is predominantly Hispanic/Latino, with 89 percent of residents identifying as Hispanic/Latino and approximately 27 percent of households earning an income below the poverty line.

Poverty and Segregation

Similar to Tulare County, nearly one quarter (24 percent) of the households in Farmersville earn an income below the poverty line. Throughout most of the city, between 20 and 30 percent of residents live below the poverty line (Figure C5-12). North Farmersville has the lowest percentage of residents living below the poverty line, less than 10 percent.

Concentrated Areas of Affluence

The AFFH Data Viewer identifies Racially Concentrated Areas of Affluence (RCAAs) as census tracts that have a white population that is 1.25 times higher than the Council of Governments (COG) region (which is all of Tulare County and the incorporated cities) and a household median income 1.5 times higher than the AMI. There are no RCAAs in Farmersville. Very few areas in Farmersville have a household median income that is higher than the county's household median income of $57,394 per year. However, there is one neighborhood with a higher median household income and a greater percentage of white residents compared to other areas of the city. North Farmersville has a higher median household income than the county, at $86,676, 41 percent higher than the county. This area has a higher percentage of white residents than the rest of the city (41 percent). In the rest of the city, 20 percent or less of the population is white.

C5.8 Disparities in Access to Opportunities

Transit Access and Walkability

One transit organization, Visalia Transit, operates throughout the city of Farmersville, offering fixed route bus services to residents.

Transit opportunities operating in Farmersville

- Visalia Transit operates two fixed bus routes serving Farmersville; one route connects Visalia and Farmersville and the other connects Visalia, Farmersville, and Exeter. These routes run from 6:00 am to 8:47 pm Monday through Friday and 8:00 am to 6:17 pm on weekends. One route has one stop in Downtown Farmersville at the intersection of Visalia Road and Farmersville Boulevard (City Hall) which stops at about one and a half hour intervals. The other route has two stops in Farmersville at City Hall and at Roy's Park at the southern end of Farmersville Boulevard which stops at one-hour intervals.
- Visalia Transit also operates Dial-a-Ride that services the city, which is a shared ride, advanced reservation, origin-to-destination service for persons with disabilities. The Dial-a-Ride service area includes anywhere within city limits.

Residents in Farmersville have lower access to transit and lower transit ridership compared to residents in other cities in the region. Farmersville received an average AllTransit performance score of 3.7 out of 10, which is based on a combination of a low number of transit trips per week and low number of jobs accessible by transit.[2] For comparison, the cities of Visalia, Tulare, and Porterville received higher performance scores, 6.5, 5.4, and 4.7 respectively. According to the American Community Survey (ACS) estimates, 85 percent of commuters commute by driving alone, 13 percent carpool, one percent walk, and less than one percent use transit or bicycle.

Walk Score is a private company that offers a walkability index on its website and measures the pedestrian friendliness of a given location by analyzing walking routes to nearby amenities and examining population density and road metrics, including block length and intersection density.[3] Farmersville received a walk score of 65 out of 100, which is considered "somewhat walkable." The Environmental Protection Agency (EPA) walkability index ranks block groups according to their relative walkability. According to the EPA index, walkability in Farmersville is considered low throughout the city.

[2] AllTransit.Org, 2021. https://alltransit.cnt.org/
[3] Walk Score, 2021. https://www.walkscore.com/methodology.shtml

East and West Farmersville are the most walkable areas in the city (Figure C5-13). North and South Farmersville are not considered to be walkable. Larger cities in the tri-county area, including Visalia, Fresno, Reedley, and Hanford, have areas that are much more walkable than Farmersville.

According to the TCAG 2022 Regional Active Transportation Plan for the Tulare County Region, priority active transportation improvements in the city of Farmersville emphasize improving pedestrian and bicycle connections throughout the city. Projects include installation of bike lanes and Americans with Disabilities Act compliant sidewalks and ramps and widening East Walnut Avenue and Visalia Road, new bike trails along Deep Creek and San Joaquin Valley Railroad, and new pedestrian crossing at the intersection of Farmersville Boulevard and Citrus Street. In addition, the City of Visalia plans to construct a multi-use trail along the south side of the San Joaquin Valley Railroad tracks from Visalia to Rocky Hill that would connect Farmersville to Visalia and Exeter. These planned improvements will increase walkability and access to active transportation throughout Farmersville, particularly in central parts of the city.

Access to Quality Education

TCAC Educational outcomes are measured through the educational opportunity index, which measures the percentage of 4th graders who meet math and literacy proficiency standards, percentage of high schoolers who graduate on time, and percentage of students not receiving free or reduced-price lunch. Scores are generated by comparing each census tract to all other census tracts within the same COG. Scores range from 0-1, with 1 being the most positive educational outcome, and 0 being the least positive educational outcome. Educational outcomes are mostly less positive throughout Farmersville (Figure C5-14). North Farmersville has more positive education outcomes compared to the rest of the city, indicating students in North Farmersville will be more likely to have higher education attainment levels and greater access economic advancement opportunities than students in other parts of the city.

Farmersville is served by the Farmersville Unified School District (FUSD). FUSD includes a total of six schools: 10 elementary schools, three middle schools, five high schools, two kindergarten through 12th grade schools, one alternative school, one continuation school, and one community day school.

According to Kidsdata.org, a data compilation program of the Lucile Packard Foundation for Children's Health, FUSD had a high school graduation rate of 88 percent in 2021. The student population is primarily Hispanic/Latino (96 percent), with less than one percent of students identifying as white, Asian American/Pacific Islander, Black/African American, Native American/Alaskan Native, and multiracial. [4] Thirty-six percent of students are English learners, almost all of whom are Spanish speakers. Approximately 92 percent of students are eligible for free and reduced-price meals, indicating they are living in low-income households. In addition, approximately seven percent of students are eligible for the Migrant Education Program, meaning their parent/guardian is a migratory worker in the agricultural, dairy, lumber, or fishing industries and whose family has moved during the past three years.[5] [6]

Education attainment levels of Farmersville residents are lower than the county and tri-county averages. According to ACS estimates, 95 percent of the city's adult population (25 years of age and older) does not have a college degree (compared to 86 percent of the county and 83 percent of the tri-county area), and 42 percent do not have a high school degree (compared to 30 percent of the county and 25 percent in the tri-county area).

Economic Outcomes

TCAC economic opportunities, measured by census tract, considers poverty, adult education, employment, job proximity, and median home values. A higher economic index score reflects more positive economic outcomes. Economic outcomes in Farmersville are similar to other cities within the same COG, with a mix of more positive and less positive outcomes throughout the city. North Farmersville has the most positive economic outcomes compared to the rest of the city (Figure C5-15). East and Downtown Farmersville and parts of West and South Farmersville have the least positive economic outcomes in the city.

In 2021, Farmersville had a labor force participation rate of 63 percent of persons 16 years and older, slightly higher than the labor force participation rate for the county (61 percent) and tri-county area (60 percent). The largest industries in Farmersville are agriculture, forestry, fishing and hunting, and mining (19 percent of employed population), educational services, and health care and social assistance (17 percent of employed population), and arts, entertainment, recreation, and accommodation and food services (16 percent of employed population). The top two industries are also the largest in the county based on employment. According to the City's General Plan, some of the largest employers in the city include FUSD, Windows Plus, Artesia Ready-Mix, and the City of Farmersville.[7]

According to the General Plan Part II Community Profile the largest employers in Farmersville include the FUSD (81 employees), Windows Plus (30 employees), Artesia Ready-Mix (27 employees), City of Farmersville (26 employees), and Nickels Payless (25 employees).[8]

Commercial and industrial land uses and zoning that accommodate employment opportunities are concentrated in North Farmersville. Most Farmersville residents commute outside the city for work (94 percent). Approximately 23 percent of employed Farmersville residents work in Visalia, seven percent work in Exeter, and six percent work in the city of Fresno.[9]

Healthy and Safe Housing Environment

Pollution burden is high throughout Farmersville, particularly associated with ozone, particulate matter, and pesticide use. Additionally, population characteristics that make Farmersville residents more vulnerable to pollution include asthma, cardiovascular disease, low birth rate, low education attainment, linguistic isolation, and rates of high poverty.

Pollution burden in Farmersville is comparable to most of the western tri-county area, including the western urbanized area of Tulare County and Fresno County and the entirety of Kings County. The CalEnviroScreen map for the City of Farmersville identifies the degree to which communities are considered burdened by pollution by comparing the scores of each census tract to every other census tract in the state. CalEnviroScreen identified a high degree of pollution burden throughout most of the city but highest in East, West, Downtown, and South Farmersville (Figure C5-16). Pollution burden associated with ozone, particulate matter, and pesticide use are high throughout the entire city. Pollution burden associated with drinking water contaminants is high in North Farmersville and parts of East and South Farmersville, and pollution burden associated with solid waste sites are high in parts of East and South Farmersville.

The TCAC environmental opportunity map also identifies pollution burden, using CalEnviroScreen scores. However, unlike CalEnviroScreen, the TCAC map compares census tracts to other census tracts within the same COG to show differences in pollution burden within the region. According to the TCAC opportunity map, environmental outcome scores are highest in East, Downtown, and parts of West and South Farmersville (Figure C5-17). Environmental outcome scores are low throughout the rest of the city.

Senate Bill (SB) 535 tasks the California Environmental Protection Agency with identifying disadvantaged communities. Disadvantaged communities are low-income areas that are disproportionately affected by environmental pollution and other hazards. Under SB 535, a minimum of 25 percent of funds from the Greenhouse Gas Reduction Fund, funded by revenue from the State's cap-and-trade emissions program, goes to projects that benefit disadvantaged communities. Most of Farmersville is considered a disadvantaged community under SB 35 (Figure C5-18). Only North Farmersville is not considered a disadvantaged community. This area has a lower percentage of LMI residents and a slightly smaller non-white population compared to the rest of the city. However, based on the CalEnviroScreen map and TCAC environmental outcome scores, like the rest of the city, North Farmersville has a high degree of pollution burden.

C5.9 Disproportionate Housing Needs

Housing Problems

Housing problems, as defined by HUD, include overcrowding, cost burden, lack of complete kitchen facilities, and lack of plumbing facilities. Approximately 45 percent of households in Farmersville are experiencing housing problems and 30 percent of households are experiencing severe housing problems. This is slightly higher than the county and tri-county area, where 44 percent of are experiencing housing problems and 26 percent of households are experiencing severe housing problems in both the county and tri-county area.

Substandard Housing

HUD considers housing units to be "standard units" if they comply with local building codes, whereas housing units are considered "substandard" if they lack complete plumbing or kitchen facilities. According to ACS estimates there are no substandard housing units in Farmersville. However, as noted in Chapter C2, *Housing Needs Assessment*, the City's Code Enforcement Division estimates that approximately two percent of units (57 units) require major rehabilitation and fewer than one percent of units (28 units) citywide are beyond the point of repair. The percentage of substandard housing units in Farmersville is slightly lower than in Tulare County and other jurisdictions in the region.

Approximately 66 percent of the city's housing stock was constructed prior to 1990 and is more than 30 years old. Housing units older than 30 years have a higher likelihood of needing repair and modernization improvements. The areas of Farmersville with older housing or housing more likely in need of repair are East and Downtown Farmersville.

Housing Cost Burden

Housing cost burden is higher among renters than homeowners. Approximately 34 percent of renters and 15 percent of homeowners are cost burdened in Farmersville.

The rate of cost burden (spending more than 30 percent of household income on housing costs) among Farmersville residents is lower than the county and tri-county area. As discussed in Chapter C2, *Housing Needs Assessment*, housing cost burden is high among both homeowners and renters in Farmersville. Approximately 34 percent of all households are cost burdened in Farmersville and 15 percent are severely cost burdened slightly more than the county and tri-county averages. Housing cost burden is higher among renters than homeowners.

Twenty-seven percent of homeowners in Farmersville experience housing cost burden. Cost burden among homeowners is highest in East and Downtown Farmersville and parts of West and South Farmersville, where approximately 61 percent of homeowners are cost burdened (Figure C5-19). North Farmersville has the lowest percentage of cost burdened homeowners (24 percent). Throughout the rest of the city, approximately 53 percent of homeowners are cost burdened.

Fifty-three percent of renters experience housing cost burden in Farmersville. There is a high percentage of cost burdened renters throughout the entire city, between 40 and 60 percent. The percentage of renters experiencing cost burden is lowest in North Farmersville, where 43 percent of renters are cost

burdened (Figure C5-20). Throughout the rest of the city, 50 to 52 percent of renter households are cost burdened.

As household income increases, the likelihood of experiencing cost burden decreases (Table C5-3). Extremely low-income households have the highest percentage of cost burden, with 69 percent of homeowners and 97 percent of renters experiencing cost burden in Farmersville. Among low-income households, 32 percent of homeowners are cost burdened and 51 percent of renters are cost burdened. Moderate- and above moderate-households have the lowest rates of cost burden among the different income levels. Among moderate- and above moderate-income households, six percent of owners and 20 percent of renters are cost burdened.

Table C5-3 Assistance Needs of Lower-Income Households (City of Farmersville)

Household by Tenure, Income, and Housing Problem	Renters		Owners		Total Household s	
	Total	Percent	Total	Percent	Total	Percent
Extremely low-income (0-30% AMI)	**305**		**290**		**595**	
With any housing problem	295	97%	200	69%	495	83%
With cost burden >30%	295	97%	200	69%	495	83%
With cost burden >50%	175	57%	175	60%	350	59%
Very low-income (31-50% AMI)	**235**		**350**		**585**	
With any housing problem	195	83%	255	73%	450	77%
With cost burden >30%	135	57%	190	54%	325	56%
With cost burden >50%	30	13%	65	19%	95	16%
Low-income (51-80% AMI)	**215**		**520**		**735**	
With any housing problem	110	51%	165	32%	275	37%
With cost burden >30%	40	19%	125	24%	165	22%
With cost burden >50%	0	0%	0	0%	0	0%
Moderate & Above Income (>80% AMI)	**280**		**720**		**1,000**	
With any housing problem	55	20%	40	6%	95	10%
With cost burden >30%	0	0%	0	0%	0	0%
With cost burden >50%	0	0%	0	0%	0	0%
Total Households	**1,035**		**1,880**		**2,915**	
With any housing problem	655	63%	660	35%	1,315	45%
With cost burden >30%	470	45%	515	27%	985	34%
With cost burden >50%	205	20%	240	13%	445	15%

Note: Housing Problems: There are four housing problems in the CHAS data: 1) housing unit lacks complete kitchen facilities; 2) housing unit lacks complete plumbing facilities; 3) household is overcrowded; and 4) household is cost burdened. A household is said to have a housing problem if they have any 1 or more of these 4 problems.

Cost burden: Monthly housing costs (including utilities) exceeding 30% of monthly income.

Severe cost burden: Monthly housing costs (including utilities) exceeding 50% of monthly income.

Source: U.S. Department of Housing and Urban Development (HUD), Comprehensive Housing Affordability Strategy (CHAS) ACS tabulation, 2015-2019 release

Overcrowding

As discussed in Chapter C2, *Housing Needs Assessment*, approximately 24 percent of all households in Farmersville, or 661 households, are considered large households (households with five or more people). This is slightly higher than the county (22 percent) and tri-county averages (19 percent). There is a higher percentage of owner households (27 percent) that are large households compared to renter households (18 percent) in Farmersville.

Approximately 12 percent of households in Farmersville are overcrowded and six percent are severely overcrowded, slightly higher than the county and tri-county averages. Renter households have higher rates of overcrowding than homeowner households, with 25 percent of renters and five percent of homeowners. Overcrowded housing is lowest in North Farmersville, where less than five percent of households are overcrowded (Figure C5-21). Throughout the rest of the city between five and 10 percent of households are overcrowded. Areas with higher rates of overcrowding in Farmersville have more land zoned Medium and High Density Residential compared to other areas of the city. Along with the higher rate of overcrowding among renters, this information indicates that overcrowded households are likely living in multifamily housing which often does not provide enough bedrooms for large households.

Persons Experiencing Homelessness

The Kings Tulare Homeless Alliance conducted a Point-In-Time (PIT) Count in 2023. Data from the PIT Count is reported for Porterville, Visalia, Tulare, and the balance of the county. Among those counted, there were a total of 1,053 people experiencing homelessness in Tulare County and 97 percent of this population lives in either Porterville, Tulare, or Visalia, while the remaining three percent (36 residents) live throughout all other jurisdictions including Farmersville. The City has a disproportionately lower percentage of the county's homeless population in comparison to the share of the county population. People experiencing homelessness are more likely to reside in nearby Visalia where there are more services.

Displacement

Communities are designated sensitive if the share of very low-income residents is greater than 20 percent and have any of the two following characteristics:

- The share of renters is above 40 percent
- The share of people of color is above 50 percent
- The share of very low-income households that are severely rent burdened is above the county median
- The percent change in rent is above the county median for rent increases

According to the UDP, low-income residents living in East and Downtown Farmersville and parts of West and South Farmersville are at risk of displacement (Figure C5-22).

C5.10 Local Area Knowledge

Farmersville received its name when Thomas G. Brundage applied to the federal government during the 1860s to establish a post office in the newly establishing community. By the 1870s, Farmersville had several residences, a general store, post office, hotel, lumber yard, and several other businesses. African American settlers were frequently met with discrimination. In the 1870s, Wiley and Lucy Hinds, African American homesteaders in Farmersville, founded the Visalia Colored School in their barn for Black/African American, Native American, and Mexican children that were barred from attending local education institutions.[10][11] The town became a center for agricultural trade for the southern central part of Tulare County and continued to grow into the 20th Century.

During the Dust Bowl in the 1930s, thousands of people migrated to the Central Valley from across the United States to work in the growing agricultural industry. Many of these workers lived in migrant camps which generally fostered poor sanitary conditions. The Farmersville squatters camp was described by a Farm Security Administration economist as a "collection of dirty, torn tents and makeshift shacks in a sea of mud."[12]

The federal Farm Security Administration established labor camps intended to resolve poor sanitation and public health problems. In addition, these camps offered a safe place for migrants to embrace their culture and foster a sense of community, providing respite from discrimination.[13] The Linnell Camp, located near Farmersville, was a Farm Security Administration camp for migratory workers during the 1930s. The camp consisted of tin cabins that housed migratory farm workers. The Linnell Camp is still active today with 191 housing units for farmworker families.

The City has invested in infrastructure to spur economic development, including widening and upgrading Visalia Road through the southern portion of the city and upgrading the capacity of the wastewater treatment plant. These improvements allow for increased residential and other development within the city. Additionally, the City has obtained funding for ADA improvements to install sidewalks and curb ramps in older, lower-income residential neighborhoods, and repaved several streets alleyways to improve access to homes and businesses.

Stakeholder and Community Input

One community workshop on the Housing Element was held in Farmersville on May 25, 2023, however, no participants attended the workshop due to a technical issue. Following the community workshop, a recording of the workshop was posted on the Housing Element website for public viewing and residents were encouraged to watch the recording and comment. During the workshops held in each jurisdiction as part of the Tulare County Regional Housing Element planning effort, participants identified the most significant housing barriers, including rent affordability and rent increases, lack of housing with supportive services, and difficulty buying a home.

An online survey was available in both English and Spanish on the Tulare County Association of Governments Housing Element website from February 6 to March 16, 2023. Most respondents from Farmersville reported earning an annual household income below $25,000 per year, significantly lower

[13] Library of Congress. 1998. Voices from the Dust Bowl: the Charles L. Todd and Robert Sonkin Migrant Worker Collection, 1940 to 1941. The Migrant Experience. https://www.loc.gov/collections/todd-and-sonkin-migrant-workers-from-1940-to-1941/articles-and-essays/the-migrant-experience/

than the city's median household income and within the range of extremely low-income households based on 2023 income limits for Tulare County. The survey asked participants about housing issues and the types and location of housing development they would like to see in their city. Respondents in Farmersville indicated the largest barriers to housing are the high cost of quality housing and lack of available housing that is rent-restricted. The most common urgent housing issue selected by Farmerville participants was the "affordability of desired housing." Respondents from Farmersville also reported the following housing needs: housing assistance for residents with special needs, supportive housing for individuals experiencing homelessness, housing for middle-income, "higher-end" housing, and non-low-income housing, and higher density zoning.

The City also participated in a series of stakeholder interviews with service providers, community organizations, and affordable and market-rate housing developers held between May 21 and April 4, 2023. Community organizations identified the need for housing near grocery stores, medical facilities, and public transportation. Additional housing needs include transitional and supportive housing, farmworker housing, and safe parking for homeless individuals living in their vehicle. Compared to larger cities in the region, smaller, rural areas have vastly fewer amenities and housing resources. According to market-rate housing developers, barriers to developing housing include high construction costs, parking requirements, State housing requirements, and the cost and time demanded by the environmental review process. Affordable housing developers described the need for more affordable housing and supportive housing for previously homeless residents and discrimination based on housing choice voucher (HCV) use. It was noted that the PIT Count likely underestimates the number of homeless individuals as it does not consider the many residents living on couches or in trailers. According to affordable housing developers, cities can address housing needs by fostering strong relationships with affordable housing providers and maintaining knowledgeable staff to pursue grant opportunities for affordable housing.

Other Relevant Factors

Other factors to fair housing issues in Farmersville that have not been previously discussed in this analysis include widespread social vulnerability of residents and lack of farmworker housing.

Land Use and Zoning

Most housing units in Farmersville are single-unit detached structures (78 percent). Only 20 percent of the city's housing stock consists of housing with two or more units. Zoning for medium and high-density residential uses is concentrated in South Farmersville and parts of East Farmersville, while zoning in North, West, and most of East Farmersville consists mostly of low density residential. Single-family homes in low density residential neighborhoods are generally more expensive than housing in multifamily developments. In addition, residents living in single-family housing generally own their home while multifamily housing residents tend to rent. Low-income households and people living on fixed incomes, such as seniors, often cannot afford to buy or live in single-family homes and therefore are limited to choosing more affordable housing options such as multifamily housing in South and parts of East Farmersville.

Social Vulnerability Index

The Center for Disease Control and Prevention and Agency for Toxic Substances and Disease Registry created the Social Vulnerability Index (SVI) to identify communities that exhibit social conditions that would make them more vulnerable to hazardous events such as natural disasters. The SVI can also serve as an identifier of vulnerable communities that are underprivileged and underserved and are more

susceptible to experiencing housing issues and lack of housing opportunities. The SVI ranks census tracts based on 16 social factors grouped into four categories: socioeconomic status, household characteristics, racial and ethnic minority status, and housing type and transportation.[14]

The SVI identifies most of Farmersville as having higher vulnerability than most of the state, based on a high level of vulnerability for each of the four categories. Census Tract 06107001601 in East, Downtown and parts of West and South Farmerville is ranked in the 95th percentile. Farmersville scored particularly high for socioeconomic status (based on social factors for poverty, unemployment, housing cost burden high school graduation, health insurance status) household characteristics (based on social factors for percentage of seniors, children, persons with a disability, single-parent households, and English language proficiency), and racial and ethnic minority status (based on social factors for percentage of racial/ethnic minorities).

Farmworker Housing Needs

Farmersville is surrounded by acres of farmland and the largest industry in the city is agriculture, forestry, fishing and hunting, and mining. Approximately 833 people in Farmersville are employed in the agriculture, forestry, fishing and hunting, and mining industry, equal to 19 percent of employed population of the city.

Farmworkers employed by nearby agricultural businesses may seek housing in Farmersville. However, the migratory and sometimes seasonal nature of farm work often makes it difficult for farmworkers to find affordable housing options. The HATC operates the Linnell Farm Labor Center just east of the Farmersville city limits. The Linnell Farm Labor Center has 191 apartments for agricultural workers and their families. The Housing Authority also operates 175 units for farmworkers at the Woodville Farm Labor Center, approximately 15 miles south of Farmersville near the unincorporated community of Woodville. The City will implement Housing Plan Program 6 to amend the City's Zoning Code to comply with the Employee Housing Act to allow employee housing with up to 36 beds in group quarters or 12 units designed for households as an agricultural use and to allow employee housing for up to six employees as a single-family residential use. In addition, through Housing Plan Program 6, the City will facilitate the development of affordable housing for farmworkers by offering expedited and streamlined project application review for farmworker housing and pursuing state and federal grant opportunities to support the development of special needs housing, including farmworker housing.

Language Barriers

Language can be a barrier to access to housing and housing resources. When outreach and services are limited to English, residents who are not comfortable communicating in English are excluded. A significant portion of Farmersville residents speak a language other than English. According to ACS estimates, 74 percent of Farmersville residents over the age of five speak a language other than English and 27 percent speak only English. Forty percent of residents over the age of five speak English less than very well. Almost all residents who speak a language other than English are Spanish speakers. The City will implement Housing Plan Program 14 to provide a translation feature on the City's website.

Home Loan Applications

As discussed in Appendix 7.B, *Housing Constraints*, there is a disparity in mortgage application approvals between racial/ethnic groups in Tulare County. Non-white mortgage loan applicants have lower rates of loan origination and higher rates of loan denial compared to white applicants. Home Mortgage

[14] Agency for Toxic Substances and Disease Registry. 2023. CDC SVI Documentation 2020. https://www.atsdr.cdc.gov/placeandhealth/svi/documentation/SVI_documentation_2020.html

Disclosure Act data from the Federal Financial Institutions Examination Council, indicates white home loan applicants had the highest rate of approval compared to other racial/ethnic groups, and "other" races and Native Hawaiian/Pacific Islander applicants had the lowest. These patterns indicate there may be racial/ethnic discrimination in mortgage lending. While there is no Home Mortgage Disclosure Act data for Farmersville, it is likely the City experiences similar patterns as Tulare County. Table C5-4 shows the loan actions taken by race/ethnicity percentage in Tulare County.

Table C5-4 Mortgage Loans (County of Tulare)

	Loan Action					
Race/Ethnicity	Loan Originated	Application Approved But Not Accepted	Application Denied	Application Withdrawn	Purchased Loan	Other
White	56.0%	2.7%	14.9%	17.9%	3.1%	5.3%
Hispanic/Latino	53.3%	2.5%	18.1%	17.7%	2.6%	5.9%
Black/African American	50.4%	1.7%	20.6%	22.7%	1.3%	3.4%
Native American/Alaska Native	44.3%	4.4%	23.6%	19.2%	0.5%	7.9%
Asian American	49.9%	3.0%	19.2%	18.2%	3.4%	6.3%
Native Hawaiian/Pacific Islander	39.4%	0.0%	18.2%	18.2%	0.0%	24.2%
Other Race	35.5%	1.9%	15.0%	12.6%	29.6%	5.4%
Two or More Races	52.4%	0.0%	28.6%	9.5%	4.8%	4.8%

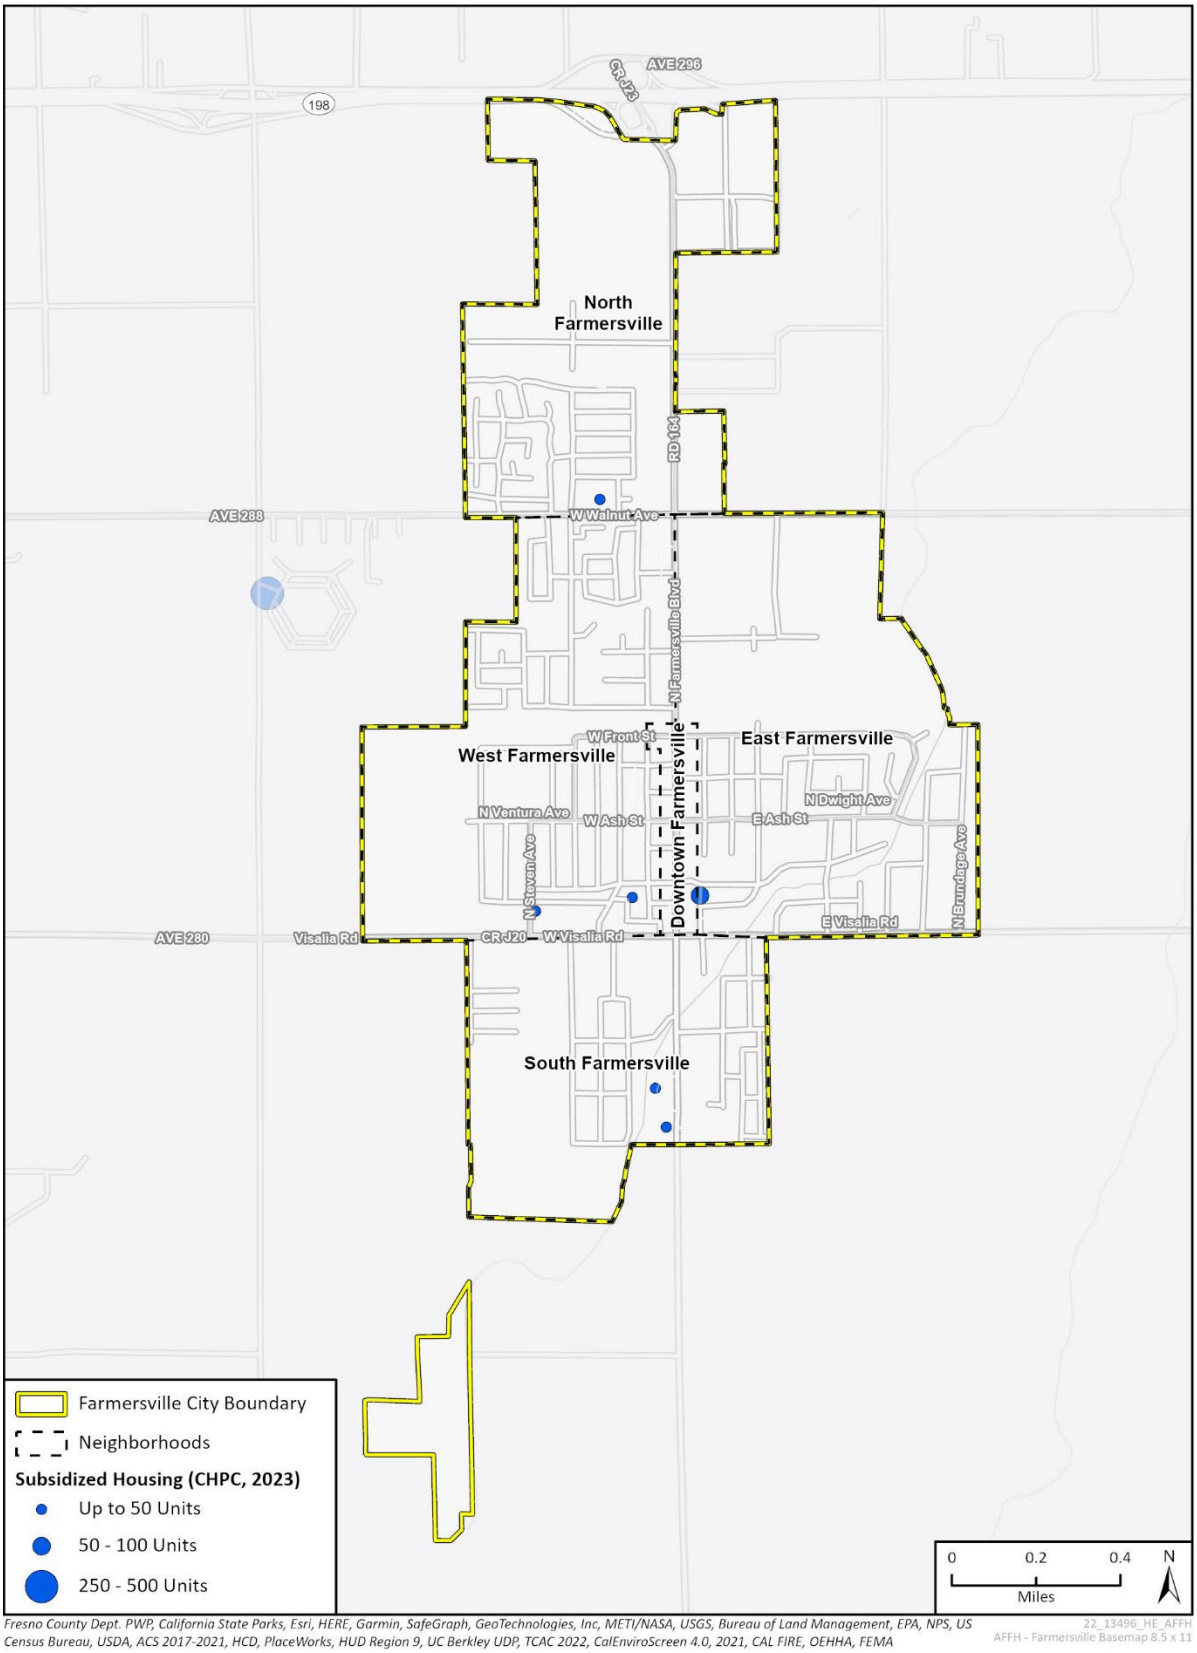
C5.11 Subsidized Housing

Subsidized housing consists of affordable rental units that are subsidized by federal and State agencies but are owned by private owners. Subsidies including HUD, the U.S. Department of Agriculture, the California Housing Finance Agency, HCD, and the Low-Income Housing Tax Credit program administered by TCAC. According to the AFFH Data Viewer, there are a total of 328 subsidized housing units in Farmersville. Subsidized housing units are concentrated in East and South Farmersville (Figure C5-23).

Public housing includes affordable rental units that are owned and operated by the government. In Farmersville the HATC manages public housing units which are available to low-income households, the elderly, and persons with disabilities. According to HUD's Public Housing Program, there are no public housing developments in Farmersville. However, the HATC owns and manages the Linnell Farm Labor Center, located just east of Farmersville. The Linnell Farm Labor Center includes 191 apartments for agricultural workers and their families. In addition, HATC also owns and operates the Gateway Village Apartments (16 housing units), Palomar Court Apartments (40 senior housing units), and Village Grove Apartments (48 senior housing units) in Farmersville.

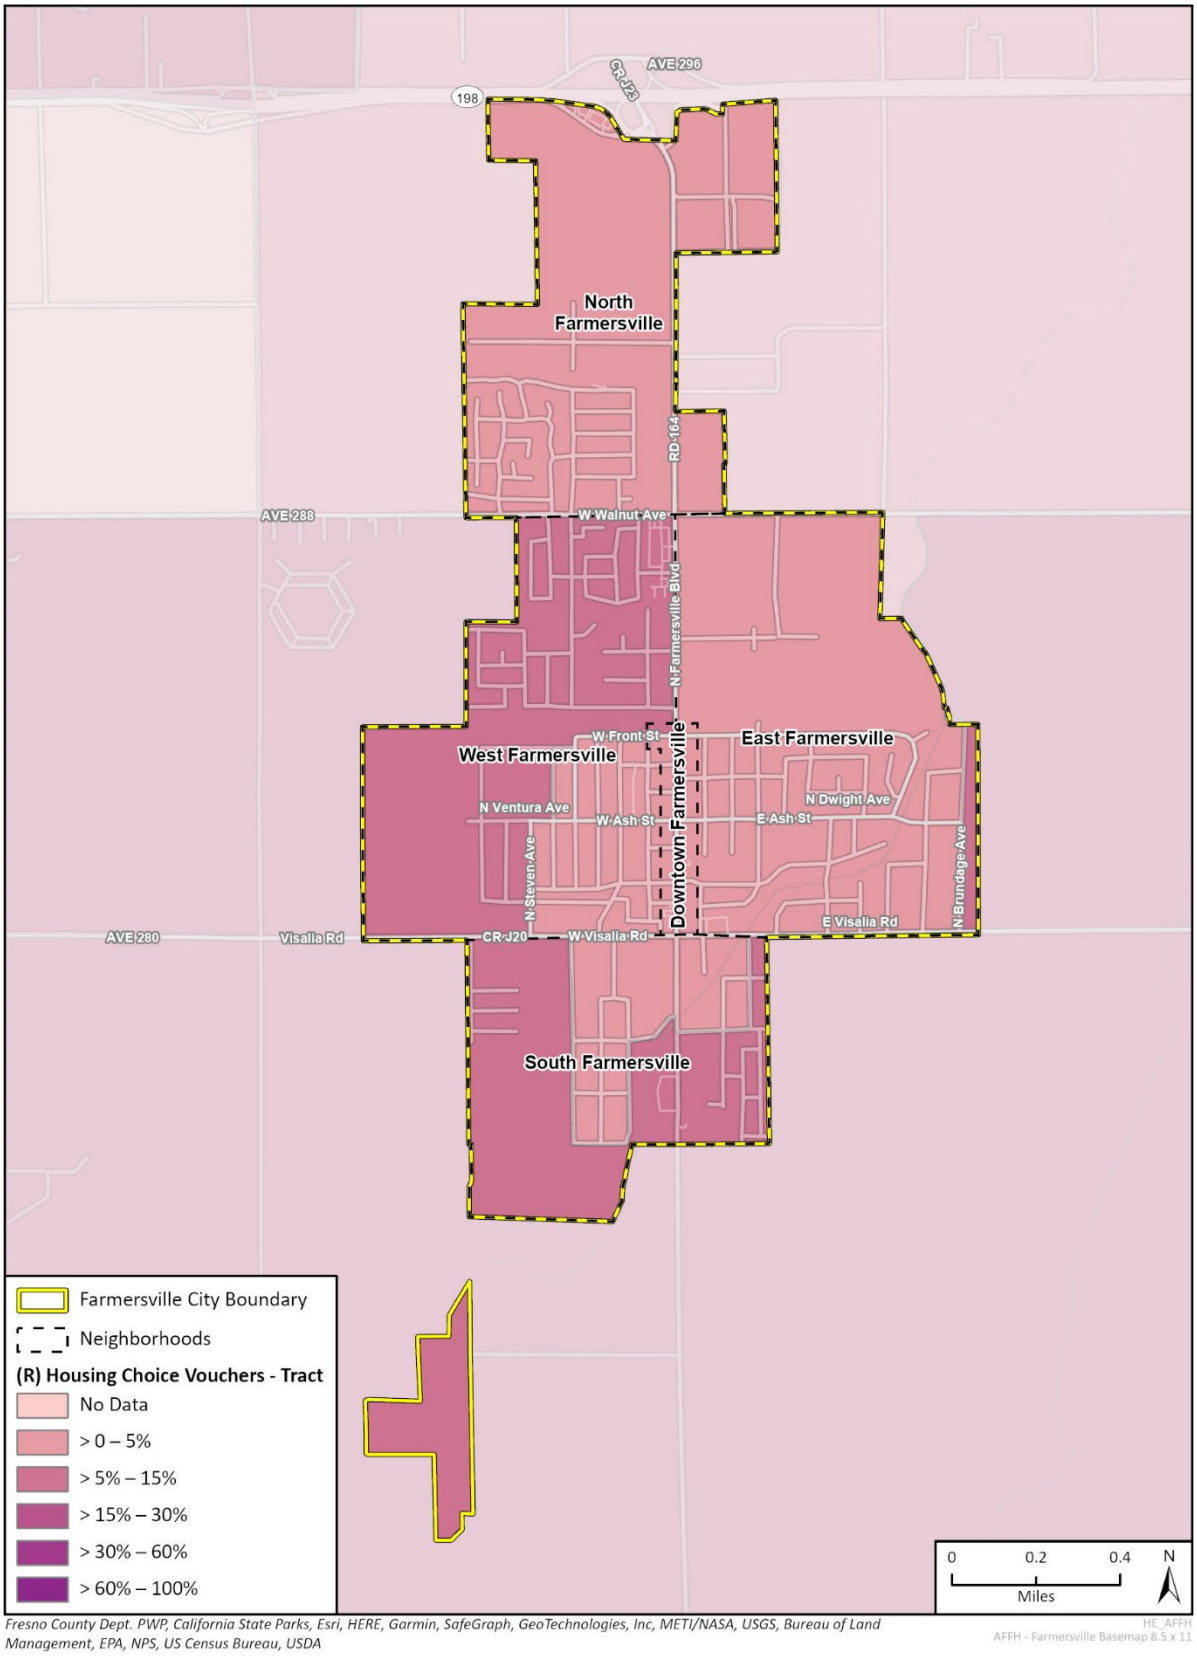
The HATC administers HCVs in the city of Farmersville. While HATC administers the HCV program in Farmersville, housing units themselves are owned by private landlords that accept HCVs on behalf of renters. According to HATC, as of 2023, there are 70 households receiving rental assistance through HCVs in the city. The use of HCVs is more common in parts of West and South Farmersville, where approximately seven percent of households are using HCVs (Figure C5-24).

Figure C5-23 Subsidized Housing (City of Farmersville)



Source: AFFH Data Viewer, 2023.

Figure C5-24 Housing Choice Vouchers (City of Farmersville)



Source: AFFH Data Viewer, 2023.

However, these areas are part of a large census tract that includes unincorporated areas of the county, including the Linnell Farm Labor Center. The City will implement Housing Plan Program 12 to collaborate with the HATC to continue and expand the HCV Program in Farmersville and foster relationships with landlords to expand housing options for HCV recipients.

C5.12 Housing Site Inventory Analysis

This portion of the AFFH analyzes the relation between the housing opportunity sites and AFFH-related issues. Government Code Section 65583(c)(10) requires the housing opportunity sites to be analyzed with respect to AFFH to ensure that sites designated for low-income households are dispersed equitably throughout the city rather than concentrated in areas of high segregation and poverty or low-resource areas that have historically been underserved, and conversely, that sites designated for above moderate-income households are not concentrated in areas of high resources. By comparing the sites inventory to the fair housing indicators in this assessment, this section analyzes whether the sites included in the Site Inventory improve or exacerbate fair housing conditions, patterns of segregation, and access to opportunity.

Housing Sites by TCAC Opportunity Area

For purposes of evaluating fair housing, resource levels designated by TCAC/HCD denote access to economic and educational opportunities such as low-cost transportation, jobs, and high-quality schools and the quality of environmental factors in the area such as proximity to hazards and air quality. TCAC has a composite opportunity score for each census tract. Farmersville has a mix of resource areas. North Farmersville is a high resource area, while Downtown, East, and portions of West and South Farmersville is an area of high segregation and poverty. The rest of the city consists of moderate resource areas.

The City's Site Inventory can accommodate 747 housing units on 15 sites. Figure C5-25 shows the housing opportunity sites by TCAC designated resource area. The housing opportunity sites are designated by income category – whether the sites could accommodate housing appropriate for low-, moderate-, or above moderate-income households. The "appropriateness" of sites for various affordability levels is dictated by State housing element law and HCD guidance and includes allowable density, size of site, realistic capacity, existing use(s), and other factors. More information about the sites and income designations is available in Chapter C4, *Housing Resources*.

Most of the housing opportunity sites are in moderate resource areas (68 percent of the proposed housing units), primarily in West Farmersville, in part due to the availability of large vacant and underutilized parcels in this neighborhood.

A portion of the City's RHNA will be satisfied by planned and approved projects (42 percent of the total housing units accommodated by planned and approved projects and housing opportunity sites). To understand the overall picture of housing development during the eight-year planning period, this analysis considers those units. Planned and approved projects will add 196 moderate-income units and 347 lower-income units. Three of the six planned and approved projects are located in moderate resource areas (411 housing units) and two of the five projects are located in high and highest resources areas (166 housing units). One project is located in an area of high segregation and poverty (107 housing units).

Total Units by Resource Area

Planned and approved projects and the housing opportunity sites accommodate 178 units planned in areas of high segregation and poverty and low resource: 44 percent of those units (79 units) will be lower-income units, 18 percent (32 units) will be moderate-income units, and 38 percent (67 units) will be above moderate-income units. In contrast, 569 units are planned in areas designated moderate resource: 23 percent of those units (130 units) will be lower-income units, one percent (5 units) will be moderate-income units, and 78 percent (434 units) will be above moderate-income units.

Table C5-5 shows the number of proposed housing units by income level in each resource area.

Table C5-5 Proposed Housing Units by Resource Area (Planned and Approved Projects and Housing Opportunity Sites)

Income Level	Lower-Income	Moderate-Income	Above-Moderate-Income	Total Units
Areas of High Segregation and Poverty	79 units (38% of lower-income units)	32 units (86% of moderate-income units)	67 units (13% of above moderate-income units)	178 units (24% of total units)
Low Resource Areas	0 units (0% of lower-income units)	0 units (0% of moderate-income units)	0 units (0% of above moderate-income units)	0 units (0% of total units)
Moderate Resource Areas	130 units (62% of lower-income units)	5 units (14% of moderate-income units)	434 units (87% of above moderate-income units)	569 units (76% of total units)
High/Highest Resource Areas	0 units (0% of lower-income units)	0 units (0% of moderate-income units)	0 units (0% of above moderate-income units)	0 units (0% of total units)

The planned and approved projects, together with the housing opportunity sites, will add a higher percentage of lower-income units in moderate resource areas (62 percent) than in areas of high segregation and poverty (38 percent). In areas of high segregation and poverty, the mix of lower-, moderate-, and above moderate-income units will provide housing opportunities households of varying income levels. Therefore, the proposed housing opportunity sites will not increase patterns of segregation and will increase integration by household income in terms of access to opportunity.

Furthermore, the City is preparing a Downtown Specific Plan, which aims to energize and revitalize Downtown Farmerville, designated as a low resource area. Although no housing opportunity sites included in this Housing Element are located within Downtown Farmerville, the Downtown Specific Plan proposes to designate areas for the development of high density, affordable multi-family housing. As Downtown Farmerville revitalizes, community benefits will likely extend beyond the Specific Plan's boundaries, providing increased economic opportunities and public and private investment in low resource areas in the vicinity of housing opportunity sites in East and South Farmersville.

Figure C5-25 Housing Opportunity Sites by TCAC Resource Area, Farmersville

Source: AFFH Data Viewer, 2023.

Sites by Income Population

Census tracts with more than 50 percent LMI households are located in Downtown, East, West, and South Farmersville. Figure C5-26 shows the housing opportunity sites by percentage of LMI populations. In most of the city, more than 50 percent of households are LMI. As such, most housing units included in the planned and approved projects and opportunity sites are located in these neighborhoods in addition to the availability of underutilized sites in these areas and the potential for mixed-use, transit-oriented development. Approximately 73 percent of the low-income units, 100 percent of the moderate-income units, and 96 percent of the above moderate-income units are located census tracts with greater than 50 percent LMI households. Of the planned and approved projects and opportunity sites in these areas, approximately 49 percent of proposed units are appropriate for above moderate-income households, 18 percent appropriate for moderate-income households, and 33 percent for low-income households. These areas of Farmersville will benefit from the mix of households of differing income levels. The Site Inventory will improve the mixture of housing opportunities by income level in the city and will not exacerbate segregation by income between neighborhoods.

Sites by Overcrowded Households

Throughout most of the city, between five and 10 percent of households are overcrowded with the lowest percentage of overcrowded households in North Farmersville. Downtown, East, West, and South Farmersville have a mixture of low- and medium-density residential development, alongside commercial land uses. Planned and approved projects and opportunity sites in Downtown, East, West, and South Farmersville could accommodate 1,265 housing units, of which 414 would be lower-income, equal to approximately 29 percent of the total housing units included in the Site Inventory and 74 percent of the total lower-income sites. These additional units will provide additional housing opportunities for overcrowded households in these neighborhoods. The Site Inventory will not exacerbate overcrowding conditions but will add new housing opportunities in areas that need them.

Sites by Overpayment by Renters

The percentage of renters experiencing overpayment is high throughout Farmersville. Figure C5-28 shows the housing opportunity sites by overpayment by renters. The planned and approved projects and housing opportunity sites will provide housing opportunities for a mix of income levels throughout the city, including 556 units appropriate for lower-income households, 233 units appropriate for moderate-income households, and 642 units appropriate for above moderate-income households. Most of these housing units will likely be rental units, based on trends in planning entitlements and developer interest.

According to the UDP, new market-rate construction in gentrifying areas neither worsens nor eases rates of people moving out of the area. It increases rates of people moving to an area across all socio-economic groups, particularly high-income residents. The UDP recommends subsidized housing construction and housing preservation to help existing residents stay in their neighborhood. The mix of lower, moderate, and above moderate-income housing units throughout Farmersville will provide affordable housing options for existing lower-income residents as well as encourage higher-income households to move into the area. The Site Inventory will not exacerbate overpayment by renters but will add new housing opportunities in areas that need them.

Source: AFFH Data Viewer, 2023.

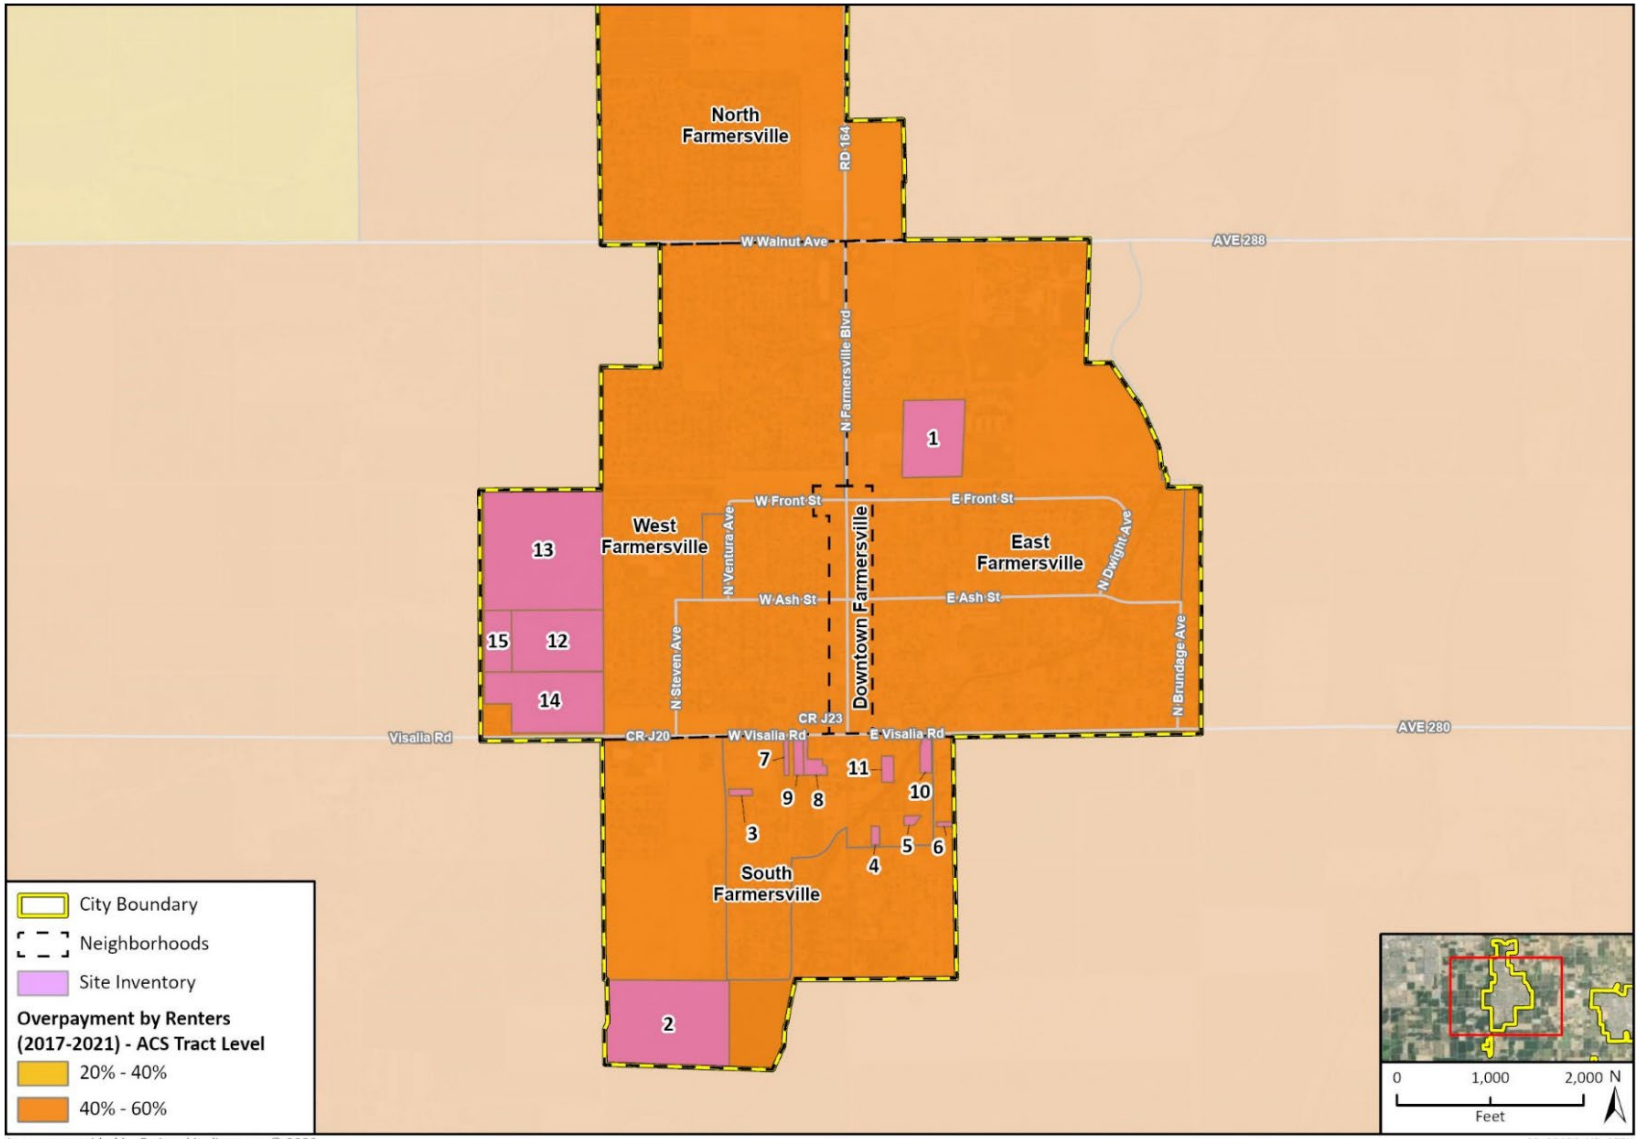
Figure C5-28 Housing Opportunity Sites by Overpayment by Renters, Farmersville



Source: AFFH Data Viewer, 2023.

Sites by Areas of Integration and Segregation

There is one census tract of high poverty and segregation in Farmersville, which consists of the entirety of Downtown and East Farmersville and portions of West and South Farmersville. This census tract, along with the rest of Farmersville is predominantly Hispanic/Latino and has a high percentage of non-white residents. Housing opportunity sites in Downtown and East Farmersville accommodate a mix of income levels in areas that already have a diverse mix of ethnic and racial groups. Figure C5-29 shows the housing opportunity sites by percent non-white residents. The Site Inventory will not contribute to segregation based on race/ethnicity or income level.

As discussed in Chapter C2, *Housing Needs Assessment*, approximately 11 percent of the population has one or more disabilities. For persons with disabilities who live independently or with other family members, independent living can be supported with special housing features, financial support, and in-home supportive services. The location of housing is also an important factor for people with mobility restrictions who rely on public transportation for travel. There are no areas with a concentration of residents with a disability. Housing opportunity sites in Farmersville would add housing units appropriate for a mix of income levels throughout the city, with a total of 556 units appropriate for lower-income households, 233 units appropriate for moderate-income households, and 642 units appropriate for above-moderate-income households.

Sites by Communities Vulnerable to Displacement

Downtown and East Farmersville and portions of West and South Farmersville are considered to be vulnerable to displacement by the UDP and are considered sensitive communities. All the proposed housing units in East Farmersville and 52 percent of the housing units South Farmersville are in areas considered to be vulnerable to displacement. There are no housing opportunity sites in Downtown Farmersville. Figure C5-30 shows the housing opportunity sites in relation to the location of sensitive communities The planned and approved projects and opportunity sites include capacity for 186 units appropriate for lower-income households in areas where low-income residents are at risk of displacement in East and South Farmersville, approximately 33 percent of the total number of the proposed lower-income units accommodated by the opportunity sites. These lower-income units will provide affordable housing options for existing very low and low-income residents that are at risk of displacement.

Sites by CalEnviroScreen Score

Farmersville has high CalEnviroScreen scores throughout the entire city, with scores ranging from the 56th to 82nd percentile. The lowest CalEnviroScreen scores are in North Farmersville and the highest CalEnviroScreen scores are in portions of West and South Farmersville. Neighborhoods with census tracts with a CalEnviroScreen score 75 and greater (indicating higher rates of pollution burden) are located in Downtown, East, South, and West Farmersville. Figure C5-31 shows the housing opportunity sites by CalEnviroScreen score. Planned and approved projects and housing opportunity sites in census tracts with CalEnviroScreen scores higher than 75 can accommodate 228 units appropriate for lower-income households, equal to approximately 41 percent of the total number of lower-income units. Therefore, the Site Inventory would not concentrate lower-income units in areas of higher pollution burden.

Sites Analysis Summary Data

Table C5-6 summarizes the Site Inventory by development priority area, sites, number of units by income level, and census tract characteristics.

C5.13 Contributing Factors and Meaningful Actions

This section lists contributing factors that create, perpetuate, or increase the severity of one or more fair housing issues that were identified in community outreach and the analysis in this document.

Enforcement and Outreach

The City's website has does not provide information on fair housing rights and resources. There are no links to the HATC or FHCCC websites. In addition, the City relies on local fair housing non-profit organizations to provide fair housing assistance to residents and defers fair housing complaints and issues to these organizations.

Contributing factors to enforcement and outreach in Farmersville include:

- Lack of City collaboration with fair housing agencies and organizations to provide assistance to tenants and landlords: The City does not directly contract with any fair housing providers to distribute information or resources for fair housing.
- Lack of participation in fair housing outreach: No community members participated in the Housing Element workshop.
- Lack of sufficient distribution of fair housing information: The City's website does not have information on fair housing rights and resources and does not provide links to fair housing providers or information on filing fair housing complaints. The City also relies on fair housing providers to distribute fair housing information and publishes limited outreach of their own.
- Lack of fair housing testing: The City does not perform fair housing testing.
- Lack of updated data and analysis of fair housing complaints: The City does not publish data or analysis of fair housing complaints.
- Language Barriers: Seventy-four percent of residents speak a language other than English and 40 percent of residents speak English less than very well.

Segregation and Integration Patterns and Trends

East, Downtown, and West Farmersville have a higher concentration of non-white residents, LMI residents, residents living below the poverty line, and lower median household incomes than other areas of the city. In contrast, North and parts of South Farmersville have lower percentages of non-white residents and slightly higher median household incomes than other areas of the city.

Contributing factors to segregation and integration patterns and trends in Farmersville include:

- Location and limited availability of affordable housing: Affordable housing is concentrated in East and South Farmersville. In addition, there are no public housing units in the city and no subsidized housing units in North Farmersville.
- Land use and zoning patterns: Zoning for medium and high-density residential uses is concentrated in South Farmersville and parts of East Farmersville, while zoning in North, West, and most of East Farmersville consists mostly of low-density residential.
- Displacement of residents due to economic pressures: High rates of cost burden and rising housing costs are placing low-income residents at risk of displacement. According to Zillow, median home value has increased 55 percent in the last five years (from $178,876 in 2018 to $277,717 in 2023).

Racially and Ethnically Concentrated Areas of Poverty

East and Downtown and parts of West and South Farmersville have a higher percentage of non-white residents and lower median household incomes.

Contributing factors to racially and ethnically concentrated areas of poverty in Farmersville include:

- Land use and zoning patterns: Zoning for medium and high-density residential uses is concentrated in South Farmersville and parts of East Farmersville, while zoning in North, West, and most of East Farmersville consists mostly of low-density residential.
- Location of affordable housing: Subsidized housing is concentrated in areas zoned medium density resident in West and South Farmersville. There are no subsidized housing units in North Farmersville, which has the highest median household income of all Farmersville neighborhoods.

Disproportionate Housing Needs

Housing problems are a widespread issue throughout the city. Approximately 45 percent of all households in Farmersville, especially extremely low-, very low-, and low-income households, are experiencing housing problems. Renter households in Farmersville have high rates of cost burden and overcrowding, higher than the county and many other cities in the county. Low-income residents are also at risk of displacement throughout East, Downtown, and parts of East and South Farmersville. Contributing factors to disproportionate housing needs in Farmersville include:

- Lack of sufficient affordable housing to accommodate households in need: Approximately 66 percent of households (1,915 households) are lower-income, however there are only 328 subsidized housing units and 70 households receiving HCVs in Farmersville.
- Lack of availability of affordable units in a range of sizes: Approximately 24 percent of households are large households and 12 percent of households are overcrowded, indicating there is a need for more housing to accommodate larger households.
- Displacement of residents due to economic pressures: According to Zillow, median home value has increased 55 percent in the last five years (from $178,876 in 2018 to $277,717 in 2023). In addition, 34 percent of all households and 45 percent of renter households are cost burdened.

Disparities in Access to Opportunities

A large part of the city is considered an area of high segregation and poverty. Only North Farmersville is considered a high resource area. In addition, large areas of the city have low education, economic, and environmental opportunity scores. The entire city has a high pollution burden from ozone, particulate matter, and pesticide use. Only North Farmersville is considered a high resource area. In addition, transit access and walkability are lower in Farmersville than in larger cities in the region.

Contributing factors to disparities in access to opportunities in Farmersville include:

- The availability, type, frequency, and reliability of public transportation: Transit access is limited in Farmersville. There are few bus stops in Farmersville and transit routes do not operate at frequent intervals (mostly one-hour intervals).
- Lack of walkability: According to the National Walkability Index, walkability is low throughout the entire city.
- Lack of employment opportunities: Farmersville does not have a large number of employment opportunities. Approximately 94 percent of residents commute outside of the city for work.

- Lack of access to high paying jobs: The largest industries in Farmersville are agriculture, forestry, fishing and hunting, and mining (19 percent of employed population), educational services, and health care and social assistance (17 percent of employed population), and arts, entertainment, recreation, and accommodation and food services (16 percent of employed population). These industries primarily provide lower paying job opportunities.
- Location of environmental health hazards: Pollution burden is high throughout the city. Pollution burden associated with drinking water contaminants is high in North Farmersville and parts of East and South Farmersville and pollution burden associated with solid waste sites are high in parts of East and South Farmersville.
- Widespread social vulnerability: Farmersville residents have higher social vulnerability than most of the state, with high rates of poverty, unemployment, housing cost burden, high percentage of seniors, children, persons with a disability, and single-parent households, high percentage of racial and ethnic minority residents. These factors indicate Farmersville has a high percentage of residents that are underprivileged and underserved and are more susceptible to experiencing housing issues and lack of housing opportunities.

C5.13.1 Meaningful Actions to Address Fair Housing Issues

Based on the analysis conducted in this AFFH document highlights the prominent fair housing issues and contributing factors that impede access to safe, affordable, and vibrant housing in Farmersville. Furthermore, the findings of this analysis were used to develop meaningful actions, metrics and milestones that promote inclusive communities, increase housing opportunities, and address racial/ethnic and economic disparities in the city. The contributing factors were prioritized to better formulate policies and programs and carry out meaningful actions to further fair housing. Meaningful actions to address fair housing issues are included in the housing programs located in Chapter C7, *Housing Plan*.

This page intentionally left blank.

C6 Review of Past Accomplishments

To develop appropriate programs to address the housing issues identified in the 2023-2031 Housing Element, the City of Farmersville reviewed the housing programs adopted in the 2015-2023 Housing Element and evaluated the effectiveness of these programs in delivering housing services and assistance. Table C6-1 and Table C6-2 summarizes the City's construction, rehabilitation, and preservation goals and accomplishments during the 5th cycle planning period and Table C6-3 provides a detailed program-level assessment of housing accomplishments over the last planning period.

C6.1 Overview of Accomplishments

During the 5th cycle Housing Element, the City implemented programs to support infill development, market-rate and affordable housing production, lot consolidation, homeownership, and preservation of existing housing stock. Most notably, the City implemented the following:

- **3.A. Infill Development Program.** In 2019, the City approved a 108-unit affordable multifamily development (Los Arroyos) on an infill site near the southeast corner of Walnut and Farmersville Boulevard.
- **4.C. New Single Family Residential Zone.** The City updated the Farmersville Zoning Ordinance to include a new single family residential zone with a larger minimum lot size than the current R-1 zone.
- **1.A. First Time Homebuyer Program.** The City (working with Self Help Enterprises) packages first time homebuyer loans for qualified households. Two loans were completed during 2021.
- **2.D. Community Development Block Grant Funding Program.** Two home rehabilitation jobs were completed in 2021. Both are funded with 2018 HOME grant funds. One household was "Low Income," and the other was "Very Low Income."

C6.2 Effectiveness in Addressing Special Needs

Special needs communities are demographic or occupational groups that call for specific program responses to address unique housing needs. State law specifically requires analysis of the special housing needs of people who are elderly or disabled (including developmental disabilities), female-headed households, large families, farmworkers, and people experiencing homelessness. These special-needs groups often spend a disproportionate amount of their income to secure safe and decent housing and are sometimes subject to discrimination based on their specific needs or circumstances.

During the 5th cycle, the City took the following actions to address special needs housing:

- In late 2019, the City approved a 108-unit multifamily residential project (Los Arroyos) that will include up to 38 units for farmworkers (and 20 units for homeless individuals).
- The City continues to work with the Housing Authority to assist with their rental programs. The City also supports the Housing Authority's ongoing operation of the Linnel Farm Labor camp, which features 191 dwelling units on the western edge of Farmersville.
- The City commits to supporting special needs populations through programs in the 6th housing cycle, as described in Chapter C7, *Housing Plan*.

C6.3 Quantified Objectives

Table C6-1 summarizes the City's progress toward meeting the 5th cycle Housing Element objectives to rehabilitate and conserve/preserve existing housing stock.

Table C6-1 Quantified Housing Objective and Achieved Accomplishments (2015-2023)

	Rehabilitation		Conservation/Preservation	
Income Levels[1]	**Objectives**	**Actual**	**Objectives**	**Actual**
Very Low Income (<50% AMI)	60	6	55	
Low Income (50-80% AMI)	–	4	–	–
Moderate Income (80-120% AMI)	–	–	–	–
Above Moderate (>120% AMI)	–	–	–	–
Total	**60**	**10**	**55**	**0**

[1] Income levels are based on Area Median Income (AMI).

As shown in Table C6-2, the City did not reach its 5th cycle RHNA goals for any income category due to limited staff resources and low interest from housing developers. The City commits to actions to support housing development for all income levels as described in Chapter C7, *Housing Plan*.

Table C6-2 RHNA Progress (2015-2023)

Income Levels[1]	5th Cycle RHNA	Permits Issued	Percent RHNA Progress with Permits Issued
Very Low Income (<50% AMI)	74	8	11%
Low Income (50-80% AMI)	65	13	20%
Moderate Income (80-120% AMI)	68	17	25%
Above Moderate (>120% AMI)	259	5	2%
Total	**466**	**43**	**9%**

[1] Income levels are based on Area Median Income (AMI).

C6.4 Review of Past Accomplishments

Table C6-3 provides a detailed program-level assessment of housing accomplishments during the 5th cycle Housing Element planning period.

Table C6-3 Review of Past Accomplishments

Program		Description and Objectives	Progress and Continued Appropriateness
Goal A: Provisions for extremely low-, very low-, low., and moderate-income housing. To develop through public and private channels, sufficient new housing to ensure the availability of affordable housing for all households in Farmersville			
1.A	Home Funding	Farmersville will encourage and work with a qualified housing entity to submit an application for funds under the HOME Program on behalf of the City. The City will in turn provide funds to first-time homebuyers, either as down-payment assistance and/or to pay development impact fees. This program provides financial assistance to low- to moderate- income families for the purchase of newly constructed homes or existing homes. Other groups that could be assisted with rental housing include Extremely Low Income and disabled residents. The City Planner and City Manager will work with a qualified nonprofit housing entity to identify appropriate building sites.	The City (working with Self Help Enterprises) packages first time homebuyer loans for qualified households. The City has facilitated 55 first time homebuyer loans during the fifth Housing Element cycle. Due to the continued effectiveness of this program, it will be carried over as Housing Plan Program 12.
3.A	In-Fill Development	Farmersville will work with a qualified developer to construct single family homes that are affordable to low- and moderate-income households. These homes could be constructed on in-fill residential lots some of which may have originally contained dilapidated homes that have been demolished. The City Planner and Code Enforcement officer will identify appropriate lots for this program.	No infill projects were processed during 2023. However, in 2019 the City approved a 108-unit affordable multifamily development (Los Arroyos) on an infill site near the southeast corner of Walnut and Farmersville Boulevard. The first phase has been completed and the second phase is under construction. Prior to that the City approved a 20-lot single family residential subdivision on the south side of Petunia Avenue west of Farmersville Boulevard and this project has received final map approval. Development of this subdivision is expected soon. The City does maintain a map for interested parties showing available sites for housing projects. Due to limited staffing and resources, this program will not be carried over into the into the 6th cycle.
4.A	Planned Development Zone	The City of Farmersville will encourage private developers who are proposing residential development to seek a P-D (Planned Development) zone district. These districts allow for greater flexibility in residential design and better utilization of land. These opportunities allow the developer to potentially provide a more affordable housing product. The City will prepare an informational brochure that explains the standards and procedures for this zone.	No projects were proposed during 5th cycle planning period that utilized the P-D zone. However, two large scale PD projects are expected to be submitted in 2023 (Eagle Meadows and Cameron Creek). This program will be revised and carried over into Housing Plan Program 6 to reduce constraints to housing development.

Program		Description and Objectives	Progress and Continued Appropriateness
5.A	Density Bonus	The City of Farmersville will encourage developers to apply for a density bonus for qualified projects. The City adopted its own density bonus ordinance in 2015 but prior to that processed density bonus applications through the State's density bonus law. The ordinance provides that a density bonus may be granted for projects that agree to limit residency to qualified households, including low-income and the elderly. In addition to granting a density bonus of up to 35 percent, the City must also grant at least one additional development standard concession – such as reduced building setbacks, for instance. The City will continue to monitor amendments to the State's density bonus laws and incorporate those into local code as appropriate.	No projects expressed interest in the density bonus ordinance during 2021. However as noted elsewhere, the City approved the Los Arroyos (formerly Farmersville Village) 108-unit low income project in 2019 without need for a density bonus. Due to the continued appropriateness of this program, it will be carried over into Housing Plan Program 9 to facilitate affordable housing development.
6.A	Housing Authority	The City of Farmersville will assist the Tulare County Housing Authority's implementation of the conventional Public Housing Rental Program and the Section 8 Existing Program, which provides rent subsidies directly to participating landlords, and will support that Agency's attempts to secure additional funding for expanded programs. The City Planner will assist the Housing Authority on an ongoing annual basis in identifying additional rental housing stock that can be used for the Section 8 Program.	The City continues to support the Tulare County Housing Authority and its Section 8 program. Information provided by the Housing Authority on recent voucher usage in Farmersville is as follows: Current (February, 2023): 74 As of 12/31/2022: 74 As of 12/31/2021: 72 As of 12/31/2020: 84 As of 12/31/2019: 100 As of 12/31/2018: 101 As of 12/31/2017: 104 As of 12/31/2016: 102 Due to the ongoing nature of this program, it will be carried over into Housing Plan Program 12 to provide assistance to lower-income households.
7.A	Farmworker Housing	The City will identify a development partner for a farmworker housing project to develop affordable housing for farmworkers. The City will support the project by expediting approval and consideration of impact fee reductions, waivers or deferrals will be given. The City will seek to develop 50 units in this fashion during the Housing Element planning period.	In late 2019, the City approved a 108-unit multifamily residential project (Los Arroyos) that will include up to 38 units for farmworkers (and 20 units for homeless individuals). The City also supports the Tulare County Housing Authority's operation of the Linnel Farm Labor Center immediately west of the city limits. This facility provides 191 units for households involved in agricultural occupations and is the largest-such development in the San Joaquin Valley. Due to the continued appropriateness of this program, it will be refined and carried over into Housing Plan Program 9 to facilitate and fund farmworker housing.

Program		Description and Objectives	Progress and Continued Appropriateness
8.A	Assist in Development	The City will proactively contact developers of housing affordable to lower income households, including extremely low income and special needs groups such as persons with disabilities. The City will seek opportunities for partnership and assist development, including: ▪ Assistance with site identification ▪ Facilitate entitlement (e.g., priority processing) ▪ Grant incentives and concessions to promote feasibility of housing for lower income households ▪ Fee deferral or reduction as appropriate ▪ Explore and pursue or assist in application to various funding sources, such as State and Federal funds.	The Los Arroyos project provides 108 units reserved for Very Low- and Low-Income households, including units reserved for farmworkers and the homeless. Also, all ground-floor units are handicap-accessible. This program will be incorporated into Housing Plan Program 9 and 12 to provide affordable housing and housing for special needs populations.
Goal B – Mitigation of Governmental Constraints; Minimize governmental constraints Farmersville that would jeopardize the development of affordable housing.			
1.B	Infill Projects	The City shall take action to promote development of qualified affordable housing projects on properly zoned small/odd shaped lots. Financial assistance could be made available to assemble parcels, reduce, defer or eliminate impact fees, reduce building/planning permit fees or assist in the installation of off-site improvements, such as curb/gutter or infrastructure, or for the demolition of existing substandard units. The City will establish a program to facilitate this action plan, including creation of a map identifying potential infill sites and a brochure to market the program to potential developers. These materials will be completed by the first quarter of 2017. The City will endeavor to facilitate the development of 20 units during the planning period of the Housing Element.	While no infill projects were approved during the 5th Cycle planning period, the City previously approved a 20-lot subdivision that is nearing development. Also, the City approved a 108-unit very low income multi-family residential complex in 2019 on an infill location. That project is currently seeking financing. The City does maintain a map for interested parties showing available sites for housing projects. Due to limited staffing and resources, this program will not be carried over into the into the 6th cycle.
2.B	Transitional and Supportive Housing	Add Transitional and Supportive Housing as permitted uses in all residential zones. Farmersville currently allows transitional and supportive housing in the RM zone but state law requires that it be allowed in all residential zones, only subject to zoning standards that apply to other residential uses in that zone. Accordingly, the City will need to amend the zoning ordinance to allow transitional and supportive housing in the R-1 zone. The City will incorporate these amendments into the comprehensive zoning ordinance update that is currently under way.	The uses “Transitional Housing” and “Supportive Housing” were adopted in August of 2016. Due to this program being achieved in 2016 it is recommended that this program be eliminated.

Program		Description and Objectives	Progress and Continued Appropriateness
3.B	Ensure General Plan Consistency	Whenever a General Plan element is being amended (to add new policies or new land use designations, for example) the Planning Department shall include an analysis of whether the amendment is consistent with policies of the Housing Element.	Though no instances have arisen during 2023, the City continues to ensure that any General Plan amendments are consistent with the Housing Element. Due to this program being a regular function of the Housing Division staff, it is recommended that this program be eliminated.
4.B	Water Supply	The City shall pursue funding to install additional capacity in the municipal water system, to ensure that water supply does not become a constraint to the production of housing. The City shall annually explore and pursue funding opportunities, as appropriate, to expand and improve water (and other utilities as needed) to accommodate housing needs.	The Water Master Plan update is programmed on the City's Five-Year Capital Improvements Program. The City released an RFP to update the comprehensive Water Master Plan in early 2024, and work is expected to begin in late 2024. This will allow the City to more effectively plan for and accommodate future housing development. Due to the continued appropriateness of this program, it will be carried over into Housing Plan Program 13 to improve public facilities and infrastructure.
5.B	Minimum Density for the RM-2.5 Zone	The City shall amend the Zoning Ordinance to specify a minimum density of 20 units per acre for the RM-2.5 zone on lots that are large enough to accommodate at least sixteen dwellings.	The Zoning Ordinance for the RM-2.5 zone was amended. This program has been completed and will be eliminated from future housing elements.
Goal C: Moderate Income Housing Opportunities – To develop a market for middle-income housing.			
1.C	Planned Development Zones	Farmersville will encourage private developers who are proposing residential development to seek a P-D (Planned Development) overlay district. Planned Development standards allow for greater flexibility in residential design and more efficient utilization of land. These opportunities allow the developer to potentially provide a more affordable housing product. Within the past five years the City has successfully facilitated the approval of over 450 lots within P-D zoned subdivisions.	No Planned Development projects were proposed in the 5th housing cycle. However, two large scale PD projects are expected to be submitted in 2023 (Eagle Meadows and Cameron Creek). Due to the continued appropriateness of this program, it will be carried over into Housing Plan Program 9 to facilitate affordable housing development.
2.C	HOME Program Funding	The City of Farmersville will continue to implement the first time home buyer program with HOME funds. This program serves those households who are otherwise excluded from the market-rate purchase of a home within the community (households earning less than 80% of the area median income). Buyers will be first-time home buyers (not having owned a home for the previous three years). Financial participation in these programs will include assistance with down payment costs, closing costs and other secondary financing mechanisms. The City will market this program utilizing English and Spanish language brochures and will endeavor to assist seven households per year with this program.	The City (working with Self Help Enterprises) offers HOME-funded first-time homebuyer loans to qualified lower income households, and two such loans were completed during 2020. Due to the ongoing nature of this program, it will be carried over into Housing Plan Program 12 to provide homebuyer assistance and support low- and moderate-income homeownership.

Program		Description and Objectives	Progress and Continued Appropriateness
3.C	2025 General Plan Implementation	The City shall implement policies in the 2002 General Plan that will lead to diversification of Farmersville's economy – thereby creating more opportunities for the establishment of moderate and above moderate-income housing	The City has been implementing a number of action plans in the General Plan, including pursuit of several grants to fund economic development activities. Major city-sponsored activities have included the widening of Visalia Road and the widening of Farmersville Boulevard (currently underway), and upgrading the capacity of the City's wastewater treatment plant, completed during 2021. The City also adopted an economic incentive program to offer sales tax rebates to commercial and industrial developers. Farmersville was also one of the few cities in Tulare County to allow cannabis businesses. Two retailers opened during 2020 with a third approved and nearing construction. This program is revised and carried over into Housing Plan Program 7 to update the Land Use Element in the City's General Plan to remove constraints to housing development.
4.C	New Single Family Residential Zone	The City will explore establishing a single-family residential zone with a larger minimum lot size than the current R-1 zone, which has a minimum lot size of 6,000 square feet. A minimum lot size of 7,500 square feet (or similar) could be considered, in an effort to attract more upscale housing to Farmersville. This would require an amendment to the policies of the Land Use Element of the Farmersville General Plan and an amendment to the Farmersville Zoning Ordinance.	The City obtained SB2 funding in 2016 to complete a comprehensive update of the Farmersville Zoning Ordinance, which included a new single family residential zone. Due to limited staffing and resources, this program will not be carried over into the into the 6th cycle.
Goal D; Conserve and improve existing affordable housing stock – To manage housing and community development in a manner that will promote the long-term integrity and value of each new housing and the environment in which it is located			
1.D	Project Review	The City of Farmersville shall facilitate residential development that is well-designed and maintained, attractive, and affordable. Affordable housing units will be accomplished through increased unit densities; attractive design through architectural review through the city's site review process and proper maintenance, through conditions such as maintenance agreements and landscaping and lighting districts.	This action plan is implemented with each development project that is submitted to the City. Due to the ongoing nature of this program, it will be revised and carried over into Housing Plan Program 9 to facilitate affordable housing development.
2.D	Community Development Block Grant Funding	Farmersville will continue to annually apply for CDBG funds for rehabilitation of housing in Farmersville. The City will aim to process ten housing rehabilitations per year under this funding.	Two home rehabilitation projects were completed in 2023. Both are funded with 2018 HOME grant funds. One household was "Low Income", and the other was "Very Low Income". Due to the continued appropriateness of this program, it will be carried over into Housing Plan Program 11 to implement the Rehabilitation Program.

Program		Description and Objectives	Progress and Continued Appropriateness
3.D	Removal of Substandard Units	The City will continue to identify dilapidated units in Farmersville that require demolition. The City will notify the property owner of this requirement. Once the lot is vacant, the City will work with the property owner to facilitate the construction of a new unit on the lot.	One existing dilapidated dwelling was removed as a result of code-enforcement action during 2020. This program is revised and carried over into Housing Plan Program 4 to require replacement housing.
Goal E: Provision of Adequate sites and infrastructure for housing development – Provide adequate housing sites for a range of housing types within the Farmersville planning area			
1.E	Monitor Land Supply	Pursue funding through the HUD Section 202 and 811 programs, and through State and federal low-income housing tax credit programs, for the construction of additional housing for seniors and persons with disabilities.	All ground floor units in the Los Arroyos affordable multi-family residential project are designed to accommodate disabled individuals. There was no dedicated senior housing developed in Farmersville during the 5th cycle; the most recent such project was the 40-unit Farmersville Senior Housing complex developed in 2009. This program is revised and carried over into Housing Plan Program 12 to provide special needs housing.
2.E	Lot Consolidation	The City will establish a special lot consolidation program to facilitate the combination of small parcels that are zoned for High Density Multi-Family Residential to larger sizes that will increase the feasibility of affordable income housing projects by providing for larger-scale projects. As part of this program, the City will waive the fee for a lot merger. To promote this program the City will prepare a brochure and other promotional materials and forward this information to affordable housing developers in the area.	The City administers this program in an ongoing fashion. The City processed a lot line adjustment for the Los Arroyos (108-units multi-family residential project) in 2020. Due to limited staffing and resources, this program will not be carried over into the into the 6th cycle.
3.E	Utility Priority	The City will give priority for water and sewer service to qualified affordable housing projects, consistent with SB 1087. The City will adopt a written procedure, pursuant to California Government Code Section 65589.7.	No written process has been established (other than the policy as it is written in the Housing Element. Due to the continued effectiveness of this program, this program is revised and carried over into Housing Plan Program 2 to ensure adequate development sites.
Goal F: Energy Conservation Opportunities – To promote energy conservation activities in all residential neighborhoods			
1.F	2025 General Plan Implementation	Implement policies of the 2002 General Plan update and amend sections of the Farmersville Zoning and Subdivision Ordinances to promote energy conservation. Specifically, amend sections of the ordinances that refer to solar orientation, planting of street trees, width of streets, and minimizing the use of cul-de-sac streets.	The City continues to implement energy-conservation policies of the General Plan with each new development project, primarily through planting of shade trees and orientation of buildings to facilitate active and passive solar energy. The Farmersville Village project will install solar panels on buildings and carports. This is a regular function of Planning staff. Therefore, this program will not be continued into the 6th cycle Housing Element.

Program		Description and Objectives	Progress and Continued Appropriateness
2.F	Weatherization Program	Continue implementing weatherization programs for senior and low-income households. The rehabilitation of housing units using CDBG funds will include energy conservation improvements, including dual paned windows, wall insulation, weather stripping, etc.	Two home rehabilitations occurred during 2021 with weatherization components. Due to the continued effectiveness of this program, this program will be carried over into Housing Plan Program 11.
3.F	Fees for Solar Systems	The City shall consider adopting reduced building permit fees for the installation of residential solar power systems.	Other priorities and funding constraints have delayed adoption of this program. Due to the incompleteness of this program, it will not be continued into the 6th cycle Housing Element.
4.F	Overall Rehabilitation	The rehabilitation of housing units by a qualified nonprofit housing entity using CDBG funds will include energy conservation improvements, including dual-paned windows, wall insulation, weather stripping, etc.	Utilizing the services of Self-Help Enterprises, the City has participated in the rehabilitation of nine units during the 5th cycle for low-income households. This program will be revised and carried over as Housing Plan Program 11 to implement the Rehabilitation Program.
Goal G: Equal Housing Opportunities and Public Participation – To promote equal access to safe and decent housing for all economic groups			
1.G	Rental Assistance	Farmersville will encourage rental assistance for extra low-, very low- and low- income households through programs provided by the Tulare County Housing Authority.	The City continues to work with the Housing Authority to assist with their rental programs. The City also supports the Housing Authority's ongoing operation of the Linnel Farm Labor camp, which features 191 dwelling units on the western edge of Farmersville. Due to the continued appropriateness of this program, it will be carried over into Housing Plan Program 12 to provide housing assistance to low-income and special needs households.
2.G	Housing Information	Farmersville continues to prepare a newsletter and brochure detailing equal housing opportunity programs. Consideration will be given to including these brochures in monthly utility bills. This information will also be added to the City's website and made available at various locations such as City Hall, the Post Office, Library, Community Center, Senior Citizen's center and other appropriate locations. Information shall be prepared in English and Spanish. Individuals with questions or complaints will be referred to the appropriate department as follows: ▪ Code Enforcement and building code issues: Farmersville Code Enforcement Department or Tulare County Building Department ▪ Planning and zoning issues: Farmersville Planning Department ▪ Landlord issues and complaints: California Department of Fair Employment & Housing ▪ Section 8 and Housing Authority Units: Tulare County Housing Authority	The City offers housing information and brochures, both at City Hall and on the City's website. Due to the continued appropriateness of this program, it will be carried over as Housing Plan Program 14 to provide fair housing information.

Program		Description and Objectives	Progress and Continued Appropriateness
3.G	Accessibility	Farmersville, through its review processes will require that all ground floor multi-family housing units meet accessibility requirements of state and federal housing requirements.	The City continues to work with developers to ensure that housing projects meet accessibility standards. The Los Arroyos very low-income multi-family residential project was approved in December 2019. The first 54 units are complete and the second phase under construction. All ground-level units are designed to be accessible to disabled residents. Due to compliance with state and federal requirements as a mandatory function of housing development, this program will be eliminated.
4.G	Public Participation	Implement a program of information and involvement to ensure that all segments of Farmersville's population has the opportunity to know and participate in housing programs. These strategies will include the following: a) Make the Housing Element available in electronic form on the City's website b) Prepare a written (and on-line) brochure that explains the City's housing programs and policies. The brochure will be made available in English and Spanish. c) Continue to publicize meetings and events concerning housing.	The City has made available brochures and other information on housing programs both at City Hall and on the City's website. The City contracts with Self Help Enterprises to provide its housing programs, including first-time homebuyers and housing rehabilitation programs for low-income households. This program will be revised and incorporated into Housing Plan Program 14 to support fair housing goals.
Goal H– Preserve at-risk assisted Projects; Preserve residential dwellings from becoming unaffordable due to conversion to market rate housing.			
1.H	Section 8 Housing Program	The City will consider seeking funds rehabilitation of rental units if the owner agrees to rent the units under the housing Authority Section 8 program	This program previously relied on funding from the Farmersville Redevelopment Agency. Redevelopment agencies across the state were dissolved as a result of State law. Due to the loss of the redevelopment agency, this program will be eliminated.
2.H	Conversion Monitoring	The City will closely monitor notices of the potential conversion of existing affordable housing projects to market-rate rents, and will undertake actions (as feasible) to try to preserve the affordability of such units. The City will endeavor to notify residents and provide assistance if notification has not been provided by the property owner. The City will notify appropriate state and federal housing agencies that administer rent-restricted units in Farmersville that it wishes to receive notices of potential conversion of units to market-rate rents. Entities that have indicated interest in participating in affordability programs are listed in Table 5-5 of Chapter 5.	The City continues to monitor notices of conversion. No conversion notices appeared during the 5th housing cycle. This program will be continued and carried over into Housing Plan Program 10 to support affordable housing units at risk of converting to market rate.

C7 Housing Plan

This eight-year Housing Plan (2023-2031) sets forth a strategy, including goals, policies, and programs, to address housing issues identified in the City of Farmersville.

C7.1 Goals and Policies

Goal 1: Regional Collaboration	**Work collaboratively with jurisdictions in the county to efficiently address housing issues and find regional solutions.**

Policy 1.1 Proactively coordinate with cities, Tulare County, and other agencies and organizations to create effective policies and programs and respond to opportunities for achieving common housing goals.

Policy 1.2 Participate in, as appropriate, pursuit of state and federal housing funds to address regional housing issues.

Goal 2: Housing Development	**Provide an adequate supply and range of housing types to meet the diverse needs of residents.**

Policy 2.1 Provide adequate sites for new housing development to accommodate the regional housing needs allocation (RHNA) throughout the planning period.

Policy 2.2 Facilitate a range of housing development that will meet the needs of all income levels including extremely low, very-low, low-, moderate- and above moderate households.

Policy 2.3 Encourage a range of housing types and sizes in large-scale development and annexations.

Policy 2.4 Promote infill development on vacant and underutilized sites within developed areas.

Policy 2.5 Encourage higher density and mixed use residential development along major transportation and transit corridors and/or near existing or planned community facilities and services.

Policy 2.6 Enact programs that facilitate well-designed, energy efficient development and flexible standards to encourage high quality projects.

Goal 3: Affordable Housing Options	**Facilitate the development of affordable housing and protect the existing supply of affordable housing to extremely low, very low-, low- and moderate-income households.**

Policy 3.1 Provide a range of incentives and tools to encourage affordable housing for all lower-income levels, including extremely low-income.

Policy 3.2 Support the Tulare County Housing Authority (TCHA) by promoting Housing Choice Voucher (HCV) opportunities.

Policy 3.3 Ensure permit processing procedures to ensure streamlining is available for affordable housing development projects (Senate Bill (SB) 35).

Policy 3.4 Support the development of Accessory Dwelling Units (ADUs) as an affordable housing option.

Policy 3.5 Promote home ownership for lower- and moderate-income households by pursuing grant funding for downpayment assistance and other homeownership loan programs.

Policy 3.6 Monitor existing affordable housing developments and pursue preservation strategies to maintain their affordability.

Goal 4: Housing and Neighborhood Preservation	**Maintain and improve the city's existing housing stock.**

Policy 4.1 Preserve existing residential neighborhoods by promoting balanced design and architecture.

Policy 4.2 Support code enforcement efforts to work with property owners with repairs and rehabilitation of housing to preserve existing housing stock.

Policy 4.3 Utilize Capital Improvement Programs for repairs and improvements of public infrastructure and facilities in existing neighborhoods.

Goal 5: Housing for Persons with Special Needs	**Support and provide housing and services for people with special needs in the community. People with special needs include, but are not limited to, seniors, families with children, people with disabilities, single-parent families, farmworkers, and people who are experiencing homelessness or at risk of becoming homeless.**

Policy 5.1 Assist in local and regional efforts that address the housing needs of special needs residents.

Policy 5.2 Provide reasonable accommodation for individuals with disabilities to access housing opportunities.

Policy 5.3 Support the development of affordable housing units for farmworkers and farmworker families by encouraging the use of federal, state, and local resources.

Policy 5.4 Coordinate with regional agencies and local non-profit/private developers on housing options and services for people who are experiencing homelessness or at risk of becoming homeless.

Policy 5.5 Proactively apply for and utilize available resources to provide and maintain housing for special needs groups.

Goal 6: Resource Conservation and Sustainable Development	**Utilize energy conservation and sustainable measures for new and rehabilitated housing.**

Policy 6.1 Support and, as appropriate, incentivize the use of green building techniques for new housing and rehabilitation.

Policy 6.2 Promote energy conservation and efficiency in residential developments.

Goal 7: Affirmatively Furthering Fair Housing	**Promote housing opportunities and access for residents regardless of age, race, religion, sex, marital status, ancestry, national origin, color, disability, or economic level in compliance with local, state, and federal fair housing laws.**

Policy 7.1 Promote meaningful and informed participation of residents, community groups, and governmental agencies in all local housing and community development activities.

Policy 7.2 Comply with federal, state, and local fair housing anti-discrimination laws ensuring equal access to housing regardless of circumstances as protected by fair housing laws.

Policy 7.3 Provide fair housing services to city residents and ensure that residents are aware of their fair housing rights.

Policy 7.4 Provide residents with housing mobility options by facilitating the development of a variety of housing types and expanding access to housing services.

Policy 7.5 Protect tenants from discriminatory housing practices and displacement.

Policy 7.6 Promote the integration of affordable and special needs housing in existing and planned neighborhoods.

C7.2 Implementing Programs

Program 1: Regional Collaboration

Collaborate with other jurisdictions in the region on housing efforts, including funding opportunities, best practices, and other efforts to address housing, transit, economic development, and homeless issues in Tulare County.

Regional collaboration efforts can include, but are not limited to:

- Affordable housing development opportunities
- Regional housing programs and outreach efforts
- Economic development opportunities
- Creation of a regional Housing Trust Fund
- Coordination on funding applications and administration
- Identification of transit opportunities and access near new and established residential areas
- Development of environmental mitigation that can improve the quality of life for residents
- Efforts for the development of emergency shelters, low barrier navigation centers, transitional and supportive housing as well as support services for persons experiencing homelessness or at risk of becoming homeless in the county, including participation in the Kings/Tulare Homeless Alliance

Specific Actions, Objectives and Timelines	▪ Participate in regional meetings related to housing and homeless issues to pursue funding and coordination opportunities. Annually pursue funding opportunities for regional housing issues. ▪ Partner with the Kings/Tulare Homeless Alliance to proactively address shelter, housing and support services for people experiencing homelessness. ▪ Collaborate with Tulare County Regional Transit Agency (TCRTA), Tulare County Area Transit (TCaT), and/or TCAG to prepare a study on transit and active transportation needs for Farmersville residents and identify actions to address those needs, focusing on connecting residents to job centers. Complete a transit needs study by January 2026 to identify potential actions. Implement at least one of those actions by the end of 2028. ▪ Hold at least one community workshop in East, South, and West Farmersville by December 2026 to identify active transportation needs and apply for funding to implement projects by December 2027. Implement at least one active transportation projects in East, South, and West Farmersville by the end of the planning period.
Primary Responsible Departments	Planning Department
Funding Sources	General Fund; federal, state, and local grant funds
Relevant Policies	1.1, 1.2
AFFH Themes	▪ Outreach and Education ▪ Housing Mobility ▪ New Housing Opportunities in Areas of Higher Resources ▪ Anti-Displacement and Tenant Protection
AFFH Geographic Targeting	Citywide, with a focus on East, South, and West Farmersville (areas of high segregation and poverty)
AFFH Outcomes	▪ Increase the percentage of residents commuting by public transit by 5 percent by December 2031 with 2020 data as baseline.

Program 2: Adequate Sites for RHNA and Monitoring of No Net Loss

For the 6th cycle Housing Element, Farmersville has been assigned a RHNA of 654 units, including:

- Very Low-Income: 135 units
- Low-Income: 83 units
- Moderate-Income: 121 units
- Above Moderate-Income: 315 units

The City is committed to ensuring that adequate sites at appropriate densities remain available during the planning period, as required by law. As of May 2024, the City has 543 units through projects under construction and units approved or permitted that will be available during the RHNA projection period. Accounting for these units, the City has exceeded the lower- and moderate-income RHNA, but has a remaining RHNA of 315 above moderate units that the City must identify adequate sites for potential development.

The Site Inventory identifies 209 lower-income units, 37 moderate-income units, and 501 above moderate-income units on 15 sites for a total of 747 units based on existing zoning. No sites smaller than 0.5-acre in size are used to accommodate lower-income housing. These sites can accommodate remaining RHNA of 315 above moderate-income RHNA units. Detailed analysis of the Site Inventory can be found in Chapter C4, *Housing Resources*, with sites shown on Figure C4.2.

Of the identified sites, nine are vacant and six are located on land currently used for agriculture. All sites are in a residential zone and would not require rezoning to allow for housing development.

To ensure that the City complies with SB 166 (No Net Loss), staff will monitor the consumption of residential and mixed-use acreage to ensure an adequate inventory is available to meet RHNA obligations. To ensure sufficient residential capacity is maintained to accommodate the RHNA, the City will develop and implement a formal ongoing (project-by-project) evaluation procedure pursuant to Government Code Section 65863. Should an approval of development result in a reduction in capacity below the residential capacity needed to accommodate the remaining need for lower and moderate-income households, the City will identify and if necessary, rezone sufficient sites to accommodate the shortfall and ensure "no net loss" in capacity to accommodate the RHNA.

The City of Farmersville is the provider of water and sewer services within city limits. The City confirms that adequate water and sewer services are available to fully accommodate the RHNA.

Pursuant to SB 1087, as the City's water and sewer service provider, the City has adopted a policy to prioritize the allocation of water/sewer services to affordable housing projects.

Specific Actions, Objectives and Timelines	▪ Facilitate the development of 654 units over 8 years (135 very low-income, 83 low-income, 121 moderate-income, and 315 above moderate-income units). ▪ Maintain an inventory of available vacant and prospective sites that can accommodate new housing; update annually. Make this inventory available to the public and interested developers on the City website. ▪ Annually meet with property owners and interested developers to pursue housing development in the city. ▪ By December 31, 2024, develop a formal procedure to monitor no net loss in capacity pursuant to SB 166. ▪ By 2026, complete update to water and sewer master plans.
Primary Responsible Departments	Planning Department
Funding Sources	General Fund
Relevant Policies	2.1, 2.2, 2.4, 3.1
AFFH Themes	▪ Housing Mobility ▪ New Housing Opportunities in Areas of Higher Resources
Geographic Targeting	N/A
AFFH Outcomes	N/A

Program 3: By-Right Approval

Pursuant to Government Code Section 65583.2, reusing the following types of sites in the City's site inventory for lower-income RHNA are subject to by-right approval exempt from CEQA and subject only to design review based on objective standards when a project includes 20 percent of the units affordable to lower-income households and no subdivision is proposed:

Reuse Sites (No Rezoning Required):

- Vacant sites that were identified in the City's 4th and 5th cycles Housing Element as sites for lower-income RHNA; and
- Nonvacant sites that were identified in the City's 5th cycle Housing Element as sites for lower-income RHNA.

The by-right approval requirement of reuse sites is effective December 31, 2023. Of the sites identified, two sites are reuse sites.

Currently, the Site Inventory does not include any sites that require rezoning. Rezoning of sites past the statutory deadline of the Housing Element to meet the lower-income RHNA are subject to the by-right approval requirement. The by-right approval requirement of rezone sites is triggered by the rezoning. By-right shall mean the local government's review shall not require:

- A conditional-use permit
- A planned unit development permit
- Other discretionary, local-government review or approval that would constitute a "project" as defined in Section 21100 of the Public Resources Code.

This provision does not preclude local planning agencies from imposing design review standards. However, the review and approval process must remain ministerial, and the design review must not constitute a "project" as defined in the Section 21100 of the Public Resources Code.

Parcels that are subject to by-right approval pursuant to state law are identified in Table C4.7 in Chapter C4, *Housing Resources*.

Specific Actions, Objectives and Timelines	By December 31, 2024, concurrent with the Development Code update to provide adequate sites for the RHNA (see Program 2), update the Development Code to address the by-right approval requirements. The zoning code will be amended to address the by-right approval requirements for lower-income sites included in the site inventory with a proposed zoning change, as well as vacant sites identified in two previous housing elements and non-vacant sites identified in the previous housing element and annexation sites, in compliance with Government Code Section 65583.2(h) and (i), to permit owner-occupied and rental multifamily uses by-right (without discretionary approval) for developments in which 20 percent or more of the units are affordable to lower-income households.
Primary Responsible Departments	Planning Department
Funding Sources	General Fund
Relevant Policies	2.1, 2.2, 3.1
AFFH Themes	▪ Housing Mobility ▪ New Housing Opportunities in Areas of Higher Resources
Geographic Targeting	N/A
AFFH Outcomes	N/A

Program 4: Replacement Housing

Development on non-vacant sites with existing residential units is subject to replacement requirements, pursuant to Assembly Bill (AB) 1397. Specifically, AB 1397 requires sites with a residential use within the last five years the replacement of units affordable to the same or lower-income level as a condition of any development on a non-vacant site consistent with those requirements set forth in state Density Bonus Law.

Specific Actions, Objectives and Timelines	By December 31, 2024, amend the Zoning Code to address the replacement housing requirements.
Primary Responsible Departments	Planning Department
Funding Sources	General Fund
Relevant Policies	2.2, 3.6
AFFH Themes	▪ Housing Mobility ▪ New Housing Opportunities in Areas of Higher Resources ▪ Anti-Displacement and Tenant Protection
Geographic Targeting	Citywide
AFFH Outcomes	N/A

Program 5: Accessory Dwelling Units

ADUs provide an important affordable housing option in the city. The City's Second Dwelling Ordinance does not presently comply with all current provisions of housing legislation. Farmersville will amend the Zoning Code in compliance with state laws.

The City will continue to encourage the production of ADUs and work to provide affordable units for lower-income households.

Specific Actions, Objectives and Timelines	▪ Amend the Zoning Code in compliance with state law by December 31, 2024. ▪ By December 31, 2024, facilitate the production of ADUs through efforts including, but not limited to: ▫ Updating ADU webpage to include available resources for ADU production, such as grants for pre-development costs available to lower-income homeowners through California Finance Agency (CalHFA). ▫ Offering expedited reviews for ADU applications. ▪ Promote the development of ADUs, prioritizing North Farmersville. ▫ Conduct three educational workshops, campaigns, or outreach events to promote ADU development in the city to residents, with at least two events targeted to residents and developers in North Farmersville, by the end of the planning period. ▪ Implement strategies to streamline the ADU permitting process. ▫ Develop an ADU application checklist and publish the checklist on the City's website by January 2025. ▫ Add information on the ADU permitting process, as well as available resources and incentives, on the City's website by January 2025. ▫ Adopt pre-approved ADU plans, potentially using SJV REAP's Template ADU Program and SJV REAP Tool: Pre-Reviewed Plan Set, by January 2026, and publish on the City's website.

	▪ Determine and implement strategy to promote ADUs for moderate- and lower-income households by the end of 2028. ▪ Collaborate with neighboring jurisdictions to develop strategies to incentivize the development of ADUs by the end of 2028. Potential strategies may include options such as: ▫ Developing pre-approved ADU plans. ▫ Developing outreach and education materials on the use of housing choice Housing Choice Vouchers on ADUs. ▫ Promoting California Housing Finance Agency (CalHFA) ADU pre-development grants of up to $40,000 to homeowners. ▫ Reducing plan check or permit fees.
Primary Responsible Departments	Planning Department
Funding Sources	General Fund
Relevant Policies	2.2, 2.3, 3.1, 3.4
AFFH Themes	▪ Outreach and Education ▪ Housing Mobility ▪ New Housing Opportunities in Areas of Higher Resources
Geographic Targeting	North Farmersville
AFFH Outcomes	▪ Support the development of at least five ADUs in North Farmersville during the planning period.

Program 6: Zoning Code Amendments

In order to facilitate a variety of housing types, especially housing for lower-income households and those with special needs, the City will remove constraints to housing development by amending the Zoning Code.

Specific Actions, Objectives and Timelines	▪ Include the following Zoning Code Amendments by December 31, 2024: ▫ **Development Standards:** Increase the maximum allowable height in the RM-2.5 zone to accommodate the maximum allowable density. ▫ **Parking Standards:** Revise parking requirements related to studios and one-bedroom multifamily units to require no more than one space per unit. ▫ **Density Bonus:** Amend the Zoning Code to refer to State Density Bonus Law. ▫ **ADUs:** The City of Farmersville does not allow multiple ADUs on residential parcels and does not allow ADUs in multifamily and mixed-use zones, as required by state law. Revise the Zoning Code for compliance with state law. ▫ **Multifamily:** Amend the Zoning Code provisions for RM districts to prohibit single-family uses. ▫ **Residential Care Facilities:** Revise the Zoning Code to allow care facilities of seven or more residents in all zones that permit residential uses, approved with objectivity and certainty, and subject only to the requirements of residential uses of similar type and form. ▫ **Emergency Shelter:** Revise parking requirements for emergency shelters to comply with AB 2339. ▫ **Low Barrier Navigation Centers:** AB 101 requires a Low Barrier Navigation Center be permitted by-right in areas zoned for mixed uses and nonresidential zones permitting multifamily uses if it meets specified requirements. The City will need to amend its Zoning Code to explicitly allow development of Low-Barrier Navigation Centers,

	by-right, in mixed-use zones, as well as nonresidential zones permitting multifamily uses. ▫ **SB 35 and SB 330 Procedures:** Establish written procedures for the processing of SB 35 and SB 330 projects pursuant to state law. ▫ **Single-Room Occupancy (SRO) Housing:** Revise the Zoning Code to allow for the development of SROs in zones allowing hotel or motel uses. ▫ **Supportive Housing (AB 2162):** Amend the Zoning Code to comply with AB 2162, whereby certain supportive housing meeting specific criteria are to be permitted by-right in all zones where multifamily housing is also permitted (including nonresidential zones). For such supportive housing locating within half-mile from transit, no minimum parking can be required. ▫ **Farmworker Housing:** Review and revise the Zoning Code to ensure compliance with the Employee Housing Act (H&S Code Section 17021.6), which requires that any farmworker housing consisting of no more than 36 beds in a group quarters or 12 units or spaces designed for use by a single family or household shall be deemed an agricultural land use for the purposes of this section. For the purpose of all local ordinances, farmworker housing shall not be deemed a use that implies that the farmworker housing is an activity that differs in any other way from an agricultural use. No conditional use permit, zoning variance, or other zoning clearance shall be required of this farmworker housing that is not required of any other agricultural activity in the same zone. The permitted occupancy in farmworker housing in a zone allowing agricultural uses shall include agricultural employees who do not work on the property where the farmworker housing is located. ▫ **Employee Housing:** Review and revise the Zoning Code to ensure compliance with the Employee Housing Act (H&S Code Section 17021.5), which requires that housing provided by an employer for up to six employees is considered a residential use, subject to the same standards as single-family residences. ▫ **Permit Findings:** Revise findings for discretionary permits to be objective.
Primary Responsible Departments	Planning Department
Funding Sources	General Fund
Relevant Policies	2.2, 3.1, 3.4, 5.2, 5.3, 7.4
AFFH Themes	▪ Housing Mobility ▪ New Housing Opportunities in Areas of Higher Resources ▪ Anti-Displacement and Tenant Protection
Geographic Targeting	Citywide
AFFH Outcomes	▪ Facilitate the development of 10 units for special needs populations during the planning period.

Program 7: General Plan Consistency

The General Plan includes residential land use designations with a density range from one to 29 dwelling units per acre. The density ranges are sufficiently high to allow the development of affordable housing for all income levels. However, the standard for persons per acre could be a constraint to development.

Specific Actions, Objectives and Timelines	Revise the Land Use Element to remove the standard for persons per acre for residential land use designations.
Primary Responsible Departments	Planning & Development Department
Funding Sources	General Fund
Relevant Policies	2.1; 2.2
AFFH Themes	▪ Housing Mobility ▪ New Housing Opportunities in Areas of High Resources
AFFH Geographic Targeting	N/A
AFFH Outcomes	N/A

Program 8: Transparency in the Development Process

The City charges various fees and assessments to cover the cost of processing permits and providing certain services and utilities. Fees for a site plan review, variance, zone change, lot line adjustment, or annexation are higher than most other similarly sized jurisdictions in Tulare County, such as Exeter, Woodlake, and Dinuba.

While the City's website provides information on permit processing, application checklists, zoning, and staff contacts, this information can be difficult to locate and is not easily accessible.

Specific Actions, Objectives and Timelines	▪ By December 2025, the City will evaluate its compliance with the new transparency requirements per Government Code Section 65940.1(a)(1) make changes as necessary. ▪ By December 2025, Review planning and development fees and revise fees to be competitive with other cities in the county. ▪ By January 2025, update the City's website to provide clear links to planning and building resources, applications, and checklists. ▪ By January 2025, provide a link to its Reasonable Accommodations policy on the Housing page of the city website with contact information for city staff who manage the application process.
Primary Responsible Departments	Planning & Development Department
Funding Sources	General Fund
Relevant Policies	2.2; 2.4; 2.6
AFFH Themes	Outreach and Education
AFFH Geographic Targeting	N/A
AFFH Outcomes	N/A

Program 9: Facilitating Affordable Housing Development

The City is committed to expanding affordable housing options for households of all income levels using development tools such as density bonus provisions, waiving development fees and streamlining the application process. The City will contact local non-profit and private developers to facilitate the production of this housing as well as pursue funding opportunities available at the local, regional, state and federal levels.

On a case-by-case basis, the City will facilitate the development of affordable housing by public, private and non-profit groups by coordinating off-site improvements and physical infrastructure as Capital Improvement Projects. Assistance provided by the City may include traffic, street and sewer upgrades as well as other pedestrian and mobility improvements.

As part of Program 6, the City will amend its code to refer to State Density Bonus Law.

Specific Actions, Objectives and Timelines	▪ Annually pursue funding at the local, regional, state, and federal levels such as State CDBG, CalHome, PLHA, and Project Homekey funds. ▪ Work with other jurisdictions in Tulare County to create a regional list of affordable housing developers by 2026. Annually conduct outreach to these developers with information on potential sites, available regulatory concessions and incentives, and potential funding opportunities. ▪ By December 31, 2024, revise the Density Bonus Ordinance in compliance with state law (Government Code Section 65915) to equally provide for density bonuses in all zoning districts where residential uses are permitted and to include provisions relative to density bonuses, incentives, and concessions as required by state law. ▪ Facilitate the development of affordable housing through the provision of the following regulatory concessions and incentives: ▫ Density increases under the City's Density Bonus Ordinance. ▫ Expedited and streamlined project application review involving any of the following housing categories: very low-income households; large families; persons with disabilities or developmental disabilities; and farmworkers. ▫ Potential fee waivers/reductions/deferrals. ▪ Develop a web-based Housing Development Toolkit that outlines a step-by-step process for residential development, including identifying steps in the entitlement and building permit process, detailed information on development incentives, and funding programs and resources for affordable housing development. Publish the Housing Development Toolkit on the City's website by December 2025. ▪ Review the General Plan, applicable Specific Plans, and Zoning Code and Zoning Map to evaluate opportunities for removing barriers to housing production, adding housing capacity, and accommodating a greater mix of dwelling types and sizes households (e.g., duplexes, triplexes, fourplexes, townhouses, courtyard buildings), prioritizing opportunities and sites in North Farmersville. Review General Plan, Specific Plans, and Zoning Code and Zoning Map by January 2026 and implement any changes by January 2027 (see Program 6). ▪ Acquire funds from the state and federal grant opportunities, including the HCD Infill Infrastructure Grant Program, to support the development of affordable housing, housing for special needs, and support service projects. Leverage City funding to partner with affordable housing developer on new affordable housing developments in the city. Prioritize subsidies for financing for rental housing units affordable to extremely low-income households, senior households, farmworkers, persons with

	disabilities, veterans, large households, and other households with special needs. ▪ Apply for state and federal funds by January 2025 and annually thereafter to facilitate the development of affordable housing, including housing for extremely low-income households and those with special housing needs. Partner with nonprofit housing developers to support the entitlement of at least 100 subsidized housing units affordable to extremely low-, very low-, and low-income households in the city during the planning period, including at least 30 percent of units outside of areas of high segregation and poverty or near public transit and services.
Primary Responsible Departments	Planning Department
Funding Sources	Local, state and federal resources, General Fund, CDBG
Relevant Policies	2.1, 2.2, 2.3, 3.1, 4.1, 4.3, 7.4
AFFH Themes	▪ Housing Mobility ▪ New Housing Opportunities in Areas of Higher Resources
Geographic Targeting	Citywide with emphasis on moderate resource census tracts.
AFFH Outcomes	▪ Entitlement of at least 100 subsidized housing units affordable to extremely low-, very low-, and low-income households in the city during the planning period, including at least 30 percent of units outside of areas of high segregation and poverty or near public transit and services. ▪ Increase the percent of the city's housing stock that is multifamily from 7 percent to 10 percent by December 2030, using 2020 Census data as a baseline. ▪ Eliminate disparity between census tracts in northern Farmersville and the rest of the city based on median income level and percent of households in poverty.

Program 10: Preservation of At-Risk Housing

The City has 321 housing units that are deed restricted as affordable housing for lower-income households. Of these units, 19 are at risk of converting to market-rate housing over the next 10 years. The City will work to preserve these at-risk units and will proactively monitor all other units to encourage continued affordability beyond existing covenants and work proactively with owners of affordable units to assist in rehabilitation needs.

Specific Actions, Objectives and Timelines	▪ Preserve 321 affordable units, including 19 at-risk units. ▪ Monitor affordable units during the planning period. ▪ Ensure tenants are properly noticed by the property owners should a Notice of Intent to opt out of low-income use is filed. Notices must be filed three years, one year and six months in advance of conversion. ▪ Maintain annual contact with property owners of affordable housing regarding any change in status/intent or need for assistance, such as rehabilitation assistance. ▪ Maintain the AB 987 database to include detailed information on all subsidized units, including those that have affordability covenants. Update annually.
Primary Responsible Departments	Planning Department
Funding Sources	General Fund
Relevant Policies	3.6, 5.5
AFFH Themes	Anti-Displacement and Tenant Protection
Geographic Targeting	Citywide
AFFH Outcomes	▪ Preserve all 321 affordable housing units.

Program 11: Housing Preservation and Rehabilitation

About 62 percent of the City's housing stock was built before 1990 and is over 30 years old and may be in need of rehabilitation. The City's Code Enforcement Division estimates that approximately two percent of units (57 units) require major rehabilitation and less than one percent of units (28 units) citywide are beyond the point of repair. Concentrated areas of substandard housing in the city are primarily in the southern part of the city. Enforcement staff regularly distribute information about the City's home rehabilitation program to property owners undergoing enforcement.

Farmersville has established and will continue implementation of its Rehabilitation Program and Weatherization Program with Self Help Enterprises to rehabilitate owner housing units using CDBG funds. Self-Help Enterprises is a community development organization that offers a variety of programs for low-income families in the region. This includes deferred payment loans available to qualified homeowners for essential health and safety repairs such as roofing, plumbing, electrical, heating/cooling, foundation, windows, and handicap accessible modifications. The loan is due and payable upon sale, change of title or change of use.

The City's weatherization program for senior and low-income households provides CDBG funds for rehabilitation activities such as energy conservation improvements, including dual paned windows, wall insulation, weather stripping, etc.

Specific Actions, Objectives and Timelines	▪ Coordinate with Self-Help Enterprises to fund rehabilitation efforts in the City. Annually research funding opportunities, such as CHAFA, for rehabilitation grants. ▪ Expand awareness and connect residents to Self-Help Enterprises' Housing Rehabilitation Program. ▪ Publish resources on homeowner rehabilitation assistance on the City's website by January 2025. ▫ Connect qualified property owners with code violations to Self-Help Enterprises to receive financial assistance through the Housing Rehabilitation Program. Refer at least five property owners with housing units in need of repair to Self-Help Enterprises annually. ▪ Ensure that Code Enforcement has the information when addressing enforcement cases. ▪ Expand the City's Rehabilitation Program. ▫ Apply for additional funding for the home repair program by 2025 to serve at least 12 households by the end of the planning period, prioritizing East and Downtown Farmersville. ▪ Amend the Municipal Code to adopt the most recent version of the California Building Code by December 31, 2024. ▪ Pursue/provide rehabilitation assistance that includes energy conservation and weatherization improvements as eligible activities.
Primary Responsible Departments	Planning Department, Code Enforcement
Funding Sources	General Fund
Relevant Policies	3.6, 4.1, 4.2, 4.3, 5.5
AFFH Themes	▪ Outreach and Education ▪ Place-Based Strategy for Neighborhood Improvements
Geographic Targeting	East and Downtown Farmersville
AFFH Outcomes	▪ Assist with at least 12 rehabilitation projects over 8 years.

Program 12: Lower-Income and Special Needs Housing

To assist in the development of housing to meet the needs of extremely low, very low- and low-income households, the Housing Authority of Tulare County (HATC) offers the following programs:

Housing Choice Vouchers (HCVs): Offers affordable, decent and safe housing in open market rentals selected by Voucher holders. Under the Moving to Work program, you receive a fixed subsidy, which the Housing Authority pays directly to the landlord, and you pay the rest of the rent for your unit. There is a five-year time limit to this type of rental assistance in most cases because the fixed subsidy helps families to stabilize their housing costs as they work to achieve self-sufficiency and save for other housing opportunities. Furthermore, in 2020, the State passed SB 222 and SB 329 that identify public assistance as a legitimate source of income for housing payments. Landlords are no longer permitted to reject HCV recipients.

Public Housing: Provides rental assistance to low -income families and individuals. The HATC owns and manages all rental units offered under this program, which are located in communities throughout Tulare County.

The City will continue to work with the HATC to obtain HCVs and provide the community information about HATCs other available programs. Additionally, Self-Help Enterprises is a community development organization that offers a variety of programs for low-income families in the region. This includes a Downpayment Assistance program and Home Ownership Education programs.

Specific Actions, Objectives and Timelines	▪ Assist 65 Farmersville households through HCVs
	▪ Work with HATC and Self-Help Enterprises to continue providing assistance in the community.
	  ▫ Contract with Self-Help Enterprises to provide financial assistance programs to low-income households, including the Homebuyer Assistance Program. Expand program awareness and participation to low-income households throughout the city (see Program 14).
	▪ Over the 8-year planning period, subsequent to each Point-in-Time Count, conduct workshops for the Planning Commission and City Council to share the data from the count. Invite the Kings/Tulare Homeless Alliance to attend.
	▪ Identify potential programs to aid moderate-income homeownership opportunities and develop a list of resources by December 2024. Apply for feasible funding opportunities by December 2025.
	▪ Develop an inventory of affordable housing, with contact information and the number of affordable units, and publish the inventory on the City's website by January 2025.
	▪ Connect low-income residents with housing assistance resources, including the HCV program.
	  ▫ Add information on the HCV Program and Self-Help Enterprises' financial assistance programs to the City's website by January 2025.
	  ▫ Promote the availability of assistance programs through all City's social media pages.
	  ▫ Attend at least two community events to spread awareness and distribute fact sheets on available financial assistance programs.
	▪ In collaboration with the Housing Authority, provide education to property owners and managers to expand awareness of the HCV program to increase acceptance of tenant-based HCVs and to facilitate mobility and provide choices for lower-income households throughout the city.

	Identify and address challenges that property owners/managers have with existing or prospective HCV holders. ▫ In collaboration with HATC, annually conduct one workshop for landlords on the HCV program, for a total of seven workshops during the planning period, targeting property owners/managers in North Farmersville. ▪ Support awareness of moderate-income homeownership, such as Homes for Heroes and other moderate-income loan opportunities. Identify potential programs to aid moderate-income homeownership opportunities and develop a list of resources by December 2024. Advertise programs on the City's website by July 2025.
Primary Responsible Departments	Planning Department
Funding Sources	HUD, Self-Help Enterprise funding sources
Relevant Policies	3.2, 5.1, 5.4, 5.5, 7.4
AFFH Themes	▪ Outreach and Education ▪ Housing Mobility ▪ New Housing Opportunities in Areas of High Resources ▪ Anti-Displacement and Tenant Protection
Geographic Targeting	Citywide; North Farmersville
AFFH Outcomes	▪ Assist with at least 12 rehabilitation projects over 8 years. ▪ Assist 5 households through the First Time Homebuyer Program ▪ Promote with the goal of expanding the use of HCVs in the city by 10 percent by December 2030, using 2023 data as baseline.

Program 13: Community and Economic Development

Well-maintained infrastructure creates a safe and accessible urban environment, fostering a sense of community and belonging. Moreover, investing in such improvements attracts businesses and investments, contributing to economic growth and ensuring equal access to essential services. The City will implement the following actions to expand community and economic development citywide.

The City has implemented several action plans directed by the General Plan, including pursuit of several grants to fund economic development activities. Major city-sponsored activities have included the widening of Visalia Road and Farmersville Boulevard (recently completed) and upgrading the capacity of the City's wastewater treatment plant, completed during 2021. The City also adopted an economic incentive program to offer sales tax rebates to commercial and industrial developers. Farmersville is also one of the few cities in Tulare County to allow cannabis businesses. Two retailers opened during 2020 with a third approved and nearing construction.

The City has a Comprehensive Infrastructure Master Plan (CIMP) that guides improvements to greenfield areas as well as utility master plans that cover all areas within the General Plan planning area that are expected to see development. In addition, developers of projects in greenfield areas are expected to install required improvements, including parks, trails and bike lanes. Upon adoption, the City of Farmersville will provide the Housing Element to all water and sewer service districts and notify all districts of the requirement to prioritize water and sewer service allocation for new affordable housing development (Government Code Section 65589.7).

Specific Actions, Objectives and Timelines	▪ Partner with the local employment organizations to connect Farmersville residents with job opportunities and workforce training program opportunities. ▫ Partner with the Tulare County Workforce Investment Board and Employment Connection to host an annual job fair and workforce training event in Farmersville. ▫ Work with Visalia Transit to provide free bus passes to residents attending job fairs and interviews. ▪ Coordinate with the Public Works Department to review the City's Capital Improvement Projects (CIP) to ensure public facilities and infrastructure are supportive of the needs of underserved communities. ▫ As part of the annual CIP program updates, evaluate public improvement needs in Downtown Farmersville Specific Plan area, and East, West, and South Farmersville, and prioritize improvements on sites that accommodate the City's lower-income RHNA. ▪ Coordinate with Tulare County and the San Joaquin Valley Air Pollution Control District to develop and implement a plan to reduce pollution burden throughout the city, targeting air quality, water quality, and pesticide use. Assess pollution burden in East, West, and South Farmersville and create an action plan to reduce pollution burden in these neighborhoods, as well as addressing proper remediation plans for cleanup sites and hazardous waste sites. ▫ Regularly assess and monitor pollution burden in each census tract, using tools such as CalEnviroScreen and identify major sources of pollution. Develop a pollution burden reduction strategy for the city and for East, West, and South Farmersville by 2026 with metrics and timelines.
Primary Responsible Departments	Planning Department
Funding Sources	General Funds
Relevant Policies	3.1, 4.4
AFFH Themes	Place-based Strategies for Neighborhood Improvement
Geographic Targeting	East, South, and West Farmersville (areas of high segregation and poverty)
AFFH Outcomes	▪ Complete 5 CIP projects during the planning period.

Program 14: Fair Housing Outreach and Enforcement

The City of Farmersville works with HATC to provide fair housing information and resources to residents and housing providers. Farmersville works with HATC to provide a local Fair Housing Information Program which includes distribution of educational materials to property owners, apartment managers, and tenants, and responding to complaints of discrimination (i.e., in-taking, investigation of complaints, and resolution) by referring the affected party to the appropriate agencies.

The City refers fair housing issues and complaints to Fair Housing Council of Central California (FHCCC) and the State Department of Fair Employment and Housing. The Department of Fair Employment and Housing (DFEH) maintains a record of housing discrimination complaints filed in local jurisdictions.

HATC refers fair housing issues and complaints to the U.S. Department of Housing and Urban Development (HUD). HUD's Office of Fair Housing and Equal Opportunity (FHEO).

Specific Actions, Objectives and Timelines	▪ Coordinate with FHCC/other fair housing nonprofit organizations to provide fair housing and tenant/landlord services, including investigation of discrimination complaints, fair housing counseling and education, fair housing testing, and tenant/landlord counseling and mediation. ▪ Coordinate with non-profit organizations, local community groups, and service organizations to increase awareness of and access to housing resources and fair housing assistance. Starting in 2025: ▫ Hold at least three fair housing workshops or pop-up events during the planning period for residents about housing rights and resources, materials in English and Spanish. ▫ Release program about housing rights and resources annually, in English and Spanish. The program will include, but not limited to, social media, print media, newspaper, radio, and/or television media outlets. ▪ Update the City's website to include fair housing rights and responsibilities for landlords and lenders. Add a language translation feature to the City's website. Complete updates by January 2025. ▪ Coordinate with TCAG to offer outreach on housing services and opportunities in conjunction with other regional planning efforts. Organize one workshop in Farmersville to provide information on housing services and programs in 2025. ▪ Develop a Fair Housing factsheet to be included with the ADU application packet to inform property owners of their responsibility with state and federal fair housing laws. Publish fair housing guide with ADU applications on or before January 2025. ▪ Beginning in 2025, provide annual trainings for City staff on how to refer residents for fair housing complaints. ▪ Beginning in 2025, provide annual trainings to the City's Police Department staff on how to engage with the city's homeless population and how to connect them with resources. ▪ Annually, conduct outreach and education on water conservation measure through a social media campaign.
Primary Responsible Departments	Planning Department
Funding Sources	General Fund
Relevant Policies	3.1, 4.4
AFFH Themes	Enforcement and Outreach
Geographic Targeting	East, South, and West Farmersville
AFFH Outcomes	▪ Assist at least 15 residents and landlords with fair housing services annually, throughout planning period.

C7.3 AFFH Actions Summary

Government Code Section 8899.50 requires "meaningful actions" well beyond combating discrimination to overcome patterns of segregation and foster inclusive communities. Actions to affirmatively further fair housing include:

- Enhancing housing mobility strategies
- Encouraging development of new affordable housing in high resource areas
- Increasing fair housing enforcement and fair housing outreach capacity
- Improving place-based strategies to encourage community conservation and revitalization, including preservation of existing affordable housing
- Protecting existing residents from displacement

Actions to affirmatively furthering fair housing are summarized below.

Affirmatively Furthering Fair Housing Action Matrix

Program	Specific Commitment	Timeline	Geographic Targeting	Eight-Year Metrics
Fair Housing Enforcement and Outreach				
Program 14: Fair Housing Outreach and Enforcement	▪ Coordinate with FHCCC/other fair housing nonprofit organizations to provide fair housing and tenant/landlord services, including investigation of discrimination complaints, fair housing counseling and education, fair housing testing, and tenant/landlord counseling and mediation. ▪ Coordinate with non-profit organizations, local community groups, and service organizations to increase awareness of and access to housing resources and fair housing assistance. Starting in 2025: ▫ Hold at least three fair housing workshops or pop-up events during the planning period for residents about housing rights and resources, materials in English and Spanish, starting in 2025. ▫ Release program about housing rights and resources annually, in English and Spanish. The program will include, but not limited to, social media, print media, newspaper, radio, and/or television media outlets. ▪ Update the City's website to include fair housing rights and responsibilities for landlords and lenders. Add a language translation feature to the City's website. Complete updates by January 2025. ▪ Coordinate with TCAG to offer outreach on housing services and opportunities in conjunction with other regional planning efforts. Organize one workshop in Farmersville to provide information on housing services and programs in 2025. ▪ Develop a Fair Housing factsheet to be included with the ADU application packet to inform property owners of their responsibility with state and federal fair housing laws. Publish fair housing guide with ADU applications on or before January 2025. ▪ Beginning in 2025, provide annual trainings for City staff on how to refer residents for fair housing complaints.	Starting 2025,then update as necessary	East, South, and West Farmersville	Assist at least 15 residents and landlords with fair housing services annually, throughout planning period.

Program	Specific Commitment	Timeline	Geographic Targeting	Eight-Year Metrics
	▪ Beginning in 2025, provide annual trainings to the City's Police Department staff on how to engage with the city's homeless population and how to connect them with resources. ▪ Annually, conduct outreach and education on water conservation measure through a social media campaign			
Housing Mobility				
Program 1: Regional Collaboration	▪ Participate in regional meetings related to housing and homeless issues to pursue funding and coordination opportunities. ▪ Collaborate with TCaT and Visalia Transit to prepare a study on transit and active transportation needs for Farmersville residents and identify actions to address those needs, focusing on connecting residents to job centers. Complete a transit needs study by January 2026 to identify potential actions. Implement at least one of those actions by the end of 2028.	Annually Study by 2026, implementation by 2028	N/A	Annually pursue funding opportunities for regional housing issues. Complete a transit needs study by January 2026 to identify potential actions. Implement at least one of those actions by the end of 2028. Increase the percentage of residents commuting by public transit by 5 percent by December 2031 with 2020 data as baseline.
Program 5: Accessory Dwelling Units	▪ Amend the Zoning Code in compliance with state law by December 31, 2024. ▪ By December 31, 2024, facilitate the production of ADUs through efforts including, but not limited to: ▫ Updating ADU webpage to include available resources for ADU production, such as grants for pre-development costs available to lower-income homeowners through California Finance Agency (CalHFA). ▫ Offering expedited reviews for ADU applications. ▪ Promote the development of ADUs, prioritizing North Farmersville. ▫ Conduct three educational workshops, campaigns, or outreach events to promote ADU development in the city to residents, with at least two events targeted to residents and developers in North Farmersville, by the end of the planning period.	By December 31, 2024 Through 2031	North Farmersville	Support the development of at least five ADUs in North Farmersville during the planning period.

Program	Specific Commitment	Timeline	Geographic Targeting	Eight-Year Metrics
	▪ Implement strategies to streamline the ADU permitting process. ▫ Develop an ADU application checklist and publish the checklist on the City's website by January 2025. ▫ Add information on the ADU permitting process, as well as available resources and incentives, on the City's website by January 2025. ▫ Adopt pre-approved ADU plans, potentially using SJV REAP's Template ADU Program and SJV REAP Tool: Pre-Reviewed Plan Set, by January 2026, and publish on the City's website. ▪ Determine and implement strategy to promote ADUs for moderate- and lower-income households by the end of 2028. ▪ Collaborate with neighboring jurisdictions to develop strategies to incentivize the development of ADUs by the end of 2028. Potential strategies may include options such as: ▫ Developing pre-approved ADU plans. ▫ Developing outreach and education materials on the use of housing choice Housing Choice Vouchers on ADUs. ▫ Promoting California Housing Finance Agency (CalHFA) ADU pre-development grants of up to $40,000 to homeowners. ▫ Reducing plan check or permit fees.	By January 2025 By January 2026 By the end of 2028		
Program 12: Lower-Income and Special Needs Housing	▪ Work with HATC and Self-Help Enterprises to continue providing assistance in the community. ▫ Contract with Self-Help Enterprises to provide financial assistance programs to low-income households, including the Homebuyer Assistance Program. Expand program awareness and participation to low-income households throughout the city. See Program 14. ▪ Over the 8-year planning period, subsequent to each Point-in-Time Count, conduct workshops for the Planning Commission and City Council to share the data from the count. Invite the Kings/Tulare Homeless Alliance to attend.	Annually Through 2031	Citywide, with a focus on North Farmersville	Assist 65 Farmersville households through HCVs. Assist with at least 12 rehabilitation projects over a period of eight years. Assist five households through the First Time Homebuyer Program Promote with the goal of expanding the use of HCVs in the city by 10 percent by December 2030, using 2023 data as baseline.

Program	Specific Commitment	Timeline	Geographic Targeting	Eight-Year Metrics
	▪ Identify potential programs to aid moderate-income homeownership opportunities and develop a list of resources by December 2024. Apply for feasible funding opportunities by December 2025.	December 2024/ December 2025		
	▪ Develop an inventory of affordable housing, with contact information and the number of affordable units, and publish the inventory on the City's website by January 2025.	By January 2025		
	▪ Connect low-income residents with housing assistance resources, including the HCV program. ▫ Add information on the HCV Program and Self-Help Enterprises' financial assistance programs to the City's website by January 2025. ▫ Promote the availability of assistance programs through all City's social media pages. ▫ Attend at least two community events to spread awareness and distribute fact sheets on available financial assistance programs.	By January 2025 then ongoing		
	▪ In collaboration with the Housing Authority, provide education to property owners and managers to expand awareness of the HCV program to increase acceptance of tenant-based HCVs and to facilitate mobility and provide choices for lower-income households throughout the city. Identify and address challenges that property owners/managers have with existing or prospective HCV holders. ▫ In collaboration with the Tulare Housing Authority, annually conduct one workshop for landlords on the HCV program, for a total of seven workshops during the planning period, targeting property owners/managers in North Farmersville.	Annually		
	▪ Support moderate-income homeownership, such as Homes for Heroes and other moderate-income loan opportunities. Identify potential programs to aid moderate-income homeownership opportunities and develop a list of resources by December 2024. Apply for feasible funding opportunities by December 2025.	December 2024/ December 2025		

Program	Specific Commitment	Timeline	Geographic Targeting	Eight-Year Metrics
New Housing Opportunities in Higher Opportunity Areas				
Program 2: Adequate Sites for RHNA	▪ Maintain an inventory of available vacant and prospective sites that can accommodate new housing; update annually. Make this inventory available to the public and interested developers on the City website. ▪ Annually meet with property owners and interested developers to pursue housing development in the city. ▪ By December 31, 2024, develop a formal procedure to monitor no net loss in capacity pursuant to SB 166. ▪ By 2026, complete update to water and sewer master plans.	Annually December 31, 2024	Citywide	Facilitate the development of 654 units over 8 years (135 very low-income, 83 low-income, 121 moderate-income, and 315 above moderate-income units).
Program 3: By-Right Approval	▪ By December 31, 2024, concurrent with the Development Code update to provide adequate sites for the RHNA (see Program 2), update the Development Code to address the by-right approval requirements. Lower-income sites included in the site inventory with a proposed zoning change, as well as vacant sites identified in two previous housing elements and non-vacant sites identified in the previous housing element, will be rezoned, in compliance with Government Code Section 65583.2(h) and (i), to permit owner-occupied and rental multifamily uses by-right (without discretionary approval) for developments in which 20 percent of the units affordable to lower-income households.	December 31, 2024	Citywide	Facilitate the development of 654 units over 8 years (135 very low-income, 83 low-income, 121 moderate-income, and 315 above moderate-income units).
Program 6: Zoning Code Amendments	▪ Complete Zoning Code Amendments outlined in Program 6 to facilitate the development and remove constraints to the development of housing for special needs populations.	December 31, 2024	Citywide	Facilitate the development of 10 units for special needs populations during the planning period.
Program 8: Transparency in Government	▪ By December 2025, the City will evaluate its compliance with the new transparency requirements per Government Code Section 65940.1(a)(1) make changes as necessary. ▪ By December 2025, Review planning and development fees and revise fees to be competitive with other cities in the county. ▪ By January 2025, update the City's website to provide clear links to planning and building resources, applications, and checklists.	December 2025 By January 2025	Citywide	Facilitate the development of 654 units over 8 years (135 very low-income, 83 low-income, 121 moderate-income, and 315 above moderate-income units).

Program	Specific Commitment	Timeline	Geographic Targeting	Eight-Year Metrics
	▪ By January 2025, provide a link to its Reasonable Accommodations policy on the Housing page of the city website with contact information for city staff who manage the application process.			
Program 9: Facilitating Affordable Housing Development	▪ Annually pursue funding at the local, regional, state, and federal levels such as State CDBG, CalHome, PLHA, and Project Homekey funds. ▪ Work with other jurisdictions in Tulare County to create a regional list of affordable housing developers. Annually conduct outreach to these developers with information on potential sites, available regulatory concessions and incentives, and potential funding opportunities. ▪ By December 31, 2024, revise the Density Bonus Ordinance in compliance with state law (Government Code Section 65915) to equally provide for density bonuses in all zoning districts where residential uses are permitted and to include provisions relative to density bonuses, incentives, and concessions as required by state law. ▪ Facilitate the development of affordable housing through the provision of the following regulatory concessions and incentives: ▫ Density increases under the City's Density Bonus Ordinance. ▫ Expedited and streamlined project application review involving any of the following housing categories: very low-income households; large families; persons with disabilities or developmental disabilities; and farmworkers. ▫ Potential fee waivers/reductions/deferrals. ▪ Develop a web-based Housing Development Toolkit that outlines a step-by-step process for residential development, including identifying steps in the entitlement and building permit process, detailed information on development incentives, and funding programs and resources for affordable housing development. Publish the Housing Development Toolkit on the City's website by December 2025.	Annually December 31, 2024 Through 2031 By December 2025	Citywide with emphasis on moderate and high resource census tracts.	Increase the percent of the city's housing stock that is multifamily from 7 percent to 10 percent by December 2030, using 2020 Census data as a baseline. Eliminate disparity between census tracts in northern Farmersville and the rest of the city based on median income level and percent of households in poverty. Entitlement of at least 100 subsidized housing units affordable to extremely low-, very low-, and low-income households in the city during the planning period, including at least 30 percent of units outside of areas of high segregation and poverty or near public transit and services

Program	Specific Commitment	Timeline	Geographic Targeting	Eight-Year Metrics
	▪ Review the General Plan, applicable Specific Plans, and Zoning Code and Zoning Map to evaluate opportunities for removing barriers to housing production, adding housing capacity, and accommodating a greater mix of dwelling types and sizes households (e.g., duplexes, triplexes, fourplexes, townhouses, courtyard buildings), prioritizing opportunities and sites in North Farmersville. Review General Plan, Specific Plans, and Zoning Code and Zoning Map by January 2026 and implement any changes by January 2027 (see Program 6).	January 2026/ January 2027		
	▪ Acquire funds from the state and federal grant opportunities, including the HCD Infill Infrastructure Grant Program, to support the development of affordable housing, housing for special needs, and support service projects. Leverage City funding to partner with affordable housing developer on new affordable housing developments in the city. Prioritize subsidies for financing for rental housing units affordable to extremely low-income households, senior households, farmworkers, persons with disabilities, veterans, large households, and other households with special needs. ▫ Apply for state and federal funds by January 2025 and annually thereafter to facilitate the development of affordable housing, including housing for extremely low-income households and those with special housing needs. Partner with nonprofit housing developers to support the entitlement of at least 100 subsidized housing units affordable to extremely low-, very low-, and low-income households in the city during the planning period, including at least 30 percent of units outside of areas of high segregation and poverty or near public transit and services.	January 2025, then as funding becomes available		

Program	Specific Commitment	Timeline	Geographic Targeting	Eight-Year Metrics
Place-based Strategies for Neighborhood Revitalization				
Program 1: Regional Collaboration	▪ Hold at least one community workshop in East, South, and West Farmersville by December 2026 to identify active transportation needs and apply for funding to implement projects by December 2027.	December 2026/ December 2027	Citywide, with a focus on East, South, and West Farmersville (areas of high segregation and poverty)	Implement at least one active transportation projects in East, South, and West Farmersville (areas of high segregation and poverty) by the end of the planning period. Increase the percentage of residents commuting by public transit by 5 percent by December 2031 with 2020 data as baseline.
Program 11: Housing Preservation and Rehabilitation	▪ Coordinate with Self-Help Enterprises to fund rehabilitation efforts in the city. Annually research funding opportunities, such as CHAFA, for rehabilitation grants. ▪ Expand awareness and connect residents to Self-Help Enterprises' Housing Rehabilitation Program. ▪ Publish resources on homeowner rehabilitation assistance on the City's website by January 2025. ▫ Connect qualified property owners with code violations to Self-Help Enterprises to receive financial assistance through the Housing Rehabilitation Program. Refer at least five property owners with housing units in need of repair to Self-Help Enterprises annually. ▪ Ensure that Code Enforcement has the information when addressing enforcement cases. ▪ Expand the City's Housing Rehabilitation Program. ▫ Apply for additional funding for the home repair program by 2025 to serve at least 12 households by the end of the planning period, prioritizing East and Downtown Farmersville. ▪ Amend the Municipal Code to adopt the most recent version of the California Building Code by December 31, 2024.	Annually By January 2025, then ongoing By 2025, then ongoing	East and Downtown Farmersville	Assist with at least 12 rehabilitation projects over eight years.

Program	Specific Commitment	Timeline	Geographic Targeting	Eight-Year Metrics
	▪ Pursue/provide rehabilitation assistance that includes energy conservation and weatherization improvements as eligible activities.			
Program 13: Community and Economic Development	▪ Partner with the local employment organizations to connect Farmersville residents with job opportunities and workforce training program opportunities. ▫ Partner with the Tulare County Workforce Investment Board and Employment Connection to host an annual job fair and workforce training event in Farmersville. ▫ Work with Visalia Transit to provide free bus passes to residents attending job fairs and interviews.	Annually	East, West, and South Farmersville	Complete 5 CIP projects during the planning period.
	▪ Coordinate with the Public Works Department to review the City's Capital Improvement Projects (CIP) to ensure public facilities and infrastructure are supportive of the needs of underserved communities. ▫ As part of the annual CIP program updates, evaluate public improvement needs in Downtown Farmersville Specific Plan area, and East, West, and South Farmersville, and prioritize improvements on sites that accommodate the City's lower-income RHNA.	Annually		
	▪ Coordinate with Tulare County and the San Joaquin Valley Air Pollution Control District to develop and implement a plan to reduce pollution burden throughout the city, targeting air quality, water quality, and pesticide use. Assess pollution burden in East, West, and South Farmersville and create an action plan to reduce pollution burden in these neighborhoods, as well as addressing proper remediation plans for cleanup sites and hazardous waste sites. ▫ Regularly assess and monitor pollution burden in each census tract, using tools such as CalEnviroScreen and identify major sources of pollution. Develop a pollution burden reduction strategy for the city and for East, West, and South Farmersville by 2026 with metrics and timelines.	By 2026		

Program	Specific Commitment	Timeline	Geographic Targeting	Eight-Year Metrics
Tenant Protection and Anti-displacement				
Program 1: Regional Collaboration	▪ Partner with the Kings/Tulare Homeless Alliance to proactively address shelter, housing and support services for people experiencing homelessness.	Annually	Citywide	Annually coordinate meetings with the Kings/Tulare Homeless Alliance to address need in Farmersville.
Program 4: Replacement Housing	▪ Amend the Zoning Code to address the replacement housing requirements.	December 31, 2024	N/A	Replace all units as required pursuant to AB 1397.
Program 10: Preservation of At-Risk Housing	▪ Monitor affordable units during the planning period. ▪ Ensure tenants are properly noticed by the property owners should a Notice of Intent to opt out of low-income use is filed. Notices must be filed three years, one year and six months in advance of conversion. ▪ Maintain annual contact with property owners of affordable housing regarding any change in status/intent or need for assistance, such as rehabilitation assistance. ▪ Maintain the AB 987 database to include detailed information on all subsidized units, including those that have affordability covenants. Update annually.	Annually	Citywide	Preserve 321 affordable units, including 19 at-risk units.

C7.4 Quantified Objectives

Farmersville has established quantified objectives for housing production and rehabilitation for the Housing Element. These objectives are based upon expected availability of resources to address the City's housing needs, expectations regarding future housing development, as well as prior objectives established in earlier housing plans. Table C7-1 below summarizes the City's quantified objectives for implementing its various programs and actions outlined above.

Table C7-1 Quantified Objectives 2023-2031

Target Income and Affordability Level	New Construction	Rehabilitation	Conservation
Extremely Low	68	3	
Very Low	67	3	
Low	83	3	
Moderate	121	3	
Above Moderate	315		
Total	**654**	**12**	**625 (none at risk)**

CHAPTER ONE

INTRODUCTION

CHAPTER ONE INTRODUCTION

1.1 Background

The City of Farmersville is located in Tulare County in the southeastern portion of the San Joaquin Valley (see Exhibit A-1 for a general location map). Farmersville is located south of State Route 198, approximately 11 miles east of State Route 99, and is bisected by County Road 164 (Farmersville Boulevard). The level topography of the City slopes from the northeast at an elevation of 365 feet above sea level towards the southwest to an elevation of 345 feet above sea level. In 2010, the population of Farmersville was recorded at 10,588, which is an annual increase of approximately 3% since 1993. The population is expected to reach 13,320 by 2014.

The City has received a Sustainable Communities Planning grant to develop a Comprehensive Infrastructure Master Plan (CIMP). This master plan will include circulation improvements and the addition of bike lanes, sidewalks, and water, wastewater, and storm drainage facilities.

On the heels of significant growth that occurred in the past 20 years and strategically planning for even more development in the next 20, the timing is ripe for Farmersville to address its infrastructure, planning for the expansions necessary to accommodate future growth and development, especially for the land uses required to provide a sustainable community for the residents of Farmersville.

1.2 Authorization

The City Council of the City of Farmersville authorized the preparation of the CIMP in August 2011. The CIMP will provide a roadmap for infill development within the Farmersville Urban Area Boundary (UAB), while limiting the pressure for development on the valuable farm land outside of the UAB.

1.3 Scope

The CIMP will include circulation, water, wastewater, and storm drainage within the Urban Area Boundary (see exhibit A-2 for the study area boundary). The plan is intended to enable smart growth concepts to be implemented as part of the City's future development, improve public health, and promote self-sustaining economic development. Each portion of the CIMP will have a specific scope, but generally they will include:

- Compiling existing data
- Identifying existing problems
- Summarizing new development needs
- Specifying areas needing service
- Identifying future expansion areas
- Summarizing needed improvements

The CIMP is intended to comply with policies of the City of Farmersville's General Plan. Exhibit A-3 depicts the current General Plan land use designations and the current city boundaries.

The proposed sizes and locations of facilities developed in this report are considered to be only preliminary. The final design and locations of the facilities can only be determined after performing more detailed field surveys and engineering design.

This CIMP will update and revise the following plans:

- 1983 Sanitary Sewer Master Plan
- 1989 Storm Drainage Master Plan
- 1998 Community Infrastructure Study
- 2000 Water System Study
- 2003 Highway 198 Corridor Specific Study

1.4 Comprehensive System Reviews

The City's current master plans have been completed at various times since 1983. This CIMP will consolidate the various studies and plans into one report and update the information where appropriate. As each section of the CIMP was developed, other sections were referenced to avoid conflicts between sections. Infrastructure needs were considered together, to allow the City to take advantage of multiple benefits of co-locating future facilities and any potential conjunctive relationships that would be potentially more cost-effective and more supportive of a sustainable community.

The Circulation section identifies locations of the collector and arterial roadways. The water, sewer, and storm drain sections were developed so that the proposed master plan infrastructure will align with the proposed arterials and collectors.

The CIMP proposes improvements to serve the Farmersville UAB. Since the current General Plan does not designate land uses beyond the existing Urban Development Boundary (UDB), additional assumptions were needed for the area between the UDB and the UAB. For example, a majority of the land within the two limit lines will be residential except for lesser areas of industrial, institutional, and commercial uses. Exhibit A-4 depicts these assumed non-residential areas. The remainder of the undesignated area is assumed to be residential. These assumptions are only intended to be used to aid in determining the estimated size and capacity of future infrastructure needs for planning purposes. These assumptions do not supersede the City of Farmersville's General Plan Land Use Element, nor do they state a formal disposition towards future land uses for land lying between the UDB and UAB.

1.5 Public Outreach

The draft report was sent out to the following agencies for review and comment:
Farmersville Chamber of Commerce
Farmersville Chamber of Commerce
Tulare County Board of Supervisors
Kaweah Delta Water Conservation
Consolidated People's Ditch Company
San Joaquin Valley Air Pollution Control District
Farmersville Unified School District
Tulare County Association of Governments
Tulare County Health Services
Proyecto Campesino

Two comment letters were received (Kaweah Delta Water Conservation and San Joaquin Valley Air Pollution Control District). The first letter had no comments. The second letter, from the Air Pollution Control District, stated the CIMP would have no impacts on air quality; however future projects within the scope of the CIMP would need to abide by the district rules.

Two public outreach meetings were held on November 7, 2012. The first meeting was held in Spanish and the second meeting was held in English. Written comments were received at both meetings. The comment forms are included in Appendix F. The comment cards issues are addressed in comment boxes added to each comment form.

CHAPTER TWO

DEMOGRAPHICS AND LAND USE

CHAPTER TWO DEMOGRAPHICS AND LAND USE

The City of Farmersville's city limits currently contains 1,385 acres. The area between the City limits and the UAB currently contains 1,572 acres. The City's UAB including the area within the City limits contains a total of 2,957 acres. The urbanized area in the City of Farmersville is surrounded on all sides by agriculture. Forty percent of the UAB is identified as agricultural uses. One fifth of the UAB is devoted to residential uses (single family and multi-family). Undeveloped land in the UAB has approximately 290 acres that could be utilized for future development without relying upon additional land outside the UAB to meet the City's projected growth. Exhibit A-1 shows the general location of the study area. Exhibit A-2 identifies the study area boundaries.

2.1 Population

The General Plan, which was completed in 2002, contained the following population projections:

Table 2-1
City Developed Population Projections

Year	Population (2.9% growth rate)	Population (3.4% growth rate)
2005	10,079	10,327
2006	10,372	10,678
2007	10,672	11,040
2008	10,982	11,416
2009	11,300	11,804
2010	11,628	12,206
2011	11,965	12,620
2012	12,312	13,050
2013	12,670	13,494
2014	13,037	13,952
2015	13,415	14,427
2016	13,804	14,917
2017	14,204	15,424
2018	14,616	15,949
2019	15,040	16,491
2020	15,476	17,052
2025	17,854	20,839

The actual population in 2011 was 10,824[1] indicating that the actual growth rate for the City was significantly below the projections for the period reported. The declining economy may have been a significant factor for the lower growth rates; however, the pace of growth should not invalidate the other assumptions and policies within the General Plan.

[1] "New Report: California Added More than a Quarter Million in 2011; Total State Population nearly 37.7 Million". State of California Department of Finance. May 1, 2012.

2.2 Land Use

The Land Use Element of the City's General Plan depicts the UDB Line and the UAB Line for the community (see Exhibit A-3), for the General Plan land use designations.

According to the General Plan Land Use Element:

- Approximately 1,572 acres is located between the UAB and the current City limit line
- 417 residential acres are needed to meet the 2025 population projections
- 24 acres of Commercial/Office space are needed to serve the 2025 projected population

Even though the City's UAB has more than enough land for future development, the actual location of future development is unknown. The CIMP includes the UAB to ensure the area that develops has a appropriate plan for infrastructure for the point in time when the General Plan is updated to allow future development. In most cases, the timing to actually install this infrastructure would not occur until after the General Plan is updated, unless the infrastructure is needed to serve other areas that are situated within the UDB.

2.3 Future Service Area

The City of Farmersville's city limits currently contains 1,385 acres (160 acres have been annexed since the 2002 General Plan update) of which approximately 290 acres are currently undeveloped. The City's UAB contains 2,957 acres as shown in Exhibit A-2. Table 2-2 shows the existing land use as identified in the 2002 General Plan update.

Table 2-2
Land Use (per 2002 General Plan Update)

	City Limits (Acres)	Urban Area Boundary* (Acres)	Total (Acres)
Residential (Single Family)	416	111	527
Residential (Multi-Family)	21.8	64.6	86
Commercial (General)	27.5	2.3	30
Commercial (Service)	16.1	1.8	18
Industrial	32.4	41.8	74
Agricultural	193.5	981	1174
Parks	14.4	0	14
Parks (Quasi-Public)	62.5	66.9	129
Schools	76.9	5.2	82
Waterways	7.4	16.4	24
Vacant	185.8	28.7	215
Right of Way	151	433	584
TOTAL	**1,205**	**1,752**	**2,957**

* Urban Area beyond City Limits

In the General Plan, land uses were assigned to all areas within the UAB. For this study, the current General Plan was used as a guide to assign land uses as shown in Exhibit A-3. Table 2-3 shows the acreage for each future land use planned beyond the existing City Limits, but within the UAB.

Table 2-3
Future Land Uses

	Existing (Acres)	Urban Area Boundary* (Acres)	Total (Acres)
Residential	613	685	1298
Commercial	48	127	175
Industrial	74	354	428
Institutional	834	222	1056
TOTAL	**1,569**	**1,388**	**2,957**

* Urban Area beyond City Limits

Exhibit A-4 depicts the assumptions made for future land use areas listed above for Commercial, Industrial, and Institutional.

2.4 Sustainable Communities Land Use Objectives

2.4.1 SHOPPING AND JOBS

A significant deficit of commercial and retail development exists in Farmersville. Residents must travel 6 to 15 miles each way to obtain basic goods and services or to go to work. The City recently changed the zoning on two large parcels strategically located near the northern gateway to Farmersville at State Route 198 for a shopping center and an industrial park. However, currently the City is not well positioned to attract developers without necessary infrastructure improvements. Farmersville needs these types of plans in place to pursue economic development and improve the lives of its residents. The CIMP is necessary to plan for expanded transportation, water, wastewater, and storm drain improvements to make the economic development of these two areas viable. These new developments will make it possible for Farmersville residents to shop and work in their own City, supporting the local revenue and job base and eliminating numerous vehicle trips outside the City to purchase basic necessities.

2.4.2 HOUSING

The City's General Plan Housing Element notes that 2,244 dwelling units are planned for the long-term within the UAB. These planned future housing units will add significantly to the existing 2,972 units. One of the primary strategies of the CIMP will be to enable development to take place on vacant or underutilized parcels inside the UAB, meeting one of the City's General Plan policies to manage growth by avoiding "urban sprawl" and by developing infrastructure plans that promote infill, compact development, and affordable housing. By identifying targeted growth areas within the City's UAB, this CIMP will ensure that Farmersville's vision for a sustainable city is implemented through thoughtful master planning. Future shopping, jobs, parks, and housing are

hinging on plans for adequate roads, sidewalks, bike lanes, water supplies, wastewater disposal, and storm drainage systems. The strategy to achieve this infrastructure objective will be to maintain and improve existing infrastructure (50 year old systems in parts of the City) and plan for expansions to accommodate future growth and development. The following chapters will address the plans to bring necessary infrastructure to serve undeveloped parcels.

2.4.3 PARKS

In addition to providing opportunities for a shopping center and industrial park by constructing necessary infrastructure improvements, the CIMP will also support the development of parks and recreation opportunities. Currently, the community is served by only 1.7 acres of park space for every 1,000 residents. The standard ratio of park acreage for residents (per State of California Quimby Act) is 3.0 acres per 1,000 people. The CIMP will also create safe paths for walking or bicycling (most existing roads in Farmersville are not pedestrian or bicycle friendly) that will provide access to new parks and recreation facilities.

CHAPTER THREE

CIRCULATION

CHAPTER THREE CIRCULATION

3.1 Introduction

Farmersville's circulation system directly affects the quality of life, physical character, and economic vitality of the community. The CIMP proposes a circulation system that will promote critical development for retail and industrial properties within the Farmersville UAB, while protecting the valuable farm land outside the UAB. The CIMP is also designed to promote an interconnected transportation network for all modes of transportation. Decreased number of vehicle trips within the urban area will be achieved through circulation improvements such as shaded "green streets" and the addition of bike lanes and sidewalks to make alternative modes of transportation safer and more feasible in Farmersville. Plans for new roadways will allow for greater access to transit and will reduce the number of vehicle miles traveled by local residents by providing access to shopping and new job opportunities within the City limits.

The City's existing circulation network is based on a typical grid pattern with a limited number of curvilinear streets that roughly parallel Deep Creek and other drainage ways throughout the City. The circulation system consists of a State highway, arterials, collectors, local roadways, alleys, bikeways, sidewalks, a railroad, and public transit. The CIMP policies for improved circulation include the following list of strategies and guidelines.

3.1.1 CIRCULATION STRATEGIES

- Provide efficient and safe circulation access to all parts of Farmersville.
- Decrease the number of vehicle trips within the urban area by providing circulation that encourages alternative modes of transportation, including pedestrian, bicycles, and transit.
- Decrease the number of vehicle trips outside the urban area by providing circulation projects that will facilitate economic development projects creating new jobs and retail shopping opportunities.
- Provide additional north-south collectors at railroad crossings in the City to promote connectivity and relieve existing and future traffic congestion on Farmersville Boulevard.
- Provide neighborhood connectivity to shopping, jobs, schools, and parks.
- Provide a truck route system that facilitates the movement of truck traffic through and around Farmersville.
- Provide "green streets" that include native tree planting on new and existing streets to create shaded sidewalks and paths that will encourage walking and biking.

3.1.2 CIRCULATION DESIGN GUIDELINES

- The CIMP's layout of streets should be consistent with the City's adopted General Plan Circulation Element.
- Bikeway facilities within the CIMP should be consistent with the City's adopted Bicycle Transportation Plan.

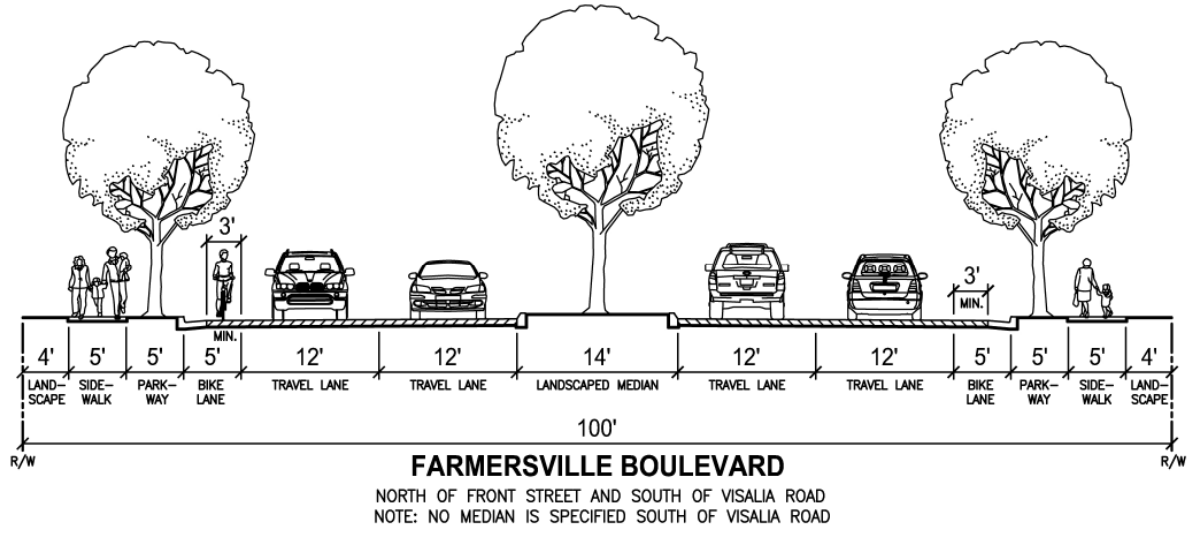
- Pathways within the CIMP should be consistent with the City's adopted Waterway Trails Master Plan.
- Compliance with the City of Farmersville's Improvement Standards for items not covered in this CIMP should be required.

3.2 Street Types

3.2.1 ARTERIAL

An arterial is a higher capacity, urban thoroughfare that moves traffic from collectors to highways or between urban activity centers. In many Central Valley cities, arterials are typically spaced every mile with intersecting collectors or other streets in between. Per the City's Circulation Element, the City shall "establish an arterial road system that conveys traffic in an efficient and safe manner" and "arterials should be visually pleasing, and designed to accommodate other modes of transportation, such as bicycles and pedestrians."[1] Currently, Farmersville Boulevard and Visalia Road are the only two designated arterials in the City.

Per the City's current Circulation Element, Farmersville Boulevard north of Front Street and south of Visalia Road includes two travel lanes, bicycle lanes, parkway, sidewalk, and landscape strip in each direction. The Circulation Element depicts a four-foot (4') bicycle lane that doesn't meet the current standards of the *Highway Design Manual*. The cross section noted below, with five-foot (5') bicycle lanes, is proposed for Farmersville Boulevard. A reduction in the landscape strip from five feet (5') to four feet (4') is being proposed to accommodate the bicycle lane widths. This proposed cross section meets the criteria of "green streets", including landscaped medians and tree lined parkways, as recommended in the City's current Circulation Element.

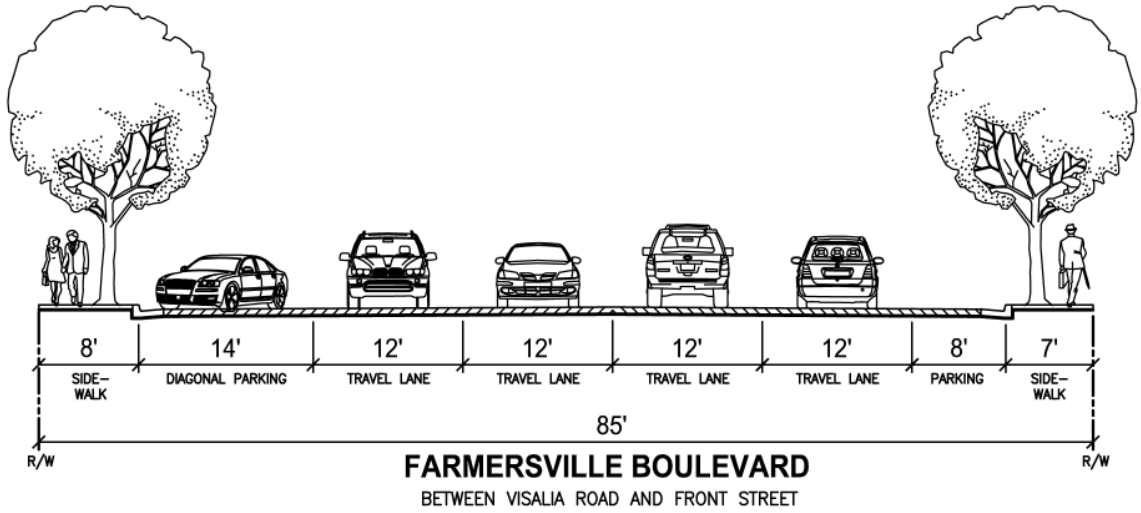


FARMERSVILLE BOULEVARD

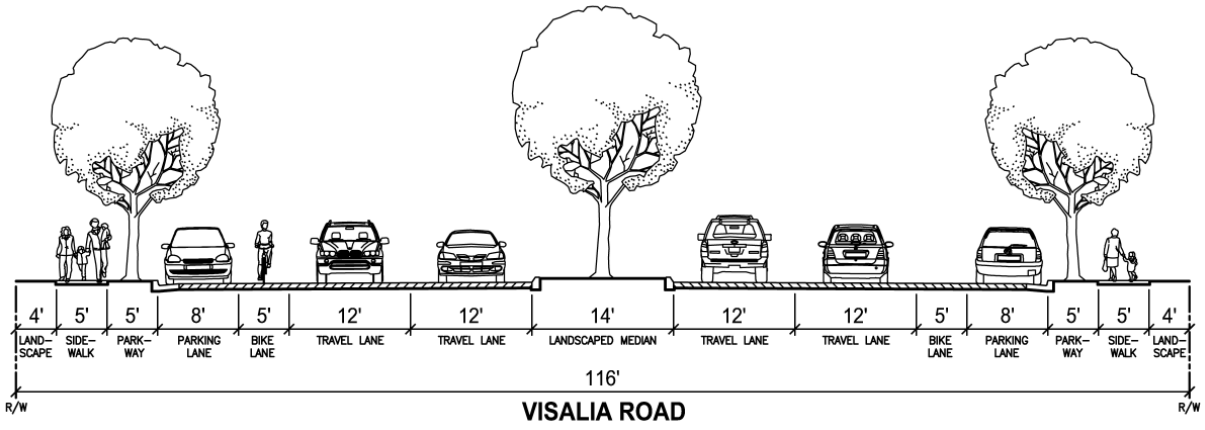
NORTH OF FRONT STREET AND SOUTH OF VISALIA ROAD
NOTE: NO MEDIAN IS SPECIFIED SOUTH OF VISALIA ROAD

[1] City of Farmersville, Farmersville General Plan Update (Collins & Schoettler Planning Consultants, 2002) 3-11.

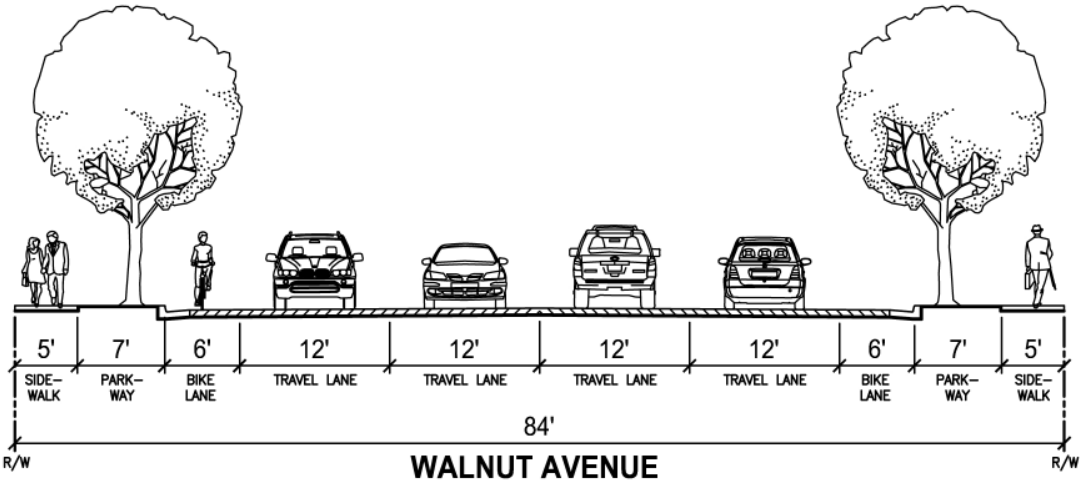
The City's Circulation Element currently indicates that Farmersville Boulevard between Visalia Road and Front Street will have two travel lanes in each direction with eight-foot (8') parallel parking and a seven-foot (7') sidewalk on the west side of the street. The east side of the street indicates 14-foot (14') diagonal parking and an eight-foot (8') sidewalk. The existing cross section for this segment of Farmersville Boulevard is depicted below. No changes to this cross section are proposed. Although this section of Farmersville Boulevard does not include a landscape median, it does include tree lined sidewalks, a "green streets" feature as indicated in the City's Circulation Element.



The existing cross-section for Visalia Road, per the City's Circulation Element, includes non-standard four-foot (4') bicycle lanes. To meet current standards per the *Highway Design Manual*, the cross section below, with five-foot (5') bicycle lanes, is proposed for Visalia Road. A reduction in the landscape strip from five feet (5') to four feet (4') is being proposed to accommodate the bicycle lane widths. The proposed cross-section for Visalia Road is shown below. It meets the criteria of "green streets", including landscaped medians and tree lined parkways, as recommended in the City's current Circulation Element.



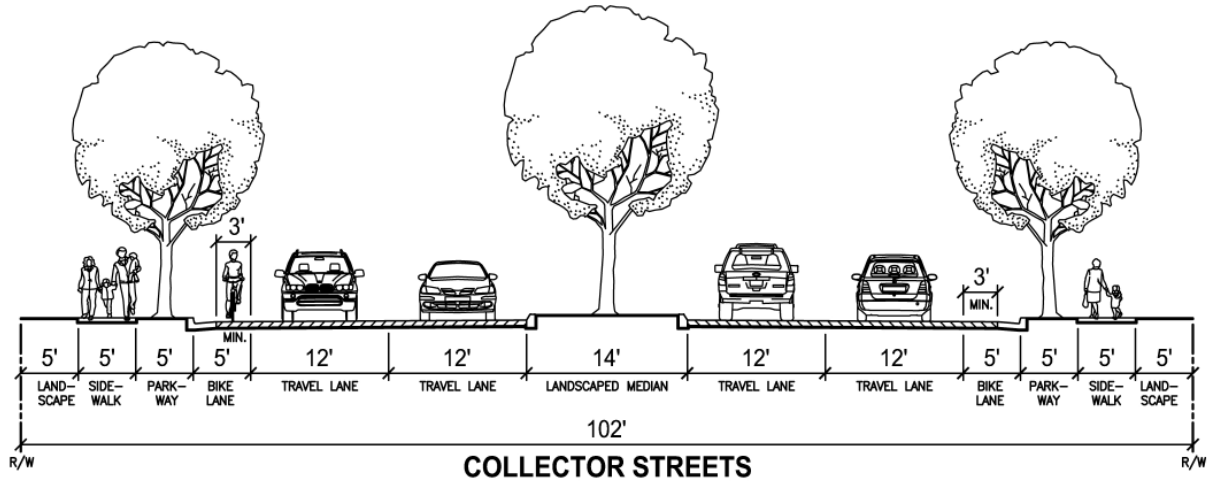
Walnut Avenue is currently designated a collector Street in the City's Circulation Element. Given it is approximately one mile north of the Visalia Road arterial and one mile south of SR 198, its spacing suggests it should be an arterial. Walnut Avenue will provide connection between collectors and activity centers in the City, as well as connection to the adjacent Cities of Exeter and Visalia. Therefore, it is recommended that Walnut Avenue be classified as an arterial with the cross section shown below. Although Walnut Avenue does not include a landscape median, it does include tree lined parkways, a "green streets" feature as indicated in the City's Circulation Element.



3.2.2 COLLECTORS

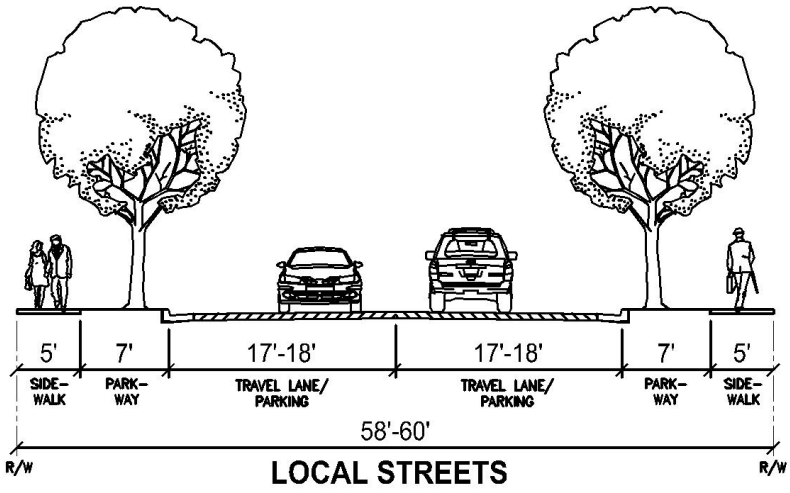
A collector street is a moderate capacity roadway whose function is to move traffic from arterials to local streets and provide access to residential neighborhoods. Per the current Circulation Element, Walnut Avenue is the only designated collector in the City. However, as indicated above, Walnut Avenue should be classified as an arterial. A few planned streets within the City's northern industrial areas, including Terry Avenue, are designated industrial collectors.

As indicated in the Existing Circulation Deficiencies/Concerns section, north-south, industrial, and school connectivity are major concerns for the City. As described in the Proposed Circulation Improvements section, additional collectors are proposed as shown in Exhibit B-1 to help address these concerns. The existing cross section for collectors is shown below and no changes are proposed. With landscaped medians and tree lined parkways, this proposed cross section meets the criteria of "green streets" per the City's Circulation Element.



3.2.3 LOCAL STREETS

Local streets, or residential streets, are a critical component of a City's overall transportation network. These are the streets residents live on, and they can be central to providing a sense of "community" in a City. The existing cross section for local streets is shown below and no changes are proposed.



NOTES:
1. Local streets on blocks less than 600 feet in length may be designed utilizing the smaller dimensions.
2. Subdivisions with average lot size larger than 8,000 s.f. are not required to install parkways.

3.3 Existing Circulation

The City's current General Plan Circulation Element was adopted by the City Council on November 6, 2002. The Circulation Element "identifies the different types of circulation routes in the community, such as roadways, bike paths and railroads"[2] that are existing and planned through year 2025. The current Circulation Element Map of the City's General Plan is shown in Figure 3.1. The City's current circulation system includes the following facilities:

3.3.1 HIGHWAY

State Route (SR) 198 is an east-west highway that serves Central California, stretching from U.S. 101 in the central coast region at its west end to the entrance of the Sequoia National Park at its east end. In the vicinity of Farmersville, SR 198 is a divided highway with two travel lanes in each direction and paved shoulders. There are interchanges at Farmersville Boulevard and Road 156.

3.3.2 ARTERIALS

Farmersville Boulevard is a north-south arterial that runs through the center of the community connecting to SR 198 near the northern City limits. The roadway continues south outside the Farmersville area and eventually connects to SR 137 (Tulare-Lindsay Highway). Through most of the City, Farmersville Boulevard has two travel lanes and a parking lane in each direction. North of Walnut Avenue and south of Oakland Street, Farmersville Boulevard tapers to one travel lane in each direction.

Design plans that include widening the roadway to include two travel lanes, a bicycle lane, parkway, and sidewalk in each direction are currently being completed for Farmersville Boulevard, from north of Walnut Avenue to SR 198. The plans include a landscaped median and prohibited parking. Construction is anticipated to be completed in 2014.

Visalia Road is an east-west arterial connecting Farmersville with the cities of Visalia to the west and Exeter to the east. Within the City, Visalia Road is typically two travel lanes in each direction with parking prohibited.

Design plans are currently being completed for Visalia Road to widen portions of the roadway to include two travel lanes in each direction. Where right-of-way is available, a landscaped median, bicycle lanes, and parking are also planned. Completion of construction is anticipated in 2013.

3.3.3 COLLECTORS

Walnut Avenue (Avenue 288) is an existing east-west collector running through the City midway between Visalia Road to the south and SR 198 to the north. In general, Walnut Avenue is one travel lane in each direction; however, newer developed sections are built to accommodate two travel lanes in each direction and a median or center two-way turn lane.

3.3.4 INDUSTRIAL COLLECTORS

The current Circulation Element identifies industrial collectors in the industrial and retail land use areas in the northern portion of the City near SR 198. Three new roadways have been proposed as industrial collectors, as well as the existing Terry Avenue.

3.3.5 LOCAL STREETS

Local streets provide traffic circulation internal to residential neighborhoods. Typically, local roadways are one travel and one parking lane in each direction. Local roadways connect neighborhoods to the transportation network.

3.3.6 ALLEYS

Alleys are limited in the City of Farmersville to providing rear access to older residential neighborhoods and to commercial buildings in downtown Farmersville.

3.3.7 BICYCLE FACILITIES

On October 25, 2010, the City of Farmersville adopted the Tulare County Regional Bicycle Transportation Plan for use in the City. Bikeway facilities include the following:

- Class I Bike Paths – provides for a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross flow by motorists minimized.
- Class II Bike Lanes – provides a signed and striped lane for one-way bike travel on a street or highway.
- Class III Bike Routes – provides for shared use with pedestrian or motor vehicle traffic. Class III Bike Routes are not striped but are often identified with signage.

Within Farmersville, the adopted plan proposes Class I Bike Paths along the Tulare Irrigation District Main Intake Canal, Extension Ditch, Blain Ditch, Deep Creek, the railroad frontage, and Walnut Avenue between Farmersville Boulevard and Extension Ditch. Class II Bike Lanes are proposed on Farmersville Boulevard, Visalia Road, Walnut Avenue, Oakland Street west of Farmersville Boulevard and a portion of Ventura Avenue south of Visalia Road. Class III Bicycle Routes are proposed on various local roadways to provide continuity to other bikeway facilities and connect neighborhoods to retail, schools and parks. The City's current Bicycle Transportation Plan is shown in Figure 3.2.

3.3.8 WATERWAY TRAILS

The City also adopted a Waterway Trails Master Plan[3] on February 22, 2010. This adopted master plan establishes a network of multi-purpose trails and open space corridors along the numerous waterways within the City. Paths, landscaping, and amenities such as lighting, benches, drinking fountains, and signage are included in the proposed plan. Trails are proposed along the Tulare Irrigation District Main Intake Canal, Cameron Creek, Extension Ditch, Blain Ditch, Deep Creek, and Davis Ditch. The map of the adopted Waterway Trails Master Plan is shown in Figure 3.3.

[3] City of Farmersville, Waterway Trails Master Plan (Collins & Schoettler Planning Consultants, 2010).

3.3.9 SIDEWALKS

The Circulation Element indicates that all areas of the City shall have convenient pedestrian access, including connectivity between neighborhoods. Where possible, all street types are planned to include sidewalks for convenient and safe pedestrian access and parkways for shade trees.

3.3.10 TRAFFIC SIGNALS

Farmersville Boulevard has two existing traffic signals in the City – one at the intersection of Walnut Avenue and the other at Visalia Road. The City's current Circulation Element indicates these intersections are "not expected to require upgrades during the planning period (unless a large project is proposed that may adversely affect these intersections)."[4] The Circulation Element also identifies additional intersections that would require some type of traffic signalization during the period of the current General Plan. These intersections are:

- Farmersville Boulevard and Front Street,
- Farmersville Boulevard and Terry Avenue,
- Farmersville Boulevard and the frontage roads on both sides of SR 198,
- Visalia Road and Steven Avenue, and
- Visalia Road and Oakview Avenue.

Existing and proposed traffic signals, per the City's current Circulation Element, are shown in Figure 3.1.

3.3.11 RAILROADS

The Union Pacific Railroad (UPRR) runs east-west through central Farmersville connecting the Cities of Exeter and Visalia, and generally has a 100 foot right-of-way width, although some portions narrow to as little as 50 feet in width. The railroad is operated by San Joaquin Valley Railroad (SJVRR). Farmersville Boulevard is the only existing railroad crossing within the City limits. An additional crossing is located on the eastern UAB at Mariposa Avenue (Road 156). Currently, there are no spurs or sidings, and no utilization of the railroad in the City of Farmersville for the transportation of goods.

3.3.12 PUBLIC TRANSPORTATION

Visalia Transit currently has two convenient fixed routes that service the City of Farmersville. Route 9 originates at the Visalia Transit Center in downtown Visalia, and travels through Farmersville from Noble Avenue south on Mariposa Avenue, east on Walnut Avenue, south on Farmersville Boulevard, and east on Visalia Road to the City of Exeter. Along Visalia Road, Route 12 connects the Cities of Farmersville and Exeter to major retail centers on Mooney Boulevard in the City of Visalia. Route 9 has a bus stop in either direction at Farmersville Boulevard and Visalia Road. Route 12 has a bus stop at the City Hall located at Farmersville Boulevard and Virginia Avenue approximately one half mile west of downtown Farmersville.

[4] City of Farmersville, Farmersville General Plan Update (Collins & Schoettler Planning Consultants, 2002) page 3-6.

3.3.13 GREEN STREETS

The City's current Circulation Element states that the City shall establish a "green streets" program that incorporates landscaped medians and tree lined parkways. Although an official program has not been adopted, the Circulation Element designates Farmersville Boulevard, Walnut Avenue, and Visalia Road as "green streets". Current plans being designed for the widening of Farmersville Boulevard north of Walnut Avenue and the planned Visalia Road widening incorporate the landscaped medians and parkways, where space permits. Green streets policies encourage native tree planting. The infrastructure improvements will support land use plans that provide green spaces and landscaped streets. The strategy counteracts the effects of motor vehicle emissions and also serves to trap particulate matter and thereby improve air quality. "Green streets" will also encourage walkability, reducing vehicle trips.

3.4 Existing Circulation Deficiencies/Concerns

3.4.1 NORTH-SOUTH CONNECTIVITY

Currently, the existing railroad divides the northern and southern sections of Farmersville and is a major obstacle to providing traffic circulation connectivity throughout the City. Only one railroad crossing at Farmersville Boulevard exists within the City limits. This forces all neighborhood residents north or south of the tracks to travel to Farmersville Boulevard in order to cross to the other side of the City. When trains are moving through town, traffic can back up for a great distance, and any north-south movements are halted until the crossing is cleared.

Another railroad crossing exists at Mariposa Avenue. Although this is within the City's current UAB, it is approximately one-half mile west of the City limits. Additionally, the only existing connections to Mariposa Avenue near the City are from Visalia Road and from Walnut Avenue. Because this crossing is further away than the Farmersville Boulevard crossing for most neighborhoods in the City (one mile), it is often not used as a north-south connection for area residents.

Additional north-south collectors should be planned in the City. These additional collectors would provide additional connectivity to improve congestion on Farmersville Boulevard, allow direct access to the industrial and retail land uses planned in the northern portion of the City, reduce vehicle trip length, reduce fuel consumption and air pollution, and improve emergency response times in the City.

3.4.2 INDUSTRIAL AREA CONNECTIVITY

Per the City's existing Land Use Element of the General Plan, two large areas are reserved for industrial uses in northern Farmersville on either side of Farmersville Boulevard near SR 198. Existing access to these areas is limited to the Terry Avenue and Drive 164 connections to Farmersville Boulevard. As these areas develop, additional accesses will be needed to limit the amount of industrial (truck and employee) traffic on Farmersville Boulevard and various local roadways. Additional accesses to the industrial land uses will increase the viability of the industrial area, and reduce trip lengths, fuel consumption, and air pollution. Emergency response vehicles will also have better access, thereby improving public safety protection for this area.

3.4.3 SCHOOL COMPLEX CONNECTIVITY

Farmersville Unified School District is planning to complete development of a large, integrated school complex bordered by Freedom Drive on the west, Citrus Drive on the south, the alignment of Road 168 on the east, and Walnut Avenue on the north. The existing complex currently includes Farmersville High School, Freedom Elementary School, and the Farmersville Unified School District Office. Future plans for the school complex include a Middle School.

Currently, only two roadways provide access to the school complex; East Citrus Drive, west of the elementary school connecting to Farmersville Boulevard, and Freedom Drive, extending south from Walnut Avenue along the west boundary of the school complex. However, an existing fence at the east end of East Citrus Drive has for some time, prohibited vehicular through traffic but allows pedestrian access. Unrestricted vehicular access is currently limited to Freedom Drive only.

On May 14, 2012, the City Council approved the opening of East Citrus Drive to allow one-way vehicular eastbound access to the school complex with no returning westbound traffic, pending amendments and approval of environmental documents by the School District. Regardless of the approved partial opening of East Citrus Drive, traffic congestion occurs on East Citrus Drive, Freedom Drive, and Walnut Avenue. Studies completed by the School District indicate these streets will continue to operate at unacceptable levels during the peak hours and will worsen with the addition of the Middle School and as student population grows. Additional accesses to the school complex are needed to alleviate some of this congestion.

3.4.4 INCONSISTENCY OF EXISTING BICYCLE PLANNING DOCUMENTS

Plans for bicycle circulation in Farmersville are identified in three separate adopted and approved documents:

- Farmersville General Plan,
- Waterway Trails Master Plan, and
- Bicycle Master Plan.

The latter was prepared by Tulare County Association of Governments and then adopted by the City. While these plans are mostly compatible with each other, there are a few places where they are in conflict with each other. An analysis of each of the plans is needed to reconcile inconsistencies and develop a comprehensive approach for how each of the plans can function collectively.

3.5 Proposed Circulation Improvements

The proposed Circulation Plan, including proposed improvements, is shown in Exhibit B-1. As described below, this plan addresses the existing deficiencies and concerns noted in Section 3.4 above. The Bicycle Plan is shown in Exhibit B-2. This plan combines and reconciles the three adopted documents that together provide direction for bicycle planning efforts for the City.

3.5.1 NORTH-SOUTH CONNECTIVITY

Two new north-south collectors are proposed within the UAB. One is west of the existing City limits, and west of the existing residential neighborhoods along Virginia Avenue. See Figure 3.4. This proposed curvilinear alignment was chosen to accommodate approved plans for the proposed Plum Blossom subdivision located south of the railroad and west of Virginia Avenue. In the northern portion of the City, the proposed collector would realign to the east, connecting to Farmersville Boulevard approximately one half mile north of Walnut Avenue. This would provide direct connection to the northern industrial and retail land uses for the residents in the western portions of the City. In the southern portion of the City, the proposed collector would again realign to the east connecting to Farmersville Boulevard at the UAB. Local roadway extensions to this north-south collector should be planned at West Ash Street, West Petunia Street, West Garrett Avenue, West Anissa Street, West Carolyn Street, and Teddy Street.

To further improve connectivity as the City develops towards its western UAB, additional east-west collectors should be planned to connect this north-south collector to Mariposa Avenue. This would provide more direct access to SR 198 at Road 156 interchange. Two such collectors are proposed: the first at the southern UAB and the second north of the railroad tracks.

The second north-south collector is located east of Brundage Avenue. See Figure 3.5. This collector serves as an edge to the City and could help protect existing farm land outside of the UAB. It provides an additional connection to the industrial and retail land uses in northern Farmersville, and to SR 198 at the Farmersville Boulevard interchange. A local roadway extension to this north-south collector should be planned at East Ash Street.

Figure 3.4
Western North/South Collector

Figure 3.5
Eastern North/South Collector

3.5.2 INDUSTRIAL AREA CONNECTIVITY

As indicated above, the additional north-south collector proposed west of the City limits would realign to the east connecting at Farmersville Boulevard approximately midway between Walnut Avenue and SR 198 (Figure 3.6). The collector provides additional access to the City's industrial areas. Two collectors are also proposed in the western industrial area; one connecting to Noble Avenue and the other connecting to Mariposa Avenue. Both of these will provide additional access to SR 198 at the Road 156 interchange.

To help improve circulation within the eastern industrial area, a local roadway has been planned along the Road 166 alignment connecting to East Noble Avenue. This provides an outlet for the industrial area traffic to SR 198 via East Noble Avenue or Farmersville Boulevard. Terry Avenue is planned to extend to the west to provide full access to the southern portion of the western industrial area. A local roadway is planned to connect Terry Avenue to the proposed collector through the industrial areas. This provides additional access and allows for an industrial traffic connection to SR 198 via the Farmersville Boulevard or Road 156 interchange.

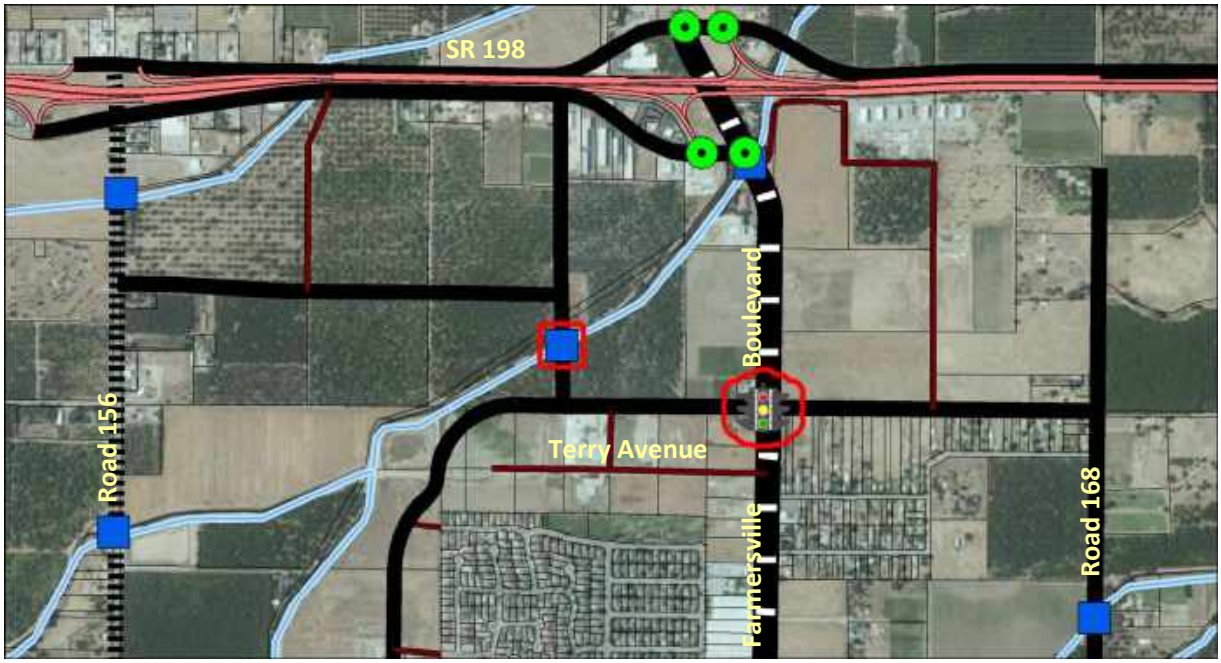

Figure 3.6 – Industrial Area

3.5.3 SCHOOL COMPLEX CONNECTIVITY

With the addition of the proposed Middle School, the school district plans to extend East Citrus Drive to the eastern limit of Farmersville High School (see Figure 3.7). A north-south local roadway is planned between East Citrus Drive and Walnut Avenue aligning with Road 168. The installation of a traffic signal is also planned at the Walnut Avenue and Road 168 intersection to help accommodate traffic entering and exiting the school complex.

In addition to the planned access east of Farmersville High School along the Road 168 alignment, East Citrus Drive is recommended to be extended to the planned north-south collector at the eastern edge of the City. This will increase connectivity around the school complex; decrease congestion on the existing roadways; and improve emergency response times to the area.

Figure 3.7 – Farmersville School Complex

3.5.4 TRAFFIC SIGNALS

As indicated previously, the current Circulation Element identifies intersections that would require some type of traffic signalization during the period of the current General Plan. These intersections are:

- Farmersville Boulevard and Front Street,
- Farmersville Boulevard and Terry Avenue,
- Farmersville Boulevard and the frontage roads on both sides of SR 198,
- Visalia Road and Steven Avenue, and
- Visalia Road and Oakview Avenue.

However, based on the proposed circulation improvements, including the planned additional collectors, local roadway connections to collectors, and changes to circulation in the north industrial area and around the school complex, not all of these intersections may require signalization. Future traffic signalization will likely occur at the intersections of arterials and collectors as shown in Exhibit B-1; however, the decision to install a traffic signal to control an intersection should always be based on an engineering study of roadway, traffic, and other conditions.

3.5.5 ROUNDABOUTS

The City's current General Plan encourages the use of roundabouts to provide traffic control at intersections. Design plans are currently being completed for a modern roundabout at the intersection of Farmersville Boulevard and Noble Avenue. Construction is anticipated to be completed in 2014. The City's future plans also include a complete SR 198/Farmersville Boulevard interchange redesign to include the installation of modern roundabouts at the off- and on-ramp intersections and the Farmersville Boulevard/SR 198 north frontage road intersection. These future roundabouts are depicted in Exhibit B-1.

Roundabouts can also be used as an alternative to the installation of a traffic signal or other control measures at some intersections. Before choosing a roundabout as an intersection control measure, a feasibility analysis should be completed to confirm its appropriateness for a given location.

3.5.6 BIKEWAYS

As indicated previously, the City of Farmersville adopted the Tulare County Regional Bicycle Transportation Plan for use in the City, as well as a Waterway Trails Master Plan. The Waterway Trails Master Plan focuses on Class I Bike Paths/Trails along the numerous waterways throughout the City. The Tulare County Regional Bicycle Transportation Plan addresses Class I Bike Paths/Trails in all areas of the City, as well as Class II Bike Lanes and Class III Bike Routes. Although these two plans focus on different types of bikeway facilities, there are overlapping components to the plans and they are not consistent with each other. This CIMP consolidates both of these adopted plans and address the inconsistencies, and also identifies appropriate bikeway facilities to be included with the proposed CIMP network. The proposed CIMP bikeway facilities are shown in Exhibit B-2.

Along with the existing bikeway facilities shown in Figures 3.2 and 3.3, the CIMP proposes additional facilities to address the connectivity issues in the City. As shown in Exhibit B-2, Class II Bike Lanes are included along all the new collectors proposed in the City. These facilities provide direct connections for the residents to the industrial and retail land uses, schools, and parks. The addition of these facilities provides a travel option which reduces congestion, thereby reducing fuel consumption and air pollution.

The Waterway Trails Master Plan recommends an open space corridor, with a trail, on both sides of the waterway. Although this is an ideal scenario, this may not be feasible for the City of Farmersville. An open space corridor and trail on only one side of the waterway should be allowed when existing conditions prohibit development on both sides. In this case, connections to adjacent neighborhoods on both sides of the waterway should be included to ensure access to the trail system wherever possible.

3.6 Estimated Costs

The development of a master plan for the City's Circulation system is dependent upon both the prioritization which should be afforded to each needed facility and the funding which can be made available for construction. The proposed Circulation Master Plan includes arterials, collectors and local roadways. Since local roadways are ordinarily the responsibility of the

developer, only the arterial and collector costs are included in the CIMP. A cost per linear foot was estimated for each type of roadway and includes: asphalt, class II base, street lights, sidewalks, curb and gutter, and median curbs, signals, culvert crossings, railroad crossings and landscaping where appropriate.

Right-of-way was not part of the estimate, because it is assumed that right-of-way will be dedicated with the future development projects that need the roadways. Table 3-1 is the summary of the estimated costs.

Table 3-1
Estimated Costs per Lineal Foot

Type	Cost/l.f.	Developer Cost/l.f.	Net Cost/l.f.
Farmersville Blvd (100' R/W)	$568.02	$333.20	$234.82
Visalia Road (116' R/W)	$704.68	$333.20	$371.48
Walnut Avenue (82' R/W)	$347.31	$256.65	90.66
Collector Street (102' (R/W)	$518.18	$307.98	$210.20

Applying these costs to the circulation system depicted on Exhibit B-1, the following capital costs in Table 3-2 are established.

Table 3-2
Capital Improvement Program Summary

Type	Length (ft)	Cost	Developer	Net
Farmersville Blvd (100' R/W)	10,560	$5,998,000	$3,518,000	$2,480,000
Visalia Road (116' R/W)	2,800	$1,973,000	$933,000	$1,040,000
Walnut Avenue (82' R/W)	5,650	$1,962,000	$1,450,000	$512,000
Road 156 (100' R/W)	7,900	$4,487,000	$2,632,000	$1,855,000
Collector Street (102' R/W)	50,793	$26,320,000	$15,643,000	$10,677,000
Construction Subtotal		$40,740,000	$24,176,000	$16,564,000
Contingencies (15%)		$6,111,000	$3,626,400	$2,485,000
Subtotal		$46,851,000	$27,802,000	$19,048,600
Engineering, Surveying and Construction Administration (20%)		$9,370,000	$5,561,000	$3,810,000
Total Cost		**$56,221,000**	**$33,363,000**	**$22,858,000**

The costs included in Tables 3-1and 3-2 are estimates based on the 2012 bidding atmosphere, and actual costs could vary from the estimates presented, depending on inflation/deflation rates affecting construction. It is common practice to use Engineering News Record (ENR) construction cost index to project the change in costs on a yearly basis. The costs included in this report should be reviewed every five years and at the minimum, the ENR construction cost index should be applied to adjust the estimates on an annual basis.

3.7 Fees

The proposed roadways developed in this study were not based on traffic generation, but circulation needs of the City. The proposed roadways will be used to serve the newly developed areas outside the existing city limits. The City will require the developer to install the outside 32 feet of all collectors and arterials which would include sidewalk, curb and gutter. This will reduce the overall cost as shown in 3-2. It also is anticipated that the City will receive grants for street improvements in the amount of $250,000 per year. This amount is based on the City receiving $10,000,000 over the next 20 years from State Transportation Program and Measure R. It is anticipated the City will receive $6,000,000 in the next two years (from Measure R) for the construction of Farmersville Boulevard. The other $4,000,000 is a conservative estimate for future grants. The grant funding would cover the entire project whether it is anticipated to be developer cost or City cost, thus reducing the overall City cost to $17,800,000.

Total Acres to develop = 1,752 (UAB) + 186 (Vacant) – 433 (right of way) = 1,505

Cost per acres = $17,800,000/1505 = $11,827.25 per acre.

The calculated fee per acre will need to be adjusted on an annual basis based on the Engineering News Record Construction cost Index.

3.8 Recommendations

The recommendations provided below are proposed to improve traffic circulation in the City of Farmersville. Some of these recommendations are the product of previously adopted plans or proposed modifications to these plans. Many of these recommendations are long term goals for the City, but should be planned for as the City continues to grow. Continued growth in the City utilizing these recommendations will help promote critical development of the retail and industrial areas, improve connectivity throughout the City, revitalize the downtown area with new street and landscape improvements, decrease the number of vehicle trips and fuel consumption within and outside the urban areas, improve air quality by decreasing ozone levels and particulate matter, lessen childhood asthma triggers, decrease obesity and inactivity rates by providing sidewalks and bikeways and improved access to parks, and allow efficient and safe movement for all modes of transportation.

1. Amend the Circulation Element of the City's current General Plan as follows:

    - Reclassify Walnut Avenue from a collector to an arterial roadway.
    - Include the new collector streets proposed in this CIMP.
    - Revise the railroad and signal locations proposed in this CIMP.
    - Include the proposed roundabouts proposed in this CIMP.
    - Update the street types to include the proposed cross-sections to meet current design standards.
    - Designate Mariposa Street as an arterial.

2. Continue developing, and implementing, a "green streets" program in the City.

3. Amend the next City Bicycle Master Plan to include the Class I, II, and III bikeways proposed in this CIMP.

CHAPTER FOUR

WATER SYSTEM

CHAPTER FOUR WATER SYSTEM

4.1 Existing Water System

4.1.1 INTRODUCTION

The CIMP will provide a road map for serving critical infill development within the Farmersville Urban Area Boundary, while protecting the valuable farmland outside of the boundary. The CIMP will include planning for water lines to enable new infill development. The development of a well-planned water system will support infill development and increased housing density, which is forecast for Farmersville. Planning for the necessary infrastructure to support this compact growth pattern will allow the City to meet the challenges of adopted land use plans and sustain the community in the long term. Many future planned developments are depending on plans for adequate water supplies.

The Farmersville CIMP will also help the State achieve its' goal to reduce per capita water consumption by 20 percent by the year 2020, by linking Farmersville's land use plans with water planning. The CIMP will focus on the nexus between water and growth, accommodating growth that minimizes the effect on water consumption and distribution costs. The Farmersville CIMP is consistent with the water-related objectives outlined in the Integrated Regional Water Management Plan.

4.1.2 GENERAL SYSTEM DESCRIPTION

Water production for the water distribution systems is generated from groundwater wells, and currently does not depend on surface waters. The water system consists of eight (8) water wells, hydropneumatic pressure tanks, approximately 144,000 lineal feet of pipe, and various valves and hydrants. The water distribution system is interconnected between fire and domestic services through a network of pipes that are directly fed by water wells located in different parts of the City.

The existing pipe network system is comprised of the major elements shown in Table 4-1:

Table 4-1
Existing Water System Inventory

Pipe Size (inches)	Length (feet)
4	10,600
6	53,200
8	56,300
10	9,500
12	14,000
Pressure Tanks	8
Wells	8
Storage Tanks	0

4.1.3 EXISTING WELL SITES

Currently eight well sites are located in the City's water distribution system (see Exhibit C-1). Well Site 2 is currently out of service, and Well Site 8 is undergoing maintenance. On average, the wells can each produce around 700 gallons per minute (gpm), and are considered fairly shallow, with groundwater depths encountered approximately 60 feet below ground surface. The operation of the water wells is dependent on the production rate of a well being matched with the water demand of the service connections. During the peak demand periods, the existing hydropneumatic tanks provide some of the equalization required to absorb the differences between the demands from the service connections and the production rates from the wells.

4.1.4 EXISTING WATER DEMANDS

In 1993, the average daily demand of the water system was recorded at 1,000 gpm, and currently the system is meeting an average daily demand of 1,500 gpm. There are two peak demands that could stress the production rates of the system. The first peaking factor is the maximum daily demand, which includes the peaking factors of diurnal patterns on an average day; currently estimated at 3,900 gpm. The second peaking factor accounts for peak hour demands, which includes the peaking factors of diurnal patterns, and fire protection demands; currently estimated at 6,000 gpm.

The current water distribution system is handling average daily demands, maximum daily demands, and peak hour demands with low head losses and is suitable under normal operation conditions. A second analysis was conducted using the maximum daily demands along with fire demands and assuming the best producing well is out-of-service. The results of the water model show that the existing water system can reasonably meet the existing demands under fire flow conditions with velocities below seven feet per second and pressures at 60 psi as shown in Exhibit C-2.

4.1.5 CAMERON CREEK COLONY

The CIMP will address critical water needs for Cameron Creek Colony, an 81-lot neighborhood located adjacent to the city, but just outside Farmersville city limits. Privately owned wells are failing due to their shallow depth and contamination from septic systems that are too close to the domestic wells serving the existing residences. Some residents have requested city water be extended into the area because they are buying water for drinking and cooking. In some cases, the septic tanks are failing, resulting in pollution of critical groundwater supplies due to nitrate contamination. This study will consider appropriate costs to provide City water service to the area.

4.2 Evaluation of Future Water System

4.2.1 FUTURE WATER DISTRIBUTION SYSTEM

In order to allow the City to eventually grow out to the Urban Area Boundary (UAB), new water lines will need to be installed to service areas outside the existing City limits. While the current

General Plan only allows development within the Urban Development Boundary (UDB), the water system needs to be master planned to support growth to the UAB to avoid water line under sizing. The current water distribution system will also need an additional well site with a storage tank, and the extension of the distribution system with 6-inch, 8-inch, 10-inch, and 12-inch water lines as shown in Exhibit C-3.

An additional well site located in the northeast portion of the UAB will be required for future expansion. In addition to the new well, a 500,000 gallon storage tank (0.50 MG), with the potential for a second 500,000 gallon storage tank, is recommended.

4.2.2 NEW WELL AND STORAGE TANK

To accommodate peak hour demands within the UAB, a new well site is recommended to increase the water production capacity. Since the northeast portion of the City has the highest elevation, an at-grade storage tank at the location would provide a good source of storage for fire protection with the inclusion of a booster station. The American Water Works Association (AWWA) M32 recommends storage tanks to have a volume capacity equal to 25% of the average daily demand plus four hours of fire protection storage, which results in approximately 0.90 MG of storage or two 0.50 MG tanks. For meeting the current needs, one 0.50 MG storage tank would meet the fire protection requirements and the City could continue to use the hydropneumatic tanks for meeting maximum daily demands.

4.3 Estimated Costs

4.3.1 DISTRIBUTION SYSTEM

The development of a master plan for the City's water system is dependent upon both the prioritization that should be afforded to each needed facility and the funding which can be made available for construction.

The summarized components of the plan are outlined in Table 4-2. Priority of the lines to be constructed will be dependent upon how the City grows. The City is hoping to attract industrial users to the northwest portion of the UAB, which would increase the priority to construct new water facilities to serve that area.

Table 4-2
Capital Improvement Program Summary

Item	Quantity	Unit	Cost/Unit	Approx. Cost
8" Water Line	23,400	LF	$ 85.00	$ 1,989,000.00
10" Water Line	5,900	LF	$ 94.00	$ 554,600.00
12" Water Line	4,300	LF	$ 95.00	$ 408,500.00
Water Well	1	EA	$ 900,000.00	$ 900,000.00
Booster Pump (from Tank)	2	EA	$ 60,000.00	$ 120,000.00
Water Storage Tank (0.5 MG)	1	EA	$ 500,000.00	$ 500,000.00
Boring	300	LF	$ 450.00	$ 135,000.00
Land Acquisition	0.75	AC	$ 30,000.00	$ 22,500.00
Construction Subtotal				**$ 4,629.600.00**
Contingencies (15%)				$ 694,440.00
Subtotal				**$ 5,324.040.00**
Engineering, Surveying, and Construction Administration Cost (20%)				$ 1,064,808.00
Total Cost				**$ 6,388,848.00**

Note: The cost estimates per lineal foot includes trench resurfacing, isolation valves at intersections, complete in place at current prevailing wage rates.

The top priority on the list of recommended improvements is the 0.50 MG storage tank and booster pump station, if land can be made available near the northeast boundary of the City. Other capital improvements on the list will depend on the City's growth areas.

The costs included in Table 4-2 are estimates based on the 2012 bidding atmosphere, and actual costs could vary from the estimates presented, depending on inflation/deflation rates affecting construction. It is common practice to use Engineering News Record (ENR) construction cost index to project the change in costs on a yearly basis. The costs included in this report should be reviewed every five years and at the minimum, the ENR construction cost index should be applied to adjust the estimates on an annual basis.

4.3.2 CAMERON CREEK

The current city water system has the ability to serve Cameron Creek Colony once the water lines are installed. Since the water lines for Cameron Creek Colony are considered local lines the cost for construction will fall on the residents of Cameron Creek Colony. The cost estimate shown in Table 4-3 would be used to help the residents find funding to construct the water lines.

Table 4-3
Cameron Creek Colony Water Improvement Program Summary

Item	Quantity	Unit	Cost/Unit	Approx. Cost
8" Water Line	4462	LF	$ 85.00	$ 379,270
Fire Hydrants	6	EA	$ 2,500.00	$ 15,000.00
Valves	10	EA	$ 900.00	$ 9,000.00
Water Meters	89	EA	$ 500.00	$ 44,500.00
Booster Pump (from Tank)	2	EA	$ 60,000.00	$ 120,000.00
Construction Subtotal				**$ 447,770.00**
Contingencies (15%)				$ 67,000.00
Engineering, Surveying, and Construction Administration Cost (20%)				$ 103,000.00
Total Cost				**$ 618,000.00**

Note: The cost estimates per lineal foot includes trench resurfacing, isolation valves at intersections, complete in place at current prevailing wage rates.

4.3.3 Fees

The proposed water lines within this master plan are based on the potential development out to the UAB. Since some of this area is outside the current general plan and there is no certainty regarding the location of future development, the basis of the fee will be the undeveloped acreage contained within the UAB.

Total Acres to develop = 1,752 (UAB) + 186 (Vacant) – 433 (right of way) = 1,505 ac.

Cost per acres = $6,388,848/1505ac. = $4,245 per acre.

The calculated cost of $4,245 per acre need to be adjusted on an annual basis based on the Engineering News Record Construction cost Index.

4.4 Conservation

4.4.1 STRATEGIES

The Farmersville CIMP will meet water conservation objectives by utilizing five important strategies:

- A full review of existing water infrastructure will be conducted to identify areas of "system fatigue," reduce leakage, and prevent future water losses. The Environmental Protection Agency (EPA) reports there are 240,000 water main breaks per year in the United States. Taking proactive steps to maintain and/or rehabilitate existing infrastructure is an important strategy to protect water resources and ensure safe, reliable water delivery. The "fix it first" strategy is typically deemed to be most critical to protecting valuable water resources.

- The CIMP will enable compact growth and efficient land use strategies that will save water. As noted in the EPA guide, "Growing towards More Efficient Water Use: Linking Development, Infrastructure, and Drinking Water Policies", compact growth helps communities reduce costs and conserve water. Compact neighborhood design, which makes maximum use of smaller lots and attached housing, has less landscaping and thus less demand for water (lawns, landscaping, and gardens account for 50-70% of water usage). Ultimately, this could make the difference between Farmersville needing to develop new water sources or using existing water sources efficiently well into the future.

- The area's system of surface irrigation ditches and channels provides abundant opportunities to design storm water facilities in locations that can also accept surface water sources for ground water recharge. This can be accomplished through exchange agreements with area farmers and irrigation companies for supplies of year-round treated waste water, once the City has implemented tertiary treatment of its wastewater to meet Title 22 requirements.

- The City's properly treated wastewater can be reused, providing a year-round supply of water for recharging groundwater and for irrigation of certain crops.

- In 2010, the City began installing water meters for 100% of its customers. Empirical evidence has proven that metered water delivery and billing encourages more conscientious water use. The CIMP will support the City's efforts to establish metered delivery and billing for all of its customers before the 2020 deadline.

4.5 Recommendations

The current water system is functioning adequately. A key issue for this system is the lack of water storage. The current system relies completely on groundwater pumping to supply the needed water. If there are problems with more than one well at a given time there will be problems providing fire flow. In the future, the City may also experience difficulty balancing well production with service demand. These issues can be resolved with the addition of a water storage tank. The northeast portion of the City has the highest elevation and should be considered the best location for the storage tank.

To improve water circulation and overall system performance in the area bounded by Rose Avenue, Brundage Avenue, Visalia Road and Front Street, a 10 inch water line is needed in Visalia Road. Currently this area is serviced by 8 inch and smaller lines which run through local streets. The proposed 10 inch line in Visalia Road will provide this area with a larger connection to the water wells on the east side of the City.

CHAPTER FIVE

WASTEWATER

CHAPTER FIVE WASTEWATER

5.1 Existing Sewer System

5.1.1 INTRODUCTION

The CIMP will provide a road map for critical infill development within Farmersville's Urban Area Boundary, while protecting the valuable farmland outside of the boundary. The CIMP will include planning for wastewater lines to enable new infill development. The development of a well-planned wastewater system will support infill development and increased housing density, which is forecast for Farmersville. Planning for the necessary infrastructure to support this compact growth pattern will allow the City to meet the challenges of adopted land use plans and sustain the community in the long term. Many planned developments are dependent on plans for adequate wastewater disposal systems.

5.1.2 GENERAL SYSTEM DESCRIPTION

The Farmersville sewer system is fairly typical for Tulare County communities and is a combination of underground gravity flow pipelines, lift stations and a sewer treatment plant.

The existing system is comprised of the major elements shown in Table 5-1:

Table 5-1
Existing Sewer Inventory

Pipe size (inches)	Length (feet)
6	26,350
8	74,580
10	22,230
12	10,880
18	1,390
21	1,920
24	1,780
Manholes	390
Lift stations	4

5.1.3 EXISTING LIFT STATIONS

The City's sewer system currently has four lift stations. One lift stations is located at the Oakview Avenue and Ash Street intersection. The second lift station is located at the intersection of Yew Street and Sandy Avenue. Both of these lift stations serve a small area that is not scheduled to be expanded. These lift stations function adequately for the areas served.

A third lift station is located at Petunia Street and Ventura Avenue. This lift station is functioning properly and serves a small area that is not proposed to expand beyond current flows.

The fourth lift station is located at the intersection of Walnut Avenue and Ventura Avenue and was designed to service the northern portion of the City. The existing lift station has a capacity of 500 gpm and was designed to allow for larger pumps to be installed that would increase the capacity to 1,035 gpm at a future date. This lift station was designed to handle the area within the UAB north of Walnut Avenue. This lift station lacks a flow meter and, without a flow meter, it will be difficult to decide when the bigger pumps will be needed.

5.1.4 EXISTING SEWER TREATMENT PLANT

The City's sewer treatment plant is located about a mile south of Visalia Road along the extension of Virginia Avenue. The facility consists of headworks and aerated ponds first constructed in 1967. The plant was expanded in 1978 and the aeration ponds were lined in 1987. The design capacity of the existing plant is 1.25 mgd; the current average daily flow is approximately 0.95 mgd.

5.1.5 USAGE

The 1983 master plan calculated a disposal rate of 140 gallons per day per capita, which in the context of a master plan is considered to be very high. With the advent of water conservation strategies and availability of more accurate population numbers, the calculated usage rate has declined since 1983. Currently, on a straight population basis (no commercial/industrial factors), the disposal rate is estimated to be 88 gallons per capita per day. Since this estimate is based on a straight population basis, its use for planning the needs of future growth would be conservative.

5.1.6 CAMERON CREEK COLONY

The CIMP will address critical wastewater needs for Cameron Creek Colony, an 81-lot neighborhood located adjacent to the City, but just outside Farmersville city limits. Privately owned wells are failing due to their shallow depth and contamination from poorly operating septic systems that are too close to the domestic wells serving the existing residences. In some cases, the septic tanks are failing resulting in inadequate treatment of sewage and pollution of critical groundwater supplies due to nitrate contamination. Some residents have requested city sewer be extended into the area because of the failing septic systems. This study will consider appropriate costs to provide City sewer service to the area.

5.2 Evaluation of Future Sewer System

5.2.1 SEWER COLLECTION SYSTEM

In order to plan for the City to grow out to the UAB, new sewer lines will need to be installed to service areas outside the existing City limits. The original 1983 sanitary sewer master plan served the east side of Farmersville (Areas 1, 2, 3, 4, 5) with a new trunk line labeled Line 1. The west side of Farmersville (Areas 12, 13, 14) was served by a new trunk line labeled Line 6 (a portion of line 6 from the treatment plant to Visalia Road was installed in 1997).

Line 1 was proposed to serve the area south and east of the existing City limits. This line is still needed to serve this area. There are 40 acres along Visalia Road (originally called Tributary Area 5) that would be serviced by the existing 10 inch line in Visalia Road.

Line 2 will not be necessary. This line was eliminated by development that has occurred in this area. The west side of Farmersville Boulevard is being serviced by the line in Walnut Avenue as well as a line located in Ashley Street. The east side of Farmersville Boulevard is proposed as a single development and would be serviced by the Walnut Avenue Line (Line 4).

Line 4 will be needed in the future to serve the area north of Walnut Avenue and east of Farmersville Boulevard. It will also be available for the school complex on the south side of Walnut Avenue should the Citrus Avenue line reach its ultimate capacity.

In 2000, the North Side Sewer Study was completed. The study sized sewer lines to accommodate growth in the area north of Walnut Avenue. This area included 713 acres with an estimated ultimate flow of 1,035 gpm. The CIMP has expanded the area of study to include the lands within the UAB. As a result, the area serviced by the Walnut Avenue lift station is now 925 acres. Using the same rational as the North Side Sewer Study (use rate of 0.0011 million gallons per day per acre), the flow for this area will be 1.018 mgd or 707 gpm. This is within the ultimate flow rate for the study but reduces the peaking factor from 1.6 to 1.5.

Since other sewer plans have been completed since the 1983 master plan was adopted, new service areas were created to allow for the incorporation of the new study areas into the CIMP. Exhibit D-3 shows the new service areas.

The new service areas are called regions and the acreages they include are listed in Table 5-2.

Table 5-2
Sewer Study Areas

Region Name	Total Acres	Residential Acres	Commercial Acres	Industrial Acres	Institutional Acres
North Sewer Study	925	236	230	439	20
West Region	467	327	20	0	120
Southeast Region	509	464	27	0	18

The southeast region contains Tributary 5 which will be served by existing sewer lines. This will reduce the southeast region to 469 acres.

5.2.2 FUTURE COLLECTION SYSTEM

For the purposes of this study, the future density will be six (6) dwelling units per acre and 3.2 people per dwelling units. Also, the current estimated use of 88 gallons per person per day was used. This will result in an estimated flow of 1,689 gallons per day per acre.

The North Side Sewer Study referenced earlier, sized the sewer lines and the existing lift station to serve the area north of Walnut Avenue. The main line in Farmersville Boulevard and the Walnut Avenue lift station were installed in 2001. The current lift station has a capacity of 500 gpm with an ability to upgrade to 1,035 gpm. The lift station is in need of a flow meter to allow the City to monitor the actual flows in order to properly plan for the timing of the future upgrade of the pumps.

Two trunk lines are needed in the North Side Sewer Study area. A trunk line, Line F, will need to be located on Walnut Avenue east of Farmersville Boulevard. A second line, Line G, will need to be installed in Noble Avenue with a bore under the freeway to extend a sewer line to Mineral King Avenue, to serve the area north of Highway 198. The remaining lines to be installed in the north sewer study area will be considered developer-responsible lines. These lines are 8 inch or 10 inch lines sized to service a specific area within the study. See Exhibit D-2 for location of trunk lines.

The southeast region will be serviced by trunk lines that will follow the proposed collectors in the area. The expected flow from the southeast area is estimated to be 530,000 gpd. Applying a peaking factor of 1.6, the peak flow is expected to be 848,000 gpd. To accommodate this estimated peak flow, the trunk line along the south side of the area will need to be a 15” line with a minimum slope of 0.0014. This sizing is consistent with the 1983 Sewer Master Plan. The pipe size can be reduced to 10” once the line has extended to the east UDB, and can be further reduced to 8” once the line has extended to Visalia Road. The future residential developments in this area will need to install the local sewer lines to serve the areas being developed. Exhibit D-2 depicts the proposed lines in this area as A, B, and C.

The west region will be serviced by an existing 24” trunk line located in Virginia Avenue south of Visalia Road. North of Visalia Road, the area will be served by a proposed trunk line located in the proposed collector street that runs through the middle of that area. The west region is expected to generate an estimated flow of 528,000 gpd. Applying a peaking factor of 1.6, the peak flow is estimated to be 845,000 gpd. This will require a 15 inch sewer line located within the proposed collector. This line may be reduced to 10 inch once it extends beyond Front Street. Development within the area will be responsible for installing the local sewer lines to serve the areas being developed. Exhibit D-2 shows the proposed lines in this area as D and E.

5.2.3 SEWER TREATMENT PLANT

The Preliminary Engineering Report (PER) completed in 2010 for the Wastewater Treatment Plant and updated in August of 2012, calls for an expansion of the sewer treatment plant to 1.4 mgd. This is expected to serve the City until 2025 or until a population of 15,866. The recommendation of the PER was for the use of aeration lanes with activated sludge. This

configuration is scalable, and can be incrementally expanded by adding additional aeration lanes. The PER has projected the 2050 population of Farmersville at 24,746 with a needed treatment capacity of 2.4 mgd.

5.3 Estimated Costs

5.3.1 COLLECTION SYSTEM

The development of a master plan for the City's sewer system is dependent upon both the prioritization that should be afforded to each needed facility and the funding which can be made available for construction.

The summarized components of the plan are outlined in Table 5-3. Priority of the lines will depend on how the City grows. The City is currently trying to attract industrial users in the North Side Sewer Study Area. This might require the planned upgrade to the Walnut Avenue lift station.

The foremost priority on the list is the flow monitor on the Walnut Avenue Lift Station. The remaining capital improvements on the list will depend on the actual activity within the various growth areas of the City.

The costs included in Table 5-3 are estimates based on the 2012 bidding atmosphere and actual costs could vary from the estimates presented, depending on inflation/deflation rates affecting construction. It is common practice to use Engineering News Record (ENR) construction cost index to project the change in costs on a yearly basis. The costs included in this report should be reviewed every five years and, at the minimum, the ENR construction cost index should be applied to adjust the estimates on an annual basis.

Table 5-3
Sewer Capital Improvement Program Summary

Item	Qty.	Unit	Cost/Unit	Approx. Cost
Add flow meter to Walnut Lift Station	1	EA	10,000	$10,000.00
Upgrade Walnut Avenue Lift Station	1	EA	$50,000.00	$50,000.00
10” North Sewer Study Line	1,320	LF	$100.00	$132,000.00
8” North Sewer Study Line	2,100	LF	$90.00	$189,000.00
Highway 198 bore	250	LF	$450.00	$112,500.00
15” Southeast Sewer Line	6300	LF	$125.00	$787,500.00
10” Southeast Sewer Line	3400	LF	$100.00	$340,000.00
8” Southeast Sewer Line	2600	EA	$90.00	$234,000.00
15” West Sewer Line	3300	LF	$125.00	$412,500.00
10” West Sewer Line	2500	LF	$100.00	$250,000.00
Construction Subtotal				$2,517,500.00
Contingencies (15%)				$377,625.00
Subtotal				**$2,895,125.00**
Engineering, Surveying, and Construction Administration Cost (20%)				$579,025.00
Total Cost				**$3,474,150.00**

The cost per lineal foot includes a manhole every 400 feet and trench resurfacing.

5.3.2 WASTEWATER TREATMENT PLANT

The PER completed for the City in 2010 and updated in August, 2012 recommended the current plant be upgraded to secondary treatment and expanded to handle 1.4 mgd. The PER estimated the cost of the upgrade to be $14.5 million which included design, land costs and contingencies.

5.3.3 CAMERON CREEK COLONY

The current city wastewater system has the ability to serve Cameron Creek Colony once the sewer lines are installed. Since the sewer lines for Cameron Creek Colony are considered local lines the cost for construction will fall on the residents of Cameron Creek Colony. The cost estimate in Table 5-4 would be used to help the residents find funding to construct the sewer lines.

Table 5-4
Cameron Creek Sewer Improvement Program Summary

Item	Qty.	Unit	Cost/Unit	Approx. Cost
8" Sewer Line	4600	LF	$80	$368,000
Manholes	14	EA	$3,500	$49,000
Laterals	81	EA	$1,500	$121,500
Construction Subtotal				$538,500
Contingencies (15%)				$80,775
Engineering, Surveying, and Construction Administration Cost (20%)				$123,855
Total Cost				**$743,130**

The cost per lineal foot includes trench resurfacing.

5.3.4 FEES

The proposed sewer lines within this master plan are based on the potential development out to the UAB. Since some of this area is outside the current general plan and there is no certainty regarding the location of future development, the basis of the fee will be the undeveloped acreage contained within the UAB. The wastewater treatment fee will need to be based on dwelling units. This is due to the fact the treatment plant has a fixed hydraulic treatment capacity and future expansions will need to be funded by the future development. The 1.4 mgd wastewater treatment plant is estimated to cost $14,500,000. The existing flow into the plant is 0.9 mgd, so 0.5 mgd (36%) is for future growth. This 0.5 mgd will serve an estimated population of 5,500 people based on 90 gallons per person. Using the current people per household of 3.2 this equates to 1,719 dwelling units.

Total Acres to develop = 1,752 (UAB) + 186 (Vacant) – 433 (right of way) = 1,505 ac.

Wastewater collection fee:
Cost per acre = $3,474,150/1505ac. = $2,308.50 per acre.

Wastewater Treatment fee:
Cost per acre = $5,220,000/1719 du. = $3,036.65 per dwelling unit

The calculated fees will need to be adjusted on an annual basis based on the Engineering News Record Construction Cost Index.

5.4 Recommendations

The current collection system is functioning adequately. The only current problem areas are the lack of a flow meter at the Walnut Avenue lift station and the condition/capacity of the existing wastewater treatment plant.

The flow meter at the Walnut Avenue lift station should be installed as soon as practical to ensure that the capacity of the lift station is not reaching the limits of the existing installed pumps.

The capacity of the treatment plant has been an issue for a number of years. The current decline in new home construction has given the City time to plan the upgrade without affecting the overall development of the City.

CHAPTER SIX

STORM DRAIN

CHAPTER SIX STORM DRAIN

6.1 Existing Storm Drain Facilities

6.1.1 INTRODUCTION

The CIMP will provide a road map for critical infill development within Farmersville's UAB, while protecting the valuable farmland outside of the boundary. The CIMP will include storm drainage facilities to enable new infill development. The development of a well planned storm sewer system will support infill development and increased housing density, which is forecast for Farmersville. Planning for the necessary infrastructure to support this compact growth pattern will allow the City to meet the challenges of adopted land use plans and sustain the community in the long term. Many planned developments are dependent on plans for adequate storm water disposal and management systems.

The CIMP will also provide guidelines to recapture storm water for recharge and groundwater sustainability programs. New storm drain systems will capture urban runoff and direct it to percolation ponds to naturally filter and return surface water back into the ground. A second strategy to improve water quality includes recapturing and naturally filtering urban runoff from storm drain systems, which will be planned in the CIMP. This strategy decreases water pollution by directing runoff into percolation ponds. The contaminated water is naturally filtered as it seeps into the ground and recharges the local water table. Directing the storm drainage that is generated within the City to recharge facilities is essential to keep underground water supplies replenished and to reduce the number of contaminants that could potentially reach the local water supply.

6.1.2 GENERAL SYSTEM DESCRIPTION

The Farmersville storm drainage system is fairly typical for Tulare County communities and consists of a combination of surface drainage and underground gravity flow pipelines. The three primary discharge locations are Deep Creek, Extension Ditch and the Front Street detention pond. The existing storm drainage system is comprised of the major elements shown in Table 6-1:

Table 6-1
Existing System Specifications

Pipe size (inches)	Length (feet)
12	5,971
15	221
18	510
21	108
24	57
27	8
30	19
33	8
42	17
48	92

Drainage Inlets – 304

Manholes – 137

Drainage ponds – 5
- Front Street(detention) approximate capacity 36.0 acre-feet
- Roy Park Pond (detention)
- City Hall basin (retention)
- Woodcrest Pond (retention)
- Terry Avenue Pond (retention)

Storm Drainage Lift Stations – 1
- Front Street

6.1.3 LINE CAPACITIES AND FLOWS

Existing drainage areas and pipeline slopes and sizes were determined using information from the master plan of 1989 and other existing information. In order to evaluate line capacities and design flows, the following generalized assumptions were made:

a. Two-year design storm (a storm intensity which statistically has a 50% probability of occurring in any given year) based on City of Farmersville rainfall intensity curves

b. Coefficient of runoff – "C" (the percentage of total rainfall which reaches the drainage system):

   See Table 6-2

c. Roughness coefficient – "n" (coefficient based on pipeline roughness; the larger the "n", the less the pipeline capacity):

   "n" = 0.013

Each drainage area and sub-area was evaluated to compare existing line capacity to design flows. Two design flows were established. First, an "unrestricted" design flow assumed that the entire drainage area contributed to the line being evaluated as if all upstream pipelines were adequately sized. Second, a "restricted" design flow that allowed upstream pipelines to contribute only at their existing capacity. Through this analysis process, it was determined that the existing system is appropriately sized for the given drainage flows experienced.

6.1.4 DRAINAGE PONDS

The existing drainage ponds serve various areas within the City.

Front Street Pond (Detention)
This is the largest of the ponds and serves Areas A, B, C, and AA (see Exhibit E-1 for areas) with a combined total land area of approximately 423 acres. The current capacity of the pond is approximately 36 acre-feet. Two (2) 10 hp pumps are used (one is for backup) to pump water from the pond into Extension Ditch. Each pump has a capacity of approximately 2,100 gpm. One (1) pump has the ability to drain a full pond in four days.

Roy Park Pond (Detention)
This pond serves Area W and has a total land area of approximately 0.30 acres. The pond capacity is estimated at 1.2 acre-feet.

City Hall Basin (Retention)
This pond is part of the City Hall complex. Streets do not drain into this pond. The only runoff that it receives is from the City Hall Complex. No problems with this pond have been reported.

Woodcrest Pond (Retention)
This pond is a temporary pond sized to serve the Woodcrest Subdivision. This subdivision is comprised of 54 residential lots. The pond is maintained by the subdivision and there are no reports of problems.

Terry Avenue Pond (Retention)
This pond is located at the end of the current asphalt surface on Terry Avenue. The pond is temporary and was sized to handle only the street runoff from Terry Avenue. The parcel map for this area depicts a permanent pond at the very westerly end of the parcel map. Current lots that front on Terry Avenue are required to maintain their lot drainage on site.

6.1.5 EXISTING DITCH CAPACITY

Watercourses within the study area are Cameron Creek, Deep Creek, Extension Ditch, Blain Ditch, Lower Extension Ditch, Hart-Sweeney Ditch and Sims-Davis Ditch. Except for Cameron Creek, which is operated by the Tulare Irrigation District (TID), all other channels are operated by the Consolidated People's Ditch Company (CPD). In reviewing existing and proposed discharges into these channels, the CPD and its ditches are currently at or near capacity and they have indicated that no further discharges can be accepted by CPD. Deep Creek is capable of taking significant discharge increases (in the order of 20-30 cubic feet per second). Discharges to CPD facilities are governed by an agreement between the CPD and the City of Farmersville.

6.1.6 EXISTING DRAINAGE AREAS

The existing drainage facilities along with their tributary areas are shown in Exhibit E-1.

The existing areas of the 1989 Storm Water Master Plan were used as the starting point to evaluate the existing condition of the storm drain system. Adjustments were made to the individual drainage sub-area boundaries if new drainage patterns have been implemented. Also, new drainage sub-areas were added to cover the lands within the City's UAB.

Sub-Area A (Citrus Drive)
This area consists of approximately 31 acres, located on both sides of Farmersville Boulevard. Surface flows run westerly to collection points on Citrus Drive, Ponderosa Street and Linnel Avenue where a pipeline carries the drainage into Sub-Area B and into the Front Street Storm Drain Pond. The curb and gutter, and cross-gutters along Citrus Drive, between Farmersville Boulevard and Linnel Avenue are very flat, creating local ponding issues.

Sub-Area B (Petunia Street to Farmersville Boulevard)
This area contains approximately 16.5 acres. A 30-inch pipe in Petunia Street carries drainage from this sub-area as well as Sub-Area A, to the Front Street ponding basin.

Sub-Area C (Front Street and Ventura Avenue)
This area contains approximately 140 acres, created primarily by the various phases of Orchard Estates and Lewis Estates. A series of pipelines collect surface runoff and carry the drainage flows to the Front Street ponding basin.

Sub-Area D (Farmersville Boulevard)
This area contains approximately 65 acres, including Farmersville Boulevard, from the railroad to Deep Creek, Visalia Road easterly to Deep Creek, and the Birch Street/Magnolia Avenue area. The existing 15 inch pipe in Farmersville Boulevard, which gravity drains southerly to Deep Creek, is significantly undersized; and once south of Visalia Road, it is only capable of carrying 16 percent of design flows. The most serious existing drainage problem is on Magnolia Avenue, just north of Visalia Road. This area used to flood severely because water from Farmersville Boulevard would back up and "bubble-up" at this location. This problem was reduced in 1986, when a flap-gate was installed on the discharge, but the area is still susceptible to flooding.

Sub-Area E (Rose Avenue and Ash Street)
This area contains approximately 54.5 acres. The storm drainage flows are collected by pipelines which ultimately drain through a 30 inch pipeline into Deep Creek.

Sub-Area F (Pepper Street and Gene Avenue)
This area contains approximately 33 acres. The storm drainage flows are collected by pipelines which ultimately drain through a 27 inch pipeline into Deep Creek.

Sub-Area G (Dwight Avenue)
This area contains approximately 9 acres. The storm drainage flows from this small area are collected by 12 inch and 15 inch pipelines which drain into Deep Creek.

Sub-Areas H, I, J, K, L and M (along both sides of Deep Creek, from Hester to Southern Pacific Railroad) and ***Sub-Areas T, U and V (along both sides of Deep Creek, from Magnolia Avenue to Visalia Road)***

These are all small drainage areas (1.4 to 16.5 acres) which each surface drain to a single drainage inlet or curb opening and then flow directly into Deep Creek. No drainage problems were identified by City staff in these areas.

Sub-Area N (E. Visalia Road)
This area contains approximately 38 acres. The storm drainage flows are collected into a pipeline running westerly along Visalia Road, which eventually discharges through a 21 inch pipeline into Deep Creek. Although the pipe sizes are adequate, a 21 inch pipeline enters Deep Creek below the bottom of the creek bed, and therefore must bubble-up into the creek through a recently installed outlet structure. This bubble-up reduces the system's effectiveness.

Sub-Area O (Hester Avenue and Larry Street)
This area contains approximately 13 acres. Storm drainage flows drain along the alley north of Visalia Road by surface and "bubble-ups", to a 12 inch pipeline, which drains into Deep Creek. The 12 inch pipeline is capable of carrying only 63 percent of design flow.

Sub-Area P (Shasta Avenue and Visalia Road)
This area contains approximately 23 acres, with surface flows draining to a 12 inch pipeline along Visalia Road. This pipeline overflows through an outlet structure into Hart-Sweeney Ditch. The 12 inch pipeline is capable of carrying only 26 percent of design flow. Further, there are no drainage facilities available in the area of Peco Street and Linnel Avenue.

Sub-Area Q (Harold Street and Virginia Avenue)
This area contains approximately 19.5 acres. In this area, surface flows are conveyed in streets and through pipelines to two retention basins. These systems are adequate.

Sub-Areas R and S (Shasta Avenue and Kern Avenue)
These two areas contain approximately 66 acres. Surface flows drain from the north end of these areas, south to Tulare Street, and then are collected into two undersized 12 inch pipelines, capable of carrying only 31 percent and 33 percent of design flows).

Sub-Area W (Langford Tract)
This area contains approximately 15 acres. The surface flows in this area are collected by an 18 inch pipeline, which drains into a retention basin. This system is adequate.

Sub-Area X (Camelia Avenue)
This area contains approximately 13 acres. This area has no sub-surface collection or disposal system. Storm water flows surface drain to the south end of Camelia Avenue, where they are drained onto vacant property to the south.

Sub-Area Y (S. Farmersville Boulevard)
This area contains approximately 21 acres. The area's storm drainage flows were originally partially collected by an undersized 15 inch pipeline (50 percent of design flows) which drains to Deep Creek. A recent cleaning of the line shows that it was fully plugged and the outfall in Deep Creek could not be found. Areas south of the 15 inch inlet, as well as overflow from the 15 inch pipeline, surface drain south onto vacant agricultural land just south of the existing City limits. There are also onsite collection points at an apartment site and the City Corporation Yard which have gravity pipeline connections to Deep Creek.

Sub-Area Z (Walnut Avenue east of Farmersville Boulevard)
This area is essentially composed of the Farmersville Unified School District's school site and the future City Sports Park. The area contains approximately 146 acres. The school site will continue to retain the storm drainage generated from this area on site. The future sports park will also be designed to retain drainage on site.

Sub-Area AA (Walnut Avenue west of Farmersville Boulevard)
This area contains approximately 236 acres. The area has curbs and gutters which allow storm drainage flows into a pipe network that drains into the Front Street ponding basin. New projects along Farmersville Avenue south of Ashley Avenue have been required to retain storm water on site since the existing pipe system does not extend to this area.

Sub-Area AB (Terry Avenue)
This area contains approximately 112 acres. This is a mostly undeveloped area zoned for industrial uses. Drainage from individual parcels fronting on Terry Avenue are required to retain drainage on site. Existing drainage along Terry Avenue is captured in a temporary retention pond at the end of the pavement. Future plans, per the SR 198 Corridor Specific Plan, call for a retention pond at the west end of Terry Avenue.

Sub-Area AC (Cameron Creek Colony)
This area contains approximately 309 acres. This area is mostly undeveloped except for the Cameron Creek Colony, an unincorporated county residential area. The drainage from this area is planned to be handled by two detention ponds; one to be constructed in the future north of Cameron Creek Colony, and the other near Walnut Avenue.

Sub-Area AD (Industrial area north of TID Canal)
This area contains approximately 177 acres. This area is currently outside the City limits but within the City's UAB. This area lies north of the TID canal.

Sub-Area AE (UAB south of Walnut Avenue)
This area contains approximately 525 acres. This area is currently undeveloped except for the Linnel Colony at the southeast corner of Walnut Avenue and Avenue 156. The drainage from this area will be handled by detention ponds.

Sub-Area AF (East UAB)
This area contains approximately 346 acres. This area is currently undeveloped.

Sub-Area AG (South UAB)
This area contains approximately 167 acres. This area is currently undeveloped.

6.2 Engineering and Planning Criteria

6.2.1 HYDROLOGY

One of the most important steps in the preparation of the Storm Drain Master Plan of 1989 was the development of the hydrology. This occurred before any determination could be made as to

pipeline sizes and storm water basin capacities. Hydrology, in its broadest sense, is the science which deals with the occurrence of water on and in the earth. The hydrology used to prepare this report is the same as that which was studied and developed for the Storm Drain Master Plan of 1989, as a review of the past hydrology was found to be consistent with current methodologies in use today.

An accepted procedure for urban drainage design for small drainage areas – such as located within the City of Farmersville – is a procedure called the Rational Method. The basic Rational Method formula, used in this study, is

Q=CIA

Where:

Q = Peak flow rate in cubic feet per second (cfs)
C = Coefficient of Runoff
I = Average rainfall rate in inches per hour corresponding to the time of concentration
A = Drainage area in acres

The basic design criteria used in this report is the once-in-two-year-storm, or more commonly referred to as a storm that has a two-year return period. "Return period" does not imply that there will be a given number of years between storm events. It only means that over many years such a storm will occur an average of the number of years designated. The two-year return period storm will occur on the average of 50 times in 100 years. For example, three of these storms may be in successive years, all three may occur in the same year or many years could elapse between such events.

The coefficient of runoff (C) is primarily based on the land use of the drainage area, and the rainfall intensity. The coefficient of runoff is a dimensionless ratio which measures the amount of runoff that can be expected to occur for a particular land use. An example of this would be if 1 inch of rain falls on a residential lot, it is expected that 0.30 inches of rain would occur as runoff and the balance would be retained on the property. The coefficient of runoff in this example would be 0.30. The coefficient of runoff values used in this report are listed in Table 6-2:

Table 6-2
Coefficient of Runoff (C)

Land Use	(C)
Commercial/Industrial/Office	0.80
Residential	
Low Density	0.30
Medium Density	0.40
High Density	0.50
Parks, Open Space	0.10

The land uses listed above are based on the Farmersville General Plan map which was adopted in November 2002.

The rainfall intensity (I) is based on the time of concentration and the storm frequency. The time of concentration is the time that it takes runoff to travel from the furthest point of the drainage area to the point for which the peak flow rate is being calculated. For the purpose of this study, time of concentration is equal to the lot time (or initial time) plus the travel time from the initial area to the point being considered. The lot, or initial time, is based on the Tulare County Improvement Standard which states the lot to street time is 20 minutes for lots smaller than ½ acre and 15 minutes for lots larger than ½ acre. A maximum lot time of 20 minutes was used for exceptionally large lots such as school grounds. Travel time is dependent upon the method of conveyance, i.e., pipeline or gutter. For runoff being conveyed by gutter, the velocity of the water is assumed to travel at 1.5 feet per second. For water being conveyed by pipeline, the calculated velocity of flow is used. This rainfall intensity (I) for a particular storm frequency and a time of concentration can then be obtained from Exhibit E-4. This information was developed by the use of the procedures outlined in the Tulare County Flood Control Master Plan. These procedures were developed from hydrologic analysis of available data and studies of the National Weather Service and the California Department of Water Resources.

One of the significant integral parts of the master plan facilities in the City of Farmersville is the use of detention and retention storm water basins and the use of temporary detention basins when required master planned trunk lines are not yet installed.

The basic storm criterion for the sizing of a ponding basin is either: a) a 10 year storm with 18" free board below the lowest street drainage curb inlet grate, or b) a 50-year storm with water at the top of the lowest top of curb within the drainage area, whichever creates the largest pond. The storage equation for a basin is:

S = (P/12)CA

Where:

S = Storage, in acre-feet
P = Rainfall depth for design storm in inches
C = Coefficient of Runoff
A = Drainage area in acres

Rainfall depth, P, is the total amount of rainfall that will occur for a given design storm. The 10-year return period/10-day duration storm will yield a total of 4.3 inches. The 50-year return period/10-day duration storm will yield a total of 5.6 inches. These amounts are taken from Exhibit E-3.

The Coefficient of Runoff (C) and Drainage Area (A) have been discussed earlier in this Section.

Retention Basins

The design criteria for sizing a retention basin (no discharge except for percolation and evaporation) is either a 10 year or 50 year storm as outlined above, for a duration of 10 days. The storage equation is used as outlined above.

Detention Basins

The design criteria for sizing a detention basin (discharge by pump or gravity during the design storm period) is the same 10 or 50 year storm as outlined, except that the duration period is chosen for that point during the design storm where the difference between total inflow and total discharge

is the greatest. The duration period will vary with each drainage area and can be solved graphically utilizing the Rainfall Depth Curves, as shown in Exhibit E-3.

Since detention basins are designed with an outlet to a water channel they should also be designed to allow for groundwater recharge during the dry time of the year. The design would divert water from the water channel to the detention basin and allowed to percolate.

Temporary Basins

Temporary basins shall use the same criteria as a retention basin to hold the runoff generated by the area served by the basin. Temporary basins are allowed only upon the approval of the City Engineer.

6.2.2 HYDRAULICS

The method used in determining pipeline sizes is by use of Manning's Formula. This equation is:

$$\mathbf{Q = (1.486/n)AR^{2/3}S^{1/2}}$$

Where:

Q = Discharge of pipeline in cubic feet per second (cfs)
n = Coefficient of roughness
A = Area of pipe based on Inside Diameter
R = Hydraulic Radius
S = Slope of the Energy Grade Line

In the use of this formula, the following assumptions and limitations are to be used:

1. Coefficient of roughness (n) = 0.013
2. Pipes assumed to be flowing at full capacity.
3. Limiting minimum velocities of 2.5 feet per second which is considered to be a minimum self-cleansing velocity.

One of the major criteria that is used in all the study areas is the utilization of existing drainage facilities. Those facilities that are hydraulically sufficient to carry the required flows are incorporated in the final master plan drainage facilities.

6.3 Estimated Costs

Table 6-3
Storm Drain
Capital Improvement Program Summary

Item	Qty.	Unit	Cost/Unit	Approx. Cost
Area for Storm Ponds	65	Ac	$30,000.00	$1,950,000.00
42" Storm Line	2,650	LF	$250.00	$662,500.00
36" Storm Line	15,200	LF	$200.00	$3,040,000.00
24" Storm Line	11,000	LF	$180.00	$1,980,000.00
Pump Stations	6	EA	$50,000.00	$300,000.00
Construction Subtotal				$7,932,500.00
Contingencies (15%)				$1,189,875.00
Subtotal				**$9,122,375.00**
Engineering, Surveying, and Construction Administration Cost (20%)				$1,824,475.00
Total Cost				**$10,946,850.00**

The cost per lineal foot includes a manhole every 400 feet and trench resurfacing.

Table 6-4
Existing Deficiency Costs

Item	Qty.	Unit	Cost/Unit	Approx. Cost
Area for Storm Pond	5	Ac	$30,000.00	$150,000.00
42" Storm Line	670	LF	$250.00	$167,500.00
36" Storm Line	3,440	LF	$200.00	$688,000.00
24" Storm Line	2,650	LF	$180.00	$477,000.00
12" Storm Line	1,100	LF	$100.00	$110,000.00
Pump Stations	1	EA	$50,000.00	$50,000.00
Install Pumps on Front Street pond	1	EA	$25,000.00	$25,000.00
Construction Subtotal				$1,667,500.00
Contingencies (15%)				$250,125.00
Subtotal				**$1,917,625.00**
Engineering, Surveying, and Construction Administration Cost (20%)				$383,525.00
Total Cost				**$2,301,150.00**

The cost per lineal foot includes a manhole every 400 feet and trench resurfacing.

6.3.1 FEES

The proposed storm system within this master plan are based on the potential development out to the UAB. Since some of this area is outside the current general plan and there is no certainty regarding the location of future development, the basis of the fee will be the undeveloped acreage contained within the UAB.

Total Acres to develop = 1,752 (UAB) + 186 (Vacant) – 433 (right of way) = 1,505ac.

Cost per acre = $10,946,850/1505ac. = $7,273.65 per acre.

The calculated fee per acre will need to be adjusted on an annual basis based on the Engineering News Record Construction cost Index.

6.4 Recommendations

6.4.1 EXISTING ISSUES

Areas D, P, Q, R, S, X and Y need a storm drain pond and trunk lines to properly handle the drainage generated from those sub-areas. The storm drain pond would be located in an area south of Tulare Street adjacent to Deep Creek. This pond will be a detention pond with an outlet to Deep Creek. The pond will need to be a minimum of 29 acre-feet capacity and the outlet pump needs to be a minimum of 8 cfs. The trunk lines need to be:

1. 42” line east from the pond to Carmela Avenue.
2. 12” line from the end of Carmela Avenue to the Trunk line.
3. 36” line in Farmersville Boulevard from Visalia Road south to the Trunk line.
4. 36” line (in Tulare Street) west from the pond to Matthew Avenue.
5. 24” line from Visalia Road to the Trunk line in Tulare Street.

The Front Street pond in its current configuration is undersized. To meet the current City standards, the pumps will need to be a minimum of 30 horsepower pumping 14 cfs. This would mean adding a 20 horsepower pump and continue operating the existing 10 horsepower pumps. The Extension Ditch has a cross section that can handle approximately 30 cfs. Preliminary discussions with CPD to increase the discharge by 10 cfs from this pond to Extension Ditch are ongoing.

6.4.2 FUTURE NEEDS

The SR 198 Corridor Specific Plan (completed in 2003) proposed two ponds for the industrial area. These ponds were proposed as detention basins with the basin on the east side of Farmersville Boulevard discharging into the basin west of Farmersville Boulevard and this basin having an outlet discharging into the TID canal. The pond on the east side of Farmersville Boulevard will need to be a minimum of 26 acre-feet capacity with a discharge pump of 10 cfs. The pond on the east side of Farmersville Boulevard needs to be a minimum of 29 acre-feet capacity with a discharge pump of 10 cfs.

The SR 198 Corridor Specific Plan split Area AC in half with the north half being industrial and included in the plan and the south side being residential and outside the plan area. The residential area needs a retention pond to serve the area. The retention pond would be located north of Walnut Avenue near Road 168. The retention pond will need to be 29 acre-feet capacity.

Area AD which lies north of the TID canal contains approximately 177 acres and needs a detention basin of 30 acre-feet capacity. This basin is proposed to be adjacent to the TID canal.

Area AE contains 525 acres and will require a total of 52 acre-feet of detention basin volume. This is proposed to be accommodated in three basins. The first would be located near Walnut Avenue with a 6 acre-feet capacity. The second would be located near the Front Street basin with a16 acre-feet capacity. The third basin is proposed at the south end of the area at the TID canal. This basin will need to be 30 acre-feet capacity.

Area AF contains 346 acres and will require retention of approximately 66 acre-feet capacity. This is proposed to be addressed with the use of two basins. The first will be approximately 30 acre-feet capacity and be located south of Walnut Avenue along the UAB line. The second will be approximately 36 acre-feet capacity and located at the UAB around the Avery Avenue alignment.

Area AG contains 167 acres and will require a detention basin with a discharge to Deep Creek. The basin will need to be approximately 12 acre-feet capacity with a discharge pump of 5 cfs.

Is there a need to discuss water banking in the Master Plan. Using the storm Ponds to perculate ~~or~~ irrigation water during the summer.

This comment was addressed in Chapter 6 Section 6.2.1. Added language to encourage detention basins be designed to allow for groundwater recharge.

Proposed Collector north of Cameron Creek will not work due to the ~~the~~ ground elevation. Ground is about 6' Below the surrounding area.

The master plan does show a collector north of Cameron Creek, however the exact placement is not known at this time. During the development of the surrounding area a location and design will be finalized.

I would like to see a light or three way stop at Freedom & Walnut Traffic at Citrus needs to be two way.

The circulation around the Farmersville School District campus is an ongoing issue that is being addressed by the School District and the City. Long term plans call for a traffic signal at Road 168 and Walnut Avenue that will help with the situation currently at Freedom Drive and Walnut Avenue.

STORM DRAIN SYSTEM

#2 PEPER & Oakview – segundo problema

Reference: Storm Drain System

What solution will be given to the problem of gray water that is causing the health problems at Front Street and drain ditch, and also at Peper and Oakview.

The gray water issue has to do with the flat slope on the irrigation channel. It also is a maintenance issue that will need to be addressed by the Irrigation Company and City staff.

Corner of Oakview and Ash there is a bad sewer smell around once a month.

There is an existing issue with rags in the Oakview Avenue lift station. This is an ongoing maintenance issue and is being handled by the Public Works staff.

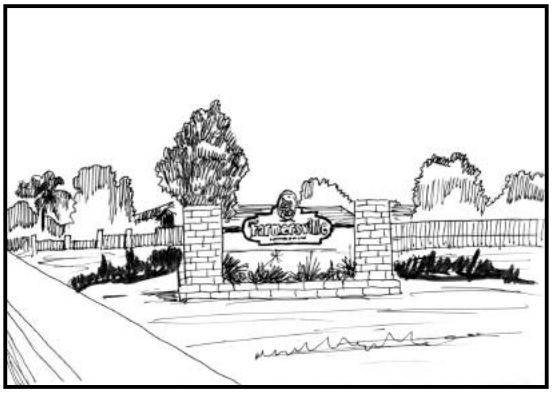
CHAPTER 1: INTRODUCTION

Farmersville

Farmersville is located in Tulare County in the central-southern portion of the San Joaquin Valley. It is located on the south side of State Route 198, a major east/west highway that serves central California. The City is bisected by Farmersville Boulevard, a north/south roadway, and Visalia Road, a major Tulare County east/west roadway.

Farmersville is five miles east of Visalia, the county seat of Tulare County, and two and one-half miles west of Exeter and ten miles northwest of Lindsay (see Map 1-1).



The General Plan

In an effort to insure that land and resources within the State of California are properly managed and developed and that the health, safety and welfare of its citizens are protected, each California city and county is required to prepare a long-term, comprehensive planning that details how the city will physically develop. This document - the General Plan - contains seven mandated elements - land use, circulation, housing, open space, conservation, safety and noise.

Farmersville's first general plan was prepared by the County of Tulare in 1964. Subsequently, the County, which provided planning services to the city, updated the general plan in 1986. The County also prepared and adopted the Urban Boundaries Element for the city of Farmersville in 1974. This document established 20-year and ultimate growth lines around the city.

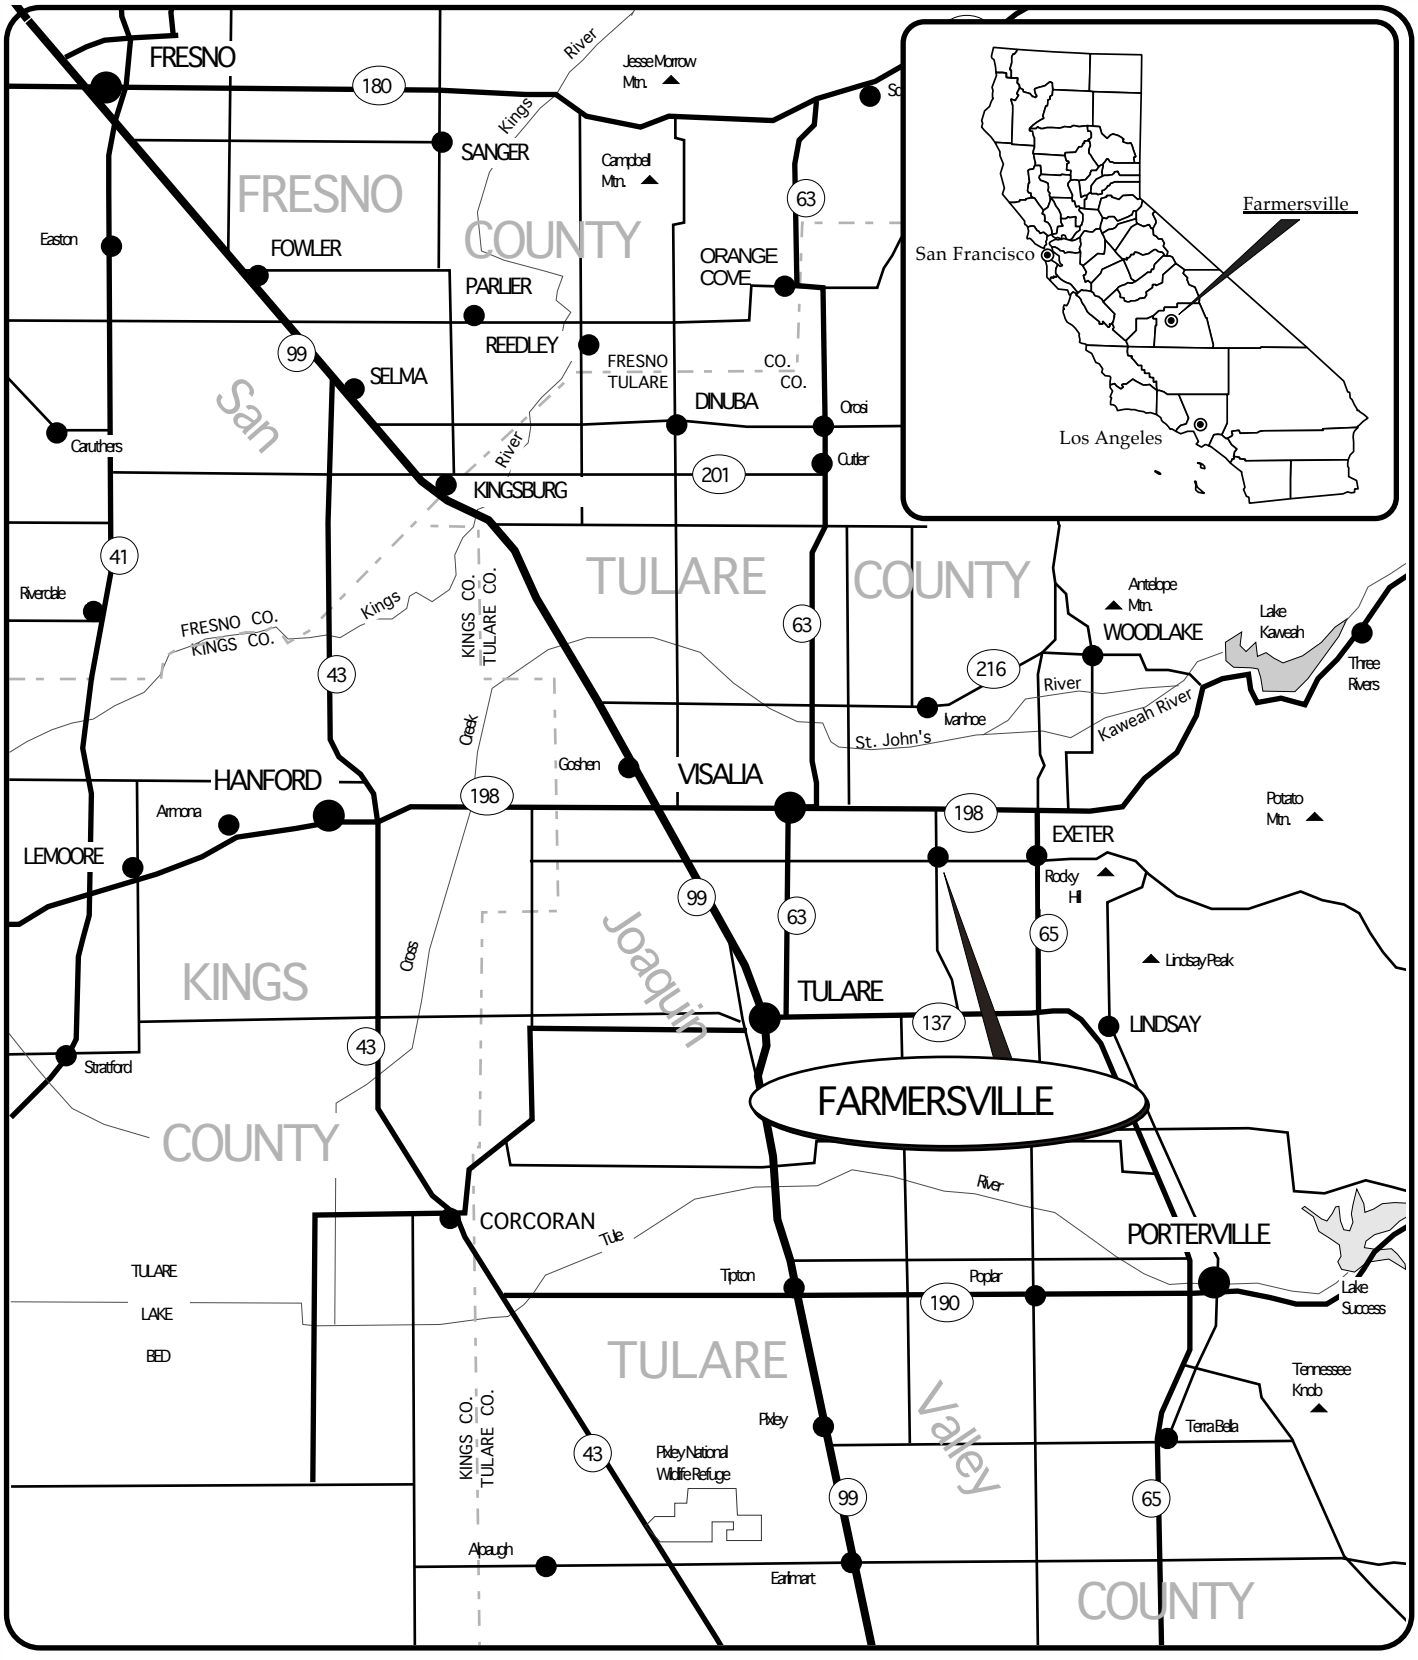
This document will serve to update four of Farmersville's general plan elements:

- Land use
- Circulation
- Open Space
- Conservation

F.Y.I

The California State Legislature first required California cities and counties to prepare a general plan in 1927

Farmersville's first general plan was prepared by the County of Tulare in 1964



City of Farmersville

Regional Location

map 1-1

For purposes of clarity the Open Space and Conservation elements will be combined into one chapter - the Open Space/Conservation/Parks Element. In that sense, Farmersville will have three updated elements of the General Plan

Farmersville has already updated its Housing Element in 1992. The Safety Element (1975) and Noise Element (1976) are adequate in regards to policy direction and do not need updating at this time.

Farmersville's vision and expectations for its future are best expressed through its General Plan. The General Plan may be viewed as a community "blueprint" for the future. Specifically, Farmersville's residents have expressed their vision and expectations for the future in the goals, policies and action programs contained in the General Plan. In addition, the land use and circulation maps included in the General Plan provide a visual display of how land uses and roadways will be arranged in Farmersville.

The principals and ideas reflected in the goals, policies, action programs and land use and circulation maps resulted from community surveys and workshops, study sessions and public hearings.

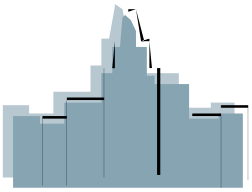
The primary goal of the General Plan is to facilitate a well-planned community. Farmersville's success in fulfilling this goal will depend on how well the City adheres to the General Plan. In this regard, the General Plan can:

- guide the Planning Commission and City Council on land use, circulation, and capital improvement decisions;
- inform the public where certain types of development will occur in the community;
- educate the public on how Farmersville's resources will be managed; and
- provide the private sector with a document upon which it can base investment decisions.

Farmersville's vision and expectations for its future are best expressed through its General Plan.

This document updates four elements of Farmersville's General Plan:

Land



The land use element details how future land uses will be arranged and what form they will take.

Circulation

The circulation element shows where future roadways will travel and what kinds of traffic roadways will likely carry. Other modes of transportation, like bicycles, walking and transit are also considered.

Open Space & Conservation

The open space/parks and conservation element plans for recreational needs and also sets forth policies to conserve resources, such as agricultural land and air quality.

The Farmersville Planning Area

The Farmersville planning area is located within Farmersville's Urban Area Boundary (UAB) line. Within the UAB line there are other planning lines, including the Urban Development Boundary (UDB) line and the city limit line. The UAB line is defined by the county's Urban Boundaries Element as:

> *" ... the areas where land uses are presumed to have an impact on the adjacent incorporated city, and within which the cities' concerns are to be given serious consideration as part of the land use review process. The urban area is considered to be the next logical area in which urban development may occur and the area within which Urban Development Boundaries may ultimately be expanded."*

The UDB line is defined as:

> *"... a 20-year planning boundary within which urban development is expected to occur over the plan period.*

The UAB and UDB lines were adopted by the city in 1999 and by the county in 2000. The UAB line contains 4.8 square miles (3,075 acres); the UDB line, 2.9 square miles (1,846 acres); and the city limits line, 1.8 square miles (1,155 acres). (Map 1-2).

The planning area contains the urbanized portion of Farmersville, the Tulare County subdivision known as Cameron Creek Colony, Linnell Camp - a Tulare County Housing Authority community, rural residential development, scattered industrial developments and agricultural lands. The dominant agricultural crop is walnut orchards.

PLANNING CONSULTANTS

Planning Period

The Farmersville General Plan update will be a 23-year plan, 2002 - 2025. Every five years, it should be reviewed and updated to insure that it is reflective of changes in community attitudes and market forces.

State planning law permits the mandatory elements of the General Plan to be amended as often as four times per year. This provision in State law allows the city to "fine-tune" its General Plan; however, since the General Plan is a "public" document, any amendment should have the broad support of the public.

The General Plan update is intended to guide Farmersville's planning for a twenty-three year period, from the year 2002 to 2025.

General Plan Objectives

The objectives of the Farmersville General Plan are to:

- project Farmersville's future growth and make provisions for this growth through the General Plan;
- create a unique and attractive city by investing in projects that will enhance Farmersville's appearance and marketability;
- provide a safe and pleasant environment and enhance property values throughout the community by avoiding and eliminating land use conflicts;
- promote increased sales tax revenue in Farmersville by providing sufficient land for a wide range of commercial uses.
- Protect and preserve natural resources, such as farmland, air and water quality and native vegetation, while facilitating growth of the community.
- provide for a greater variety of housing choices and shopping opportunities;
- ensure that there are adequate public facilities to serve Farmersville in the future;
- ensure that Farmersville's infrastructure system can effectively serve the land use framework;

Farmersville's economy is supported by agriculture. The need to grow while preserving agricultural land presents a challenge for the future.

- enhance the character of Farmersville by creating an improved and revitalized downtown area;
- promote economic development and enhanced employment opportunities in Farmersville by designating sufficient land for industrial uses, retail stores, and office parks;
- recognize the changing conditions and trends in the planning area and market place and make appropriate amendments to the General Plan;
- recognize past land use approval actions and adopted land use policies;

Promote economic development and enhanced employment opportunities in Farmersville

What is the legal background for the General Plan?

Planners and decision-makers have likened the General Plan to the U.S. Constitution in that decisions regarding land use, circulation, housing and capital improvements must be consistent with the goals, objectives and policies of this document. In City of Santa Ana v. City of Garden Grove, 100 Cal. App. 3d 521, 532 (1979), the court of appeal, in explaining California's general plan legislation in 1971, stated it has:

> *". . . transformed the general plan from just an "interesting study" to the basic land use charter governing the direction of future land use in the local jurisdiction . . . . As a result, general plans now embody fundamental land use decisions that guide the future growth and development of cities."*

The General Plan has been called the equivalent of the U.S. Constitution for cities.

All Actions of a City Must be Consistent with the General Plan

City decisions that are not consistent with the General Plan place that community in a legally tenuous position and subject to legal challenge. In Friends of "B" Street . et. al. v. City of Hayward, et. al., 106 Cal. App. 3d 988 (1980), the court concluded that construction of public improvements (e.g. street projects, sewer lines, etc.) must be consistent with the General Plan. Further, the court stated that the General Plan essentially is the constitution for all future development within the city.

A General Plan, which is internally inconsistent, lacks one or more of the mandatory elements, or is lacking required information, can potentially prevent a city from issuing land use approvals, including building permits, zone changes, and subdivisions, if the Court finds that any one of the aforementioned conditions exist (Sierra Club v. Kern County, 126 Cal. App. 3d 698, 704 (1981); Resource Defense Fund v. County of Santa Cruz, 133 Cal. App. 3d 800, 803 (1982); Camp v. Mendocino, 123 Cal. App. 3d 334 (1981)).

For example, the Farmersville Housing Element may include a policy that states that the city provide adequate sites for a range of housing types, including multi-family residential uses. The Land Use Element would have to be consistent with this policy by designating sufficient land area for this type of development.

Another example of inter-element consistency involves the use of population projections, which is the basis for future land needs for housing units and other types of land uses. The Land Use and Housing Elements should use the same population projections in their needs analysis to avoid inter-element inconsistencies.

The courts have enacted a building moratorium in cities that have violated their general plans, or that have not updated their plans.

How is this document organized?

The Farmersville General Plan and accompanying environmental impact report are combined into one document. Part 1 contains four of the seven state-mandated elements of the General Plan. These elements are: land use, circulation, and two elements that have been combined, the open space/conservation element. Each element is generally formatted as follows:

PART 1: GENERAL PLAN ELEMENTS

I. Introduction

II. Existing Conditions

III. Projections

IV. Goals

V. The Plan

- A. Issue
- B. Policy
- C. Action Program

Part 2 contains existing conditions (background information) on the City of Farmersville. It is support information for the three general plan elements found in Part 1 and serves as the existing conditions section of the environmental impact report (EIR) contained in Part 3. It is formatted as follows:

Part 2: Existing Conditions

I. Human Environment

- A. Population
- B. Socio-economic Conditions
- C. Housing Characteristics
- D. Services
- E. Land Use
- F. Infrastructure

II. Physical Environment

- A. Climate
- B. Topography

Farmersville's General Plan update is organized into three main parts:

1. General Plan elements
Consisting of four elements:
- *Land Use*
- *Circulation*
- *Open Space*
- *Conservation*

2. Existing Conditions
A discussion of existing conditions in the planning area

3. Environmental Impact Report
An analysis of environmental effects that will result from the General Plan

C. Soils
D. Geology

III. Resources

A. Scenic
B. Agricultural
C. Cultural
D. Biotic
E. Air Quality
F. Water Quality

IV. Risk of Upset

A. Flooding
B. Noise
C. Seismic

Part 3 of this document contains the Environmental Impact Report (EIR) prepared for the Farmersville General Plan. This part of the document discusses the environmental impacts associated with the implementation of the General Plan. In addition, it lists mitigation measures and discusses plan alternatives that can reduce the General Plan's impact on the environment. The EIR is organized as follows:

Part 3: Environmental Impact Report

I. Executive Summary
II. Introduction
III. Project Description
IV. Environmental Setting (see Part 2)
V. Environmental Impact Analysis
VI. Unavoidable Adverse Environmental Impacts
VII. Alternatives to the Proposed Actions
VIII. Growth-Inducing Impacts
IX. Long-Term Implications of the Proposed Project
X. Cumulative Impacts
XI. Effects Found Not to be Significant
XII. Persons and Agencies Consulted

Preparation of the General Plan also requires Farmersville to undertake an Environmental Impact Report. This is because the growth that is accommodated by the General Plan will have significant impacts on the environment.

CHAPTER 2: LAND USE ELEMENT

Introduction

The Land Use Element is the most prominent of the seven mandatory elements of the General Plan. It, more so than the other elements, has the most significant impact on existing and future Farmersville residents. It is the element that determines the general location of residential, commercial, industrial, public and open space uses and it discloses building intensities and population densities for the planning area.

In planning circles, the land use and circulation elements of the General Plan have been termed the "blueprints" for the development of a city. The goals, policies, and implementation measures of the elements are considered to be the "instructions" for the blueprints.

The Farmersville Land Use Element contains seven sections:

1) existing land use patterns and population trends;

2) population and land use projections;

3) land use designations and population densities;

4) planning issues and land use goals;

5) land use policies and actions (implementation measures);

6) land use designation/zoning district matrix; and a

7) land use map.

Existing Land Use Patterns and Population Trends

Farmersville's urban area is generally centered along Farmersville Boulevard, the city's major north/south roadway. The city's downtown commercial area is situated along Farmersville Boulevard generally between Visalia Road and Front Street. Additional commercial areas are located on Visalia Road, east and west of Farmersville Boulevard and on Farmersville Blvd., north of Front Street and south of Visalia Road.

Residential neighborhoods are situated in all quadrants of the community. The oldest neighborhoods are located around the intersection of Farmersville Blvd. and Visalia Road. Newer residential development is occurring in the northwest portion of the community, north and south of Walnut Avenue. The community has a very limited amount of industrial development. A nut/fruit drying facility is located in the center of the urban area, on the east side of Farmersville Boulevard, north of the railroad. There is a cement mixing operation in the city's only industrial park on Terry Avenue, on the west side of Farmersville Boulevard.

Prominent public uses in Farmersville include the five campuses operated by Farmersville Unified School District. These include Farmersville High School on Walnut Avenue, west of Farmersville Boulevard, Farmersville Junior High School on Virginia Avenue and Ash Street, Hester Elementary School on Ash Street and Rose Avenue, and Snowden Elementary School and the continuation high school on Farmersville Boulevard , south of Visalia Road. Major city-owned facilities include six neighborhood parks, the Farmersville Civic Center on Visalia Road and Virginia Avenue, Public Works yard on Farmersville Boulevard, south of Tulare Street, two city-operated child-care centers and the city's wastewater treatment plant, located southwest of the urban area.

As of the year 2002, Farmersville's city limits contained 1,205 acres, approximately 1.9 square miles. The Urban Development Boundary contains 1,726 acres and the Urban Area Boundary contains approximately 2,952 acres. Table 2-1 shows the makeup of land uses within the city limits, UDB and UAB.

Table 2-1
Existing Land Use Acreages

	City Limits	Urban Development Boundary	Urban Area Boundary	Total
Single Family Residential	416	76	35	527
Multi-Family Residential	21.8	0.9	63.7	86
General Commercial	27.5	2.3	0	30
Service Commercial	16.1	0.4	1.4	18
Industrial	32.4	0	41.8	74
Agricultural	193.5	357	924	1,474
Parks	14.4	0	0	14
Public/Quasi-Public	62.5	31	35.9	129
Schools	76.9	0	5.2	82
Waterways	7.4	0	16.4	24
Vacant	185.8	13.8	14.9	215
Right-of-Way	151	150	283	
Total	1,205	631	1,421	
Total acreage in Plann ing Boundary	1,205	1,686	2,957	

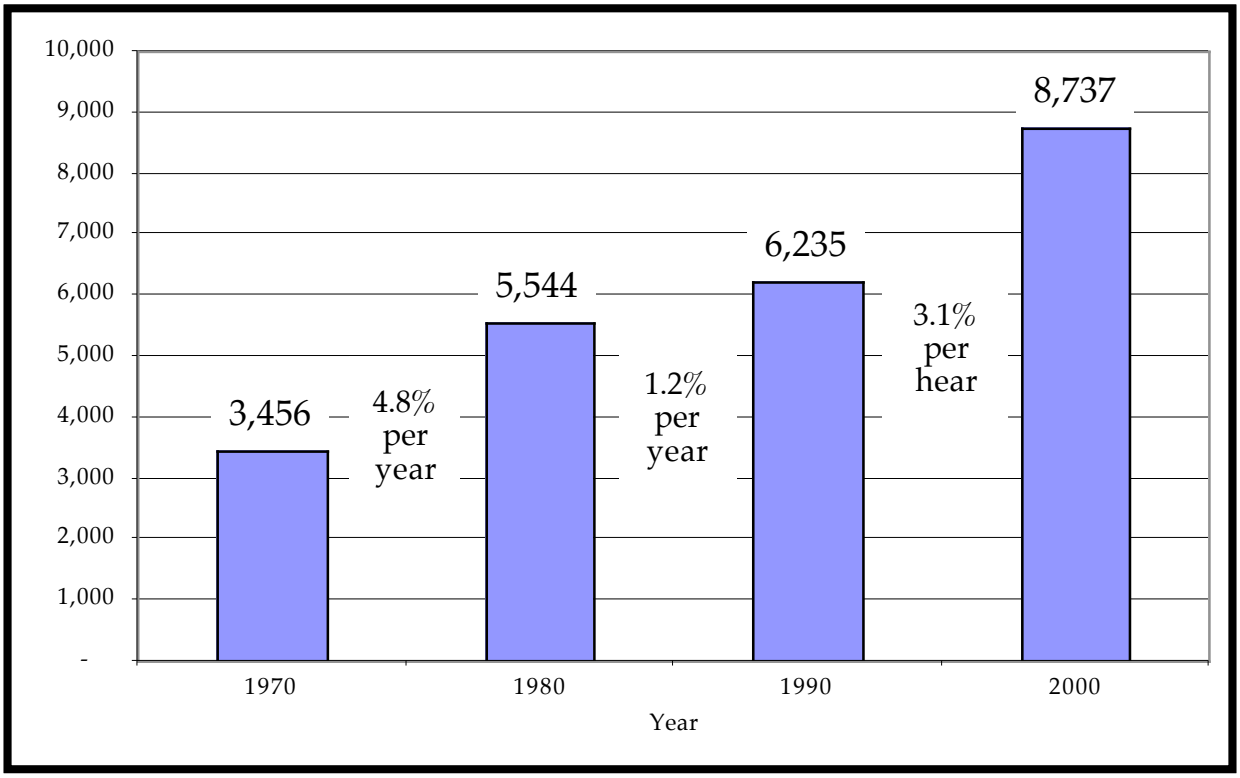
Since 1990, Farmersville has been averaging 35 new single family and 7 multiple family residential units per year.

Population

From 1990 to 2000, Farmersville's population growth during this time period has been about 3.4% per year. This ranks highest of Tulare County's eight incorporated cities. Exeter experienced a rate of 2.3% per year, Visalia, 1.9%, Lindsay, 2.1% and Woodlake 1.6%. Farmersville's population growth of 3.4% per year averages out to about 250 persons per year.

Chart 2-1 display's Farmersville's historic growth since 1970.

Chart 2-1
Population Growth
1970 - 2000



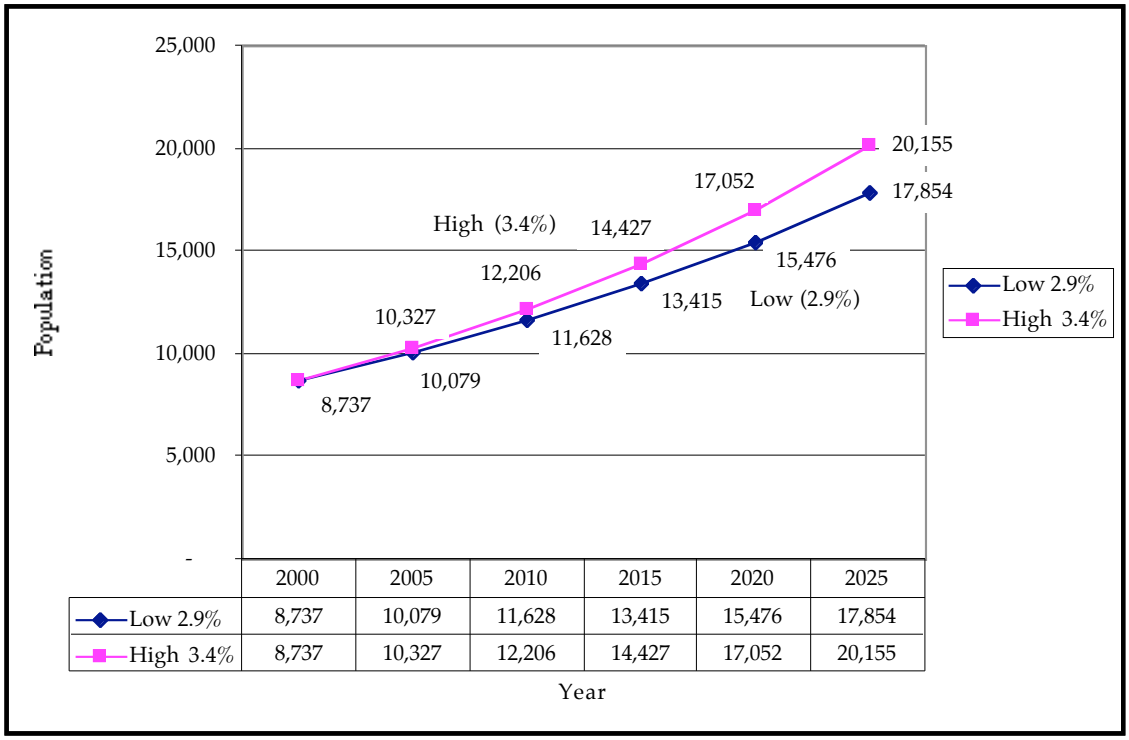
Population and Land Use Projections

Population Projections

In order to determine the amount of land needed for urban development in Farmersville over the next 23 years, 2002 to 2025, population projections are required. Two population projection scenarios (low and high) are provided in the Plan.

These population figures are projections from the base year of 2000, provided by the U.S. Census Bureau. The Plan's "low" population projection is based on Farmersville's average annual growth rate from 1980 to 2000 (2.9 percent); its "high" population projection is based on the average annual growth rate from 1990 to 2000 (3.4 percent).

Chart 2-2
Population Projections



Source: U.S. Census Bureau; State Department of Finance; Collins & Schoettler, 2000

How Much Land Will Farmersville Need to Accommodate Expected Growth?

This section provides projections of land that will be needed to accommodate expected growth of Farmersville through the year 2025. These land use projections are based on the previously discussed population projections and land use statistics.

Additional data factored into the land use projections include persons per dwelling unit, acres of parkland per 1,000 persons, residential densities, size of school sites, etc.

RESIDENTIAL LAND DEMAND, 2025

Residential land demand assumptions

- The number of persons per residential unit will be 3.66 persons (California Department of Finance, 2000).

- Future dwelling types will fall into the following categories:

    - 84% will be single family dwellings,
    - 12% will be multiple family units,
    - 4% will be mobile homes (Source: 2000 Department of Finance).

    - Single family dwellings will occur on 7,000 square foot (average) parcels
    - Multiple family development will be allowed at an average density of one unit per 2,500 square feet.
    - Mobile homes will typically be developed in mobile home parks on 3,000 square foot individual parcels.

- The residential land demands for single family housing development will be increased by a factor of 25 percent to account for land consumed by street rights-of-way, and will be increased by 15 percent for multiple family and mobile home developments.

- Farmersville has about 80 acres of existing vacant land zoned R-1 and 3.95 acres of existing vacant land zoned R-M.

Residential Land Demand, 2025

Population Growth:

17,854 (2025 projected population) - 7,701 (2000 population) =

10,153 persons

Housing Units Needed:

10,153 persons / 3.66 persons per residential unit =

2,774 residential units

Expected Housing Types:

2,774 residential units x 84 percent single family units = **2,330 units**

2,774 residential units x 12 percent multi-family units = **333 units**

2,774 residential units x 4 percent mobile home units = **111 units**

Single Family Residential:

2,330 x 7,000 square feet x 1.25 (right-of-way factor) = 468 acres - 80 existing vacant R-1 acres =

388 acres needed

Multiple Family Residential:

333 units x 2,500 square feet x 1.15 (right-of-way factor) = 22 acres - 4 existing vacant R-M acres =

18 acres needed

Mobile Homes:

111 mobile home units x 3,000 square feet x 1.15 (right-of-way factor) =

9 acres

Total Residential Acreage Needed: 415 acres

The residential land use projections indicate that 415 acres will be needed to accommodate residential growth through the year 2025.

COMMERCIAL LAND DEMAND, 2025

Commercial land demand assumptions

- Retail commercial/office uses will continue to be intermixed
- The bulk of new commercial/office developments will be one-story buildings.
- Farmersville has 44 acres of existing commercial development.
- Farmersville has 22 acres of existing vacant land zoned C-G ("General Commercial), and 12 acres of existing vacant land zoned C-S (Service Commercial).
- Compared to other Tulare County cities, Farmersville is presently grossly "underserved" by commercial development.

Commercial/office land demand, 2025

Existing Commercial "Need":

7,701 (2000 population)/44 acres of existing commercial/office development =

1 acre commercial/office per 175 persons

Future Commercial Need

1 acre commercial/office space per 175 persons / 10,153 (additional 2025 population) =

58 acres needed through the year 2025.

58 acres - 34 acres of vacant/undeveloped land zoned "Commercial" =

24 acres of commercial/office land needed through 2025.

Farmersville has a need for 24 acres of additional commercial development through the year 2025. If the city's commercial development level was on a par with other Tulare County cities, this total could be significantly higher.

INDUSTRIAL LAND DEMAND, 2025

Industrial land demand assumptions

- Industrial uses do not require the high visibility that retail commercial/office uses require.
- Farmersville has approximately 32 acres of industrial land (2000)
- Farmersville has 82 vacant acres zoned for industrial uses.
- Compared to other Tulare County cities, Farmersville is grossly "underserved" by industrial development.
- Some of Farmersville's vacant industrial land is located within a flood plain and is therefore difficult to market and develop.

Industrial land demand, 2025

Existing Industrial "Need":

7,701 (2000 population)/32 acres of existing industrial lands (2000) =

1 acre industrial use per 240 persons.

Future Industrial Need:

1 acre of industrial per 240 persons / 10,153 (additional 2020 population) =

42 acres industrial land needed.

42 acres industrial lands needed - 82 acres existing industrial uses =

-65 acres needed for industrial uses.

No additional land needed for industrial uses by 2020. However, Farmersville is very "under-developed" in the category of industrial uses. Therefore, the projected need is expected to be under-estimated.

PARK LAND DEMAND, 2025

Parkland demand assumptions

- The City of Farmersville has a standard of developing three acres of parkland for every 1,000 persons. The current (2000) population of 8,737 should be served by 23.1 acres of park land. The existing total of developed park land in 2000 is 13 acres. Therefore, Farmersville is presently deficient on park acreage by 10 acres.

- Open space on school sites will not be counted as parkland.

Parkland Demand, 2025

Three acres of parkland per 1,000 persons x 10,153 (additional 2025 population) =

30.5 additional acres of parkland needed through the year 2025.

Farmersville presently is short ten acres on parkland. Therefore, 30.5 + 10 = 40.5 acres.

40.5 acres of parkland needed by 2025

SCHOOL LAND DEMAND, 2025

School land demand assumptions

- This study assumes a general standard for elementary schools that provides for an enrollment of 600 to 700 students and a school site ranging from 10 to 12 acres. The standard for middle schools shall provide an enrollment of 750 to 900 students and a school site ranging from 18 to 20 acres. The standard for high schools shall provide an enrollment of 1,500 to 2,000 students and a school site of 40 acres or more.

School land demand, 2025

The school district has indicated a need for an additional elementary campus in the next several years.

There are currently 52 acres of land reserved for future school development, south of the existing high school. It is assumed that this land will accommodate Farmersville's school needs through the year 2025.

CONCLUSIONS

The above analysis shows that Farmersville will need the following amount of land through the year 2025.

Residential: 415 acres

Commercial: 24 acres (there are presently 33 acres commercially-zoned undeveloped land)

Industrial: 17 acres (there are presently 82 acres of agricultural and vacant land)

Parks: 41 acres

Schools: 12 acres (52 vacant acres of land designated for schools exist)

Total: 456 acres - existing vacant/ag zoned land (commercial, industrial, schools) = 190 acres - existing zoned land (commercial, industrial, schools) = 289 acres needed

The projections above indicate that a total of approximately 456 acres of "undeveloped" land will be needed to accommodate expected urban growth in Farmersville through the year 2025. Because there is already sufficient "undeveloped" land in the commercial, industrial and schools categories, the actual land demand is about 290 acres.

In order to ensure that the real estate market does not become overly restricted (artificially forcing up land prices), the land demand figure (290 acres) shall be increased by 40 percent as follows:

290 x 40% = 116 acres. 290 + 116 = 406 acres.

Farmersville's current city limits (not including the wastewater treatment plant) contain 1,181 acres. Adding 406 acres results in a total area of 1,587 acres. The existing city Urban Development Boundary contains 1,726 acres.

Therefore, this analysis indicates that there is more than enough land within the Urban Development Boundary

needed to accommodate growth to the year 2025. As noted previously, however, city officials consider Farmersville to be grossly under-developed with commercial and industrial development, as compared other Tulare County cities. As such, the land demand projections should be tempered by this realization.

Land Use Designations and Population Densities

The following land use categories are established to implement the policies of the Farmersville General Plan.

These land use categories pertain to six typical land use activities:

- Residential;
- Commercial;
- Industrial;
- Public;
- Open space and
- Agricultural/Urban Reserve.

These categories are further refined into more specific designations below. For example, the plan establishes three residential categories - these are based on the density of development, such as single family, multi-family residential, and so forth.

For residential land use designations, maximum population densities are provided, as required by State law.

Residential

Low Density - a maximum of 5 dwelling units per gross acre, or 14 persons per acre. Development in this category shall be required to install curbs, gutters, sidewalks and street lights, and connect to the city's sewer, storm drain and water systems.

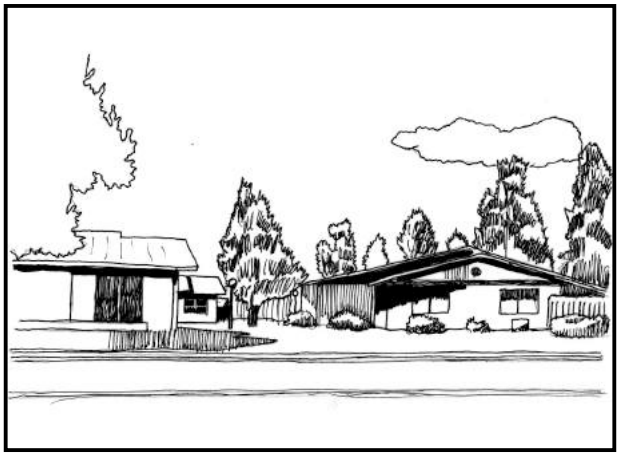
This designation shall be reserved for those lands that are appropriate for single family residential developments. Uses that are typically associated with single family neighborhoods, such as churches, day-care centers, community centers, parks, and schools, shall also be permitted, subject to appropriate permits. These lands shall generally be located in areas of the community that are free from conflicting land uses, such as industrial and service commercial uses.

Medium Density - a maximum of 15 dwelling units per gross acre, or 42 persons per acre. Development in this category shall be required to install all the same improvements that are required in the low density residential designation.

Medium density development could encompass a mix of single family and multi-family uses, including duplex, tri-plex, four-plex units and mobile home parks.

These lands shall generally be located in areas of the community that are free from conflicting land uses, such as industrial and service commercial uses.

Medium-High Density - a maximum of 29 dwelling units per gross acre, or 84 persons per acre. Development in this category could encompass apartment complexes, senior citizen projects and condominiums.



These lands shall generally be located in areas of the community that are free from conflicting land uses, are located near the center of Farmersville, and are generally situated on major street corner lots, or along major streets.

Commercial

Farmersville's current General Plan only provides for one commercial category. It is the intent of this General Plan to increase this number to four commercial categories:

- General Commercial;
- Central Commercial; and
- Service Commercial
- Highway Commercial

General commercial designations shall be reserved for properties generally located on Farmersville Blvd. and Visalia Road, outside the downtown area (which is designated Central Commercial).

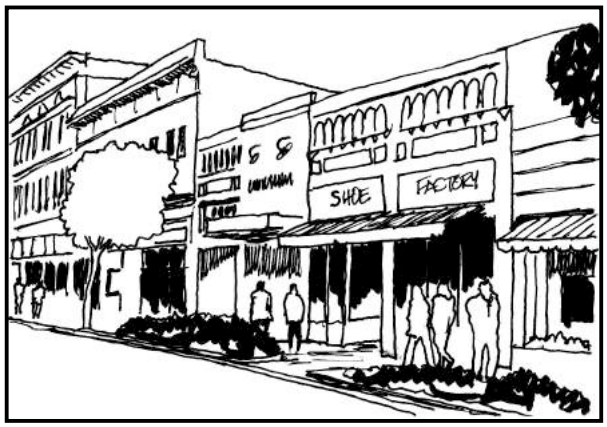
This designation shall provide for shopping centers, retail uses, and offices.

Development within this designation will have the following distinguishing features - new development will be required to be landscaped, parking shall be constructed off-street, signs shall be regulated and new uses or extensive expansion of existing uses shall require site plan review or a conditional use permit, as determined by the Farmersville Zoning Ordinance.

Service commercial is a new designation that provides for uses that include a mix of light industrial and "heavy" commercial uses. In particular, uses such as auto repair should be directed into this category.

Development with this designation will have the following distinguishing features - new development will have landscaping, parking shall be off-street, all visible equipment and storage areas shall be fenced and screened from public view, signs will be regulated and new uses or extensive expansion of existing uses shall require site plan review or a conditional use permit, as determined by the Farmersville Zoning Ordinance.

Central commercial designations shall be reserved for those properties located in the central commercial area, generally fronting along Farmersville Boulevard and Visalia Road, in the vicinity of the intersection of those two streets.



It is the goal of the General Plan to foster a downtown atmosphere of stores fronting directly on the street with display windows catering to pedestrian shopping. Parking facilities should be located to the rear or to the side of buildings.

Development with this designation will have the following distinguishing features - the buildings will generally be built to back of sidewalk, parking shall be generally located at the rear or side of the building, signs shall be regulated and shall be pedestrian-oriented, the architectural design of the building will be compatible with a downtown environment, and new uses or extensive expansion of existing uses shall require site plan review or a conditional use permit, as determined by the Farmersville Zoning Ordinance.

In order to permit design flexibility and prevent the creation of large parking lots in the downtown area (thereby eroding the pedestrian character of this area) the City should consider allowing reduced parking requirements for uses in the Central Commercial area. It is suggested that the Zoning Ordinance's parking requirements be reduced by 25% for commercial and public uses in the Central Commercial area.

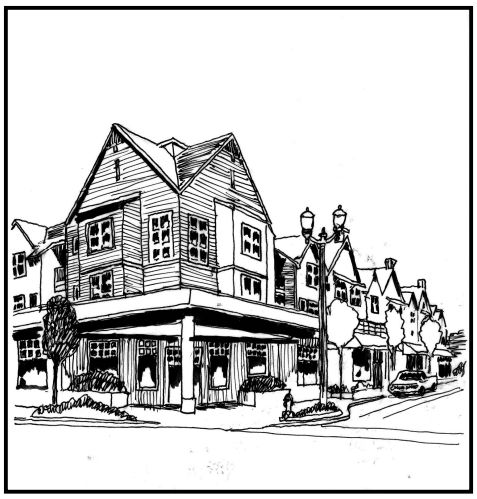
Highway Commercial

The Highway Commercial designation is intended to provide for commercial uses that cater to the travelling public along State Route 198. Highway-oriented uses should include service stations, convenience stores, restaurants and lodging establishments.

Development within this designation be required to be landscaped, parking shall be constructed off-street, signs shall be regulated and new uses or extensive expansion of existing uses shall require site plan review or a conditional use permit, as determined by the Farmersville Zoning Ordinance.

Mixed Use Overlay

This designation is intended to encourage flexibility in new development by allowing for the combination of residential, office and commercial uses on one site. The designation recognizes that before the advent of modern zoning, most cities allowed combinations of these types of uses. For instance, many communities had multi-story buildings (particularly in their downtowns) that featured



retail commercial or offices on the ground floor, and living units on upper floors. This arrangement potentially allows one to live and work in close proximity, without the need for an automobile. It also sets up a dynamic urban atmosphere where various land

uses inter-relate with one another in a unique way not possible in a typical "suburban" setting.

Projects approved with this designation shall require Conditional Use Permit approval and will be developed in accordance with a new "Mixed Use" zoning designation. This concept is further addressed in the policy section of the Land Use Element.

Industry

This designation will provide for uses that are involved in manufacturing, processing, warehousing, and certain service commercial uses.

Development with this designation will have the following distinguishing features - the subject site will be landscaped, parking lots will be constructed off-street and will be landscaped, storage areas shall be fenced and screened, signs shall be regulated and new uses or extensive expansion of existing uses shall require site plan review or a conditional use permit, as determined by the Farmersville Zoning Ordinance.

Public Facilities

This designation is reserved for facilities that are operated by public agencies, including schools, the post office, City Hall, other City-operated facilities and county offices.

New development with this designation will have the following distinguishing features - the subject site will be

landscaped, parking lots will be constructed off-street and will be landscaped, signs shall be regulated and new uses shall undergo site plan review. Schools should receive special attention in regards to pedestrian, bike and bus circulation.

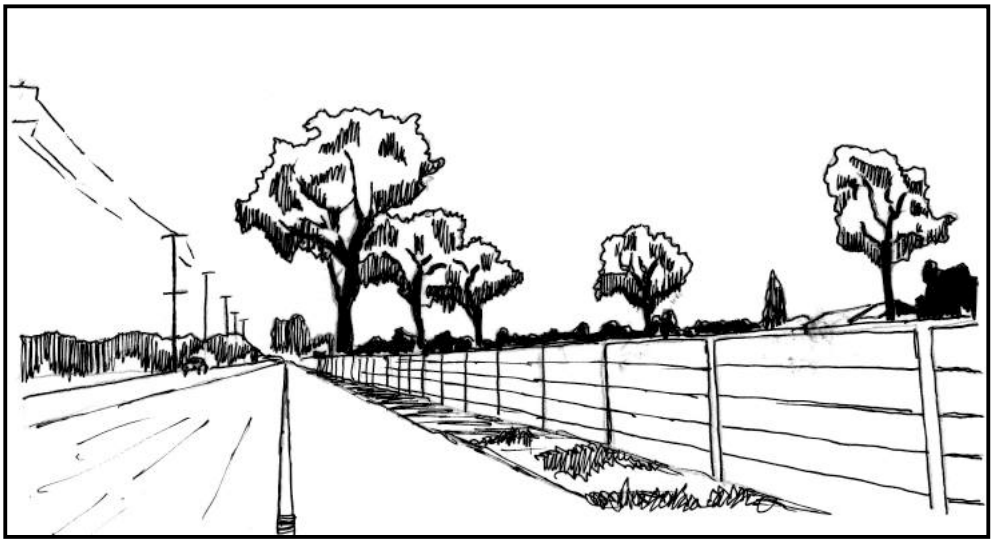
Open Space

This designation is applied to lands that will remain generally free of buildings. Uses that would receive this designation would include parks, playing fields, and golf courses.

Urban Reserve (Agriculture)

This designation is applied to lands that are being, or have the capacity to be, actively farmed but are within the planning area and proposed to be eventually developed.

Further, this designation could also be applied to lands that contain agriculturally-related uses, such as packing houses, cold storage operations or agriculturally-related businesses. The purpose of this designation is to protect agriculture from urban encroachment, maintain land in agriculture until the time is appropriate for conversion to urban uses, and to ensure that conflicts do not arise between agriculture and urban uses.



LAND USE GOALS, OBJECTIVES AND ACTION PLANS

This section of the Land Use Element establishes goals, objectives and actions, to guide Farmersville's growth through the year 2025.

Land use goals express general community values. They are the community's vision for its future. They can refer to image and appearance, economic viability, health and safety, preservation of resources or fiscal soundness, among other issues. Goals are refined into objectives and action plans. These represent concrete actions the city will take to ensure that goals are realized. Goals, objectives and action plans are organized under topical issues, including:

Land use goals express general community values. They are the community's vision for its future.

- Community Image
- Growth Management
- Agricultural Land
- Residential Neighborhoods
- Commercial Development
- Industrial Development
- Downtown
- Public Facilities
- Schools
- Economic Development
- Infrastructure
- Public Safety
- Public Participation
- Special Issues
    - Cameron Creek Colony
    - Linnel Farm Labor Center
    - State Highway 198
- Appendix A: Smart Growth Primer

ISSUE ONE: **Community Image**

Image is an important community assest in that it can influence how people feel about their city. If a community has a positive image, a strong sense of community and pride can result.

A community that is clean, well-maintained, visually appealling and properly planned will:

- Attract outside investment;
- Encourage people to maintain their property;
- Cause real estate values to appreciate; and
- Stimulate city revenues - tax increment, sales tax and transient occupancy (lodging) taxes.

Goals, Objectives, Action Plans

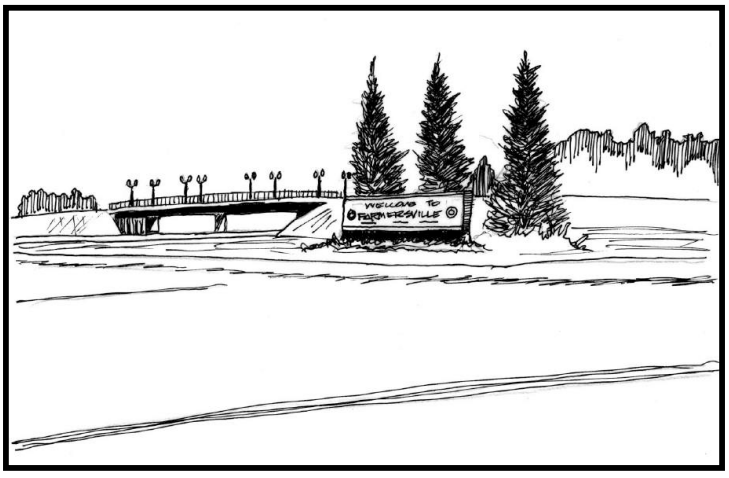
Public Improvements

I. Foster an attractive, clean and well-maintained community.

1. The City should design and install "Welcome to Farmersville" community identification signs at the Highway 198/Farmersville Boulevard interchange.

    a. The City should hold a design contest for the design of the sign. Various funding sources should be identified, including sponsorships, donations, memorials, etc. The City must coordinate with Caltrans on the design and installation of such signs.

2. The City should explore the creation of a downtown maintenance district to pay for the cost of maintaining improvements in the downtown, such as landscaping, street furniture, parking lots and lighting.



"Welcome to Farmersville" sign and landscaping at Hwy. 198 interchange

3. The City should facilitate a landscaping program in appropriate locations, such as parks, future street medians and within the downtown that promotes shading, color, and aesthetically pleasing forms.

    a. The City should seek funding to pay for landscape improvements. In addition to grant monies, the city should explore establishing a development impact fee that pays for the construction and landscaping of street medians and landscape planters.

    b. The City should apply for an urban forestry grant to pay for the planting of trees within sidewalks along major streets, including Farmersville Boulevard, Visalia Road and Walnut Avenue.

Code Enforcement/Property Maintenance

1. The City shall ensure that street sweeping, trash pickup, and the maintenance of public grounds and buildings are completed on a regular basis.

    a. Ensure these tasks are adequately funded and staffed. Consider adding a development impact fee to fund these activities.

2. The City shall actively enforce the State Housing Code, which provides a procedure for abating or rehabilitating unsafe, dilapidated residential structures.

    a. The Building Inspector shall report to the City Council on an annual basis progress on rehabilitating or removing unsafe residential structures.

    b. The Planning Department shall maintain a city map that identifies the location of unsafe residential dwellings.

    c. The Farmersville Redevelopment Agency should explore the use of state or federal funds to promote infill residential development while concurrently facilitating the rehabilitation of stubstandard dwellings

The need for property maintenance and code enforcement was frequently mentioned by the General Plan

and the removal of unsafe residential structures.

3. The City shall continue to actively enforce the city's vehicle abatement program and illegal parking on residential property.

    a. The City should create a property maintenance brochure that addresses the most common questions about property maintenance and code enforcement issues. This brochure should be mailed to all property owners periodically. The brochure could be sent along with other regular mailings, such as utility bills.

4. A truck-parking facility could be located at the to-be-expanded public works yard and/or within industrially-zoned areas. The facility should be fenced for security. The City could charge a small fee to recoup the cost of operating the facility.

The City shall explore creating a space for the overnight parking of "big rig" trucks by residents who are employed in trucking.

5. Farmersville shall continue to actively enforce the city's sign ordinance.

    a. The City shall review its Zoning Ordinance and if necessary, update its sign regulations.

    b. The City shall prepare a brochure that clearly explains the sign ordinance.

    c. The City should send the sign brochure to all businesses along with yearly business license renewals, as a reminder of the city's sign ordinance standards.

6. The City shall develop a standard public notice form that could be sent to persons who are violating the Farmersville Municipal Code as it relates to zoning violations, public nuisances or non-compliance under an approved site plan or conditional use permit.

I. The City should establish community "clean up" days where residents are encouraged to spruce up their property and dispose of unwanted trash.

This event should be held several times per year, as funds allow.

a. Partner with local organizations like the Boy Scouts, C-SET, and other youth organizations to assist residents in clean-ups.

b. Coordinate with Farmersville's solid waste contractor to supply refuse bins for the clean up.

Community Character and Identity

II. Create development that conveys a "sense of place" with architecture that reflects local history and traditions.

1. The City shall prepare and adopt a set of design guidelines that specifies "good" design strategies and architectural themes that reflect Farmersville's "sense of place"

III. Create a community that is free of land use conflicts.

1. Legal, non-conforming land uses should not be allowed to be enlarged physically or operationally (unless the expansion does not increase the degree of non-conformity).

2. The city shall actively enforce existing zoning and building regulations that preclude or eliminate uses of land or buildings that present conflicts for adjacent properties.

3. The city shall ensure that commercial uses do not operate in residential neighborhoods unless the operator of the commercial use has obtained a home occupation permit from the city.

4. The city should develop an urban growth strategy that minimizes the impact on urban uses on adjacent agricultural operations (see Growth Management, page 2-21).

   a. The Land Use map shall use roadways. ditches, railroads, creeks and other physical

BACKGROUND

Non-conforming uses are those that do not comply with zoning standards for the zone in which they are located. A frequent example is where a house located in a commercial zone. Because houses are not allowed in commercial zones, they are considered to be "non-conforming".

The presence of numerous non-conforming uses creates problems for the planning process. Residents of the dwelling may complain about noise or traffic generated by commercial uses. Non-conforming uses can hamper the city's ability to attract new development into the intended zone. Allowing a non-conforming use to expand only "entrenches" the use at its location, making future conversion of the site to another use even more difficult.

• • • • • • • • •

features to separate urban uses from existing agricultural operations.

b. The City shall explore implementing a development impact fee that pays for the purchase of agricultural easements outside Farmersville urban area boundary line. Such easements would be used to form a greenbelt around the community (see Growth Management, Page 2-21).

Community Pride and Public Involvement

IV. Create a city that portrays a "sense of community".

1. The city should continue to promote public events and celebrations that bring citizens together, in its downtown and in other public places, like parks, schools and public buildings.

   a. Promote a Farmers Market in the downtown area, possibly closing a street for the event.

   b. Promote an Arts/Crafts Fair in the downtown.

   c. The City should contact the Urban Tree Foundation to seek their assistance in the development of a tree planting program in the downtown and on major streets, such as Farmersville Boulevard and Visalia Road.

2. The City should explore creating a "Museum of the Farm Worker". Such a museum would include exhibits and information documenting the history of farmworkers in Central California. This facility should be centrally located within the community, such as on the land adjacent to the railroad, west of Farmersville Boulevard. The facility should function as a multi-use site, with festivals, meetings and other events. Finally, the building should also make a positive architectural statement that is related to Central California's farming heritage.

BACKGROUND

The idea of establishing a Museum of the Farmworker was raised by participants during General Plan Committee meetings, as a way to key into Farmersville's identity.

a. The City, and Chamber of Commerce should establish a committee to pursue this goal.

3. The City shall continue to work with the Chamber of Commerce to promote community events, such as the Memorial Day Parade, and Christmas Tree Lighting Ceremony.

V. Foster a friendly community that encourages public involvement.

1. The City should form additional citizen advisory committees that report to the City Council on various topics, including beatification, recreation, circulation, etc.

   a. The to-be-formed beautification committee should work with the Urban Tree Foundation to develop a city-wide tree planting program. The city should apply for tree grants to fund this program .

2. The City should convene an annual study session with Farmersville Unified School District (F.U.S.D.) to discuss planning matters that are of mutual interest.

   a. The City Manager will coordinate with the F.U.S.D. to set a date for a joint meeting between the two agencies. The City Manager will meet with the Farmersville Schools Superintendent to prepare an agenda for the joint meeting.

3. The City Council and Planning Commission should hold biannual study sessions to discuss planning-related matters.

   a. The City Manager and City Planner will set a date and formulate an agenda for these joint meetings.

The City should convene an annual study session with Farmersville Unified School District to discuss planning matters that are of mutual interest.

VI. Create a community that portrays an image that is progressive and energetic.

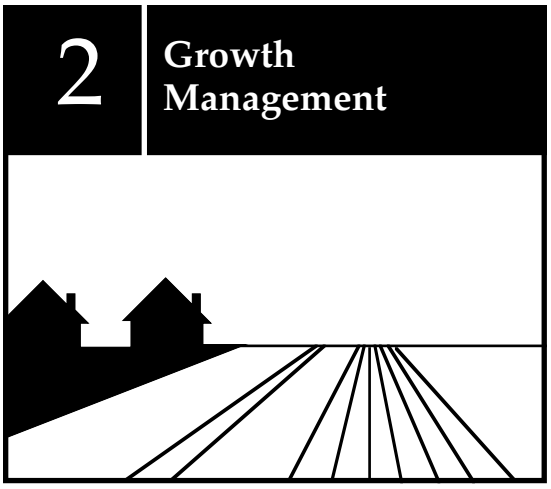
1. The City should work with other public entities and service organizations to jointly work on projects that benefit Farmersville as a whole.

    a. The City Manager and City Council should make presentations to various community organizations to solicit their help in financing, constructing and/or maintaining public art or beautification improvements, such as statues, fountains, mini-parks, specimen trees, murals or roundabouts,

ISSUE TWO: **Growth Management**

The management of Farmersville's growth - direction, rate, density and arrangement of land uses, can be beneficial from a fiscal, environmental and social perspective.

A community that is well-planned will be more attractive to potential residents, developers, companies and investors than one that is poorly planned, has numerous land use conflicts, urban sprawl, a non-viable downtown, poor ciculation patterns and disenfranchised sections of town. Furthermore, a community that is compact and is not sprawling has more efficient, cost effective infrastructure and service delivery systems than a community without these attributes.



Goals, Objectives, Action Plans

Protecting Farmersville's Boundaries

I. Maintain Farmersville as an agriculturally-oriented city surrounded by farmland.

1. To the extent possible, ensure that Farmersville is surrounded by agricultural land that is zoned for large parcel agriculture (e.g. AE-20 [20 acre minimum parcel size, or larger]).

    a. The City shall notify the County of Tulare that all land that surrounds Farmersville that is not zoned Rural Residential, Commercial or Industrial, should be zoned to the AE-20 (or larger acreage) zone. Further the City shall discourage proposals for parcelization to sizes smaller than 20 acres.

    b. Tulare County shall continue to refer applicants for urban development (subdivisions, commercial or industrial development) on lands within the Farmersville Urban Development Boundary (UDB) and Urban Area Boundary (UAB) to the City for comment and review. All development occuring within these areas must be consistent with the Farmersville General Plan.

BACKGROUND

When agricultural lands around a city are split into small parcels (such as 1/2- 2- and 5-acre "ranchettes", it erodes the viability of the land for farming. Rural residential development is also difficult to deal with when it is in the path of urban development. Rural residential residents frequently resist city efforts to grow in their direction. For these reasons, it is most advantageous for lands immediately around the city to remain in large agricultural parcels.

II. Keep Farmersville from physically merging with the cities of Visalia and Exeter.

1. The City shall meet with officials from Visalia and Exeter to explore the concept of forming a greenbelt to keep the cities from growing together

2. The City should consider a development impact fee that will be used to purchase agricultural conservation easements on lands that surround Farmersville. Such a fee could also be used to leverage additional outside grant funds.

    a. The City should work with a farmland conservation organization such as American Farmland Trust, to establish an easement program.

BACKGROUND

The need to keep Farmersville from growing together with Visalia in particular, and to a lesser extent Exeter, was voiced frequently during General Plan Committee meetings. The idea of a greenbelt to provide a buffer between the cities was supported by participants.

• • • • • • • • • • •

New Development

III. Promote Smart Growth planning principals in order to discourage urban sprawl and the premature urbanization of agricultural land, and to create more livable neighborhoods. This issue is addressed in more detail in Appendix A: "A Smart Growth Primer".

1. The City shall amend its Zoning Ordinance to add a Smart Development District.

    a. The Smart Development District shall incorporate planning principals that promote moderate increases in residential densities, narrower streets, better connectivity in and between neighborhoods and site and architectural design that emphasizes a humanized evnironment, as opposed to an automobile-oriented environment.

    b. Smart Growth design techniques should be incorporated into Farmersville's residential and commercial zone district standards, as appropriate (see Appendix A: "A Smart Growth Primer").

2. New urban development should occur in an orderly manner with initial development

BACKGROUND

The concept of Smart Growth was explored extensively by the General Plan Committee. Appendix A contains additional information on this topic. Some of these concepts have already been embraced by area developers.

• • • • • • • • • • •

See Appendix A: "A Smart Growth Primer"

occurring on available undeveloped properties which are closer to the existing built-up area.

a. The City should promote in-fill development and development of lands immediately adjacent to existing urbanized areas, before allowing development of outlying lands.

b. The General Plan maps designates lands further away from existing development with a "Reserve" status. Development of these lands should be delayed until land closer to the city is developed.

3. The City should promote mixed-use development where appropriate.

a. The City shall amend its Zoning Ordinance to provide for a Mixed-Use Zone District.

b. The City should identify sites in the downtown core where mixed-use development would be appropriate.

4. The City shall amend its Zoning Ordinance to permit residential development in the downtown.

a. The City shall amend the Zoning Ordinance to permit housing development in the downtown with a conditional use permit.

b. Housing units should be permitted in the upper stories of downtown buildings with a Conditional Use Permit.

BACKGROUND

Up until the mid 1940s mixed use buildings were common in American cities. Typically, shops occupied the ground floor, and residential units were situated above. The concept of separate use zones came about as a response to deplorable conditions in eastern industrial cities where people lived next to smoke-belching factories

Single use zoning has set up patterns of urban sprawl where residents must drive to make any meaningful connections in their community. This has been taken to extemes in suburban areas of California, like Orange County. Succesful mixed use development can address this situation by providing living and working places in close proximity to one another.

ISSUE THREE: **Residential Neighborhoods**

The "neighborhood" is the fundamental building block of a community. The health and quality of life of a community is best measured at the neighborhood level. If a city's neighborhoods are noisy, contain excessive traffic, unkempt, include incompatible land uses or are depreciating in value, then the community as a whole is most likely spiraling towards a condition of blight. In terms of community priorities, preservation of the neighborhood ranks as one of the its most important goals.

The ideal neighborhood should be inviting, quiet, cool in the summer, children-friendly, pedestrian oriented, achitecturally interesting and it should maintain its value over time. The neighborhood should also provide for a wide range of housing types, styles and prices.

Multi-family development (also known as apartments) is necessary in all communities. It provides housing opportunities for persons or families who do not wish to own a single family dwelling or who can not afford to rent or own one.

Improperly located, designed or maintained, multi-family development can have an adverse impact on the neighborhood and the community as a whole. To protect the health, safety and welfare of persons living adjacent to multi-family development as well as persons living in these types of units, the location, design and long-term maintenance of this type of housing must be carefully considered.

Goals, Objectives, Action Plans

Neighborhood Maintenance and Revitalization

I. Take actions to keep existing neighborhoods strong and healthy.

1. Remove substandard homes from residential neighborhoods.

    a. The City shall abate or rehabilitate substandard residential dwellings through the process established in the State Housing Code.

b. The Redevelopment Agency should consider the purchase of substandard housing in order to clear the property for new, low to moderate income housing.

2. Rehabilitate homes that have deteriorated.

a. The City should continue to apply for Community Development Block Grant (CDBG) funds to rehabilitate homes that have deteriorated.

3. Upgrade public improvements in blighted neighborhoods, including sidewalks, alleys, street trees, roadways, parkways and street lights.

a. Establish an annual objective for repairing or replacing broken curbs, gutters and sidewalks.

b. Replant vacant parkways with street trees.

c. Identify alleys that can be abandoned and initiate the process consistent with the Streets and Highways Code.

d. Upgrade alleys with pavement, where possible.

4. Encourage residential infill development in neighborhoods that are blighted.

a. Consider the reduction of development impact fees on residential infill projects.

b. Consider increasing the allowable underlying density on land that will support a residential infill project. Increased density can help make projects "pencil-out".

5. Continue to enforce the city's property maintenance ordinance.

II. The planning and building department will work together to ensure that building and zoning code violations are corrected and/or eliminated.

During the past ten years, Farmersville has rehabilitated an average of 8 homes per year, working with Self-Help Enterprises.

b. The city on a monthly basis will send out correction letters to persons who are in violation of planning or building code regulations.

6. The city will annually seek state and federal grant funds that can assist in the elimination of blight in residential neighborhoods.

   a. The City should contract with a grant writer to obtain funding.

7. The Farmersville Redevelopment Agency will use its tax increment funds and low to moderate housing income funds to eliminate conditions of blight in residential neighborhoods.

New Development

II. Promote neighborhoods that are quiet, visually pleasing, and cool.

1. The City should discourage land uses that are incompatible with residential neighborhoods.

   a. Adoption of the Land Use Element and Land Use Map will implement this policy.

III. Promote attractive, well-maintained and designed residential neighborhoods.

1. The City should develop a Smart Development Overlay Zone which promotes:

   - Narrow, tree-lined residential streets.
   - Neighborhood parks.
   - Dwellings that are architecturally reflective of historic and traditional styles used in Farmersville and the San Joaquin Valley.
   - Common areas that are maintained by Landscaping and Lighting Districts.

   a. Appendix A: "A Smart Growth Primer", includes recommendations for the creation of a Smart Growth development code.

Promote neighborhoods that are quiet, visually pleasing, and cool.

2. Encourage residential developments and adjacent land uses to be pedestrian-oriented.

    a. All residential developments with walls should provide openings for pedestrian and bike traffic.

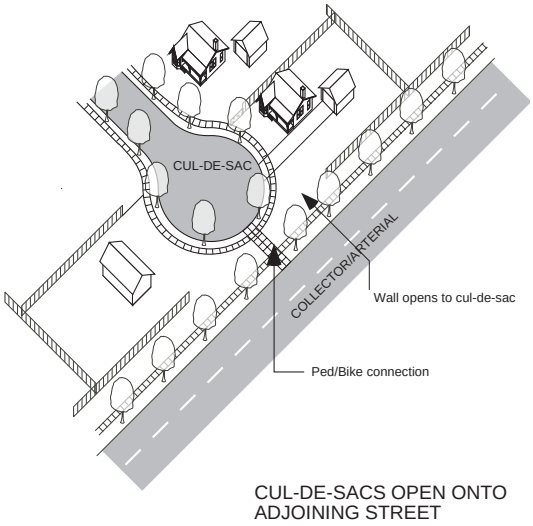
    b. Land uses adjacent to residential developments should provide for pedestrian access between the two types of developments.

    c. Permit home occupations where appropriate.

3. The City should consider promoting mixed uses in the Smart Development Overlay Zone. Examples might include a neighborhood commercial building with multi-family units next to, or above the commercial use.

IV. Protect existing neighborhoods from incompatible land uses.

1. Through the Site Plan Review and Conditional Use Permit process, ensure that the city's zoning ordinance regulations do not permit uses that will be incompatible with residential neighborhoods.



CUL-DE-SACS OPEN ONTO ADJOINING STREET

All residential developments with walls should provide openings for pedestrian and bike traffic.

<u>Multi-Family Development</u>

I. Multi-Family development shall be well-designed, well-maintained and properly sited.

1. The City shall prepare design guidelines that provide examples of good multi-family residential design.

    a. The Planning Director will work with the Planning Commission to create and adopt design guidelines (see Preliminary Guidelines, below)

2. Multi-family development shall be limited to a maximum of 40 units on any given site.

    a. The Zoning Ordinance shall be amended to incorporate this standard.

The General Plan Committee viewed numerous slide photos of different types of multi-family design. The Committee agreed that good design is possible and must be required.

The best designs were those that emulate the appearance of single family homes. Prominent design features include front doors and windows opening onto a useable front porch with railings. Parking should be situated to the rear of the building. The graphic on the following page was used to illustrate "good" multi-family residential design.

3. Multi-family developments shall be required to enter into a maintenance agreement with the City, prior to occupancy. The maintenance agreement shall be reviewed and approved by the Planning Commission.

    a. The Zoning Ordinance shall be amended to incorporate this standard.

4. The City shall explore requiring a maintenance bond be posted for new multi-family residential development.

    a. The Community Development Director and City Attorney shall research this issue and present their findings and recommendations to the City Council.

5. All multi-family residential development shall require a Conditional Use Permit.

    a. The Zoning Ordinance shall be amended to reflect this policy.

6. Duplex and triplex buildings may be integrated into single family residential subdivisions, on corner lots, through a Conditional Use Permit.

    a. The Zoning Ordinance shall be amended to incorporate this standard.

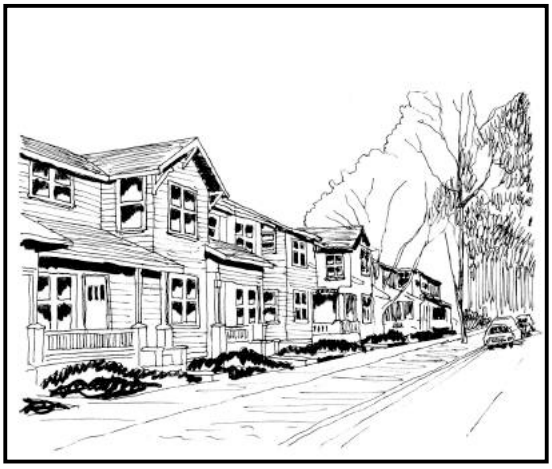
7. The City shall review the Zoning Ordinance's development standards for multi-family residential development, and amend the ordinance where deemed necessary.

    a. The Community Development Director shall review the Zoning Ordinance with the Planning Commission, who shall forward their recommendations to the City Council.

8. A traffic study shall be required for all multi-family residential projects of twenty units or greater.

    a. The Zoning Ordinance shall be amended to reflect this requirement.

The website "Affordable Housing Design Advisor" provides profiles of award-winning affordable housing projects throughout the nation, that exhibit outstanding design characteristics. Go to http://www.designadvisor.org/ for more information. Prospective affordable housing developers should be referred to this website prior to submitting plans.



Farmersville's vision for multi-family residential housing. Units face onto the street with porches, front doors and windows. This type of design improves neighborhood security by placing more "eyes" onto the street. Parking is located to the rear.

ISSUE FOUR: **Commercial Development**

The term "Commercial" Development generally refers to several types of land uses that feature businesses providing goods and services. These types of uses include:

Retail commercial - businesses whose primary activity is selling goods to the public.

Office - businesses whose primary activity is financial, insurance, real estate, information processing etc.

Service - businesses that provide a variety of physical services, such as auto repair, appliance repair, etc. These types of uses approach light industrial activities in nature and are typically encouraged to locate away from retail and office commercial activities.

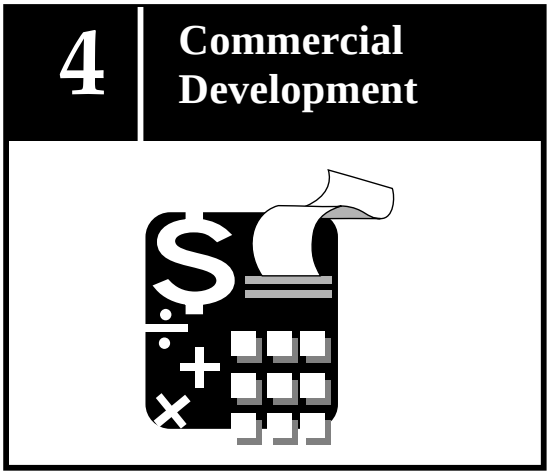
Office development is almost as important to the economic well-being of a community as industrial development. Offices support both small and large businesses, which on average, have a higher wage scale than most of the agricultural economy and some of the manufacturing/warehousing economy.

The Farmersville General Plan provides for four types of commercial land use designations:

- **Central (downtown),**
- **General**
- **Service, and**
- **Highway**

Each of these types of commercial uses is necessary if the community wishes to provide services and shopping opportunities for its citizens. Further, if a city is going to maintain its sales tax base, it is imperative that it not only retain its own shoppers but that it also attact shoppers from surrounding cities and outlying rural areas.

For each type of commercial development to be successful, it must be properly located, it must have adequate access and it should be designed so that it will attract patrons. For example, a parcel of land that is designated for general commercial uses should front onto a major roadway (with high traffic volumes), it should be designed so that it is attractive and visible from the



See also Issue 11: Economic Development

roadway and it should incorporate ample off-street parking.

Commercial developers also have a responsibility to the community to create projects that are pleasing in appearance, are well-maintained, and which are not disruptive to surrounding properties. Indeed, it is these types of uses that will form the community's image.

Goals, Objectives, Action Plans:

I. Ensure that different types of commercial development are provided for in Farmersville.

1. The General Plan Land Use map designates sufficient land to accommodate projected commercial development through the planning period.

2. Continue to monitor commercial land demand and accommodate requests to redesignate land for commercial development as demand warrants, subject to the following guidelines:

    a. The site has direct access to a major street, such as Farmersville Boulevard, Visalia Road, Walnut Avenue or the Highway 198 frontage roads.

    b. Development of the site for commercial use would not negatively impact adjacent residential uses.

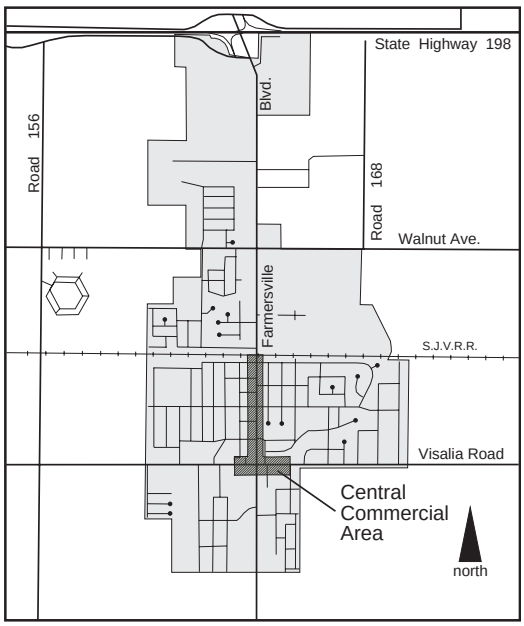
2. Allow service commercial uses to be located in Farmersville's industrial areas.

    a. Amend Farmersville's Zoning Ordinance to provide for service commercial uses in Farmersville's industrial zone district.

3. Establish a "Central Commercial" zone, for lands in the downtown area (see Map 2-1).

    a. The Zoning Ordinance should be amended to create a Central Commercial Zone. The zone should facilitate the development of a pedestrian-oriented shopping atmosphere. Buildings should be built to the back of the

Map 2-1
Central Commercial Area



sidewalk with parking located to the rear or side of structures. Shops should feature large storefront windows and pedestrian-scaled signs. Buildings should employ historic-theme architecture that reflects design traditions of Farmersville and the San Joaquin Valley. The Design Guidelines that will be established for the Redevelopment Agency's facade-rehab program can address this issue.

II. Promote commercial development that is aesthetically attractive.

1. All commercial developments shall be processed through the city's site plan review process (or Conditional Use Permit process, where required by the Zoning Ordinance).

    a. Require each commercial development to be built consistent with an architectural theme that reflects Farmersville's identity and the identity of the San Joaquin Valley.

    b. The City should establish a set of design guidelines that show graphic examples of good design.

    c. The Planning Department should work with the Planning Commission to develop and adopt the design guidelines. Guidelines should be advisory in nature.

    d. All commercial parking lots shall be landscaped and shall be provided with pedestrian-oriented circulation features. The design guidelines will provide graphic examples of these types of features.

3. Promote the development of shopping centers and complementary commercial uses that enhance the city's sales tax position.

    a. Designate adequate land for larger-scale commercial development along the northern portion of Farmersville Boulevard, and the western portion of Visalia Road.

General Plan Committee members agreed that some of Farmersville's commercial buildings set a positive tone and help to create a sense of place that is uniquely Farmersville.

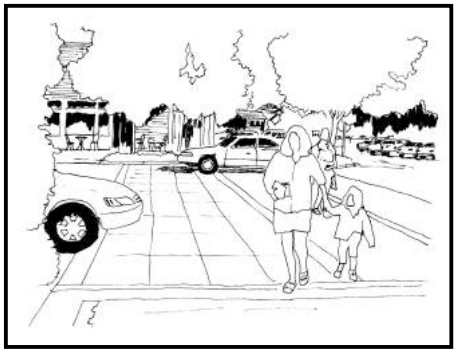
b. Ensure that the commercial zoning applied to lands along north Farmersville Boulevard and west Visalia Road allows uses that are compatible with each other, such as shopping centers, offices and fast food operations. This zoning should not include service commercial uses like auto repair (unless conducted as a subordinate part of a larger-scale retail commercial business).

III. Encourage commercial development to be pedestrian-oriented.

1. Through design, require new commercial development to be accessible by the walking public.

   a. During Farmersville's site plan review process the city will insure that the design of the commercial development will be pedestrian-oriented. The previously-mentioned design guidelines will provide examples of good pedestrian-oriented design.

   b. Encourage downtown stores to provide additional entrances to their stores from the rear.



With careful attention to details, even "suburban" shopping centers can be designed to encourage pedestrian activity.

IV. Pursue a program of economic development to create new businesses, jobs and increase Farmersville's tax revenues.

1. Strategies for economic development are addressed under Issue Eleven: Economic Development, on Page 2-48.

ISSUE FIVE: **Downtown Farmersville**

One of the main goals of any community's plan is to preserve and strengthen the downtown. Just as a person depends on their heart for survival, a good city has a downtown that pumps life and vigor into the community.

Farmersville's downtown is not as well-defined as the downtowns of most other Tulare County cities. Where most cities' downtowns feature at least several blocks of commercial use in a fairly compact area, Farmersville's commercial uses are situated in strip-fashion along Farmersville Boulevard and Visalia Road. In addition, Farmersville's downtown generally lacks the historic buildings found in most communities.

Despite these circumstances, there is potential for Farmersville to strengthen the image of its downtown and fortify it as the heart of the community. Indeed, this goal was voiced perhaps more than any other during the General Plan Committee workshops.

See also Issue 11: Economic Development

Downtown Farmersville Goals:

Character and Quality of Environment

I. Enhance Farmersville's quality of life by providing a Downtown which is inviting, friendly, clean, safe and aesthetically pleasing.

1. The Redevelopment Agency shall establish a facade improvement program whereby low- or no-interest loans are made to businesses to improve their exterior appearance. Such programs exist in Exeter and Woodlake.

    a. The Executive Director and City Planner will work together to formulate a facade rehab program.

II. Maintain the Downtown as the government, civic and retail/office center for the City.

1. The City should try to locate future government facilities in the downtown area. Future school district and county facilities should also be encouraged downtown.

2. The City should implement the recommendations of the "Farmersville Boulevard Revitalization Study", prepared by Urban Futures, Inc. in 2001. This study features a number of recommendations, listed to the right.

3. The City should prepare a Downtown Farmersville Specific Plan which outlines land use, circulation and aesthetic strategies to improve the downtown area. The City Manager will work to identify funding sources for preparation of the plan.

III. Identify and promote Downtown as the entertainment, cultural and community activity center of Farmersville.

1. The City should encourage downtown merchants to form an association or perhaps a property-based improvement district.

Housing

I. Promote multi-family and senior citizen housing in the Downtown area, to facilitate diversity, security and to extend "life of the streets" into evening hours.

1. The City should promote the downtown area as a location for future multi-family development

a. The Land Use Map identifies the downtown as a mixed use area, which permits the combination of residential and commercial land uses

II. Protect and enhance the integrity of the residential neighborhoods adjacent to the Downtown.

1. In the establishment of new uses, ensure that adequate screening and buffering are provided to protect adjacent neighboring uses. At the same time, work to establish good pedestrian connections between the downtown and adjacent neighborhoods.

a. The Site Plan Review process will focus on techniques to buffer adjacent neighborhoods

Farmersville Boulevard Revitalization Study Recommendations

- Coordinate with State of California Department of Trade and Commerce to market the downtown (and community as a whole)
- Host community events to bring people to the downtown.
- Establish a community outreach program.
- Create a business retention program.
- Create development information handouts.
- Establish a retail development program that involves financial participation by the City.
- Establish a building improvement loan program.
- Undertake a comprehensive planning effort for the downtown area.
- Work with property owners to understand their market.
- Install infrastructure improvements.
- Install signage and landscape improvements.
- Work with realtors to represent the downtown area.
- Establish design guidelines.

Source: Farmersville Boulevard Revitalization Study, 2001

from the undesirable effects of adjacent commercial development.

Circulation

I. Create a safe and comfortable environment in the Downtown where pedestrians, bicyclists, vehicular traffic and parking work in harmony.

1. The to-be-prepared Downtown Specific Plan will propose circulation improvements in the downtown area.

II. Identify the location of the Downtown for the traveling public.

1. The City should prepare unique and attractive directional signs that point the way to downtown.

Parking

I Provide sufficient, accessible parking for automobiles and bicycles.

1. The proposed Downtown Specific Plan shall analyze existing parking conditions and make recommendations to increase the supply of parking both on and off street, in the downtown area.

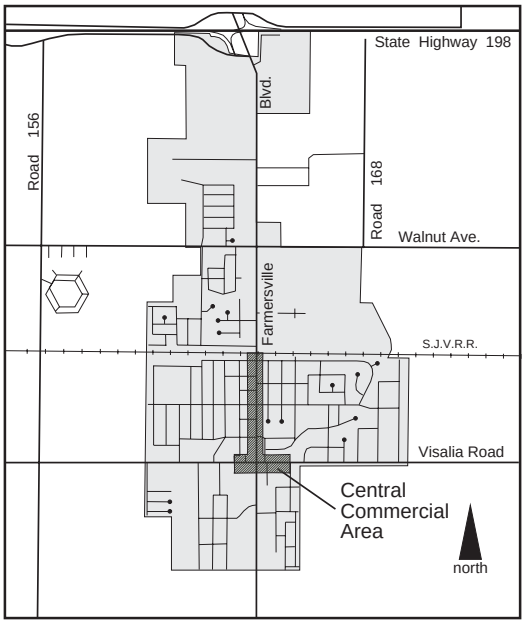
2. The City should encourage the use of shared parking agreements in the downtown area, in order to reduce the amount of land consumed for surface parking.

    a. Survey other cities that utilize shared parking agreements to determine the best method for doing this.

II. Ensure parking areas are convenient, attractive and safe. At the same time, minimize the negative visual impacts of parking lots through careful placement, landscaping and screening techniques.

III. Balance the parking downtown so there are sufficient spaces to efficiently meet shoppers' and tenants' needs for future land requirements for new building construction.

Map 2-2
Downtown Farmersville Specific Planning Area



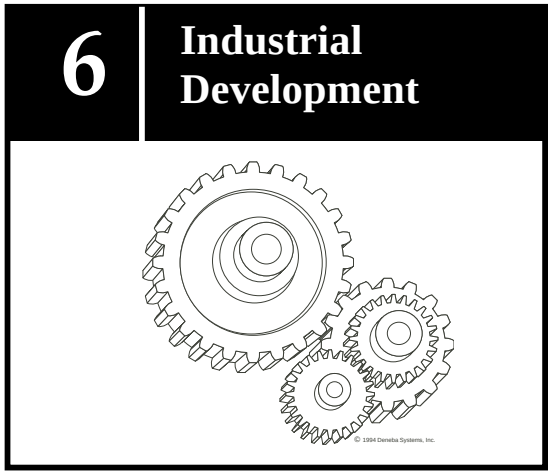
IV. Provide and maintain infrastructure to meet the needs of Downtown growth.

1. The City shall continue to monitor infrastructure needs and make repairs and upgrades as necessary. The proposed Downtown Specific Plan should identify any deficiencies in the infrastructure system and propose remedies.

ISSUE SIX: **Industrial Development**

Industrial development generally provides the economic foundation for a city in that it is a source of employment and it provides a flow of revenue into the city from outside sources - other businesses buying raw materials or finished goods from the local industry.

Industries are typically poor land use neighbors because they can generate large volumes of truck traffic, they can produce noise and odors, they may pose public health hazards and they can be unslightly. For these reasons, it is important that they be properly located in the community - away from land uses that are sensitive, such as schools, residential development and parks.



See also Issue 11: Economic Development

Goals, Objectives, Action Plans

I. Designate sufficient land to accommodate industrial development in Farmersville.

1. The Land Use map designates land to accommodate industrial development in Farmersville through the year 2025. When warranted, the City shall require the establishment of buffers, incorporating landscaping, walls or other effective measures.

II. Ensure that new industrial development does not conflict with existing or planned adjacent or nearby uses.

1. The City shall review zoning standards to ensure that adequate measures are in place to achieve this goal.

    a. When warranted, the City shall require the establishment of buffers, incorporating landscaping, walls or other effective measures.

2. The City Engineer will review each industry that wishes to locate in Farmersville to ensure that the project will not have an adverse impact on Farmersville's sewer or water systems.

    a. The City Engineer will require industries that generate high strength industrial

effluent to mitigate this impact by either pre-treating the effluent or by paying an appropriate wastewater impact fee to defray the city's cost of treating the effluent.

3. New industrial uses will be processed through Farmersville's site plan review process, or Conditional Use Permit process (as applicable) to ensure that they do not conflict with surrounding land uses or adversely impact the health and safety of the community.

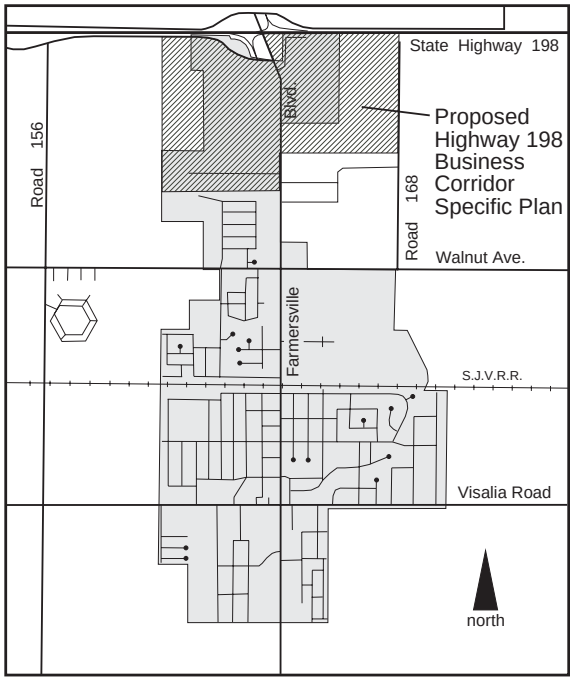
    a. The Farmersville Planning Commission will apply conditions to industrial projects that will insure that surrounding land uses and the community will not be adversely impacted.

III. Pursue a program of economic development to create new industries, jobs and increase Farmersville's tax revenues.

1. Prepare a "Highway 198 Business Corridor Specific Plan for the area in north Farmersville shown on the map to the right. The Specific Plan should detail street alignments, utilities, parcelling, development standards and funding mechanisms. While emphasis should be on encouraging industrial development, complementary commercial uses should also be permitted.

1. Strategies for industrial economic development are addressed under Issue Eleven: Economic Development, on Page 2-48.

Map 2-3
Highway 198 Business Corridor Specific Planning Area



ISSUE SEVEN: **Public Facilities**

I. The city should pursue expansion of public facilities, as needed.

1. Plan for expansion of the Public Works yard by acquiring adjacent properties and seeking funding for the expansion.

    a. The Land Use map identifies expansion of the Public Works yard.

2. Consider future relocation of the Civic Center to a more centralized location in the city's downtown area.

    a. Explore the possibility of building a new civic center in the downtown area. One possible site is the land adjacent to the railroad track, west of Farmersville Boulevard. This site could function as a multi-use facility and include the proposed Museum of the Farmworker. Given its location, an historic railroad architectural theme would be appropriate for this structure.

2. The City should work with the school district to identify building projects where the city and district could work together. These projects could include:

    - multi-purpose room
    - gymnasium
    - theater

II. Public facilities should be located in the core of the community, when possible.

1. As previously mentioned, the City should consider relocating City Hall to the site adjacent to the railroad, west of Farmersville Boulevard.

2. Other public facilities should be directed to locate in the downtown area. Existing downtown public facilities (such as the post office) should be encouraged to remain in the downtown.

See also Issue 8: Schools

III. If a public agency identifies the need to relocate, the city shall work with the agency to keep the facility in the downtown area.

III. Public facilities should make an aesthetic statement in terms of appearance and architectural style.

1. When new public buildings and facilities are developed, the City should take an opportunity to set the tone it expects for the community, in terms of quality design.

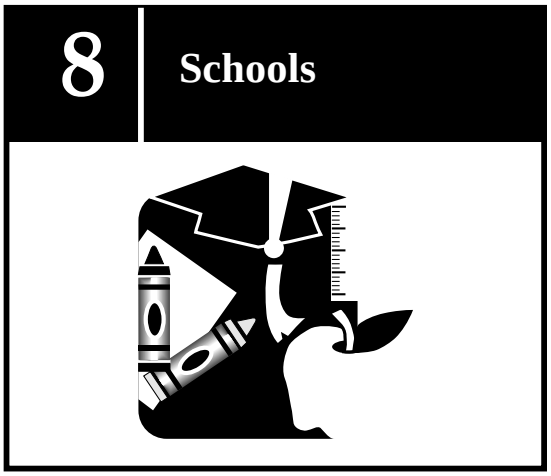
IV. Where possible, public facilities should have multi-purpose uses.

1. Construction (or) restoration of public buildings should provide for public meeting rooms.

    a. Public meeting rooms should be equipped with modern audio-visual equipment and the room should also be wired for modern telecommunications.

ISSUE EIGHT: **Schools**

Schools are the cornerstone of any community. A good school system can provide the foundation for citizens to prosper. Equally important is a good relationship between the city and local school district. Schools are major land use features in the community. The City and school district must work together to plan for future expansion of the school system and ensure the system can respond to demands of future growth.



Goals, Objectives, Action Plans

I. Promote community-based schools.

1. The City, Farmersville Unified School District and the community should all be involved in the design and location of schools.

    a. To the greatest extent possible, schools should be multi-purpose in nature.

    b. Schools (as appropriate) should be available for use by the community during non-school hours.

    c. Schools should be designed to accommodate some of the community's recreational needs, like playing fields, hard courts and running tracks.

The General Plan Committee watched a presentation about the town of Gaylord, Michigan which involved the entire community to build a multi-purpose educational center open to all residents.

II. Work to develop schools that are easily accessible and free from land use and circulation conflicts.

1. Schools should be located in areas of the community where they are easily accessible for school-aged students.

    a. Schools should be designed so that they can be easily accessed from adjacent residential developments.

    b. Schools should be designed so that students can be easily dropped off by their parents.

    c. Bus drop-off zones should be separate from where parents drop off their children.

2. The location of schools should not be on roadways that attract other types of significant traffic (e.g. commuter, industrial or commercial traffic).

    a. Elementary and middle schools should not front onto major collector or arterial roadways.

    b. Sidewalks should be installed on all streets around a school site.

    c. Schools should be connected to bike path systems.

3. To the best extent possible, schools should be centrally located in the neighborhoods they are expected to serve.

    a. Existing, centrally located schools should consider acquiring adjacent property for future expansion.

    b. The Land Use Map identifies the area south of Farmersville High School for future school development.

III. Encourage schools to establish partnerships with other public entities.

1. Farmersville Unified School District should forge a working relationship with College of Sequoias as it pertains to agricultural, technical and mechanical training courses. In addition, the City could employ summer interns in a variety of positions.

IV. Work with educational institutions to fashion a training program that teaches skills that mirror local industrial sectors, including equipment repair, irrigation technology, food processing, nurseries, and agricultural technology.

1. Farmersville Unified School District should develop training and vocational programs for students that wish to be employed in the above sectors.

IV. The School District should develop programs in cooperation with organizations such as Proteus Inc., C-Set, and the Tulare County Private Industry Council.

V. Encourage college courses to be taught in the Farmersville area.

1. Farmersville Unified School District should provide classroom space for College of Sequoias classes.

2. The School District should make its facilities available to other institutions that wish to provide instruction, training, or certification.

VI. Work to resolve school district boundary conflicts between Farmersville Unified School District and Visalia Unified School District. Farmersville U.S.D.'s boundaries should include at least the City's Urban Area Boundary.

1. The two school districts should meet regularly to resolve boundary issues. A date should be set for completion of this goal. The City may wish to participate in this activity.

ISSUE NINE: **Agricultural Lands**

Agriculture is the primary industry in the Farmersville area. This basic industry employs almost 30 percent of the city's labor force. Agriculture is a relatively stable industry when compared to other industrial sectors, like manufacturing, tourism, and the transportation industries. For this reason, agriculture should be encouraged in the Farmersville area. Further, land use policies that minimize the impacts between urban and agricultural uses should be promoted.

See also Issue 2: Growth Management

Goals, Objectives, Action Plans

I. Farmersville will ensure that its primary economic base (agriculture) is protected.

1. New subdivisions shall be located no more than 1/8 mile of existing or approved urban development.

    a. The Planning Commission and City Council shall make a finding in approving General Plan Amendments and Zone Changes, to ensure the foregoing statement is true.

2. Encourage Tulare County to maintain large-lot agricultural zoning (20 acre minimum) to land within Farmersville's Urban Area Boundary.

    a. The City of Farmersville shall oppose any county development within its Urban Area Boundary that creates parcels of land smaller than 20 acres.

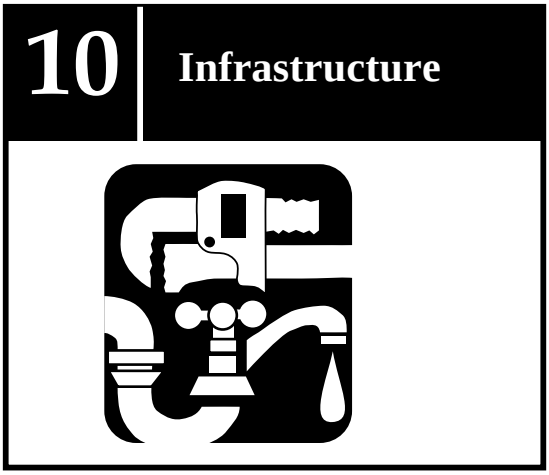
3. Moderately increase overall residential densities so that Farmersville utilizes land more efficiently.

    a. The Smart Development zone will offer moderate increases in residential density as an incentive for developers to utilize this zone district.

3. Urban uses, to the best extent possible, should be separated from agricultural uses by streets, railroads, canals or similar man-made or natural barriers.

    a. Adoption of the Land Use Element and Land Use Map will implement this policy.

ISSUE TEN: **Infrastructure**



Infrastructure generally refers to a city's utilities - water, sewer, storm drainage, gas and electric, phone and cable television services. In Farmersville, the city operates water, sewer and storm dainage systems. The other utilities are operated by private firms.

The operation and maintenance of infrastructure is of paramount importance to cities. Without these services, human health and well-being would be in jeopardy. Good infrastructure can also serve as an economic development tool. For instance, many industries require water supply, and wastewater disposal capacity. Farmersville must strive to maintain its existing infrastructure while planning for expansions to accommodate future growth and development.

See also Issue 11: Economic Development

I. Adequately finance infrastructure systems.

1. New development shall be required to install water, sewer and storm drainage improvements to serve their needs.

    a. The City Engineer shall evaluate development projects and identify infrastructure needs, in the form of conditions of approval.

2. Farmersville's water, sewer and storm drainage master plans shall be reviewed in order to ensure that they can properly and efficiently serve future development provided for by the Land Use Element.

    a. The City's water, sewer and storm drainage development impact fees shall be reviewed on an annual basis. This review should focus on the relationship between the amount of fees being collected for each of the accounts and the future capital needs of each system based on development trends in Farmersville.

    b. The modification of the City's development impact fees should be consistent with Assembly Bill 1600, which requires a clear relationship between fees and their purpose.

2. The City should continue to seek state and federal grants for the upgrading and expansion of its infrastructure systems.

II. Ensure infrastructure master plans and the general plan are consistent with one another.

1. The Land Use Element shall identify where development will occur in Farmersville through the year 2025. The Element will be fashioned so that it is generally in concert with existing master plans.

III. Maintain, rebuild and upgrade infrastructure systems.

1. The City shall update its 5-Year Capital Improvement Program to ensure that its infrastructure system can accommodate the urban growth prescribed by the Land Use Element.

2. The Redevelopment Agency should prepare a 5-Year Capital Improvement Program to assist in the maintenance, rebuilding and upgrading of Farmersville's infrastructure system, within the Redevelopment Project Area.

3. The City should work with the private sector to participate in the upgrading of the infrastructure system when it is developing in the City.

    a. From time to time, the City may wish to work with a developer to upgrade a part of the infrastructure or street system that is not part of the project being developed.

ISSUE ELEVEN: **Economic Development**

Economic development is an increasingly important issue for many cities. New and well-paying jobs must be available for residents if a community is to prosper. In addition, new development can generate revenues needed to fund local government and services. Farmersville must continue to pursue economic development to better the lives of its residents and to ensure that necessary services will be available to the community

Goals, Objectives, Action Plans

Land Resources

I. Ensure that adequate land exists for future commercial and industrial development

1. The General Plan's Land Use Map designates sufficient land to accommodate commercial and industrial land demand through the planning period.

2. The City Planner shall maintain a map that shows readily-developable lands designated for commercial and industrial development.

3. Continue to monitor local market needs and amend the land use map (as appropriate) to accommodate commercial and industrial development.

General Issues/Marketing

I. Foster a better business climate by developing communication among the business community, City Council and City administration.

1. Schedule an annual meeting between the Chamber of Commerce and City Council, to discuss business and development issues.

2. Continue to participate in efforts to market Farmersville to outside developers through the Tulare County Economic Development Commission.

See also

Issue 4: Commercial Development
Issue 5: Downtown
Issue 6: Industrial Development

a. The City Manager shall be responsible to maintain a relationship with the EDC.

II. Increase the number of businesses operating in Farmersville, in order to generate more sales, property, business and transient occupancy taxes.

1. Conduct an economic study to target development of new businesses in Farmersville.

2. The Farmersville Redevelopment Agency should financially assist, where possible, businesses wishing to locate in the Redevelopment project area. Targeted businesses should offer the "most bang for the buck" in terms of jobs created and potential tax revenues.

3. Invite a university team to conduct a project study aimed at improving Farmersville's commercial and industrial climate.

4. Seek to have Farmersville designated as an Enterprise Zone. This type of zone provides tax incentives to businesses that locate in the community.

➤ ***The City of Lindsay was designated as an Enterprise Zone in 1996***

5. Agressively pursue grants to provide the installation of infrastructure to serve new commercial and industrial development.

6. Investigate and promote the use of the railroad as a resource for industry in Farmersville.

7. Develop a web site for the City of Farmersville. The web site could be used to market the city, as well as provide essential information for residents.

➤ ***As of 2001, six of Tulare County's eight cities have a city website.***

a. The City Council should budget general funds for the development of a web site for the City of Farmersville. The City could also consider utilizing high school students to design and maintain the website.

b. The site should also provide socio-economic information on the city, information on city services, and a photo essay of the community.

8. Consider hiring an economic development specialist/grant writer, to pursue industry leads and grant funds. The City may wish to consider sharing this position with other neighboring communities, in order to reduce expenses.

III. Encourage organizations to use Farmersville as a destination for meetings, conferences, and seminars.

1. The Farmersville Chamber of Commerce should conduct an annual survey of its members to identify leads for upcoming meetings and conferences that could be held in Farmersville.

2. Opportunities for holding meetings and seminars in Farmersville should be detailed on the City's web site.

3. The City should explore opportunities to incorporate meeting space in buildings it owns. For example, meeting space could be developed at City Hall.

Business Retention/Expansion

I. Assist existing industries to expand their operations and increase employment.

1. The City and/or Chamber of Commerce should (on an annual basis) contact existing industries to determine if they have plans for expansion and if there are tasks that the city and chamber could assist them with.

2. The Farmersville Redevelopment Agency should develop an Existing Company Expansion Program where funds would be provided by the Agency to a company if they hired additional employees.

   a. The Redevelopment Agency could use redevelopment or CDBG funds to finance an existing company expansion program.

V. The Redevelopment Agency should develop an outreach/marketing program to publicize the expansion plan.

Employment

I. Diversify Farmersville's employment base

1. Prepare an Industrial Area Specific Plan for Farmersville's northern area (see Industrial Economic Development Goals).

2. Work with local community college districts to provide technical training programs for employers and employees.

    a. Encourage college courses to be taught in the Farmersville area.

    b. Farmersville Unified School District, or the City could provide classroom space for college courses.

    c. The City and school district could make meeting facilities available to other institutions that wish to provide instruction, training or certification.

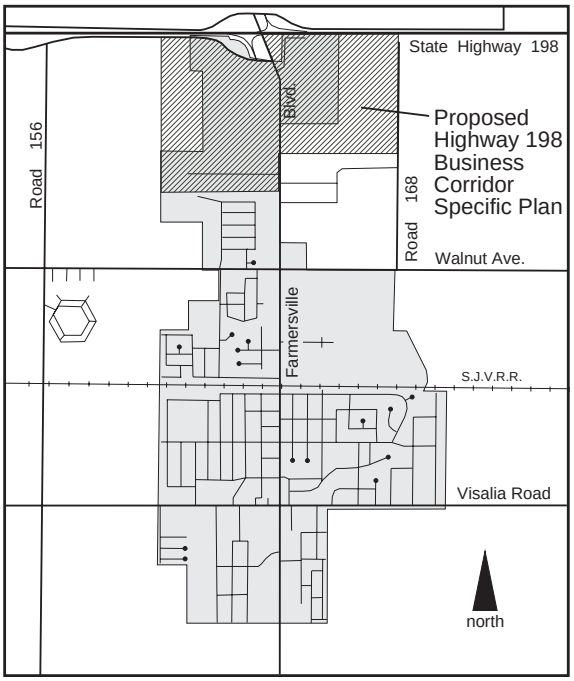
Industrial

I. Attract industries that are complementary to the existing work force, that do not adversely affect air quality, the city's waste water treatment plant or the city's water system and do not have a negative impact on the health and safety of the neighborhood or on the community as a whole.

1. Prepare a "Highway 198 Business Corridor" Specific Plan for the area in northern Farmersville designated on Map 2-4, to the right. The Specific Plan should identify future roadway alignments, land parcellization, major utility trunk lines and specify property development standards. Once completed, the Specific Plan should be used to obtain grant monies to help develop the area.

    a. The City Council should appropriate money and establish a time goal for completion of the Industrial Area Specific Plan.

Map 2-4
Highway 198 Business Corridor Area Specific Plan Planning Area



2. Seek industries that compliment the local work force, such as agricultural equipment repair and manufacturing, nurseries, warehouses and packing houses, and trucking and farm management.

II. Diversify the City's industrial base.

1. Work with the Chamber of Commerce and Tulare EDC to attract new industries to the City.

2. Utilize redevelopment funds to financially assist new companies to locate in Farmersville.

   a. Financial assistance should be based on the number of jobs being created by the new company and/or by the hourly wages paid by the company.

III. Explore the possibility of expanding the local rail line to serve Farmersville's future industrial area.

1. The City and Chamber of Commerce should work closely with the San Joaquin Valley Railroad to identify opportunities and constraints to constructing rail sidings or spur lines to serve industrial uses in Farmersville.

Fiscal Conditions

I. Facilitate a strong sales tax base.

1. The City should attempt to reverse the leakage of sales tax dollars to surrounding communities by:

   - working to attract new retail establishments to the community.

   - retaining existing businesses.

   - maintaining high standards that create an attractive business climate which is inviting to prospective new businesses.

2. The City should seek to attract moderate-sized retail stores that sell the kinds of goods presently not found in Farmersville, including appliances,

furniture, electronics, and home improvement supplies.

a. The Land Use map shall identify adequate land reserves for future retail commercial development.

3. A sales tax audit should be prepared for the city of Farmersville.

a. The City should contract with a consulting firm that provides this service.

4. Encourage an automobile dealership to locate in Farmersville.

a. The City and Chamber of Commerce should work to attract an automobile dealership to lands fronting State Highway 198.

b. Identify other types of high sales-tax generating dealerships (boats, trailers, farm equipment) that could be located in Farmersville.

Downtown

I. Promote shopping in Farmersville's downtown.

See also Issue 5: Downtown

1. Continue to identify other uses that could be located in the downtown that would be compatible with existing downtown uses, like antique stores, gift shops, restaurants, and banks.

2. Continue to work with building owners in the renovation of their building facades in order to make the storefronts more attractive.

a. The Redevelopment Agency should establish a facade rehab program that offers financial assistance to building owners willing to upgrade the exterior of the buildings, in the downtown area.

b. Develop guidelines to implement the facade rehab program.

3. Identify, design and construct downtown streetscape improvements that make the downtown a more desirable place to visit and shop, including antique lighting, landscaping planters, street trees, benches paseos, signage and accent paving.

    a. Prepare a Downtown Farmersville Specific Plan to implement the foregoing objectives.

II. Promote the conversion of residential dwellings in the downtown area into office and/or retail uses.

1. Amend the zoning ordinance to allow residential dwelling units in the downtown to be converted to office or retail uses. Also encourage the establishment of "live-work" units where residents live and work in the same building.

    a. All conversions will be processed through the city's site plan review process.

2. Promote "mixed use" development in the downtown area.

    a. The Land Use map identifies the downtown area for mixed use development.

    b. The Redevelopment Agency should assist developers interested in a mixed use project.

Mixed Use Development

Typical mixed use: Retail commercial and offices on the ground floor, apartments above.

Redevelopment

I. Enhance tax increment revenues by encouraging development to occur in the redevelopment district.

1. The City could consider the reduction of development impact fees in the redevelopment district in order to encourage infill development.

2. The City could consider encouraging higher residential densities in the redevelopment district in order to facilitate infill development.

3. The Redevelopment Agency should fashion a financial assistance program that promotes development within the District and that such a

program would have the Agency participating financially based on the number of new jobs and tax revenues being created.

4. The Redevelopment Agency should, on behalf of existing companies or companies interested in locating in Farmersville, apply for state or federal grants that assist the company with off-site improvements, purchase of land or equipment or training of employees.

    a. The Agency should identify state or federal grants that are available for the above listed costs.

    b. The Agency should send a letter to existing companies in Farmersville asking about their long-term needs in terms of expanding their operation.

    c. The Agency should provide to the Farmersville Chamber of Commerce information regarding state and federal grants that can be used to pay for the above listed costs.

Infrastructure/Public Services

I. Ensure that development impact fees pay for public improvements required by the general plan and infrastructure master plans.

See also Issue 10: Infrastructure

1. Review Farmersville's development impact fees to ensure that new uses pay their fair share of the costs of providing infrastructure and services, while remaining competitive with other communities.

    a. A new fee schedule shall be developed for Farmersville's development impact fees.

    b. The City Engineer shall review Farmersville's sewer, water and storm drainage impact fees and forward a recommendation to the City Council regarding any modification.

c. The City Planner shall review Farmersville's park impact fees and forward a recommendation to the City Council regarding any modification.

d. The City Planner shall identify any new impact fees that would be appropriate for financing other public improvements delineated by the General Plan.

3. The fees for Farmersville's planning, subdivision and zoning applications should be reviewed and amended every two years, as necessary.

   a. These fees should be developed consistent with Assembly Bill 1600, which requires a clear demonstration between the need for fees and their use.

Agriculture

I. Promote and encourage agriculturally-related industries.

See also Issue 9: Agricultural Lands

1. The City should prepare an Industrial Area Specific Plan to establish the planning framework necessary to attract agriculturally-related industries. The Plan would apply to areas in the northern portion of Farmersville designated "Industrial" on the General Plan's Land Use Map.

2. Annually, the Farmersville Chamber of Commerce should survey existing agriculturally-related businesses in the area to gather leads on other similar businesses that might wish to locate in Farmersville.

   a. Planning staff will assist the Chamber in the preparation of this survey form and in the preparation of a mailing list.

II. Attract technologies to the Farmersville area that are related to the field crop and citrus industry, including plant breeding, nurseries, integrated pest management, and agricultural chemical companies.

1. The Chamber working with the Tulare Economic Development Corporation (EDC) should develop and continuously update an information packet detailing the benefits of locating the above types of businesses in Farmersville.

III. Promote agriculturally-related tourism.

1. The City, working with the agricultural community should develop tours of various sectors of the agricultural economy, including farms, packing houses, cold storage plants and other related businesses.

    a. The City, working with the Chamber of Commerce, should form a citizen advisory committee composed of persons knowledgeable about the local agricultural economy.

2. The Farmersville Chamber of Commerce and the City should investigate the idea of creating a "Museum of the Farmworker".

    a. The City, working with the Chamber of Commerce, should form a citizen advisory committee composed of local historians, farmworkers, industry leaders and persons interested in the museum to investigate the likelihood of establishing such a museum.

    b. This group should develop a time-line, a financing plan, and a schematic plan for the museum.

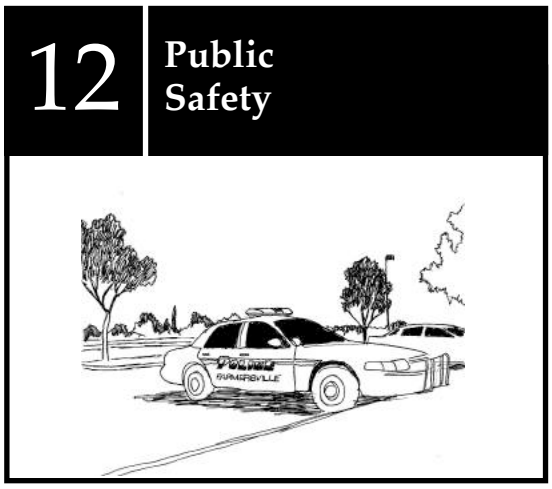
    c. The City should seek state grants, donations and foundation funding for the construction of the museum.

2. A Certified Farmers Market should be established in the downtown area once a week.

    a. The City should work with the local Chamber of Commerce to make a farmers market a reality.

    b. Consult with other communities who are currently holding farmers markets.

ISSUE TWELVE: **Public Safety**



These types of services are crucial to the public's health, safety and welfare. Public safety, which includes police and fire, ensures that the public and their possessions are protected from criminal elements and exposure to fire and hazardous materials; emergency medical services respond to calls for emergency medical response and potentially, the need to transport the victim to a local health care facility; and health care facilities, which include hospitals, medical clinics and other types of medical-related uses, provide to the public physical and psychological care and treatment.

Goals, Objectives, Action Plans:

I. Promote a safe community that is free of crime and fire hazards

1. Through the City's Site Plan Review process, new developments should be designed so that that crime and fire safety are considered in the design.

    a. Ensure that all new uses have water available to the site and that proper water pressure is also available.

    b. Buildings larger than 5,000 square feet in size should be equipped with sprinklers.

    c. Ensure that all new uses are properly equipped with on-site lighting to promote safety and security. At the same time, ensure that outdoor lighting does not become a nuisance by unnecessarily illuminating adjacent properties. Involve officials from the Police and Fire Department to ensure that safety concerns are addressed in the site design process.

2. The City shall establish a Site Plan Review committee to provide early review of development projects. This goal will ensure that communication between various departments/agencies and project applicants is maximized in the development process. The

committee should be comprised of individuals representing agencies that may serve or otherwise be affected by a project, including:

- City Planner
- City Manager (as needed)
- City Engineer
- Public Works
- Fire Department
- Police Department
- Local utility companies:
- Southern California Edison
- The Gas Company
- Cable TV
- Irrigation District (as needed)
- Farmersville Unified School District (as needed)

The project applicant/agent should also attend the committee meeting.

The City Planner shall establish a procedure for the site plan review committee that should include the following:

- Set a regular daytime meeting date/time (twice a month is recommended)
- Copies of site plans are mailed to agency representatives two weeks before the meeting.
- Agency representatives should review plans and submit comments to the City Planner at least three days prior to Site Plan Review Committee meeting.
- At the meeting, agency representatives can explain their comments and/or ask questions of the applicant, regarding the project.
- After the meeting, agency representatives should formalize their comments into conditions of approval for the project.

3. The City will continue to upgrade its water system to ensure that adequate water pressure is maintained throughout the system.

Site Plan Review Committee Proposed Process

Maximizing Understanding in the Planning Process

I. Applicant submits site plan to City Planner.

II. City Planner distributes copies of site plan to Committee members.

III. Committee members review plans and submit comments, questions, draft conditions to City Planner at least three days before Committee meeting.

IV. Committee meeting: Site Plan Review Committee meets with applicant and goes over the project.

V. After meeting, committee members formalize conditions of approval and submit them to City Planner.

VI. City Planner prepares staff report and resolution on project, incorporating conditions of approval received from committee members.

VII. Public hearing (or staff action) on project.

a. The City should amend its development impact fee schedule to provide funds for replacement of old water lines.

b. The City should amend its development impact fee schedule to provide funds for future water facilities.

4. Developments should be designed so that access is maximized.

a. The Site Plan Review process will ensure that new developments provide proper access for public safety vehicles.

II. Ensure that public safety departments are adequately financed.

1. The City should apply for state and federal grants that can provide money to supplement the city's police department revenue.

2. The Police Department should implement innovative programs that promote an efficient delivery system, such as:

- A volunteer program
- Take-home car program
- K-9 Unit Program

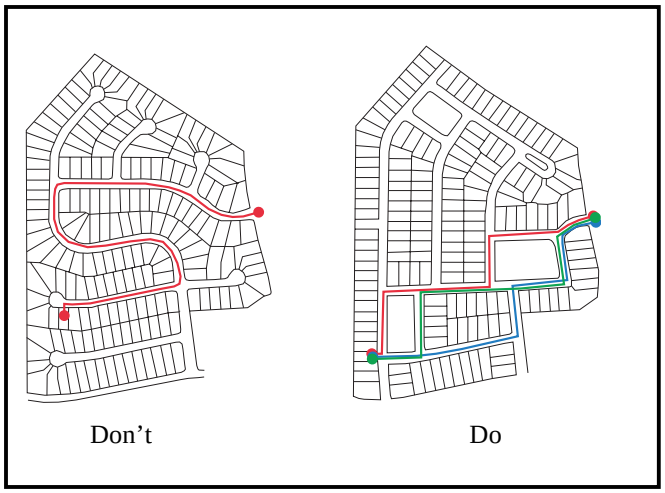
3. The Fire Department should implement innovative programs that promote an efficient delivery system, such as:

a. A volunteer program

b. Promoting sprinklers to be installed in new commercial and industrial developments

111. Promote a cooperative working relationship between city public safety departments and other agency public safety departments.

2. The City should maintain a strong working relationship with the Tulare County Fire



Developments should be designed to maximize access. This increases the effectiveness of crews in responding to emergencies.

Department to ensure that a strong system of mutual aid support continues.

Health Care

IV. Establish an efficient medical emergency delivery system

1. The City should work and maintain communication with with the Exeter Ambulance District to insure that persons in Farmersville are well served in regards to response time by ambulances.

V. Promote the continued operation and future expansion of health facilities within the community.

1. The City should work with Kaweah Delta District Hospital (K.D.D.H.) and other entities that provide medical care to provide medical services to the community, especially for low-income families.

2. The City should encourage the K.D.D.H. to provide outreach programs to Farmersville.

3. The City should seek to attract a medical clinic to the community that caters to persons without medical insurance.

ISSUE THIRTEEN: **Public Participation**

For planning to be sucessful, citizens must be involved in plan-making. A plan created without public input will more than likely fail, as residents of the community, over time, may not support the plan's goals and principles.

The City took an important step in public involvement by creating a citizen's General Plan committee to work on this General Plan. The Committee met over a period of one year to educate themselves on planning issues, and then formulate goals, objectives and action plans.

The City should continue to strive to involve citizens in the planning process. A number of strategies to do this are available.

I. Work to educate and involve Farmersville's citizens in the city planning and development process.

1. Convert the General Plan's goals, objectives and action plans into display boards that will be permanently mounted in the City Council Chambers.

2. Maintain planning maps in the City Council Chambers and in the public lobby at City Hall. Maps should include the General Plan, Zoning, existing land uses, vacant lands, flood zones and agricultural preserves.

3. Establish a web site for the City. The website should include details on the city's planning goals and procedures.

4. Develop a set of brochures to explain zoning and development standards in a user-friendly fashion.

5. Re-design planning application forms to make them more user-friendly.

6. Send staff, Planning Commissioners and City Council members to planning workshops and seminars.

    a. The City shall ensure that funds are available to implement the foregoing

objectives. For printed materials, the city should consider creating Spanish language versions.

7. Establish a beautification awards program where property owners in Farmersville are recognized for their efforts to maintain and beautify their property or businesses. Awards could be given on an annual basis for residential, commercial, industrial and public/institutional land uses.

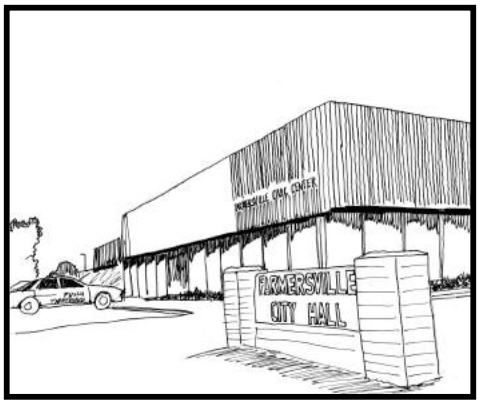
    a. The City should work with the Chamber of Commerce to form a citizen's beautification committee, which will undertake an awards program.

8. Review the General Plan every five years. State planning guidelines recommend that cities review their general plans on a five year basis. This gives the community an opportunity to determine how well the plan is functioning and whether amendments may be necessary.

    a. The Planning Director shall schedule a Planning Commission review of the General Plan, on a five year basis.

9. Require public notices be posted at development sites, announcing public hearings on the matter.

    a. The Planning Director will require applicants to post public hearing notices at their site.



ISSUE FOURTEEN: **Special Issues**

The General Plan Committee addressed several planning issues that are unique to Farmersville. These issues include:

- Linnel Farm Labor Center
- Cameron Creek Colony
- Lands along Highway 198

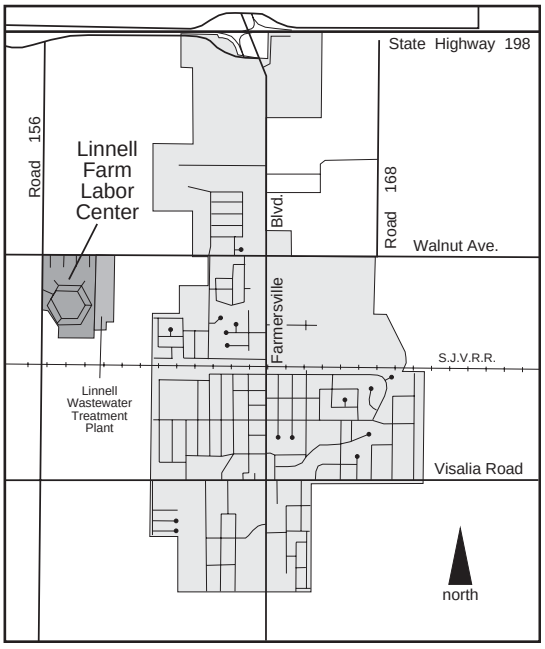
The Committee decided that these issues warrant special attention for the community's long-term planning goals.

Linnel Farm Labor Center

Linnel Farm Labor Center is a farm labor housing development operated by the Tulare County Housing Authority, on land west of Farmersville. Linnel is situated on approximately 72 acres located on the east side of Road 156 and the south side of Walnut Avenue (Avenue 288). The site was originally developed in the 1950s and includes 191 dwelling units, a community center, day care, recreational areas and manager's facility. Residency is limited to qualified low-income households.

Over the years, Farmersville has been growing towards Linnel. Recent city development is now about one-quarter mile east of Linnel. Linnel has its own wastewater treatment plant, situated on fourteen acres on the east side of the site. Farmersville is down-wind from Linnel and on occassion, odors from the plant are noticeable in the community. The presence of Linnel (and in particular its wastewater treatment plant) may negatively affect Farmersville's future growth in this area. In light of these concerns, the General Plan Committee formulated several strategies.

Map 2-5
Linnel Farm Labor Center



I. Establish a long-term framework to allow Farmersville's continued growth in the vicinity of Linnel Farm Labor Center.

1. Open a dialogue between the City and Tulare County Housing Authority (TCHA) to discuss issues of mutual interest relating to Linnel Farm Labor Center.

2. Encourage TCHA to continue to upgrade and improve the appearance of Linnel, through landscaping and routine maintenance.

3. Explore the possibility of closing Linnel's wastewater treatment plant. Identify funding to extend lines from Farmersville's sewer system to serve Linnel, and expand Farmersville's wastewater treatment plant.

    a. The City Manager shall contact officials of TCHA to set a meeting between the TCHA board of directors and the Farmersville City Council to discuss these issues.

Cameron Creek Colony

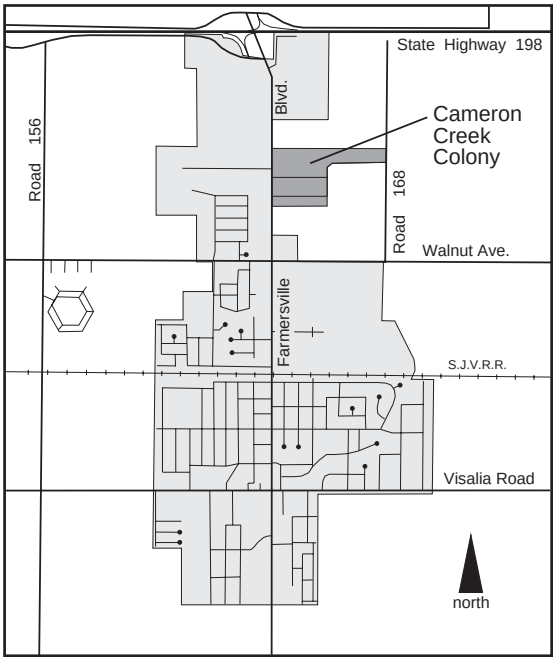
Cameron Creek Colony is a rural residential subdivision situated northeast of Farmersville, on the east side of Farmersville Boulevard, midway between Walnut Avenue and State Highway 198. Road 168 forms the eastern boundary of Cameron Creek Colony. This subdivision was developed many years ago under minimal County requirements.

Many of the dwellings are poorly maintained and appear to be substandard in terms of building and zoning codes. All of the dwellings are hooked to individual on-site septic systems and water wells. Roads are poorly maintained and were constructed without curbs, gutters, sidewalks or street lights. There are no storm drainage facilities. Some residents maintain farm animals on their property.

In 2000, Farmersville's Urban Development Boundary was expanded to include Cameron Creek Colony. This means that although presently under the jurisdiction of Tulare County, the community is ultimately in Farmersville's future growth area.

As Farmersville continues to grow toward Cameron Creek, it is expected that the City will eventually be required to annex the area. This brings a number of concerns to City and County administration, as well as residents of the area. It is likely that Cameron Creek would not be able to pay for public services that it requires, such as police and fire protection, code enforcement, recreation and planning and building

Map 2-6
Cameron Creek Colony



services. In addition, as previously mentioned, much of the subdivision does not appear to meet current city (or County) development standards. As Farmersville continues to grow towards Cameron Creek Colony, the City and County must coordinate on future planning for this area.

Goals, Objectives, Action Plans

I. Open a dialogue between the City and Tulare County officials about the future of the Cameron Creek Colony development. Interested individuals in Cameron Creek Colony should also be involved in this effort.

1. At some point, the City should annex Cameron Creek Colony.

    a. Work with Tulare County to establish a redevelopment district to generate funding to bring public and private development up to code in Cameron Creek, including streets, utilities and dwellings.

    b. The City and County should negotiate a special tax-sharing agreement that places the city in a better position to assume public services requirements for Cameron Creek.

    c. Encourage Tulare County to contract with Self-Help Enterprises to conduct a housing rehabilitation program for willing property owners.

2. Establish land use regulations that reflect the existing rural residential lifestyle in Cameron Creek Colony.

    a. The Land Use Map identifies most of Cameron Creek as “Rural Residential”.

    b. The City should establish a “Rural Residential” zone to apply to Cameron Creek Colony. The zone should mirror standards contained in the County’s existing zoning for the area. This zone should not be utilized in other portions of the planning area.

State Highway 198

Highway 198 is Farmersville's "front door" to the world. Daily, thousands of vehicles pass by Farmersville on the highway. A number of these vehicles carry international visitors bound for the scenic wonders of Sequoia National Park.

View looking east on Highway 198

As the city's front door, the City should try to create as attractive an image as possible. This goal is not only for aesthetic reasons but is also economic. Travelers do not want to stop at a location they perceive as unattractive or unsafe.

Likewise, business owners will not choose to locate their firms in a community that does not appeal to them. Establishing an attractive highway presence can help Farmersville bolster its economic development. The City can also take the opportunity to attract retail commercial businesses (such as an automobile dealership) that prefer a high visibility location along the highway. The sales tax benefits for the City could be significant.

Goals, Objectives, Action Plans

I. The City shall take actions to establish an attractive development pattern along lands fronting State Highway 198.

1. The Land Use Map designates a combination of Highway Commercial and Industrial land uses along the highway.

2. Require attractive landscape and building designs that will reflect positively on Farmersville.

    a. Establish a special "Highway 198" overlay zone that incorporates special building, landscaping, screening and signage requirements.

3. Erect "Welcome to Farmersville" signs at the interchange of Highway 198 and Farmersville Boulevard.

    a. The City, Chamber of Commerce and to-be-formed Beautification Committee should

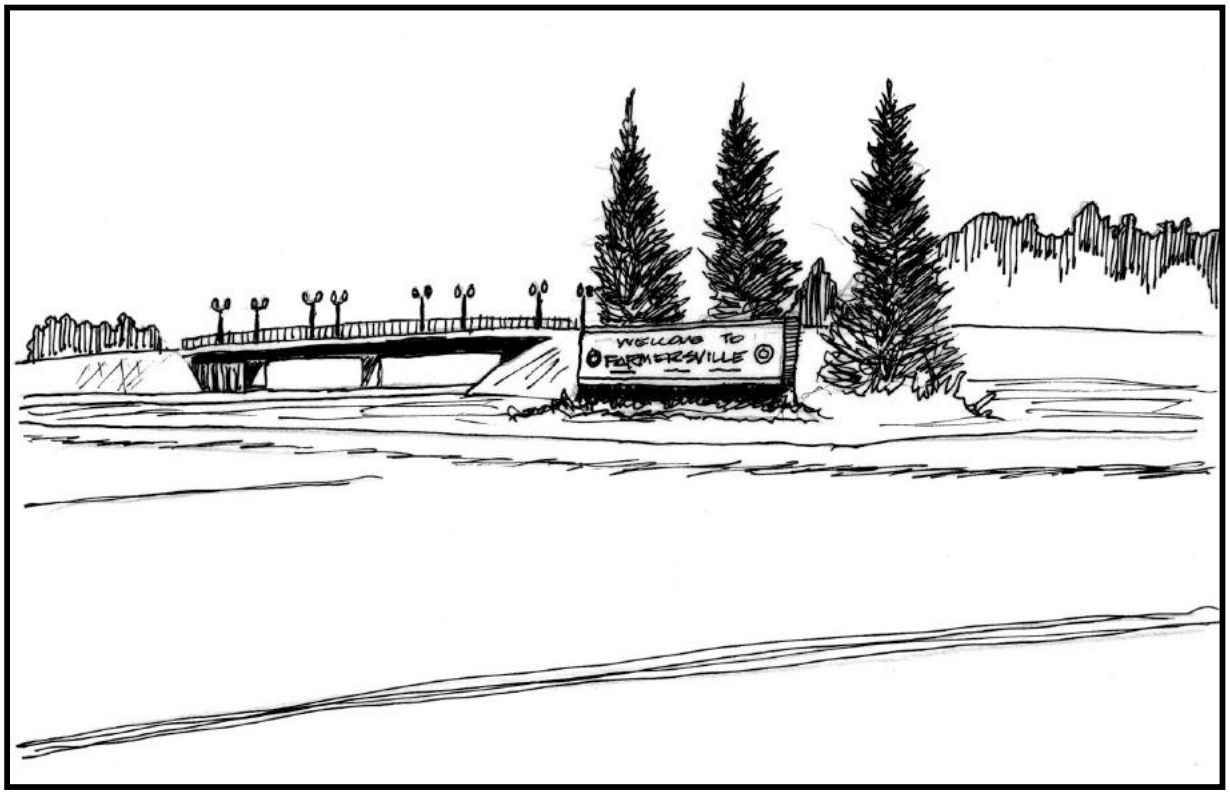
Highway 198 is Farmersville's "front door" to the world. First impressions can "make or break" a community's chances of attracting new development and revenue. . .

work together to design, raise funds and establish community identification signs.

4. Work with Caltrans to establish landscaping within the freeway right-of-way.

5. Work with Caltrans to transform the Farmersville Boulevard overpass bridge into an attractive design element. Antique light poles, black wrought-iron railing and banners could be considered.

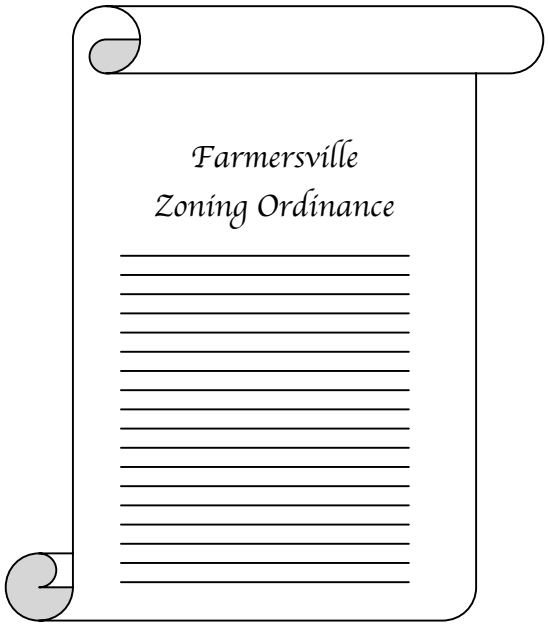
    a. The City Manager should open a line of contact with Caltrans to pursue completion of these objectives.



View of Highway 198/Farmersville Boulevard interchange shows "Welcome to Farmersville" sign, landscaping, and decorative light fixtures on the bridge.

Amendments to the Zoning Ordinance

The General Plan includes several recommendations to amend the Farmersville Zoning Ordinance. The Ordinance is one of the city's foremost tools for implementing and enforcing the recommendations of the Plan.



The primary recommendations are for the creation of several new zoning districts. These recommendations are as follows:

Rural Residential Zone (R-R)

The Plan recommends creation of this zone to apply to properties within the Cameron Creek Colony area. Presently, Farmersville does not have a Rural Residential district. The R-R zone would be applied to Cameron Creek upon its future annexation to the City. Most cities in Tulare County have a Rural Residential zone. Typical features include large lot sizes and the provision for the keeping of farm animals. Farmersville should survey other cities' zone district and choose from the best features of each to create its Rural Residential Zone.

Smart Development Zone (S-D)

One of the General Plan's primary recommendations is for Farmersville to create a zone to implement "Smart Growth" design techniques. The recommendations for this type of zone are detailed further in Appendix A.

Central Commercial Zone (C-C)

The General Plan recommends the city create a special commercial zone to apply to the downtown area. This zone is intended to help create a downtown environment where pedestrian-oriented shops front the sidewalk, and on-site parking is located to the rear or side of stores.

Highway Commercial Overlay (H-C)

This zone is intended to promote appropriate retail and service commercial uses that cater to the travelling public, in locations along or near State Route 198. Appropriate uses generally would include service stations, restaurants, lodging establishments, convenience stores and other complementary uses. This zone is to be applied along

Highway 198 and is intended to be an "overlay" zone. This means that the zone will be applied as an overlay to the existing zoning designation. The Highway Commercial zone will apply special standards to ensure that development along the highway occurs in an attractive manner, with attractively designed buildings, signs, landscaping, and screening, where desired.

Mixed-Use

As its name implies, the Mixed Use Zone is intended to facilitate the combination of various land uses on a single site or within a single building. An example would be a building that contains retail commercial businesses on the ground floor, and residential units on the upper floor. The mixed use zone should be targeted to appropriate areas of the community, such as the downtown. A mixed use designation could make parcels in the downtown more marketable as the possibilities for development are expanded.

Residential Multi-Family

It is recommended that the R-M zone be recongifured so that it is consistent with other communities in Tulare County. Two density standards should be established:

RM- 2.5: One unit per 2,500 square feet of land area

RM-4.0: One unit per 4,000 square feet of land area

Zoning Matrix

State planning law requires that the zoning on every parcel be consistent with the General Plan land use designation for that parcel. For instance, a parcel designated "Residential" in the General Plan must be zoned for residential land uses.

Table 2-2 below is a matrix that shows which land use designations are consistent with which zone districts. Land use designations are listed in the left column of the matrix while zone districts run across the top. Shaded boxes show consistency between a land use category and a zone district. For example, a parcel designated "Medium Density Residential" would be consistent with the R-1 zone. Boxes that are unshaded denote inconsistency. Per state law, zoning must always be consistent with its General Plan land use designation.

Table 2-2
Land Use/Zoning Consistency Matrix

	Zone Districts														
Land Use Categories	RR*	R-1	RM-4.0*	R-M-2.5*	P-D	S-D*	C-G	C-C*	C-S	HC*	M-U*	I	FP	OS	UR

Open Space					■					■			■	■	
Urban Reserve					■					■			■		■

Note: Zone districts with an asterisk indicate a new district (proposed by the General Plan) or significant revisions to an existing district.

Land Use Map

Map 2-7 shows the Farmersville General Plan Land Use Map. The map delineates the ultimate use of land in and around Farmersville. It is to be read in conjunction with the land use descriptions, goals, policies and action plans detailed in the text of the Land Use Element. The Land Use map shows areas intended for Farmersville's development through the year 2025.

CHAPTER 3: CIRCULATION ELEMENT

Introduction

The Circulation Element is second only to the Land Use Element in terms of importance to the community. It has a significant impact on the residents of Farmersville because it delineates the routes by which people will travel within and through Farmersville. Further, the Element identifies the different types of circulation routes in the community, such as roadways, bikepaths and railroads.

Section 65302 (b) of the State Government Code indicates that the Circulation Element must disclose the general location, dimensions and physical characteristics of existing and proposed major thoroughfares, transportation routes and transportation-related facilities.

The Courts have indicated that not only must a roadway improvement must be consistent with the General Plan (Friends of "B" Street.et.al. v. City of Hayward, et. al., 106 Cal. App. 3d 988 {1980}), there must be a correlation between the circulation and land use elements. Generally, correlation is achieved by using the same population and land use projections for each element.

The Court has indicated that in addition to the finding that a roadway improvement must be consistent with the General Plan, there must be a correlation between the circulation and land use elements.

The Farmersville Circulation Element is composed of five sections. They are:

1) Existing conditions;

2) An evaluation of the existing circulation system;

3) Traffic projections and evaluations;

4) Circulation goals, policies and action programs;

5) Roadway cross-section designs; and

6) Circulation map.

Existing Conditions

In addition to the information contained in this chapter, additional circulation information is also provided in Part II: Existing Conditions, of this document.

Early Circulation System

Farmersville's road system was centered around the railroad line that runs east/west through the community. As such, the community's streets run east/west and north south. The few exceptions occurred where local waterways required a change in this pattern.

Major east west roadways include Visalia Road, Ash Street, Walnut Avenue, Highway 198 and the frontage roads that parallel the highway. Major north south roadways include Farmersville Boulevard, Road 168 and Virginia Street

Present Circulation System

Since the early 1900s, a system of roadways has been constructed in the Farmersville area that falls into one of the following categories - freeways, arterials, collectors, local streets and alleys. A profile of major roadways in the community is as follows:

State Highway 198 is an east/west highway that serves Central California. The highway stretches from U.S. 101 in central coast region, through the coastal ranges, across the San Joaquin Valley and into the foothills and mountains of the Sierra Nevada range. The highway terminates as a state route at the entrance to Sequoia National Park but continues on as a federal roadway within the park.

In the vicinity of Farmersville, the highway features two travel lanes in each direction, a median divider, paved shoulders and unlandscaped borders. The interchange with Farmersville Boulevard features on and off-ramps for traffic in both directions. The ramps connect to the frontage roads on both sides of the highway. West of Farmersville there is an interchange at Road 156 which also features on and off ramps in both directions. East of Farmersville the highway changes from a freeway with controlled access to an expressway with cross traffic.

Farmersville Boulevard is an arterial roadway that runs north/south through the center of the community. The street connects Farmersville to the State Highway 198 Freeway at the north end of the City. Within most of the community, the street features two travel lanes and one parking lane in each direction. The downtown area has some diagonal parking along the east side of the street.

North of Walnut Avenue, and south of the city limits, Farmersville Boulevard tapers to one travel lane in each direction. Shoulders are unpaved. Traffic signals exist at intersections of Visalia Road and Walnut Avenue. Four-way stop signs exist two-lane, undivided collector street that runs in an east-west direction located on the north edge of Farmersville. Existing land uses consist of agricultural uses to the north and residential facing south of the roadway.

Visalia Road is an east/west arterial that connects Farmersville to Visalia to the west, and Exeter to the east. Within city limits, the roadway generally features two travel lanes and a parking lane in each direction. The intersection of Visalia Road and Farmersville Boulevard is controlled by a traffic signal.

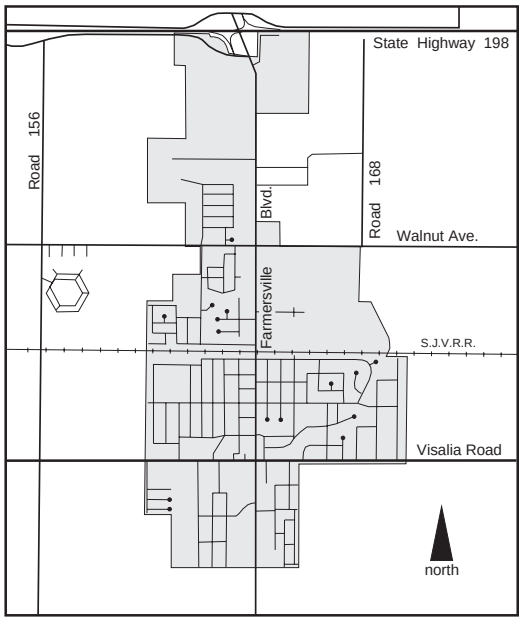
Walnut Avenue (Avenue 288) is an east/west collector road that runs midway between Visalia Road and State Highway 198. The roadway generally features one travel lane in each direction. Where recent development has occurred, the street features a parking lane with curbs, gutters and sidewalks. The intersection of Walnut and Farmersville Boulevard is controlled by a traffic signal.

The frontage roads along State Highway 198 feature one travel lane in each direction. Recent development along the southern frontage road has installed paveout, curbs and gutters. Otherwise, the roads feature unpaved shoulders.

Local Roadways

Local roadways provide for internal traffic movement within residential neighborhoods. Adjacent property has direct access to these types of roadways. Local roadways typically feature two travel lanes and two parking lanes. They have rights-of-way widths that range from 52 to 60 feet.

Map 3-1
Farmersville Street System



Alleys

Alleys provide rear access to residential dwellings in some older neighborhoods and to commercial buildings in the downtown area. Some alleys contain above- (electricity and CATV) and below-ground utilities (sewer and water lines). They also serve as a route for trash pickup. Most of the alleys are 20 feet wide and are unpaved.

Railroads

Farmersville grew up around the San Joaquin Valley Railroad, originally constructed by the Southern Pacific Railroad. The line through Farmersville connects Visalia (and points west) with Exeter (and points south). The railroad is situated within a wide right-of-way, generally 100 feet in width. Presently, there are no uses in Farmersville that utilize the railroad for transport of goods.

Public Transportation

Farmersville is the only city in Tulare County without a public transit service. There is a bus service provided by Orange Belt stages that provides access to other California cities.

The City should explore the merits of establishing a dial-a-ride service for the elderly, youth, handicapped, and others who may not have access to transportation.

Air Service

Farmersville is served by the Visalia Municipal Airport, located 15 miles west of Visalia and by Fresno-Yosemite International Airport (FYI), located in Fresno, about 50 miles northwest of the city. Both airports provide regularly scheduled freight and passenger service and furnish private and company aircraft hangers and tie-downs.

Bicycling and Walking

Presently, there are no established bike lanes in Farmersville. However, the City has been participating with the Tulare County Association of Governments in the preparation of a bike plan for Tulare County and its

cities. Within Farmersville, the plan designates bike routes on Visalia Road, Farmersville Boulevard, Walnut Avenue and the southern frontage road along State Highway 198

Evaluation of Existing Circulation System

Capacity Evaluation

The ability of a roadway to carry traffic is a function of many factors, including the number of travel lanes, the number of intersecting streets (and driveways), the presence of signals, and the existence of medians.

A roadway's traffic volume typically increases during "peak-hour" times - 7:00 to 8:30 a.m., (home to work/school commute) 12:00 to 1:00 p.m., (lunch hour) and 4:30 to 6:00 p.m. (work to home commute).

To measure the traffic capacity of a roadway, a Level of Service (LOS) rating system is used. An LOS of "A" signifies a roadway that has traffic that is free flowing, while a roadway with a LOS of "F" is very congested. Table No. 3-1 provides an interpretation of the various LOS ratings and, for comparison purposes, Table No. 3-2 provides traffic counts for various types of roadways that are operating at a LOS of "E" - a roadway that is experiencing extreme congestion (grid-lock). Typically, an LOS of "C" is considered acceptable by the driving public, however, in smaller cities, it may be too congested for the typical driver.

Table No. 3-3 shows existing average daily traffic volumes for selected roadways in Farmersville and a calculated Level of Service (LOS) rating for these roadways. Only Avenue 288 (Walnut Avenue) east of Farmersville Boulevard is operating at a Level of Service below “A”. This is likely due to traffic generated by Farmersville High School. At present, this portion of Walnut Avenue is one lane in both directions. As the street is widened and lanes are added, the capacity of the street will increase.

Intersections

Intersection analysis have been conducted at the intersections of Visalia Road/Farmersville Boulevard, Farmersville Boulevard/Walnut Avenue, and the

Table 3-1
Level of Service Table

LOS	Description	Volume/Capacity
A	Free flow, low volume, high operating speed, high maneuverability.	0.00-0.59
B	Stable flow, moderate volume, speed somewhat restricted by traffic conditions, high maneuverability.	0.60-0.69
C	Stable flow, high volume, speed and maneuverability determined by traffic conditions.	0.70-0.79
D	Unstable flow, high volumes, tolerable but fluctuating operating speed and maneuverability.	0.80-0.89
E	Unstable flow, high volumes approaching roadway capacity, limited speed, intermittent vehicle queuing.	0.90-0.99
F	Forced flow, volumes lower than capacity due to very low speeds; heavy queuing of vehicles, frequent stoppage.	above 1.0

Example: Farmersville Blvd. north of Visalia Road currently carries an average of **8,000** vehicles per day. Table 3-2 (next page) shows the ultimate capacity of the roadway is **24,000** vehicles per day. The Level of Service can be calculated by dividing volume (**8,000**) by capacity (**24,000**) = **0.33**. The table above shows that **0.33** is a Level of Service **“A”** .

Table No. 3-2
Daily Capacities for Roadways Operating at LOS E

Roadway Capacity	Level of Service "E"
4 Lane Freeway	80,000 vehicles per day
4 Lane Divided Arterial	27,000
2 Lane Divided Arterial	15,000
4 Lane Undivided Arterial	24,000
2 Lane Undivided Arterial	12,000
4 Lane Divided Collector	20,000
2 Lane Divided Collector	10,000
4 Lane Undivided Collector	18,000
2 Lane Undivided Collector	9,000

interchange of State Highway 198, Farmersville Boulevard and the two frontage roads that parallel the highway.

The intersections of Farmersville Boulevard/Visalia Road and Farmersville Boulevard/Walnut Avenue are signalized and are not expected to require upgrades during the planning period (unless a large project is proposed that may adversely affect these intersections. The intersections at the Highway 198/Farmersville Boulevard interchange were analyzed for a recent development project. These intersections will require signalization at some point during the planning period. The traffic consultant has also recommended future signalization at Farmersville Boulevard and Ash Avenue and Farmersville Boulevard and Terry Avenue.

Connectivity

There are various neighborhoods in Farmersville that would benefit from the extension of a roadway to another part of the community. Persons living in these neighborhoods would be able to travel to other parts of the community using a direct roadway route.

The railroad is a major impediment to through traffic in Farmersville. Farmersville Boulevard is the only roadway that crosses the tracks to connect the southern and northern sections of the community. This forces residents of neighborhoods on both sides of the tracks to "funnel out" onto Farmersville Boulevard to cross the community.

Improved connectivity has the benefits of reducing traffic on over-burdened streets, reducing trip lengths, reducing air pollution and fuel consumption. Further, by enhancing connectivity through Farmersville, emergency vehicles are better able to access neighborhoods, thereby ensuring better public safety protection for residents.

Traffic Safety

A roadway system that is safe and efficient - free of congestion - is a primary circulation goal of all cities. This goal also promotes a roadway system that is safe for pedestrians and bicyclists, especially younger children.

The most potentially hazardous roadways in terms of traffic safety in Farmersville are Farmersville Boulevard,

Visalia Road, and the interchange at Farmersville Boulevard and State Route 198.

Driving, riding or walking along these roadways can be hazardous depending on a variety of factors, including volume and speed of traffic, the width of the roadway, cross traffic (vehicles entering and exiting the roadway) the number of trucks or the number of pedestrians/bicyclists traveling along the roadway.

Traffic Projections and Evaluations

The traffic consultant has projected traffic volumes for roadway segments and certain intersections in the planning area. These projections are based on the following assumptions:

1. Traffic volumes on local and State roadway systems will generally increase at a rate similar to population growth rates within the planning area.

2. Persons living and working in Farmersville will continue to use cars as their primary mode of transportation.

3. Uses that generate abnormally high volumes of traffic are not expected to locate in the planning area during the planning period.

4. Current traffic flow patterns in the planning area will not change significantly.

Roadway Segment Projections

Increases in traffic volumes over the planning period for local and State roadways is going to be generated by the development of the land uses in the Farmersville area and by increases in population and development in surrounding communities.

Traffic volume projections for 2025 for selected roadways in Farmersville are delineated in Table No. 3-3. These projections are based on data from the Tulare County Association of Government's traffic model for Tulare County and for the Farmersville area.

The projections in Table 3-3 indicate that Visalia Road will be most impacted by increases in traffic. Even with

two travel lanes in each direction, the roadway will be operating at Level of Service "F". It is likely that these significant traffic loads will be as much a result of regional growth (Visalia, Exeter, etc.) as growth in Farmersville. It is possible that as new roads are developed in Farmersville, and north/south connectivity is improved, some of the traffic load could be taken off of Visalia Road.

Those roadway segments are projected for LOS levels of D, E or F during the planning period will be listed in Farmersville's Capital Improvement Program (CIP). Improvements on these roadways, which will facilitate a more acceptable LOS rating - "C" or better - will be financed by gas tax and transportation funds, redevelopment funds and development impact fees.

Intersection Projections

TPG Consulting, using projected traffic counts from the TCAG traffic model and roadway geometric and land use information, identified which intersections would require some type of signalization during the planning period. The intersections are: Farmersville Boulevard and Front Street, Farmersville Boulevard and Terry Avenue, Farmersville Boulevard and the frontage roads on both sides of State Route 198, Visalia Road and Steven Avenue, and Visalia Road and Oakview Avenue.

Improvements at these intersections, which will facilitate a more acceptable Level of Service rating, will be financed by gas tax and transportation funds, redevelopment funds and development impact fees.

Table No. 3-3
Existing Traffic Volumes and Level of Service

Existing Roadway Segment	Year 2025 Traffic Volume	Capacity	Volume / Capacity	Level of Service Rating
Visalia Road				
west of Farmersville Blvd.	12,000	24,000	0.5	A
east of Farmersville Blvd.	9,000	24,000	0.38	A
Avenue 288 (Walnut Avenue)				
west of Farmersville Blvd.	4,000	10,000	0.4	A
east of Farmersville Blvd.	7,000	10,000	0.7	C
Farmersville Blvd.				
south of Visalia Road	5,000	24,000	0.21	A
north of Visalia Road	8,000	24,000	0.33	A
north of Avenue 288	4,000	15,000	0.27	A

Table No. 3-4
Year 2025 Projected Traffic Volumes

Existing Roadway Segment	Year 2025 Traffic Volume	Capacity	Volume / Capacity	Level of Service Rating
Visalia Road				
west of Farmersville Blvd.	28,000	27,000	1.03	F
east of Farmersville Blvd.	23,000	27,000	0.85	D
Avenue 288 (Walnut Avenue)				
west of Farmersville Blvd.	11,000	18,000	0.61	B
east of Farmersville Blvd.	12,000	18,000	0.67	B
Farmersville Blvd.				
south of Visalia Road	10,000	24,000	0.42	A
north of Visalia Road	11,000	15,000	0.73	C
north of Avenue 288	14,000	24,000	0.58	A
south of Avenue 288	12,500	24,000	0.52	A

CIRCULATION GOALS, OBJECTIVES AND ACTION PLANS

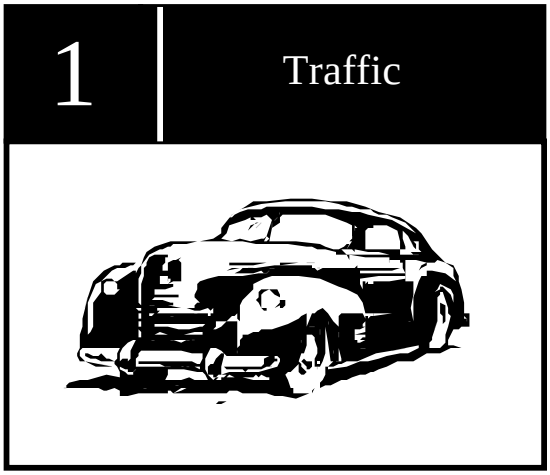
Circulation goals express general community values as they relate to travel, traffic safety, mobility and funding for maintenance, construction and reconstruction. Some of the goals listed below are the product of previously approved General Plan elements. Other goals were fashioned by Farmersville's General Plan committee, Planning Commission and City Council.

Circulation goals, objectives and action plans are organized under topical issues, including:

- Traffic
- Arterials
- Collectors
- Intersections
- Green Streets Program
- Connectivity
- Truck Traffic
- Parking
- Transit
- Bike Paths and Pedestrian Pathways
- School Routes

ISSUE ONE: **Traffic**

Even if a roadway is operating at a Level of Service (LOS) A, which means that traffic flows freely along the street with little or no congestion, people still complain that there is too much traffic on the street especially if it is their neighborhood street. While it is difficult to improve on a roadway that has a LOS of A, the city can embrace goals that will minimize traffic impacts on the community.



See also Issue 7: Connectivity

Goals, Objectives, Action Plans

I. Ensure that streets in Farmersville are not congested.

II. Ensure that traffic on Farmersville's streets operates in an efficient and safe manner.

III. Provide for long-term financing for street construction and maintenance.

1. A level of service C will be the desirable minimum service level in Farmersville at which arterial and collector segments will operate. A level of service of C will be the desirable minimum service level in Farmersville at which intersections will operate.

    a. The City will program street improvements into its 5-year capital budget that will ensure the specified LOS is not exceeded in the city limits. Funds for these street improvement projects will come from gas tax and transportation funds.

    b. The City should develop a traffic impact fee for new development in Farmersville. This fee shall be consistent with the requirements of AB 1600.

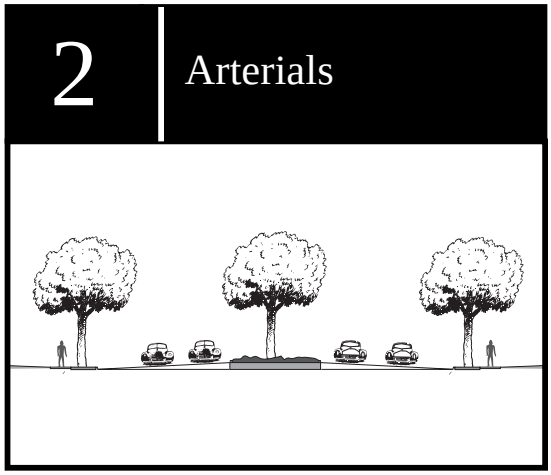
2. Land use projects which generate large amounts of traffic shall be discouraged from channeling traffic onto local roadways.

    a. The Planning Department shall recommend denial of discretionary land use projects to the Planning Commission and City Council that are inconsistent with this policy.

ISSUE TWO: **Arterials**

Arterial roadways carry the greatest amount of traffic in Farmersville. These roadways carry traffic that may be traveling at a high rate of speed and they may carry a significant amount of truck traffic, which can make these roadways noisy. Because of these characteristics, the design, location and types of land uses developed adjacent to these roadways must be carefully planned.

Most persons in Farmersville will travel on an arterial at least once a day. Travel efficiency on these roadways is important for two reasons: (1) congested traffic conditions cause the traveler to be late to their destination and (2) congestion creates greater amounts of air pollution, already a significant environmental problem in the Valley. Traffic that moves smoothly and efficiently along an arterial minimizes these two problems.



See also Issue 6: Green Streets Program

Goals, Objectives, Policies

I. Establish an arterial road system that conveys traffic in an efficient and safe manner.

1. The Circulation Element map identifies arterial roadways in the planning area.

II. Arterials should be visually pleasing, and designed to accommodate other modes of transportation, such as bicycles and pedestrians.

1. Study reconfiguring Farmersville Boulevard and Visalia Road to provide a landscaped medians, left-turn lanes and bike lanes.

    a. The City should contract with a traffic consultant to prepare a preliminary road design for these two roadways, and solicit input from property owners and business people.

    b. The City should seek state or federal funds to construct improvements along these roadways, including medians, signalization and left-turn pockets.

    a. The City should establish a landscaped median development impact fee for new

Background

Visalia Road is in the process of being upgraded during the General Plan update. This upgrade does not include landscaping. It should be a long-term objective of the city to undertake a street tree program along Visalia Road in the future.

• • • • • • • • • •

development. This fee shall be consistent with the requirements of AB 1600.

d. Arterial roadways will be constructed consistent, where possible, with street cross-section illustrations contained in Figure 3-1 of the Circulation Element.

Street design standards are shown in Figure 3-1.

2. Driveways that intersect with arterials should be kept to a minimum and, if possible, should be reduced or eliminated when redevelopment occurs along an arterial roadway.

   a. Through the site plan review process, the Planning and Engineering Departments will work to minimize the number of driveways that intersect arterial roadways.

3. Left turn lanes shall be constructed on arterials where they intersect with other arterials or collectors.

   a. The City Engineer and Public Works Department will coordinate to ensure that left turn lanes are installed as development occurs. For already-developed neighborhoods, the proposed circulation impact fee should be set to fund installation of left turn lanes.

4. Curbing at the intersections of arterial and collector streets should be painted red at least 50 feet in all directions from the corner curb radius in order to provide sufficient sight-line for traffic pulling into the intersection.

   a. The Public Works Department will ensure that curbing is properly painted.

ISSUE THREE: **Collectors**

Next to arterials, collectors carry the greatest amount of traffic in a city. Unlike arterials, collectors may traverse residential neighborhoods. It is this type of roadway that "drains" traffic from a neighborhood and conveys it towards other collector or arterial roadways. Because collectors pass through neighborhoods, their effectiveness to channel traffic can be diminished by the design of land uses adjacent to the roadway. If these uses are designed so that they haphazardly funnel traffic onto the collector, the efficiency of the collector is reduced.

Collectors that accommodate truck traffic must be located where they will not have an adverse impact on existing neighborhoods and yet be able to conduct truck traffic effectively.

Collectors, due to their location, can impact a residential neighborhood. The volume of traffic, the level of noise and a collector's appearance can influence adjacent neighborhoods. It is important to properly plan and design these roadways so that they are an asset to the community and not a detraction.

See also

Issue 6: Green Streets Program
Issue 8: Truck Traffic

Goals, Objectives, Policies

I. Provide efficient and safe circulation access to all parts of Farmersville.

1. Where possible, collector roadways should contain sufficient right-of-way for two travel lanes, two bike lanes, two parking lanes and a median/turn lane; and minor collectors should have sufficient right-of-way for two travel lanes, two parking lanes, two 6-foot parkways, and two 5-foot sidewalks.

    a. Major and minor collector roadways will be constructed consistent with street cross-section illustrations contained Figure 3-1 of the Circulation Element.

2. All street improvement projects, including widening, closing, or constructing new roadways, will be reviewed by the Planning and Engineering Departments to confirm that the

▶ *Street design standards are shown in Figure 3-1.*

project is consistent with the Circulation Element.

a. The Planning and Engineering Departments will review development projects to determine consistency with the Circulation Element during site plan and subdivision review.

3. Left turn lanes shall be constructed on collectors where they intersect with other arterials or collectors.

a. Through the site plan review process, the Planning and Engineering Departments will require this design feature.

4. Curbing at the intersections of arterial and collector streets should be painted red at least 50 feet in all directions from the corner curb radius in order to provide sufficient sight-line for traffic pulling into the intersection.

a. The Public Works Department will identify which curbs at the aforementioned intersections should be red-curbed.

5. Driveways that intersect with collectors should be kept to a minimum and, if possible, should be eliminated when redevelopment occurs along this type of roadway.

a. Through the site plan review process, the Planning and Engineering Departments will work to eliminate unnecessary driveways.

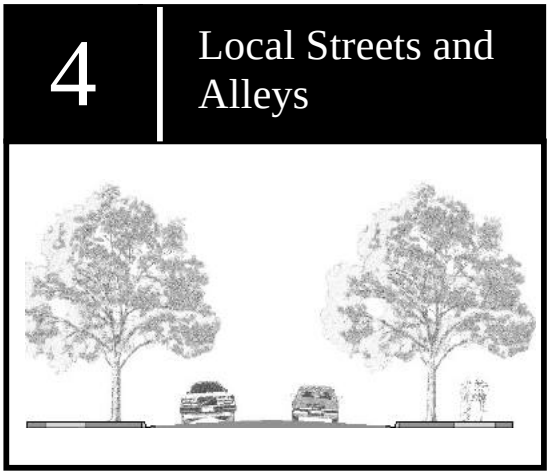
II. Establish a collector system that encourages truck traffic but not at the expense of the livability of the community or adjacent neighborhoods.

See also Issue 8: Truck Traffic

1. Designate a system of truck routes in Farmersville that minimizes negative impacts on sensitive land uses and neighborhoods

a. The Circulation Map designates truck routes.

ISSUE FOUR: **Local Streets and Alleys**



Local streets (also frequently referred to as "Residential Streets" are perhaps the most important roadways in a community. These are the streets that people live on. They form the nucleus of the neighborhood. Well designed, local streets can be an asset to the neighborhood. Poorly designed local streets can become a nuisance, and worse, a safety hazard.

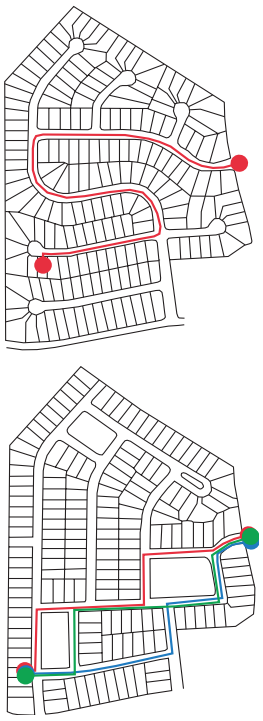
Local Street Design

Recent studies have suggested that current engineering standards are creating dangerous streets. Wide residential streets tend to encourage higher vehicle speeds, making streets less safe. Narrower streets cause drivers to slow down In addition, current standards do not require street trees. Research indicates that heavily shaded streets further cause drivers to slow down. In addition, shaded streets generate much less heat, cooling the neighborhood. Shaded pavement also tends to last longer. Finally, studies have shown that well-maintained shady streets have higher property values.

Subdivision Street Patterns

Most new subdivisions are designed with circuitous street patterns featuring numerous dead-end roads with cul-de-sacs. The purpose of these designs is to reduce through-traffic (which in turn theoretically reduces noise and improves safety). While well intentioned, these designs usually result in circuitous travel patterns that concentrate traffic onto collector and arterial roadways as well as the entry/exit streets into individual subdivisions. The end result is cities where people are tied to the automobile to make all of their trips around a community. Walking and cycling become frustratingly inconvenient.

Older neighborhoods in the original part of towns were designed almost exclusively using a grid (or modified grid) pattern. Dead-end cul-de-sac patterns and walled subdivisions were almost unknown in city design until the 1950's. Not uncoincidentally, that is about the same time that highway-based street design standards (wider streets focussed solely on moving traffic) came into wide use around the nation.



To the extent practical, road layouts shall use a grid pattern which maximize the number of connections to the surrounding collector roadway system.

Properly designed, subdivisions layed out with grid roadway patterns can improve connectivity by providing a variety of routes for motorists, pedestrians and bicycles. If the grid is fine enough, automobile traffic is diffused so that individual streets are not over-impacted by traffic. Requiring narrower, tree-lined streets can work to further slow vehicle speeds. Other mechanisms such as shorter block lengths, roundabouts, bulb-outs and stop signs can further tame neighborhood traffic.

See also Appendix A: A Smart Growth Primer, in the Land Use Element

Goals, Objectives, Action Plans

I. Revise local street standards to ensure residential streets are safe and effective.

1. Single family residential subdivisions may have local streets that have a minimum right-of-way width of 60 feet, 36 feet paved width. Tree-lined parkways shall be installed in this right-of-way. The parkway shall have a width of 7 feet; and the sidewalk 5 feet (see Figure 3-1).

   Single family residential subdivisions with streets on blocks shorter than 600 feet may have a minimum right-of-way width of 58 feet, 34 feet paved width. Tree-line parkways shall be installed in this right-of-way. The parkway shall have a width of 7 feet; the sidewalk 5 feet (see Figure 3-1).

   Subdivisions with all lot larger than 8,000 square feet are not required to install parkways.

   Parkways and street trees shall be maintained by a landscape and lighting district.

Farmersville's vision for residential streets: shady, cool, and narrow to slow traffic.

3. Alleys are permitted within residential subdivisions. Alleys shall have a rights-of-way of 24 feet and a paved width of 20 feet. A concrete vee gutter is required in the middle of the alley. The non-paved portion of the right-of-way shall be landscaped and provided with irrigation. Garbage pickup shall not be permitted in the alleys.

II. Require subdivision designs that utilize grid street patterns, reserving cul-de-sacs only where necessary.

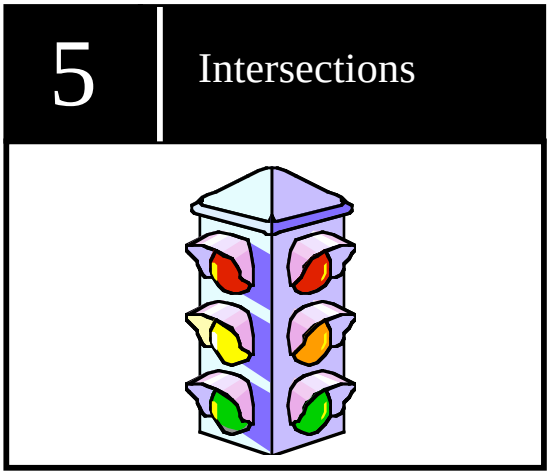
1. Subdivisions shall be designed to maximize connectivity, favoring grid street patterns over cul-de-sac heavy street patterns. The use of cul-de-sacs shall be kept to a minimum unless needed to allow more efficient utilization of oddly shaped or "leftover" portions of the parent subdivision parcel.

a. This requirement shall be implemented by the City Planner and City Engineer during project review.

Future residential streets in Farmersville should be cool and shady, as well as narrower – to tame traffic.

ISSUE FIVE: **Intersections**

Circulation at busy roadway intersections can be improved with a variety of methods. Signallization is an effective, but very expensive way to improve traffic flow. Simpler methods like adding turn lanes or stop signs can work well in a small community like Farmersville. However, signals do become necessary when traffic conditions warrant.



Another way of controlling intersections is the roundabout. For hundreds of years Europe and Mexico have used roundabouts to control traffic at intersecting streets. In addition, the interior portion of the roundabout often contains a visual feature, like landscaping, trees or even a fountain or statue. The Walnut Woods subdivision being developed in the northwest portion of the community is utilizing roundabouts. The City should encourage the use of additional roundabouts, particularly at the intersection of local streets within new development.

Goals, Objectives, Action Plans

I. Ensure that busy intersections are properly designed, thereby ensuring safe and effective traffic maneuvers.

II. Seek innovative methods of controlling traffic at busy intersections within the Farmersville planning area.

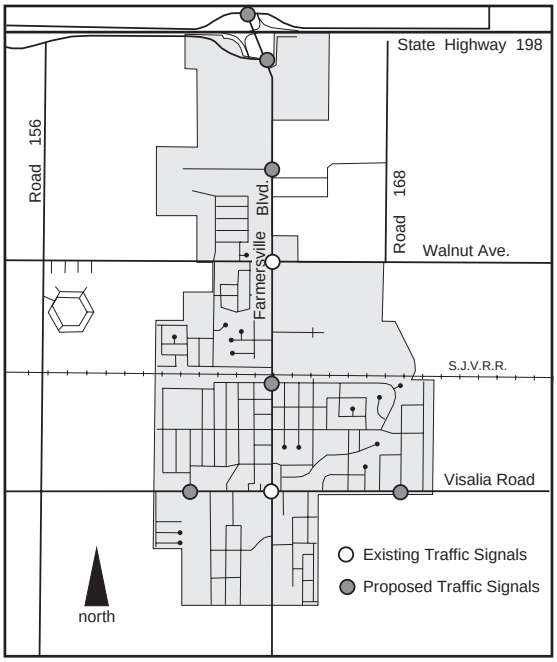
1. Future signals are designated at the following intersections (see Map 3-2):

- Farmersville Boulevard and Front Street
- Farmersville Boulevard and Terry Avenue
- Farmersville Boulevard and the frontage roads on both sides of State Route 198
- Visalia Road and Steven Avenue
- Visalia Road and Oakview Avenue

2. The City shall adopt a development impact fee that finances signalization and the proper design of intersections.

   a. The City will calculate and implement development impact fees that are consistent

Map 3-2
Proposed Traffic Signals



with the Circulation Element map and Assembly Bill 1600 (legislation that requires a nexus, or connection, between the fee being required and the improvement to be installed).

b. The City will periodically review the levels of service ratings at major intersections in Farmersville to determine when improvements should be installed.

2. The City should consider allowing roundabouts within new development.

a. The Engineering and Planning Departments will prepare the design plan for these roundabouts.

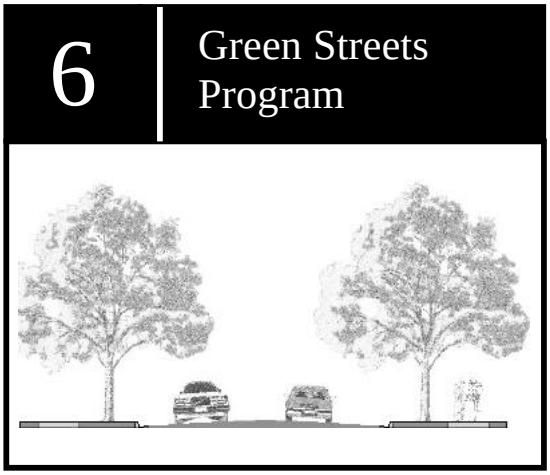
b. The City shall seek public input in regards to the interior landscape treatment of the roundabouts.

Example of a modern roundabout.

ISSUE SIX: **Green Streets Program**

Some of the great streets in the world are graced by landscaped medians or a boulevard of street trees. These features "soften" the appearance of the street, provide shade for pedestrians and establish a memorable, positive image.

Studies have shown that lands along tree-shaded streets frequently enjoy higher property values. While the cost of installing and maintaining trees is a concern, proper selection of trees can reduce long term maintenance costs. Non-profit organizations like the Urban Tree Foundation can assist Farmersville in establishing a green streets program.



I. The City should explore establishing landscaped medians and tree lined parkways on Farmersville Boulevard,Visalia Road and Walnut Avenue.

1. The City shall have prepared a streetscape design plan that will establish a 20-year improvement program for the construction of landscaped medians for Farmersville Boulevard and Visalia Road. This Plan should include details for lighting, landscaping and signing.

    a. The Engineering and Planning Departments will prepare the streetscape design plan. Funds will come from tax increment, gas tax, transportation funds and the state grant programs.

    b. The City shall apply for urban forestry grants to assist in the funding of landscaped medians.

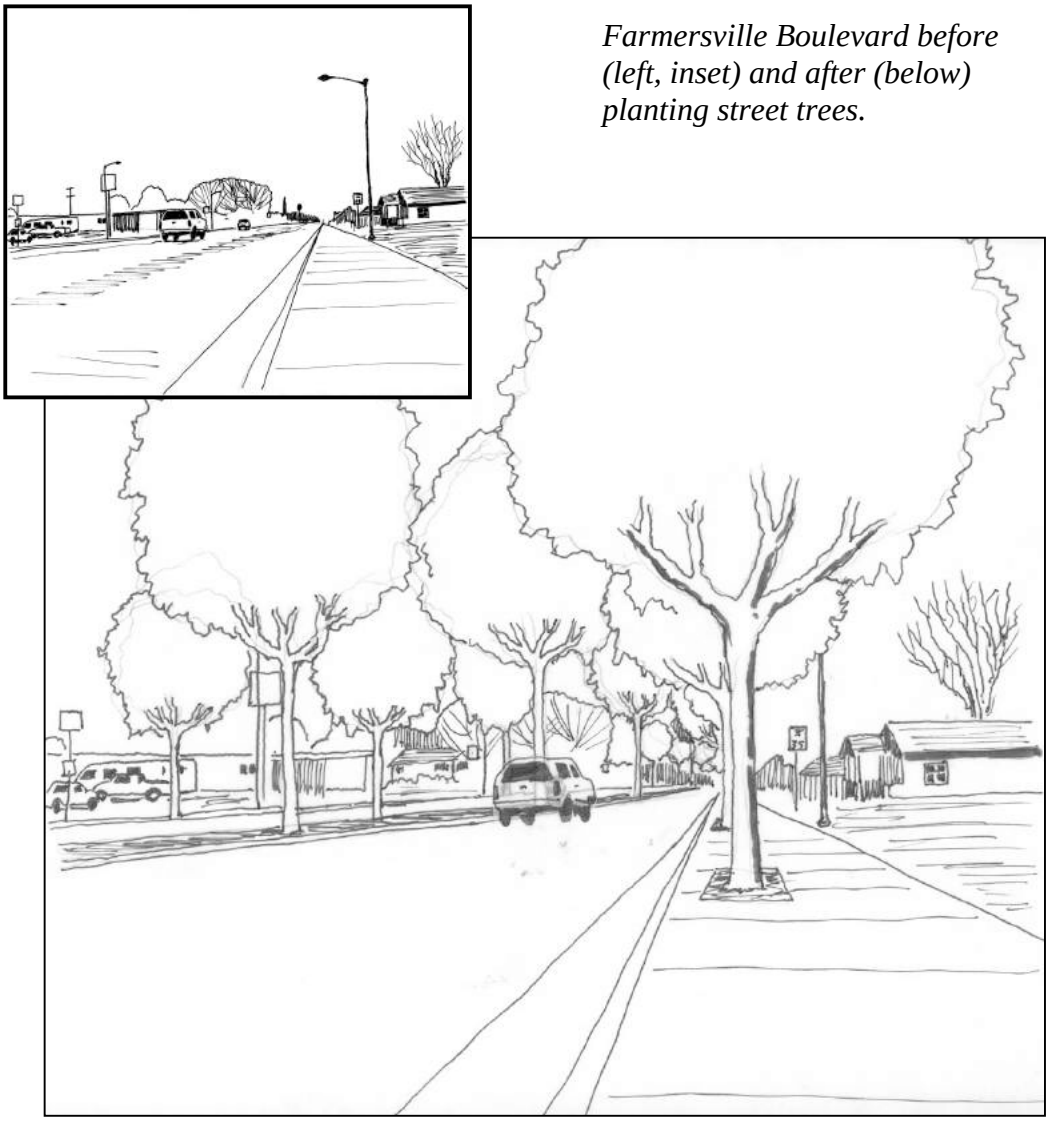
2. Existing parkways that do not contain trees should be planted with trees.

    a. The City should apply for an urban forestry grant to pay for the cost of installing street trees.

3. Parkways with trees that have broken or lifted adjacent sidewalk shall be removed and replaced with more appropriate street trees.

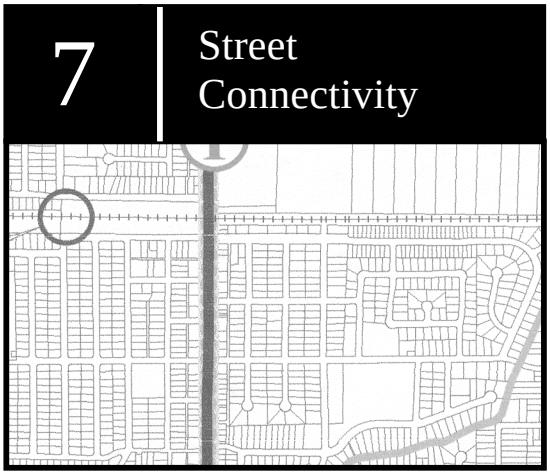
Visalia Road before (above) and after (below) conversion to a "Green Street."

4. Parkways that have been filled with pavement shall be opened up and planted with appropriate street trees.



Farmersville Boulevard before (left, inset) and after (below) planting street trees.

ISSUE SEVEN: Street Connectivity



Good connectivity is important for an effective street system. A well connected pattern of collectors and arterials ensures that no one individual street is over-burdened with traffic. Good connectivity also helps to reduce air pollution and fuel consumption, by reducing trip lengths and delays.

Connectivity in Farmersville is hampered by the railroad. Farmersville Boulevard is the only street in the entire city that crosses the tracks. This requires requires motorists to rely solely on Farmersville Boulevard to travel north/south through the community. In order to alleviate this situation, it is recommended that additional railroad crossings be established.

Goals, Objectives, Action Plans

I. Improve connectivity in Farmersville's street system

1. Establish a new railroad crossing on Ventura Avenue

    1. The City shall seek funding to establish a railroad crossing at Ventura Avenue.

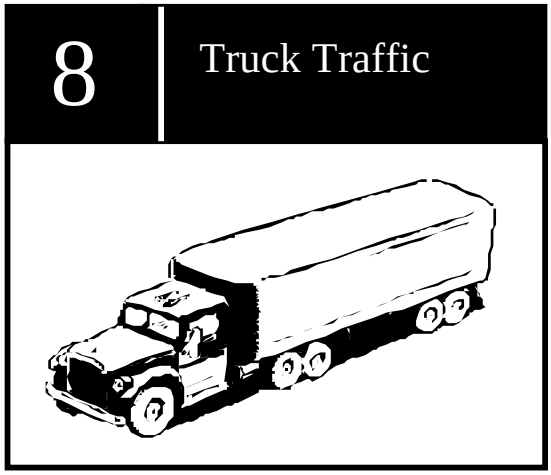
    2. Coordinate with the San Joaquin Valley Railroad in the design and timing of the crossing.

2. Explore establishing a railroad crossing east of Farmersville Boulevard. Possible crossings could be established at Rose Avenue or Brundage Avenue. Altnernately, the City could explore creating a new collector street east of the existing city limit line that connects Visalia Road to Walnut Avenue.

    a. The City Manager and City Engineer shall prepare a report on this matter for presentation to the City Council.

ISSUE EIGHT: **Truck Traffic**

Truck traffic can adversely affect a community (and specifically residential neighborhoods) because of the noise and vibrations they generate. Further, heavy trucks can damage local roadways because of their weight. However, trucks are an essential ingredient for the local economy in terms of employment and movement of goods and products. In Farmersville, the local economy would collapse if local industrial and commercial businesses could not receive trucks at their locations.



Goals, Objectives, Action Plans

I. Establish truck routes through Farmersville that are safe and not disruptive to residential neighborhoods, schools and businesses.

II. Facilitate the movement of truck traffic through and around Farmersville.

1. Identify truck routes on the Farmersville Circulation Element map.

2. Prohibit through-truck traffic on streets that are not identified as truck routes.

    a. Direct truck traffic away from residential areas and other sensitive land uses.

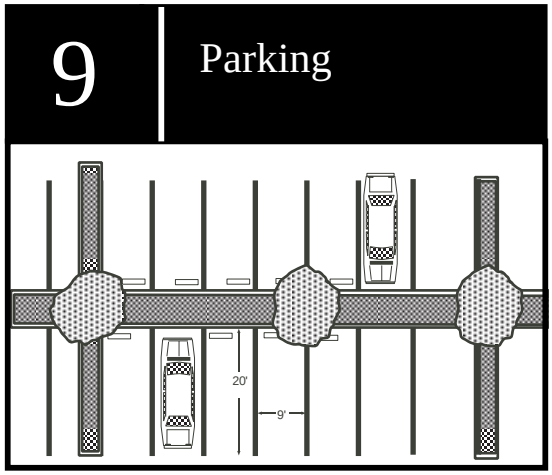
    b. The Public Works Department shall install truck route signage.

    c. Consider using county roads to divert truck traffic through or around Farmersville to avoid sensitive land uses.

See also Land Use Element – Issue 1: Community Image, for policies on truck parking.

ISSUE NINE: **Parking**

The success of commercial businesses is often dependent upon parking. Parking must be in close proximity to the business, it must be safe, and should well designed - good lighting, adequate stalls, shaded, and easy access.



For other uses, such as public facilities, churches, apartments and industries, good parking design is important so as to ensure that surrounding land uses are not adversely impacted by individuals parking their vehicles in front of other establishments or residences.

Goals, Objectives, Action Plans

I. Insure that adequate off-street parking is provided by new development.

II. Encourage the joint use of parking lots.

III. Design parking lots that are safe, visually pleasing and convenient.

IV. Provide adequate public parking in the downtown.

1. Parking lots for new uses shall include landscaping, proper lighting and shall be properly designed to ensure maneuverability of vehicles and pedestrians.

    a. Through the site plan review process, the Planning and Engineering Departments will ensure that the design of new parking lots contain these features.

    b. The Zoning Ordinance shall be amended to include parking lot design standards, including a requirement for 50 percent shading within a ten-year time frame. Rows of parking stalls shall be interrupted with tree planters.

Parking lot landscaping

1. Pedestrian pathways through parking lots shall be clearly delineated using improvements such as landscaping, lighting, trellises and special pavement material, such as textured/colored concrete.

a. This standard shall be implemented during the site plan review process.

3. Parking lots located adjacent to streets shall be screened by a low wall, berm, hedge or combination of these (see diagram to the right).

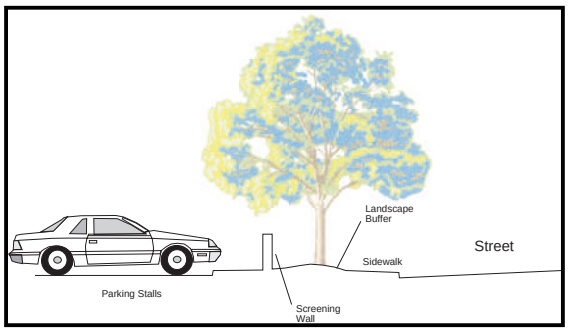
   a. The Zoning Ordinance should be amended to add this standard.

4. New parking lots along Farmersville Boulevard and Visalia Road should be designed so that the parking lot does not occupy the entire frontage of the site.

   a. Through the site plan review process, the Planning Department will ensure that the design of new parking lots will be consistent with this policy.

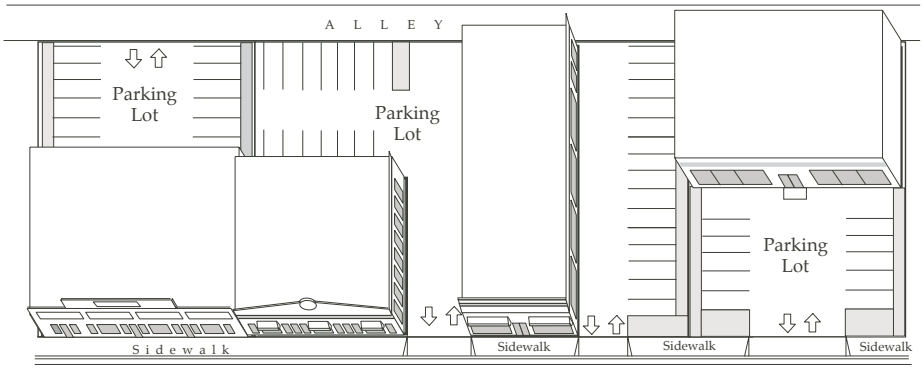
5. Off-street parking in the downtown should be located on the side or at the rear of the building(s). The City should also pursue re-designing Farmersville Boulevard to add additional diagonal parking on-street.

   a. The City and/or the Farmersville Redevelopment Agency should consider the purchase of land in the downtown for use as a public parking lot.



BACKGROUND

The downtown environment of most communities is one of pedestrian shopping where buildings come right up to the sidewalk. Storefronts feature large display windows that allow window shopping and a view of what's available. Pedestrians are able to window shop by walking past numerous businesses in a short distance. This pattern can be destroyed when a parking lot replaces a store front. For this reason, many cities require parking in the downtown area to be screened - either to the rear or to the side of a building.



CONFIGURATION #1

PREFERRED. Parking lot at rear of building. Cars take access from alley. Building at front of lot.

CONFIGURATION #2

ACCEPTABLE. Parking lot at rear of building. Cars take access from street or alley. building at front of lot.

CONFIGURATION #3

ACCEPTABLE. Parking lot at side of building. Cars take access from street or alley. Building along side of lot with front at sidewalk.

CONFIGURATION #4

STRONGLY DISCOURAGED. Parking lot at front of building. Cars take access from street. Building is at rear of the lot.

S T R E E T

The three buildings on the left have at least some street frontage. The building on the right has no street frontage and disrupts the pattern of sidewalk storefronts in the downtown district.

ISSUE TEN: **Transit**

10 Transit

Alternative modes of transportation are important to different groups of people for different reasons. For low-income, handicapped or non-driving age persons, public transit may be the only means of travel. For a person who is concerned about polluting the air, riding a bus or bike may be their way of minimizing an impact on the environment.

Farmersville is presently the only city in Tulare County that does not have some type of transit system. As the community grows, the City should explore adding at least a dial-a-ride type service. This would be a particularly valuable addition for individuals who do not have access to other modes of transportation

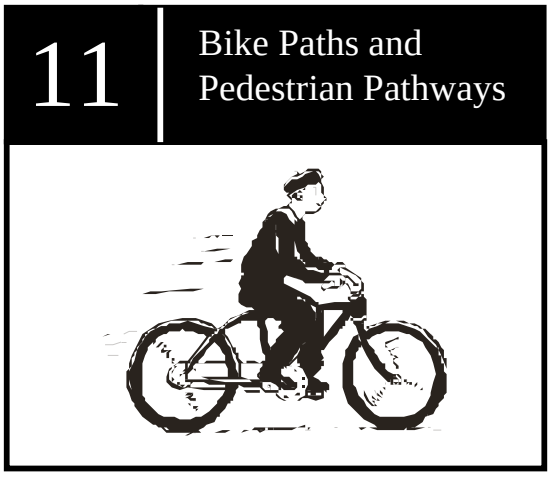
Goals, Objectives, Action Plans

I. Promote opportunities for residents to increase mobility within Farmersville.

1. Farmersville should explore the concept of establishing a local transit service, such as a dial-a-ride system

    a. The City should coordinate with the Tulare County Association of Governments to consider and operating structure and funding mechanisms necessary to establish a dial-a-ride system. Also, coordinate with neighboring communities that do operate transit service.

ISSUE ELEVEN: **Bike Paths and Pedestrian Pathways**



Bicycling is an important form of transportation. In a small community like Farmersville, bicycling can provide a realistic way to make meaningful trips around the community.

When added to the local bike traffic generated by school-aged children, it is important to properly locate and design Farmersville's bikepath system.

By encouraging persons to walk in Farmersville, personal contact is promoted. This interaction makes for a more close-knit community in addition to promoting a more healthy lifestyle.

Farmersville has been participating with the Tulare County Association of Governments in developing a county-wide bicycle route plan. As of this writing the plan is in the draft stage. The draft plan identifies four future bicycle routes in Farmersville, including Visalia Road, Farmersville Boulevard, Walnut Avenue and Avenue 296 (the frontage road along the north side of State Route 198).

Goals, Objectives, Action Plans

I. Encourage persons to ride bikes for good health as well as for environmental reasons.

II. Ensure that Farmersville's bikepath system is consistent with the Tulare County Association of Government's Countywide Bicycle Transportation Plan.

III. Encourage residents to walk in Farmersville.

1. Develop a bike path plan for the City of Farmersville. Consider other routes in addition to those identified in the regional bike plan.

    a. Design the Plan so that some of the bike path segments are not along surface streets but along the railroad right-of-way, parks and creek/canal easements.

b. Apply for state and federal funds to finance the construction of the bikepath system.

c. Ensure that subdivisions are designed so that persons riding bikes can access adjacent properties from the neighborhood.

d. Cooperate with the County of Tulare to ensure that Farmersville's Plan is linked to the County's regional bikeway network.

e. Consider implementing traffic calming designs where bike paths cross surface streets.

f. Bikepaths will be constructed consistent with the bikepath cross-section illustrated in Appendix A of the Circulation Element.

2. Provide safe and convenient pedestrian access to all areas of the city, including between neighborhoods.

a. Maintain and repair sidewalks to make them safe for pedestrians.

b. Plant existing parkways that lack trees to make the walking experience more comfortable and enjoyable.

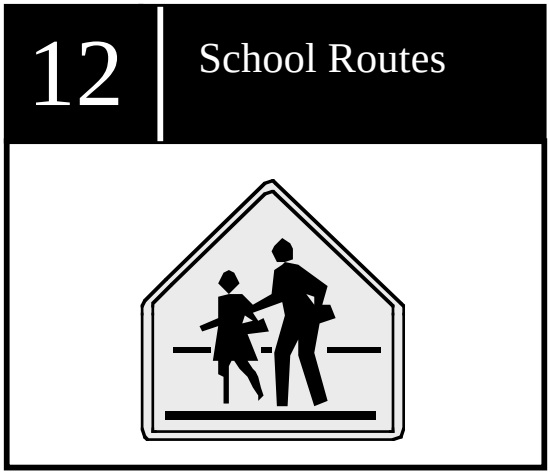
c. Provide signage for walking paths.

d. Investigate the use of creek and canal easements for walking paths.

Investigate the use of creek and canal easements for walking paths

ISSUE TWELVE: **School Routes**

School-aged children walking or riding to school should be provided with a safe route to school. There are a number of roadways in Farmersville that are used extensively by children traveling to and from school. Sidewalks should always be constructed along both sides of roadways leading to schools in Farmersville.



Goals, Objectives, Action Plans

I. Ensure that children have safe walking and bicycling routes to school.

1. Require new development to install sidewalks.

    a. The City Planner and City Engineer will ensure that sidewalks are installed as a requirement of development.

2. Seek funding to establish sidewalks in existing neighborhoods without them.

    a. The City should seek grant monies to establish sidewalks in critical locations.

3. Coordinate with Farmersville Unified School District (F.U.S.D.) to establish sidewalks along their campuses.

    a. City staff will work with F.U.S.D. to ensure sidewalks are established around school campuses.

CHAPTER 4 • CONSERVATION, OPEN SPACE, PARKS AND RECREATION ELEMENT

Introduction

Open space, parks, and recreation facilities enhance the quality of life in a community. The conservation of these types of resources is an integral part of providing for the needs and welfare of a community.

Conservation of open space takes planning for the future. If these areas are not planned for at this time and set aside for the future, a city runs the risk of losing them to development.

Conservation of open space takes planning for the future. If these areas are not planned for at this time and set aside for the future, a city runs the risk of losing them to development.

Open space lands are undeveloped areas that provide a low density perception in an urban area, define the edge of a community, and provide the sight lines that allow long distance vistas to the Sierra Nevada, agriculture fields, or other local view-points. Most people think of open space as park areas, but a large portion of a city's open space is provided by residential yard areas and right-of-way along streets.

A park is an open area that provides an assortment of recreation and leisure opportunities for a community. A park can include community recreation parks, school playgrounds, community centers, and other publicly-owned outdoor recreation areas. Parks can supply active as well as passive recreation. Activities can range from family picnics to organized sporting events.

One of the primary purposes of parks is to contribute to Farmersville's quality of life. The City accomplishes this through the provision of convenient, well-equipped and maintained sites and facilities, conservation of natural resources, and a comprehensive and quality program of recreational activities and services for all citizens of the community.

The Element

The open space portion of this Element identifies lands that are appropriate for open space and parks acquisition as well as the development of recreation programs on these lands. The Element establishes goals, policies, action programs and standards for the conservation and treatment of open space.

Government Code Section 65560 et seq. defines **open space** as land that can be used for any of the following uses:

- Conservation of natural resources
- Managed production of resources
- Outdoor recreation
- Preservation of lands for the purpose of protecting the public's health and safety

Specific requirements of the **conservation** portion of the Element are identified in Government Code Section 65302 (d). This portion of the element includes "the conservation, development and utilization of natural resources, including water, forests, soils, rivers and other waters, wildlife, and other natural resources." Items that are addressed in this category include the conservation of:

- Agricultural lands
- Soils
- Air and water quality
- Mineral resources
- Wildlife habitat
- View opportunities

The Parks and Recreation Element is an optional element of the General Plan. This Element identifies existing and potential recreational opportunities within the community. Since it is closely related to the City's open space system, integration of the three documents into one element makes good planning sense.

Existing Conditions

Part II of the General Plan contains an in-depth profile of conditions in the Farmersville planning area. A brief summary of these conditions is provided below, as they pertain to particular topics addressed by the Element.

Air Quality

Farmersville has a moderate climate with warm summers and generally mild winters. The City is located within the San Joaquin Valley Air Basin. The closest air monitoring station is located in Visalia, where Ozone and PM-10 (Particulate Matter-10 microns or less) are measured. The San Joaquin Valley, including Farmersville, has failed to achieve state and federal standards for these pollutants and is therefore designated as a non-attainment area. There are several factors which cause this to occur. They are:

The San Joaquin Valley, including Farmersville, has failed to achieve state and federal standards for ozone and PM-10 and is therefore designated as a non-attainment area

1. The topography of the valley as a basin surrounded by mountains has the effect of trapping stagnant or polluted air.

2. The local climate (abundant sunshine and high atmospheric pressure) is favorable for the formation of smog.

3. The primary factor is the growth of population in the Valley. With more and more people moving to the valley, smog is produced by fossil fuel burning and emissions from factories and other combustion processes.

Water Resources

Farmersville currently obtains its water from underground supplies. The aquifer underlying the Cityis a good supply of water although the relative shallowness of the water table can make the supply susceptible to surface contaminants. In recent years, the water table has been as shallow as 20 feet below ground level. In order to reduce the possibility of contamination, the city's well system draws water from 240 to 400 feet below ground level.

The water table is recharged primarily by water moving downhill from the watersheds of Sierra Nevada streams, particularly the Kaweah River and its distributary system, which includes Deep Creek. Irrigation waters also help to recharge the water table. Rainfall in the Farmersville area provides only a small amount of groundwater recharge.

Deep Creek is a natural waterway which has been trenched and channelized since the arrival of European settlers. However, portions of the channel retain some "native" vegetation such as oak trees, willows and vines. The presence of these relatively undisturbed stream sections represents an important natural resource. These types of riparian areas can function as a protective travel corridor for wildlife through an otherwise "sterile" area.

In addition to Deep Creek there are other irrigation facilities in the planning area. These include channels maintained by Tulare Irrigation District (TID) and People's Ditch Company.

In 2000, the Tulare Irrigation District (TID) canal that runs along the west side of Farmersville was the subject of a proposal by TID to line the channel with concrete, in order to reduce the loss of water to percolation. Controversy centered over the loss of groundwater recharge from what was historically a natural stream channel, and also the loss of numerous large Valley Oak trees along the banks of the ditch.

The project was cancelled when an agreement was reached between TID, Kaweah Water Conservation District and the City of Visalia that set forth a mechanism whereby TID would receive payments for water lost to percolation.

Agricultural Resources

Farmersville is surrounded by thousands of acres of producing cropland. Agricultural lands have provided a strong economic base for the community as well as a rural landscape and open space "system" that surrounds the City. As Farmersville continues to grow, surrounding agricultural lands are taken out of production to accommodate residential, commercial, and industrial growth.

In 1965, California adopted the Williamson Act to address the loss of agricultural lands due to urbanization. The Williamson Act provides property owners with a reduction in their property tax if they agree to maintain their land in agriculture for a ten-year period. This ensures, at least for the near-future, that agricultural lands will remain undeveloped, thereby continuing agricultural production and enhancing the sense of open space around Farmersville. Map 4-1 shows properties within the Farmersville planning area that have a Williamson Act contract. Approximately 60 acres within Farmersville's Urban Development Boundary are in agricultural preserves under Williamson Act contracts

Mineral Resources

There are no known mineral resources within the planning area and no known mining of mineral resources has occurred in the planning area. The closest significant mineral resources consist of sand and gravel deposits along the Kaweah River northeast of Farmersville, near the Sierra Nevada foothills. Several open-pit sand and gravel mines operate along the river. Recent applications to expand these operations have generated controversy over their potential environmental impacts.

Soil Resources

Soils are discussed in detail in Part II: Resources. The soils in the Farmersville area are described by the Soil Survey of Central Tulare County, prepared by the Soil Conservation Service, Department of Agriculture (see Map 2-2 in Part II: Community Profile). The Soil Survey identifies three specific soils in the planning area. They are

- Grangeville sandy loam, drained, 0 - 2 % slopes;
- Nord fine sandy loam, 0 - 2% slopes;
- Tagus loam, 0 - 2% slopes.

According to the survey, these soils have few limitations for urban development. At the same time, they are considered to be prime agricultural soils.

Biotic Resources

The Conservation Element is required to discuss the presence of native plants and animals and in particular, native species regarded as rare, threatened, or endangered. In addition to inventorying these species, the element must plan for their preservation. Additional information on biotic resources may be found in Part II: Chapter 3: Resources.

For the Farmersville area a list of sensitive species was developed based upon the list of species identified by a search of the Exeter Quadrangle in the California Natural Diversity Database, and discussions with local wildlife experts familiar with the area. A list of the plant and wildlife species addressed by field surveys is presented in Table 4-1. A total of 8 special status animal species could potentially occur in the Farmersville area. Two of the 8 species are listed as threatened or endangered by the U.S. Fish and Wildlife Service or the California Department of Fish and Game. The remaining 6 species are candidates for federal listing or listed species of special concern by the State of California. No special status plant species are likely to occur in the planning area.

A biotic survey prepared for the General Plan update indicated that the overwhelming bulk of the planning area has been severely disturbed from its natural state by urbanization and agricultural activities. The survey did note the presence of some minor areas that appear to be less disturbed including scatterred grasslands and riparian areas along Deep Creek. The survey indicated that the grasslands have a very low likelihood of supporting native rare, threatened or endangered (RTE) animal species.

The riparian areas along Deep Creek near the railroad were noted as having a higher value for habitat. These sections of waterway should be carefully considered for protection from development.

Table 4-1
Sensitive Species Potentially Occurring in the Farmersville Area

		Listing Status	
Common Name	**Scientific Name**	**Federal**	**State**

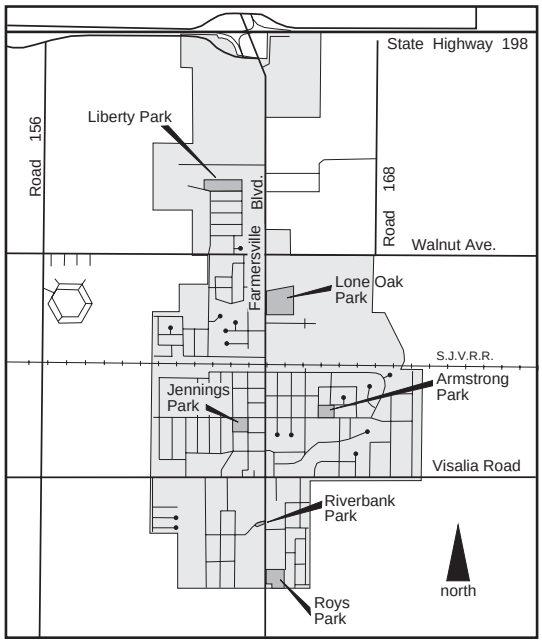
Park and Recreation Resources

The City of Farmersville currently has five developed parksites and one undeveloped (city-owned) parksite (see Table 4-2 and Map 4-2

Map 4-2
Existing Parks



In addition to these existing parks the City owns a five-acre parcel on the north edge of the Sierra Woods subdivision. This site will be developed into a park featuring lawn, trees and picnic tables.

In addition to the city's parks, the athletic fields on the campuses of Farmersville Unified School District provide recrational opportunities after school hours. At this time, the City and School District do not have an official agreement for joint-use of district facilities.

Sports Programs

At this time, the City does not have an established recreation program. However, there are an organized little league, pee wee softball and pop warner football for children. Youths interested in soccer participate in

Visalia AYSO (American Youth Soccer League) programs. Most recently, the city has been seeking funding for after school programs.

Regional Parks Facilities

There are several regional parks that are within driving distance to Farmersville. Generally speaking, at a maximum, most people are willing to travel thirty minutes to get to a regional park facility, and possibly one hour if there was some type of event scheduled there, such as a church gathering, family reunion, or school function.

Farmersville has two regional parks operated by Tulare County within 15 minutes driving time. Cutler Park is a regional park located about 5 miles north of Farmersville. The park is situated on 50 acres along the bank of the St. Johns River and features grassy areas shaded by towering oak trees. Facilities include picnic tables and barbecues, walking paths, restrooms and passive play areas.

Mooney's Grove is a regional park located about five miles west of Farmersville, on the south side of Visalia. This park covers some 140 acres and preserves a large area of native valley oak trees. The park features a historical museum, picnic tables, restrooms and play areas, ponds, and creeks.

About two miles northeast of Farmersville is Kaweah Oaks Preserve. This 324-acre property contains the largest protected example of Great Valley valley oak riparian forest anywhere within the Kaweah River Delta. About half the property at the Preserve is an equally rare habitat called alkali meadow where bunchgrasses and other alkali-loving native plants thrive. The Preserve is frequently used as an educational resource by local school classes.

Kaweah Oaks Preserve was originally operated by the Nature Conservancy but is now owned and operated by the Sierra Los Tulares Land Trust. The trust also operates the Herbert Wetland Prairie Preserve on 725 acres about six miles south of Farmersville. This site features vernal pools scattered amid extensive grassland and is a rare example of the valley landscape before widespread agricultural and urban development.

Future Needs

A primary objective of this Element is the establishment of criteria that will guide the acquisition and development of future open space areas. These standards should be realistic and represent the actual amount of area and facilities necessary to meet the needs and desires of the community. These open spaces can be provided in a variety of ways, and do not necessarily need to be under the control of the City to meet Farmersville's needs.

State Government Code Section 66477 (b) requires a minimum of three acres of open space for every one thousand residents. Each jurisdiction can require that a maximum of five acres of open space be set aside per one thousand residents if the community feels that current standards are not meeting demands.

Presently, Farmersville has a total of 19.5 acres of developed parkland. With a year 2000 population of 8,737 persons, Farmersville only has 1.95 acres of park land per one thousand residents. At a rate of three acres per 1,000 residents, the City should have about 26 acres of parks. As such, Farmersville is currently "short" by about 6.7 acres.

Presently, Farmersville has a total of 19.5 acres of developed parkland. With a year 2000 population of 8,737 persons, Farmersville only has 1.95 acres of park land per one thousand residents. At a rate of three acres per 1,000 residents, the City should have about 26 acres of parks. As such, Farmersville is currently "short" by about 6.7 acres.

Projections of a community's open space and park needs involves many factors. Population, income, education, accessibility, and age must all be considered in determining the correct amount of open space/parks for a community.

Park aquisition must strike a balance between use and the maintenance available to sustain the park. Generally speaking, city parks cost approximately $3,500 to $4,000 per acre per year to maintain.

A city may have 10 acres of open space per 1,000 persons; however, if this acreage is not maintained properly, its value as usable open space will be greatly diminished. As Farmersville acquires more parkland, it must also dedicate the resources to adequately maintain that land.

Americans today are spending more of their time in recreation leisure activities than ever before. This emphasis has created a much higher demand than ever for

quality open space, parks and recreation facilities. In response to this, cities must designate areas for such uses, before development occurs.

Parkland

In order to determine the type, location and amount of parkland that will be required by Farmersville within the 23-year planning period, population projections are required. Two population projections (low and high) are displayed in Table 4-3. The table shows that as population increases, so does the need for park acreage.

Table 4-3 shows that Farmersville is currently "short" 6.7 acres on park land - using the standard of 3 acres per 1,000 residents. By the year 2025, the City would need to add about 34 acres to meet the standard (using an annual growth rate of 2.9% per year. Using the "high" growth rate of 3.4% per year, the City would need to add 41 acres of parkland.

Table 4-3
Parkland Demand Projections

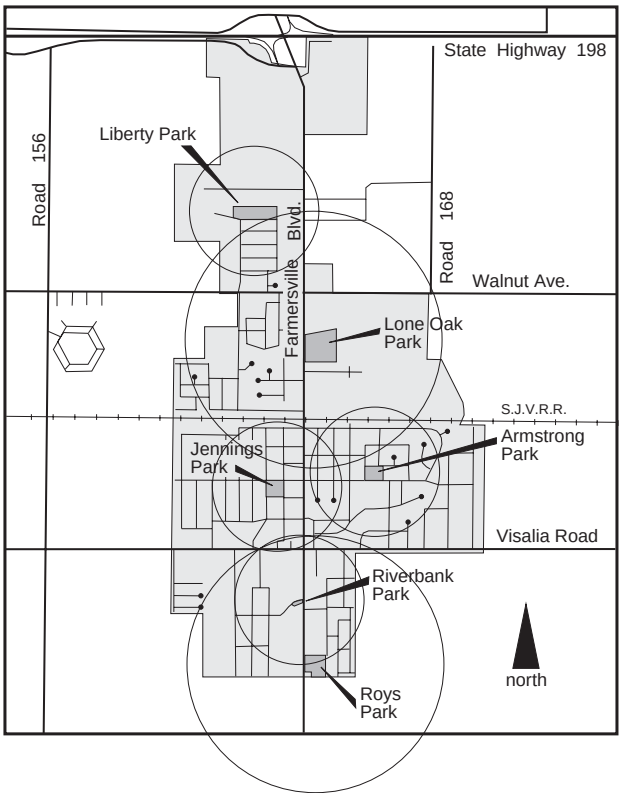
	Low Population Projection			High Population Projection		
	Population Projection (2.9% per year)	Park land need at 3 acres per 1,000 residents	Difference between existing park acreage and projected need	Population Projection (3.4% per year)	Park land need at 3 acres per 1,000 residents	Difference between existing park acreage and projected need
2000	8,737	26.2 acres	6.7 acres	8,737	26.2 acres	6.7 acres
2005	10,079	30.2	10.7	10,327	31	11.5
2010	11,628	34.9	15.4	12,206	36.6	17.1
2015	13,415	40.2	20.7	14,427	43.3	23.8
2020	15,476	46.4	26.9	17,052	51.2	31.7
2025	17,854	53.6	34.1	20,155	60.5	41

Accessibility

Another important factor in the planning of future parks is to insure that parks are accessible to all citizens of the community. For instance, although a city may currently meet the standards regarding the amount of parkland required; the existing park sites may not be easily accessible from all areas of the community.

Map 4-3 shows the location of existing City-owned park facilities and their service areas. Service area dimensions are those provided by the National Parks and Recreation Association. Generally, a community park will have a one-half mile service area, and a neighborhood park has a one-quarter mile service area. In general Farmersville has been successful in establishing a good distribution of parks throughout the community. The community will need to continue planning for park needs as new neighborhoods are developed.

Map 4-3
Park Service Areas



GOALS, OBJECTIVES AND ACTION PLANS

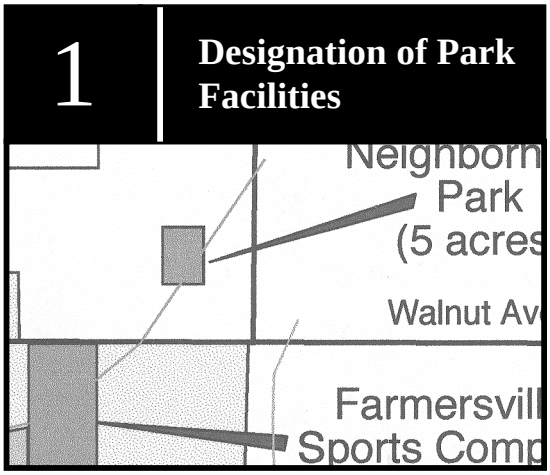
This portion of the Element establishes goals, objectives and action plans to guide to the future development of parks and recreation facilities as well as the preservation of Farmersville's natural resources.

Goals, objectives and action plans are organized under topical issues, including:

- Designation of Park Facilities
- Parks Location and Design
- Acquisition and Funding
- Urban Boundaries and Farmland Protection
- Air and Water Quality
- Energy Conservation
- Biotic Resources
- Historic/Cultural Resources

ISSUE ONE: **Designation of Park Facilities**

The City's General Plan must designate adequate recreational facilities for future development. The Land Use Element and this Element must provide locations for the future development of conservation, open space, parks and recreation facilities. If adequate sites are not designated in advance, the City will continue to grow with no property set aside for these uses.



Goals, Objectives, Action Plans

I. Plan for adequate park and recreation facilities to meet existing and future needs in Farmersville.

1. Maintain compliance with adopted City park standards now, and as the City grows.

    a. The City shall review and, if necessary, increase its park impact fees in order to ensure that it maintains its ratio of at least 3 acres of parkland per 1,000 people.

2. Provide a variety of park sites and recreational facilities to accommodate the City's diverse population.

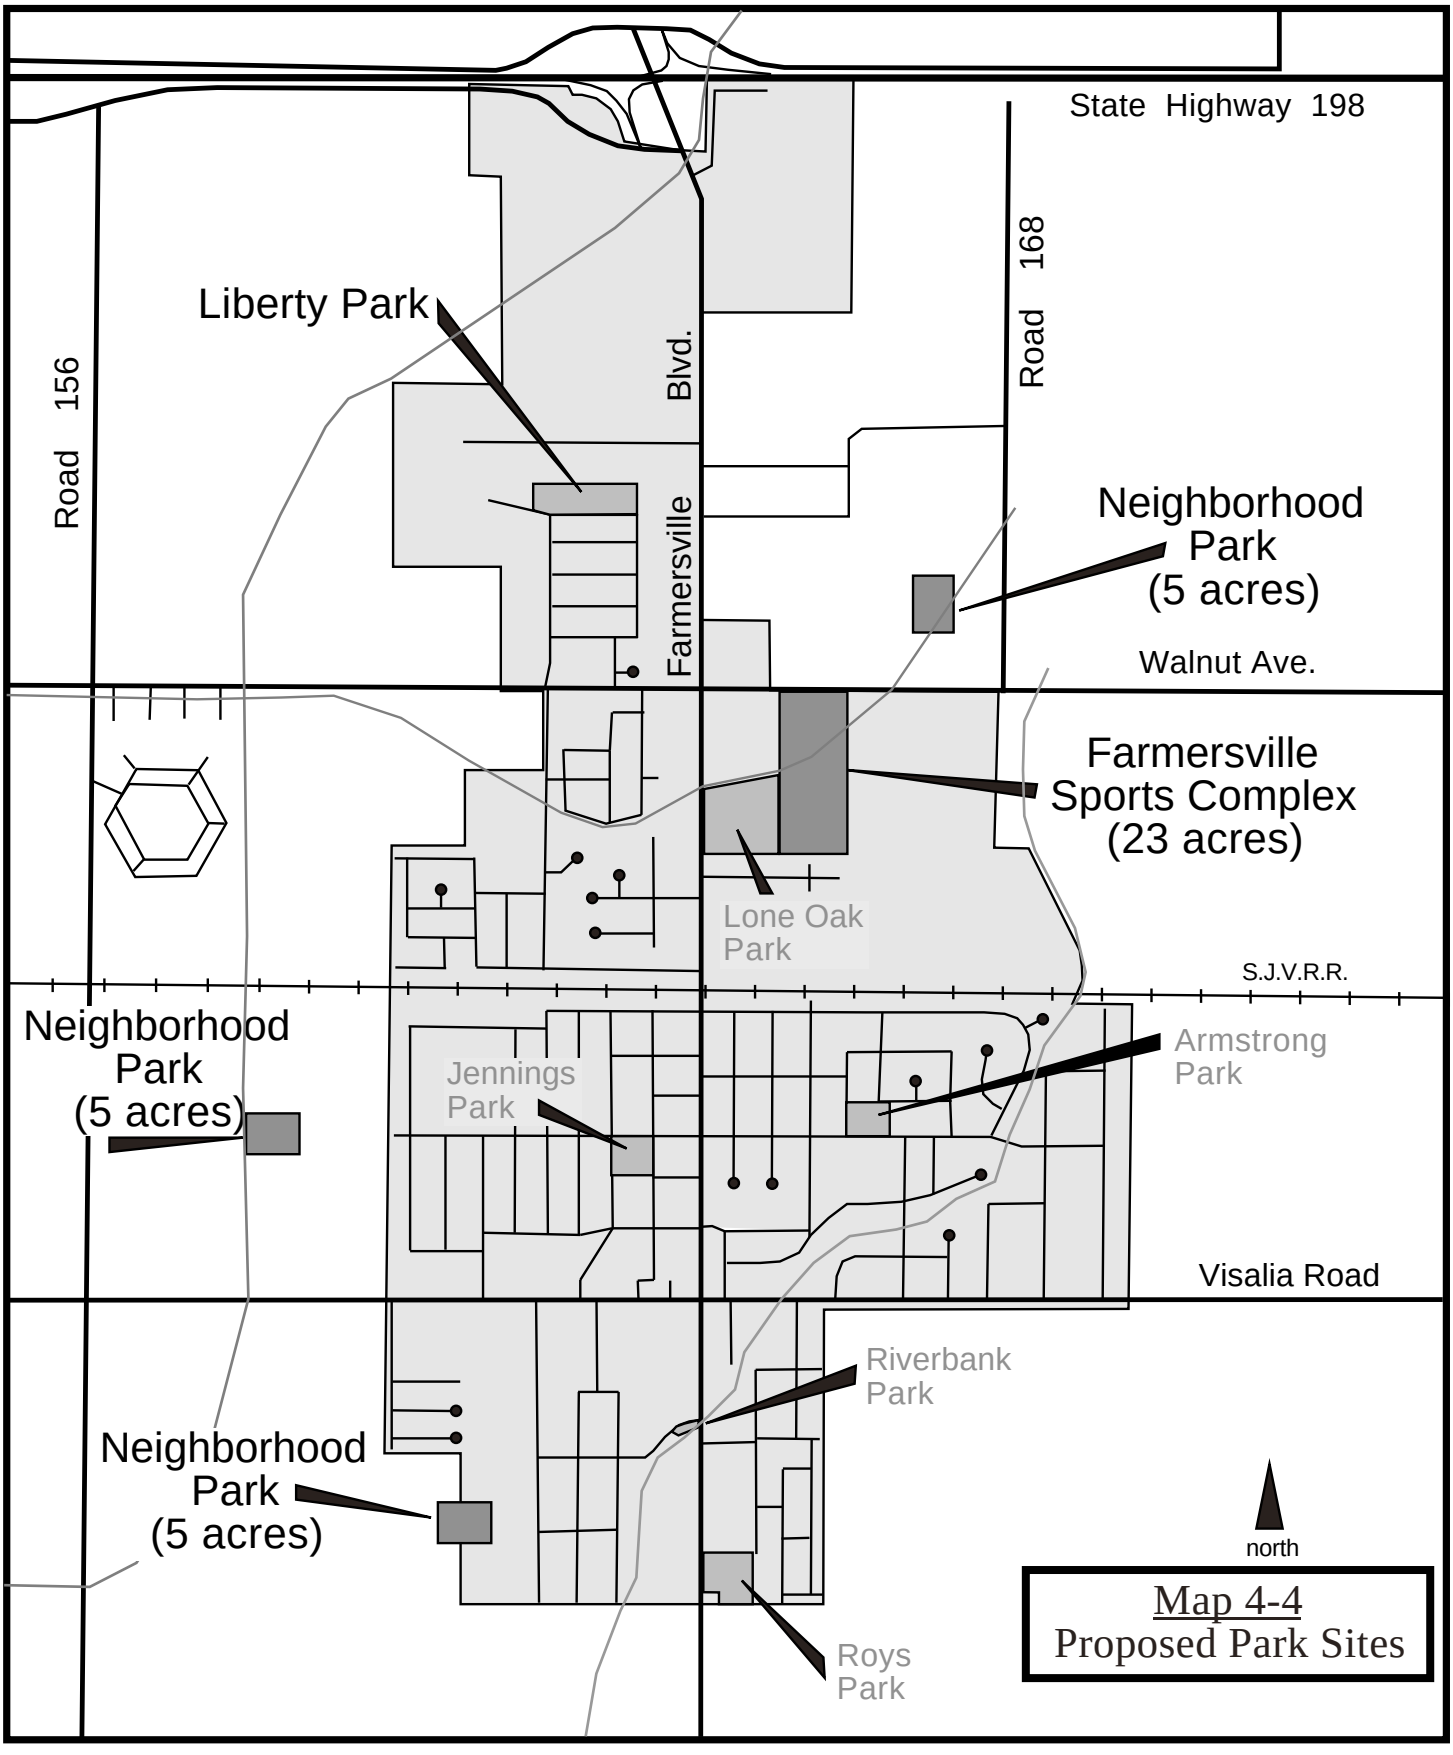
    a. Future park sites are identified on Map 4-4

3. Plan for the acquisition of parks prior to urban growth and development. These lands may be acquired and left vacant until funding for development is available.

    a. Adoption of this Element and the Land Use Element will provide implementation of this item.

4. Encourage private or commercial development of recreational opportunities such as racquetball courts, golf, commercial softball, etc., that are available to the public.

    a. The City will encourage the development of private recreation facilities.



Map 4-4
Proposed Park Sites

5. Add at least 35 acres of conservation, open space and parks and recreation area by the year 2025. This figure is based on a 2025 population of 17,854 and a standard of three acres of parkland per 1,000 residents. Farmersville currently has 18 acres of public parks.

    a. This element and the Land Use Element identify future park locations in the planning area. City Planning and Engineering Departments must ensure that developers are assessed park impact fees.

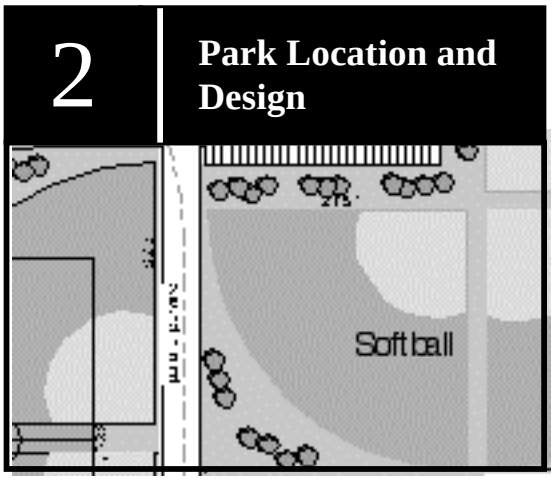
6. Creeks and canals in the planning area shall be investigated for use as public open space features, with landscaped pathways and landscaping adjacent to the waterway.

    a. Farmersville will work with local canal and irrigation districts to develop standards to incorporate local waterways as open space features. The City could require developers of adjacent lands to install a pathway and landscaping within canal easements. This could satisfy the developer's open space dedication obligation.

Investigate the use of creeks and canals for use as public open space features, with landscaped pathways and landscaping adjacent to the waterway.

ISSUE TWO: **Park Location and Design**

The City of Farmersville must work to ensure there is an adequate distribution of park and open space facilities throughout the City. Active park sites and passive open space areas should be accessible to all segments of the community.



Goals, Objectives, Action Plans

I. Establish parks in appropriate locations and ensure their design caters to the needs of the community.

1. Design park sites that fulfill the open space, passive and active recreational needs of all the citizens of Farmersville.

    a. Prior to the design of each new park, the City and Recreation Commission shall conduct public workshops to receive input from citizens regarding the design of the park.

2. Locate future parks in such a way as to be accessible and available to all the citizens of Farmersville.

    a. Adoption of this Element and the Land Use Map and its policies will provide implementation of this policy. The City must observe this policy when considering the location of new parks.

3. Locate park and recreational facilities so that they do not conflict with adjacent land uses.

    a. Adoption of this Element and its policies will provide implementation of this policy. Factors to consider include avoiding streets with high traffic, industrial uses, and noise sensitive uses.

4. Consider the design of parks that double as stormwater retention/detention facilities.

a. The Planning Department and City Engineer shall explore the feasibility of designing future parks to act as dual use facilities, incorporating recreation and storm drainage.

5. All parks shall be designed to meet the needs of the handicapped.

    a. The Building Department shall review plans for proposed facilities for compliance with handicap/accessibility requirements of the Uniform Building Code.

6. Create a new Smart Development zone district that will require new subdivisions of forty acres or more to incorporate a neighborhood subdivision park into the project. In turn for development of the park, the city could allow a moderate increase in residential density within the subdivision.

    a. The Planning Department shall develop a new zone which incorporates the above-referenced standards.

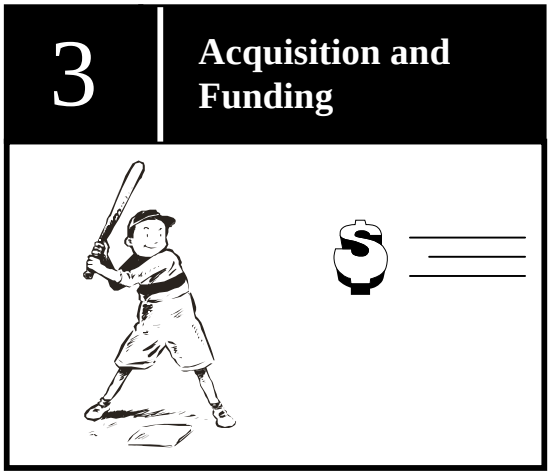
7. Parks and other facilities that may require a significant amount of night lighting, such as ball parks and tennis courts, should be designed in such a way as to minimize the impacts of lighting on the surrounding neighborhood.

    a. The Planning Department shall review lighting schemes for all projects.

8. Park design may incorporate the use of berms and small hills where appropriate to provide relief to the otherwise flat terrain of Farmersville.

    a. Grading plans for all park sites should include areas of berms and mounding, as appropriate. Earth moved from ponding basins or other construction projects can provide a ready source for berms and hills.

ISSUE THREE: **Acquisition and Funding**



Adequate funding is the key to establishing and maintaining a quality parks and recreation program. Numerous sources of funding exist, however it is not always easy to tap these sources. To be successful, the City should evaluate a variety of funding methods and sources. Strategies for doing this are provided in the following goals, objectives and action plans.

Goals, Objectives, Action Plans

I. Create and preserve open space in the Farmersville area to meet the needs of the community now, and in the future.

1. Farmersville shall continue to require developers to pay park impact fees (Quimby fees) or dedicate land in lieu thereof. The State of California adopted Section 11546 of the Business and Professional Code, which allows a jurisdiction to require the dedication of parkland by a subdivider, or in-lieu-of dedication, to pay a fee of equivalent value.

    a. The City shall annually review its fees for recreational programs, park lands and rentals to insure that they are sufficient to finance future park needs. Areas that could be considered for review include:

        - Increasing the park land dedication standard from 3 acres per 1,000 residents. State law allows cities to require up to 5 acres per 1,000 residents

        - Charging user fees for use of a facility or participation in an activity,

        - Entrance fees for admission to a large park or other developed recreation area,

        - Charging rental fees for the use of recreation equipment or property, and

        - Admission fees can be charged for special events, exhibits, or rallies.

2. Ensure that the City of Farmersville receives its full share of federal and state grant funds including matching and competitive grants. The City shall also seek out available charitable contributions for parks and open space facilities.

    a. The City shall apply for available state and federal grants as they become available. Contracting with an established grant writer should be considered.

    b. Farmersville should explore securing gifts from foundations and individuals to support special interest recreation programs or park projects.

3. Farmersville should explore the financing of park and recreational facilities through the use of tax-increment funds, generated by the sale of tax-allocation bonds.

    a. The City should conduct a feasibility study of financing park and recreation facilities by the sale of tax-allocation bonds.

4. Farmersville should explore the opportunities to enter into joint powers agreements with other agencies to share the costs of park and recreation facilities development and maintenance.

    a. The City should consider approaching the Farmersville Unified School District and Tulare County Parks Department to discuss a joint powers agreement for the sharing of park and recreation facilities.

5. Farmersville should utilize, where appropriate, landscape and lighting districts to maintain parkways, landscaped medians and neighborhood parks.

    a. Where appropriate, the City shall require proposed subdivisions to

Ensure that the City of Farmersville receives its full share of federal and state grant funds including matching and competitive grants.

establish landscape and lighting districts to maintain open space areas.

8. Develop an "adopt a park" program throughout the City.

    a. The City should implement an "adopt a park" program in which private citizens or organizations (ie; service clubs, churches, scouting groups, etc.) help with the maintenance of open space, parks, and recreation facilities. The City should contact other communities who are succesfully operating similar programs.

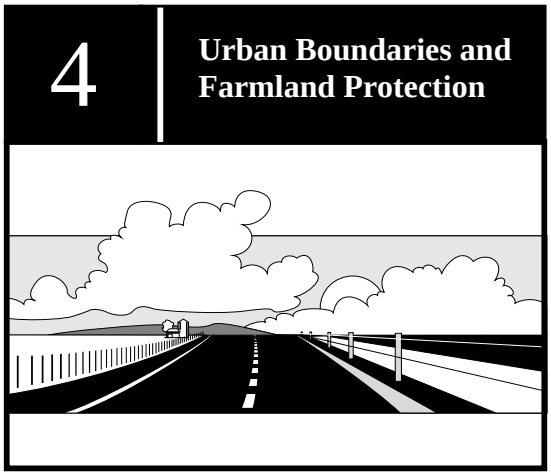
9. Encourage donations of land and/or money towards the acquisition, development or maintenance of parks and recreational facilities.

    a. The City shall seek out donations of land or money towards park facilities. The City may announce these efforts in recreation schedules, telephone book schedules, plaques or notices at existing parks, etc.

10. Coordinate efforts to acquire and develop park and recreational facilities with the Farmersville Unified School District to ensure that there is no unnecessary duplication of facilities or programs.

    a. The City of Farmersville shall coordinate the development of recreation facilities with the Farmersville Unified School District.

ISSUE FOUR: **Urban Boundaries and Farmland Protection**



The City of Farmersville and its surroundings have locally significant natural resources that must be preserved. Chief among these natural resources are the surrounding agricultural lands. As the city grows, increased pressure to develop these areas can result in conflicts, which may lead to the permanent loss of these resources. The City will adopt policies so that these precious resources can be conserved.

Goals, Objectives, Action Plans

I. Establish policies to reduce the impact of urbanization on agricultural lands, while allowing the City to grow.

1. Preserve and protect agricultural lands as a means for providing open space and for the managed production of resources.

    a. The City shall strive to ensure that new development is designed in a manner that uses land efficiently and reduces the need to expand the urban area outward onto prime agricultural lands.

    b. The Planning Department shall conduct an annual review of cancelled Williamson Act contracts and development proposals on agricultural land within the City Limits and Sphere of Influence.

2. Develop buffers and transition areas between urban uses and agricultural land to reduce incompatibility issues that are associated with cultivation, pest control and harvesting of crops.

    a. Adoption of the Land Use Element and Land Use map will provide the implementation of this policy.

    b. Work with the Cities of Visalia, Exeter and Tulare County to establish an agricultural preservation area to keep Farmersville,

Visalia, and Exeter from physically growing together.

4. Promote infilling and moderately increase overall residential densities in the City of Farmersville to reduce the rate of urbanization of surrounding agricultural lands.

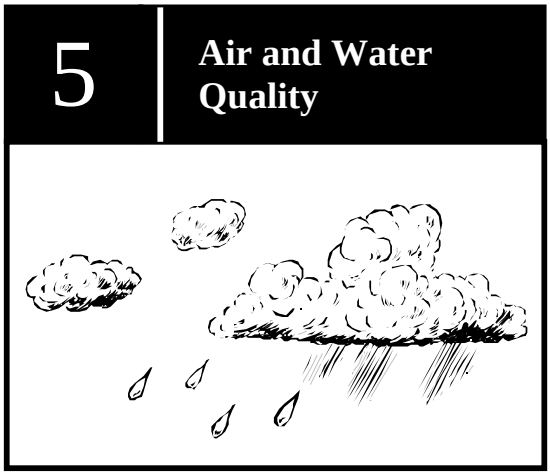
    a. Strive to create an overall community-wide residential density of five units per acre. All unit types (single and multi-family residential) shall be counted in calculating community-wide density.

5. Establish and maintain "hard edges" around Farmersville that define where urbanization stops and agricultural open space begins.

    a. In order to discourage sprawl and leapfrog development, require the Planning Commission and City Council to make a finding that new development is within 1/8 mile of existing or approved development when approving new residential, commercial, industrial or quasi-public construction projects.

    b. Where appropriate, the City will discourage zoning requests in the Sphere of Influence and surrounding County areas to permit further parcelization for development of large lot residential purposes ie; ranchettes.

ISSUE FIVE: **Air and Water Quality**



The City of Farmersville exceeds two important air pollution standards - ozone and particulate matter. As growth occurs, more smog is produced by fossil fuel burning and emissions from factories. The City must encourage development that will minimize vehicular emissions by providing an adequate circulation system.

The City of Farmersville obtains its water supply from a vast aquifer underlying the San Joaquin Valley. The quantity and quality of water appears to be adequate, however, in the future, Farmersville must provide for long-range community water needs and protect water quality and quantity. It must also maximize the efficient use and conservation of the community's water resources.

Goals, Objectives, Action Plans

I. Protect air and water quality from negative impacts.

Air Quality

1. Participate in the regional planning efforts to meet air quality goals by working to improve air quality for the entire planning area.

    a. The Planning Department will send proposed development plans to the San Joaquin Valley Unified Air Pollution Control District for review of potential air pollution impacts.

2. Consider traffic flow in the planning of residential, commercial and industrial developments.

    a. The Planning and Engineering departments will review all new projects to ensure that efficient traffic flow maintained, thereby minimizing vehicle-related air emissions.

3. Maintain adequate roadway levels of service (LOS) to avoid congestion which contributes to the air pollution problem.

a. The Planning and Engineering departments will review all proposed development projects to ensure that roadway service levels do not fall below Level C for arterials, collectors and intersections. The City will utilize gas tax and transportation funds to maintain these transportation standards.

4. Develop an organized and efficient circulation system to reduce vehicle trips in the planning area, idling time, intersection delays, and other emissions-producing activities.

   a. The Circulation Element establishes policies that will encourage increased connectivity in the City's street patterns.

5. The City shall encourage residents to use alternative modes of transportation.

   a. The City will seek funds to implement the bike path system, consistent with the Circulation Element map.

Water Quality

1. Promote a community awareness program that will educate the community in water-saving methodologies at the home and the work place.

   a. The Public Works department will provide the community with information brochures containing water-saving techniques. Further the department should prepare a Water Conservation Ordinance for adoption by the City Council.

2. Promote the use of native and drought-tolerant new landscaping in existing and future parks.

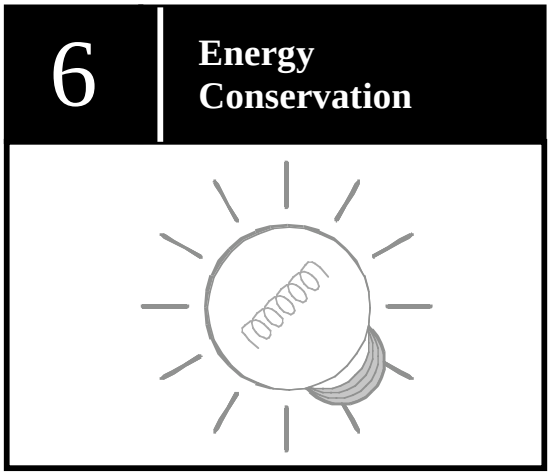
   a. The City's to-be-prepared Water Conservation Ordinance shall stress the use of native and drought-tolerant species.

3. Allow for adequate groundwater recharge by developing storm ponding and retention basins where feasible. In some areas these ponds or

basins can be incorporated into a recreational area or used as wildlife habitat area.

a. The Engineering Department shall implement the policies of this Element with regard to locations of future park/pond basins.

ISSUE SIX: **Energy Conservation**



Energy conservation is a topic of increasing importance. The State of California has experienced recent power shortages that have threatened to cripple the local economy. It is becoming increasingly difficult to tap new sources of energy, from a fiscal, political and environmental perspective. At the same time, the state continues to grow at a rapid pace.

Local governments can take a number of actions to ensure that new (and existing) development is as energy-efficient as possible. Strategies for Farmersville are outlined below.

Goals, Objectives, Action Plans

I. Consider energy conservation in the planning and design of new and existing development in Farmersville.

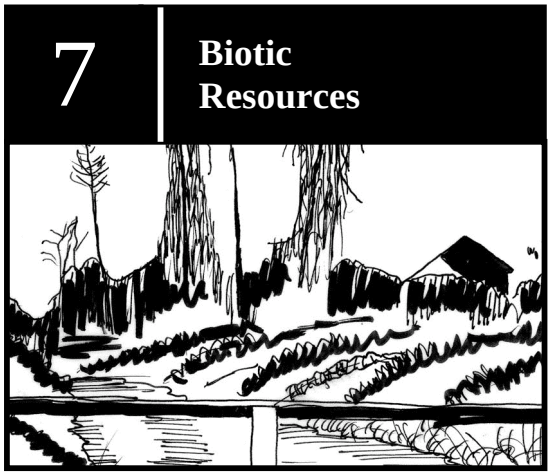
1. Development in the planning area shall be designed in a fashion that maximizes energy efficiency.

    a. Street standards shall be revised to increase shading along all future streets. Residential street widths for future streets shall be narrowed, thereby reducing the amount of pavement area - reducing heat buildup. Shade trees will also help to reduce heat buildup. For more information, see the Circulation Element.

    b. The City shall work with subdividers to design subdivisions so that a majority of dwelling units are properly oriented with respect to the sun, to take advantage of passive solar heating and cooling opportunities.

    c. The City shall work with developers to maximize the planting of deciduous shade trees around buildings and in paved areas.

***ISSUE SEVEN*: Biotic Resources**



Conservation of biotic resources generally refers to the protection of plant and animal species that have been determined to be rare, threatened or endgangered. A biotic survey prepared for the General Plan did not indicate the presence of any listed species in the planning area. The survey did note several locations in the planning area that could serve as habitat for species of concern, particularly the riparian habitat along Deep Creek along the east side of the community. While development proposed under the General Plan is not expected to have a significant impact on biotic resources, the community should do what it can to minimize these impacts.

Goals, Objectives, Action Plans

I. Minimize the impact of new development on biotic resources in the planning area.

1. Explore establishing the banks of local waterways as an open space resource.

    a. The Planning Department shall conduct an analysis of this proposal and prepare a plan of action.

2. The City shall review any attempts to line or pipe local waterways. This policy recognizes the value of local waterways as historical sources of groundwater recharge and wildlife habitat.

    a. The City shall remain vigilant in monitoring acitivities of local canal and irrigation districts and shall forward comments regarding lining or piping canals.

3. Protect areas that may serve as habitat from impacts of development.

    a. Where warranted, the City Planner shall require a biotic assessment for projects that may impact habitat areas.

4. Investigate establishment of a recreational trail along Deep Creek between Farmersville and the Kaweah Oaks Preserve.

    a. The City should coordinate with Sierra Los Tulares Land Trust, Tulare County and intervening property owners to explore this concept.

ISSUE EIGHT: **Historic/Cultural Resources**

Although the City of Farmersville does not have any structures designated as "historic" by the Tulare County Historical Society, there are some architecturally significant structures that enhance Farmersville's identity. Several buildings along Farmersville Boulevard and Visalia Road, in the central area display an interesting architectural character that create a sense of place. Spanish and western style architecture is used prominently, helping to give the community identity.

Conservation of cultural resources generally refers to the protection of historic and pre-historic artifacts. In the arena of city planning, this often pertains to buried objects (such as human remains, arrowheads, tools, and other objects left behind by previous cultures. State law requires the protection of these objects. The City is responsible for implementing these preservation laws.

Goals, Objectives, Action Plans

I. Take actions to promote Farmersville's historic identity and protect cultural resources.

1. Work with developers and architects in creating new buildings and renovating old buildings in a manner that is sensitive to the architectural character of Farmersville and the San Joaquin Valley.

    a. The City shall adopt design guidelines that promote good architectural design that reenforces Farmersville's identity and sense of place.

2. Protect cultural resources that may be impacted by new development.

    a. The Planning Department may require preparation of a cultural resources analysis where warranted. Areas along waterways are of particular concern. When cultural resources are uncovered during construction projects, all work in the vicinity of the "find" must be stopped and a qualified cultural resources expert consulted to determine appropriate protective measures.

PROJECT INFORMATION

This document is the Initial Study/Mitigated Negative Declaration on the potential environmental effects of the City of Farmersville (City) Gardenia Courtyards Development Project (Project). The City of Farmersville will act as the Lead Agency for this project pursuant to the California Environmental Quality Act (CEQA) and the CEQA Guidelines. Copies of all materials referenced in this report are available for review in the project file during regular business hours at 909 W. Visalia Road, Farmersville, CA 93223.

Farmersville, California 93223

Contact person and phone number

Karl Schoettler, City Planner
City of Farmersville: (559) 734-8737 ext. 8032

Project location

The City of Farmersville is located in Tulare County in the northern part of the San Joaquin Valley, east of the City of Visalia (see Figure 1). The approximately 9.4-acre Project site is located northeast of the intersection of Farmersville Road and East Walnut Avenue (see Figure 2) and the site would occupy Assessor's Parcel Numbers (APN) 111-290-015. State Route 198 runs east-west through Farmersville, approximately 0.75 miles north of the proposed Project site.

Project sponsor's name/address

AMG & Associates, LLC
PO Box 260770
Encino, CA 91426

General plan designation

General Commercial

Zoning

C-G (General Commercial)

Project Description

The proposed Project would include the development of two fully affordable multi-family projects for a total of 82 residential units and up to 13,950 square feet of commercial space. The northern portion of the Project site would consist of four buildings of senior housing developments with a total of 42 units, a commercial pad, community area, fenced dog park, bocce ball court, community garden, retention basins, and 97 parking spaces. The southern portion of the Project site would consist of an apartment complex with five residential buildings consisting of a total of 40 units, a community building, two commercial/retail pads, dog park, basketball court, retention basins, and 92 parking spaces. This apartment complex would include residential units, tot lot, half-basketball court, fenced dog park, on-site laundry facility, and outdoor picnic-barbeque area. The site construction will also include internal access roads, lighting, site landscaping and additional related improvements.

Specifically, the proposed Project includes:

- General Commercial:
    - Commercial Pads total – 13,950 sq. ft.
- Multi-family Residential:
    - Units – 40
    - Buildings - 5
- Senior Community
    - Units – 42
    - Buildings - 4

- Community Building
- Parking Spaces total – 92
- Retention Basins
- Facilities – Dog parks, basketball court, bocce ball court, on-site laundry, outdoor picnic-barbeque area
- Approve a General Plan Amendment for the General Commercial portions of the site to "Multi-Family Residential" on the Farmersville General Plan land use map.
- Approve a Zone Change from the General Commercial (C-G) portions of the site to "Multi-Family Residential (R-M)".
- Approval of a Site Plan Review

Surrounding Land Uses/Existing Conditions

The proposed Project site currently consists of vacant land with minimal vegetation. The site is highly disturbed.

Lands surrounding the proposed Project are described as follows:

- North: Residential housing.
- South: Vacant land, general commercial.
- East: Rural residences.
- West: Existing general commercial.

Other Public Agencies Involved

- The adoption of a Mitigated Negative Declaration by the City of Farmersville
- Approval of a General Plan Amendment by the City of Farmersville
- Approval of a Zone Change by the City of Farmersville
- Approval of a Site Plan Review by the City of Farmersville
- Approval of Building Permits by the City of Farmersville
- Approval of a Stormwater Pollution Prevention Plan by the Central Valley Regional Water Quality Control Board
- Dust Control Plan Approval letter from the San Joaquin Valley Air Pollution Control District

- Compliance with other federal, state and local requirements.

Tribal Consultation

The California Native American Tribes were contacted pursuant to AB 52 (Public Resources Code Section 21080.3.1, et seq.) and SB 18 on behalf of the City of Farmersville on May 30, 2023.

- Big Sandy Rancheria of Western Mono Indians
- Santa Rosa Indian Community of the Santa Rosa Rancheria
- Tule River Indian Tribe
- Wuksache Indian Tribe/Eshom Valley band
- Tubatulabals of Kern Valley
- North Fork Mono Tribe
- Big Sandy Rancheria of Western Mono Indians
- Kern Valley Indian Community

Tribes were provided 90 days, to request consultation pursuant to those statutes.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture Resources and Forest Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Energy
☐ Geology / Soils	☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials
☐ Hydrology / Water Quality	☐ Land Use / Planning	☐ Mineral Resources
☐ Noise	☐ Population / Housing	☐ Public Services
☐ Recreation	☐ Transportation	☐ Tribal Cultural Resources
☐ Utilities / Service Systems	☐ Wildfire	☐ Mandatory Findings of Significance

DETERMINATION

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Karl Schoettler

City Planner

City of Farmersville

Date

ENVIRONMENTAL CHECKLIST

I. AESTHETICS

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and regulations governing scenic quality?	☐	☐	☒	☐
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

RESPONSES

a. Have a substantial adverse effect on a scenic vista?

Less Than Significant Impact. The proposed Project would include the development of a 9.4-acre parcel for two fully affordable multi-family projects for a total of 82 units, three commercial/retail pads and community areas. The site construction will also include parking spaces, internal access roads, lighting, site landscaping and additional related improvements.

The structures will conform to design standards set forth by the City's General Plan and Zoning Ordinance. The proposed Project site is located in an area that is largely surrounded by urban uses such as commercial and residential and will not result in a use that is visually incompatible with the surrounding area.

The City of Farmersville General Plan does not identify any scenic vistas within the Project area. A scenic vista is generally considered a view of an area that has remarkable scenery or a resource that is indigenous to the area.

Construction activities will be visible from the adjacent roadsides; however, the construction activities will be temporary in nature and will not affect a scenic vista. The impact will be ***less than significant***.

Mitigation Measures: None are required.

b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Less Than Significant Impact. There are no state designated scenic highways within the immediate proximity to the Project site. California Department of Transportation Scenic Highway Mapping System identifies SR 198 east of SR 99 as an Eligible State Scenic Highway. This is the closest highway, located approximately 0.75 miles north of the Project site; however, the Project site is both physically and visually separated from SR 198 by intervening land uses. In addition, no scenic highways or roadways are listed within the Project area in the City of Farmersville's General Plan or Tulare County's General Plan. Based on the National Register of Historic Places (NRHP) and the City's General Plan, no historic buildings exist on the Project site. The proposed Project would not damage any trees, rock outcroppings or historic buildings within a State scenic highway corridor. Any impacts would be considered ***less than significant***.

Mitigation Measures: None are required.

c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and regulations governing scenic quality?

Less Than Significant Impact. Site construction will include multifamily housing consisting of 82 units and three general commercial pads, along with a community building, basketball court, bocce ball court,

dog parks, retention basins, and parking spaces. The site construction will also include internal access roads, lighting, site landscaping and additional related improvements. The residences will be multi-family and will conform to design standards set forth by the City's General Plan and Zoning Ordinance. The proposed Project site is located in an area that is substantially surrounded by urban uses, including commercial and residential, and as such, will not result in a use that is visually incompatible with the surrounding area. The proposed Project will not substantially degrade the existing visual character or quality of the area or its surroundings. The impact will be ***less than significant***.

Mitigation Measures: None are required.

d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less Than Significant Impact. Nighttime lighting is necessary to provide and maintain safe, secure, and attractive environments; however, these lights have the potential to produce spillover light and glare and waste energy, and if designed incorrectly, could be considered unattractive. Light that falls beyond the intended area is referred to as "light trespass". Types of light trespass include spillover light and glare. Minimizing all these forms of obtrusive light is an important environmental consideration. A less obtrusive and well-designed energy efficient fixture would face downward, emit the correct intensity of light for the use, and incorporate energy timers.

Spillover light is light emitted by a lighting installation that falls outside the boundaries of the property on which the installation is sited. Spillover light can adversely affect light-sensitive uses, such as residential neighborhoods at nighttime. Because light dissipates as it travels from the source, the intensity of a light fixture is often increased at the source to compensate for the dissipated light. This can further increase the amount of light that illuminates adjacent uses. Spillover light can be minimized by using only the level of light necessary, and by using cutoff type fixtures or shielded light fixtures, or a combination of fixture types.

Glare results when a light source directly in the field of vision is brighter than the eye can comfortably accept. Squinting or turning away from a light source is an indication of glare. The presence of a bright light in an otherwise dark setting may be distracting or annoying, referred to as discomfort glare, or it may diminish the ability to see other objects in the darkened environment, referred to as disability glare. Glare can be reduced by design features that block direct line of sight to the light source and that direct light downward, with little or no light emitted at high (near horizontal) angles, since this light would travel long distances. Cutoff-type light fixtures minimize glare because they emit relatively low-intensity light at these angles.

Currently, the sources of light in the Project area are from streetlights, the vehicles traveling along Farmersville Road and nearby residential streets, commercial uses, and nighttime lighting from adjacent residences, mini storage and commercial store. The Project would necessitate street and residential nighttime lighting and such lighting that would be subject to City standards. Accordingly, potential impacts would be considered ***less than significant***.

Mitigation Measures: None are required.

II. AGRICULTURE AND FOREST RESOURCES

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d. Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

RESPONSES

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. The Project site is located in an area of the City considered *Farmland of Local Importance* by the State Farmland Mapping and Monitoring Program.[1] The Project site is entirely within the Farmersville City limits and is designated General Commercial by the General Plan. Therefore, the proposed Project does not have the potential to result in the conversion of Farmland to non-agricultural uses or forestland uses to non-forestland. There is ***no impact***.

Mitigation Measures: None are required.

b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact. The 9.4-acre Project site is planned for urban uses and is currently zoned and designated in the General Plan as General Commercial. Upon approval of the Zone Change and General Plan Amendment, the eastern portion of the site will be Multi-family residential. The site is not under a Williamson Act Contract. There are ***no impacts.***

Mitigation Measures: None are required.

c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

No Impact. The Project is not zoned for forestland and does not propose any zone changes related to forest or timberland. There is ***no impact***.

Mitigation Measures: None are required.

[1] California Department of Conservation Division of Land Resource Protection. Farmland Mapping and Monitoring Program. https://maps.conservation.ca.gov/DLRP/CIFF. Accessed June 2023.

d. Result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. No conversion of forestland, as defined under Public Resource Code or General Code, as referenced above, would occur as a result of the Project. There is ***no impact***.

Mitigation Measures: None are required.

e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact. No land conversion from Farmland would occur for the Project. Surrounding land uses include residential and commercial. The proposed Project site is designated for urban development by the Farmersville General Plan and as such, does not have the potential to result in the conversion of Farmland to non-agricultural uses or forestland uses to non-forestland. There is ***no impact***.

Mitigation Measures: None are required.

III. AIR QUALITY

Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c. Expose sensitive receptors to substantial pollutant concentrations?	☐	☒	☐	☐
d. Result in other emissions (such as those leading to odors or adversely affecting a substantial number of people)?	☐	☐	☒	☐

The following information was provided by an Air Quality, Health Risk Analysis, Greenhouse Gas, and Energy Technical Memorandum that was performed on behalf of the proposed project by Johnson, Johnson & Miller Air Quality Consulting Services, report date September 22, 2023. The report can be read in its entirety in Appendix A.

RESPONSES

a. Conflict with or obstruct implementation of the applicable air quality plan?

Less Than Significant Impact. Air Quality Plans (AQPs) are plans for reaching attainment of air quality standards. The assumptions, inputs, and control measures are analyzed to determine if the Air Basin can reach attainment for the ambient air quality standards. The proposed Project site is located within the jurisdictional boundaries of the San Joaquin Valley Air Pollution Control District (SJVAPCD). To show attainment of the standards, the SJVAPCD analyzes the growth projections in the Valley, contributing factors in air pollutant emissions and formations, and existing and adopted emissions controls. The SJVAPCD then formulates a control strategy to reach attainment that includes both State and SJVAPCD regulations and other local programs and measures.

For projects that include stationary sources of emissions, the SJVAPCD relies on project compliance with Rule 2201—New and Modified Stationary Source Review to ensure that growth in stationary source emissions would not interfere with the applicable AQP. Projects exceeding the offset thresholds included in the rule are required to purchase offsets in the form of Emission Reduction Credits (ERCs).

The CEQA Guidelines indicate that a significant impact would occur if the project would conflict with or obstruct implementation of the applicable air quality plan. The GAMAQI indicates that projects that do not exceed SJVAPCD regional criteria pollutant emissions quantitative thresholds would not conflict with or obstruct the applicable AQP.

Compliance with Applicable Control Measures

SJVAPCD's AQPs contain a number of control measures, which are enforceable requirements through the adoption of rules and regulations. The following rules and regulations are relevant to the Project:

Rule 4201—Particulate Matter Concentration. This rule shall apply to any source operation that emits or may emit dust, fumes, or total suspended particulate matter.

Rule 4601—Architectural Coatings. The purpose of this rule is to limit Volatile Organic Compounds (VOC) emissions from architectural coatings. Emissions are reduced by limits on VOC content and providing requirements on coatings storage, cleanup, and labeling. Only compliant components are available for purchase in the San Joaquin Valley.

Rule 4641—Cutback, Slow Cure, and Emulsified Asphalt, Paving and Maintenance Operations. The purpose of this rule is to limit VOC emissions from asphalt paving and maintenance operations. If asphalt paving will be used, then the paving operations will be subject to Rule 4641. This regulation is enforced on the asphalt provider.

Rule 4702—Internal Combustion Engines. The purpose of this rule is to limit the emissions of NO_x, carbon monoxide (CO), VOC, and sulfur oxides (SO_x) from internal combustion engines. If the project includes emergency generators, the equipment is required to comply with Rule 4702.

Regulation VIII—Fugitive PM_{10} Prohibitions. This regulation is a control measure that is one main strategies from the 2006 PM_{10} for reducing the PM_{10} emissions that are part of fugitive dust. Projects over 10 acres are required to file a Dust Control Plan (DCP) containing dust control practices sufficient to comply with Regulation VIII. Rule 8021 regulates construction and demolition activities, road construction, bulk materials storage, paved and unpaved roads, carryout and trackout, etc. All development projects that involve soil disturbance are subject to at least one provision of the Regulation VIII series of rules.

Rule 9510–Indirect Source Review. This rule reduces the impact of NO_X and PM_{10} emissions from growth within the SJVAB. The rule places application and emission reduction requirements on development projects meeting applicability criteria in order to reduce emissions through on-site mitigation, off-site District-administered projects, or a combination of the two.

As discussed in Impact III(b) below, emissions of ROG, NO_X, CO, SO_X, PM_{10}, and $PM_{2.5}$ associated with the proposed Project would not exceed the SJVAPCD's significance thresholds during the construction phase (see Table). Similarly, emissions of ROG, NO_X, CO, SO_X, $PM_{2.5}$ or PM_{10} during operations would not exceed any applicable threshold of significance (see Table 2).

The Project would comply with all applicable CARB and SJVAPCD rules and regulations. Therefore, the Project complies with this criterion and would not conflict with or obstruct implementation of the applicable air quality attainment plan with regards to this criterion. The Project's regional operational emissions would not exceed any applicable SJVAPCD prior to the incorporation of mitigation measures (see Impact III(b)). Therefore, the Project would be considered consistent with the existing AQPs. Based on the findings above, the proposed Project would not conflict with or obstruct implementation of the applicable air quality plan. The impact would be ***less than significant***.

Mitigation Measures: None are required.

b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less Than Significant Impact. To result in a less than significant impact, emissions of nonattainment pollutants must be below the SJVAPCD's regional significance thresholds. This is an approach recommended by the SJVAPCD's in its GAMAQI. The SJVAB is in nonattainment for ozone, PM_{10} (State only), and $PM_{2.5}$. Ozone is a secondary pollutant that can be formed miles from the source of emissions, through reactions of ROG and NO_X emissions in the presence of sunlight. Therefore, ROG and NO_X are termed ozone precursors. As such, the primary pollutants of concern during Project construction and operation are ROG, NO_X, PM_{10}, and $PM_{2.5}$.

Since the SJVAB is nonattainment for ozone, PM_{10}, and $PM_{2.5}$, it is considered to have an existing significant cumulative health impact without the Project. When this occurs, the analysis considers whether the project's contribution to the existing violation of air quality standards is cumulatively considerable. The SJVAPCD regional thresholds for NO_X, ROG/VOC, PM_{10}, or $PM_{2.5}$ are applied as cumulative contribution thresholds. The SJVAPCD GAMAQI adopted in 2015 contains thresholds for CO, NO_X, ROG, SO_X, PM_{10}, and $PM_{2.5}$. Air pollutant emissions have both regional and localized effects.

The Project's regional emissions are compared to the applicable SJVAPCD regional thresholds below to address if the Project would result in a cumulatively considerable net increase of any criteria pollutant (including ozone precursors) of concern.

Criteria Pollutant Emission Estimates

Construction Emissions (Regional)

Construction emissions associated with the development envisioned for the proposed project are shown in Table prior to the incorporation of any mitigation.

Table 1
Summary of Construction-Generated Emissions of Criteria Air Pollutants – Unmitigated

Emissions Source	Emissions (Tons/Year)					
	ROG	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Project Construction (2025)	0.18	1.42	1.77	< 0.01	0.21	0.10
Project Construction (2026)	0.37	0.22	0.30	< 0.01	0.03	0.01
Total Construction Duration (2025-2026)						
Project Total	**0.55**	**1.64**	**2.07**	**< 0.01**	**0.24**	**0.11**
Significance Thresholds	**10**	**10**	**100**	**27**	**15**	**15**
Exceed Significance Thresholds?	**No**	**No**	**No**	**No**	**No**	**No**

Notes:
PM_{10} and $PM_{2.5}$ emissions are from the mitigated output to reflect compliance with Regulation VIII—Fugitive PM_{10} Prohibitions.
Source of Emissions: Modeling Assumptions and CalEEMod Output Files (Attachment A of Appendix A).
Source of Thresholds: San Joaquin Valley Air Pollution Control District (SJVAPCD). 2015. Guidance for Assessing and Mitigating Air Quality Impacts. February 19. Website: https://www.valleyair.org/transportation/GAMAQI-2015/FINAL-DRAFT-GAMAQI.PDF. Accessed September 2023.

As shown in Table 1 above, emissions from construction activities associated with the proposed Project would fall below the significance thresholds. Therefore, regional and cumulative impacts associated with construction of the proposed Project are less than significant.

Operational Emissions (Regional)

Operational emissions occur over the lifetime of the project. The SJVAPCD considers permitted and non-permitted emission sources separately when making significance determinations. In addition, the annual operational emissions are also considered separately from construction emissions. Operational emissions associated with the proposed Project are shown in Table 2. Operational emissions were estimated using

a full buildout scenario in the earliest year of operations (2026), which provides a conservative estimate of emissions and resulting potential impacts.

Table 2
Summary of Operational Emissions of Criteria Air Pollutants – Unmitigated

Source	Emissions (tons/year)					
	ROG	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Area	0.49	0.03	0.49	< 0.01	0.00	0.00
Energy	0.01	0.11	0.07	< 0.01	0.01	0.01
Mobile (Automobiles)	2.48	0.92	6.71	< 0.01	0.28	0.08
Annual Total	**2.98**	**1.06**	**7.27**	**< 0.01**	**0.29**	**0.09**
Significance Thresholds	**10**	**10**	**100**	**27**	**15**	**15**
Exceed Significance Thresholds?	**No**	**No**	**No**	**No**	**No**	**No**

Notes:
Emissions were quantified using CalEEMod based on Project details and earliest operational year for the proposed Project.
Source: Modeling Assumptions and CalEEMod Output Files (Attachment A of Appendix A).

As shown in Table 2, operational emissions would not exceed the applicable SJVAPCD thresholds of significance for ROG, NO_X, CO, SO_X, PM_{10}, or $PM_{2.5}$. Therefore, the impact from operations of the Project would be less than significant.

Conclusion

As shown in Table , the Project's regional emissions would not exceed the applicable regional criteria pollutant emissions quantitative thresholds during project construction. During operations, the Project would not exceed the applicable regional criteria pollutant emissions quantitative thresholds (see Table 2). Therefore, the impact would be ***less than significant***.

Mitigation Measures: None are required.

c. Expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact with Mitigation. Emissions occurring at or near the Project have the potential to create a localized impact that could expose sensitive receptors to substantial pollutant concentrations. The SJVAPCD considers a sensitive receptor to be a location that houses or attracts children, the elderly, people with illnesses, or others who are especially sensitive to the effects of air

pollutants. Examples of sensitive receptors include hospitals, residences, convalescent facilities, and schools.

The closest existing sensitive receptors to the Project site include residential receptors, the closest of which include existing single-family homes located within approximately 50 feet east of the Project boundary. See Appendix A (Attachment B-Construction Health Risk Assessment and Operational Health Risk Screening) for a graphical representation of the sensitive receptor locations within approximately ¼-mile of the Project site.

Localized Impacts

Emissions occurring at or near the project have the potential to create a localized impact also referred to as an air pollutant hotspot. Localized emissions are considered significant if when combined with background emissions, they would result in exceedance of any health-based air quality standard. In locations that already exceed standards for these pollutants, significance is based on a significant impact level (SIL) that represents the amount that is considered a cumulatively considerable contribution to an existing violation of an air quality standard. The pollutants of concern for localized impact in the SJVAB are NO_2, SO_X, and CO.

The SJVAPCD has provided guidance for screening localized impacts in the GAMAQI that establishes a screening threshold of 100 pounds per day of any criteria pollutant. If a project exceeds 100 pounds per day of any criteria pollutant, then ambient air quality modeling would be necessary. If the project does not exceed 100 pounds per day of any criteria pollutant, then it can be assumed that it would not cause a violation of an ambient air quality standard.

Construction: Localized Concentrations of PM_{10}, $PM_{2.5}$, CO, SO_x, and NO_X

Local construction impacts would be short-term in nature lasting only during the duration of construction. As shown in

Table 3 below, on-site construction emissions would be less than 100 pounds per day for each of the criteria pollutants. To present a conservative estimate, on-site emissions for on-road construction vehicles

were included in the localized analysis. Based on the SJVAPCD's guidance, the construction emissions would not cause an ambient air quality standard violation.

Table 3
Localized Concentrations of PM_{10}, $PM_{2.5}$, CO, SO_x, and NO_X for Construction - Unmitigated

Emission Source	On-site Emissions (pounds per day)					
	ROG	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Highest Daily Construction (2025)	3.39	31.75	30.51	0.05	9.78	5.27
Highest Daily Construction (2026)	33.78	10.10	14.04	0.02	1.14	0.43
Total Construction Duration						
Highest Daily Maximum	**33.78**	**31.75**	**30.51**	**0.05**	**9.78**	**5.27**
Significance Thresholds	**—**	**100**	**100**	**100**	**100**	**100**
Exceed Significance Thresholds?	**—**	**No**	**No**	**No**	**No**	**No**

Note:
Overlap of construction activities is based on the construction schedule shown in Table 2 and Attachment A of Appendix A.
Source of Emissions: Modeling Assumptions and CalEEMod Output Files (Attachment A of Appendix A). Maximum daily emissions represent the maximum daily emissions between the Summer and Winter scenarios.
Source of Thresholds: San Joaquin Valley Air Pollution Control District (SJVAPCD). 2015. Guidance for Assessing and Mitigating Air Quality Impacts. February 19. Website: https://www.valleyair.org/transportation/GAMAQI-2015/FINAL-DRAFT-GAMAQI.PDF. Accessed September 2023.

Operation: Localized Concentrations of PM_{10}, $PM_{2.5}$, CO, SO_x, and NO_X

Localized impacts could occur in areas with a single large source of emissions such as a power plant or with multiple sources concentrated in a small area such as a distribution center. The maximum daily operational emissions would occur at Project buildout, which was modeled for the year 2026 (the earliest year of operations). Operational emissions include those generated on-site by area sources such as consumer products and landscape maintenance, energy use from natural gas combustion, and motor vehicles operation at the Project site. Motor vehicle emissions are estimated for on-site operations using trip lengths for on-site travel and ¼-mile of off-site emissions.

As shown in

Table 4 below, operational modeling of on-site emissions for the Project indicate that the Project would not exceed 100 pounds per day for each of the criteria pollutants. Therefore, based on the SJVAPCD's guidance, the operational emissions would not cause an ambient air quality standard violation. As such, impacts would be less than significant.

Table 4
Localized Concentrations of PM_{10}, $PM_{2.5}$, CO, SO_x, and NO_X for Operations

Source	On-site Emissions (pounds per day)					
	ROG	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Area	2.96	0.68	0.29	0.00	0.06	0.06
Energy	0.04	0.63	0.37	0.00	0.05	0.05
Mobile (Automobiles)	15.41	5.42	42.84	0.03	1.55	0.42
Total	**18.41**	**6.73**	**43.50**	**0.03**	**1.66**	**0.53**
Significance Thresholds	**—**	**100**	**100**	**100**	**100**	**100**
Exceed Significance Thresholds?	**—**	**No**	**No**	**No**	**No**	**No**

Source of Thresholds: San Joaquin Valley Air Pollution Control District (SJVAPCD). 2015. Guidance for Assessing and Mitigating Air Quality Impacts. February 19. Website: https://www.valleyair.org/transportation/GAMAQI-2015/FINAL-DRAFT-GAMAQI.PDF. Accessed September 2023.

Toxic Air Contaminants

Construction

Project construction would involve the use of diesel-fueled vehicles and equipment that emit DPM, which is considered a TAC. The SJVAPCD's current threshold of significance for TAC emissions is an increase in cancer risk for the maximally exposed individual of 20 in a million (formerly 10 in a million). The SJVAPCD's 2015 GAMAQI does not currently recommend analysis of TAC emissions from project construction activities, but instead focuses on projects with operational emissions that would expose sensitive receptors over a typical lifetime of 70 years. In addition, the most intense construction activities of the Project's construction would occur during site preparation and grading phases over a short period.

There are no conditions unique to the Project site that would require more intense construction activity compared to typical development. Examples of situations that would warrant closer scrutiny may include sites that would require extensive excavation and hauling due to existing site conditions. Building construction typically requires limited amounts of diesel equipment relative to site clearing activities. Nonetheless, a construction HRA was prepared as part of this analysis. In addition, the analysis includes an evaluation of potential health impacts from construction and operations of the Project considered together, over a 70-year exposure scenario.

The results of the HRA prepared for Project construction for cancer risk and long-term chronic cancer risk are summarized below. Construction emissions were estimated assuming adherence to all applicable rules, regulations, and Project design features. The construction emissions were assumed to be distributed over the Project area with a working schedule of eight hours per day and five days per week. Emissions were adjusted by a factor of 4.2 to convert for use with a 24-hour-per-day, 365 day-per-year averaging period. Health risk calculations were completed using HARP2. Detailed parameters and complete calculations are included in Appendix A. The estimated health and hazard impacts at the Maximally Exposed Receptor (MER) from the Project's construction emissions are provided in **Error! Reference source not found.**.

Table 5
Unmitigated Health Risks from Project Construction to Off-Site Receptors

Exposure Scenario	Maximum Cancer Risk (Risk per Million)	Chronic Non-Cancer Hazard Index	Acute Non-Cancer Hazard Index
Risks and Hazards at the MER			
Risks and Hazards at the MER (Construction Only)	19.47	0.02005	0.00000
Risks and Hazards at the MER (Construction Plus Operations)	29.19	0.02015	0.00000
Significance Threshold	**20**	**1**	**1**
Threshold Exceeded in Any Scenario?	**Yes**	**No**	**No**

MER = Maximally Exposed Receptor
Project MER: Receptor #509 (36°18'52.8"N 119°12'16.4"W)
Source: Construction Health Risk Assessment and Operational Health Risk Screening (Attachment B of Appendix A).

As shown in **Error! Reference source not found.**, estimated health risks from elevated DPM concentrations during construction of the proposed Project would not exceed the applicable health risk significance thresholds when construction is considered alone; however, construction plus operational emissions would exceed the applicable cancer risk threshold. This represents a potentially significant construction TAC exposure impact. Therefore, mitigation is required to reduce the impact during the construction period to below a level of significance.

Mitigation measure AIR-1 requires the Project applicant, project sponsor, or construction contractor to provide documentation to the City of Farmerville that all off-road diesel-powered construction equipment greater than 50 horsepower meet EPA or CARB Tier 4 Interim off-road emissions standards or will utilize Level 3 filters. **Error! Reference source not found.** shows the health risks and non-cancer hazard index for construction with implementation of mitigation measure AIR-1.

Table 6
Summary of the Health Impacts from Mitigated Construction of the Project

Exposure Scenario	Maximum Cancer Risk (Risk per Million)	Chronic Non-Cancer Hazard Index	Acute Non-Cancer Hazard Index
Risks and Hazards at the MER—Tier 4 Equipment Scenario			
Risks and Hazards at the MER (Construction Only)	4.52	0.00466	0.00000
Risks and Hazards at the MER (Construction Plus Operations)	14.24	0.00476	0.00000
Risks and Hazards at the MER—Level 3 Filters Scenario			
Risks and Hazards at the MER (Construction Only)	5.32	0.00547	0.00000
Risks and Hazards at the MER (Construction Plus Operations)	15.04	0.00557	0.00000
Highest Risks and Hazards at the MER after Incorporation of MM AIR-C1			
Risks and Hazards at the MER	15.04	0.00557	0.00000
Significance Threshold	**20**	**1**	**1**
Threshold Exceeded in Any Scenario?	**No**	**No**	**No**

MER = Maximally Exposed Receptor
Project MER: Receptor #509 (36°18'52.8"N 119°12'16.4"W)
Source: Construction Health Risk Assessment and Operational Health Risk Screening (Attachment B of Appendix A).

As noted in **Error! Reference source not found.**, calculated health metrics from the proposed Project's construction DPM emissions would not exceed the cancer risk significance threshold or non-cancer hazard index significance threshold at the MER with incorporation of AIR-1. Therefore, the proposed Project would not result in a significant impact on nearby sensitive receptors from TACs during construction.

Operations

Unlike warehouses or distribution centers, the daily vehicle trips generated by the proposed residential and commercial mixed-use Project would be primarily generated by passenger vehicles. Passenger vehicles typically use gasoline engines rather than the diesel engines that are found in heavy-duty trucks. Gasoline-powered vehicles do emit TACs in the form of toxic organic gases, some of which are carcinogenic. Compared to the combustion of diesel, the combustion of gasoline had relatively low emissions of TACs. Thus, residential and commercial mixed-use development Projects typically produce limited amounts of TAC emissions during operation. Nonetheless, it is anticipated that there would be some heavy-duty trucks visiting the Project site during operations. Consistent with SJVAPCD guidance, an operational prioritization screening analysis was completed for the proposed Project.

Operational DPM emissions from diesel trucks were estimated using EMFAC2021 emission factors and estimated truck travel and idling at the Project site. The emissions were entered into the SJVAPCD Prioritization Screening Tool to determine the risk scores, with complete calculations and assumptions included as part of Attachment B of Appendix A. The results of the screening analysis are provided in **Error! Reference source not found.**.

Table 7
Prioritization Tool Health Risk Screening Results

Impact Source	Cancer Risk Score	Chronic Risk Score	Acute Risk Score
Diesel Trucks	9.72	0.00010	0.00000
Total Risk from Project Operations	**9.72**	**0.00010**	**0.00000**
Screening Risk Score Threshold	**10**	**1**	**1**
Screening Thresholds Exceeded?	**No**	**No**	**No**
Source: Construction Health Risk Assessment and Operational Health Risk Screening (Attachment B of Appendix A)			

As shown in **Error! Reference source not found.**, the Project would not exceed the cancer risk or chronic hazard screening threshold levels during Project operations. The primary source of the emissions responsible for chronic risk are from diesel trucks. DPM does not have an acute risk factor. Since the Project does not exceed the applicable SJVAPCD screening thresholds for cancer risk, acute risk, or chronic risk, this impact would be less than significant.

Valley Fever

Valley fever, or coccidioidomycosis, is an infection caused by inhalation of the spores of the fungus, *Coccidioides immitis* (*C. immitis*). The spores live in soil and can live for an extended time in harsh environmental conditions. Activities or conditions that increase the amount of fugitive dust contribute to greater exposure, and they include dust storms, grading, and recreational off-road activities.

The San Joaquin Valley is considered an endemic area for Valley fever. The San Joaquin Valley is considered an endemic area for Valley fever. During 2000–2018, a total of 65,438 coccidioidomycosis cases were reported in California; median statewide annual incidence was 7.9 per 100,000 population and varied by region from 1.1 in Northern and Eastern California to 90.6 in the Southern San Joaquin Valley, with the largest increase (15-fold) occurring in the Northern San Joaquin Valley. Incidence has been consistently high in six counties in the Southern San Joaquin Valley (Fresno, Kern, Kings, Madera, Tulare,

and Merced counties) and Central Coast (San Luis Obispo County) regions.[2] California experienced 7,517 new probable or confirmed cases of Valley fever in 2022. A total of 319 suspect, probable, and confirmed Valley fever cases were reported in Tulare County in 2022.[3]

The distribution of *C. immitis* within endemic areas is not uniform and growth sites are commonly small (a few tens of meters) and widely scattered. Known sites appear to have some ecological factors in common suggesting that certain physical, chemical, and biological conditions are more favorable for *C. immitis* growth. Avoidance, when possible, of sites favorable for the occurrence of *C. immitis* is a prudent risk management strategy. Listed below are ecologic factors and sites favorable for the occurrence of *C. immitis*:

1) Rodent burrows (often a favorable site for *C. immitis*, perhaps because temperatures are more moderate and humidity higher than on the ground surface)
2) Old (prehistoric) Indian campsites near fire pits
3) Areas with sparse vegetation and alkaline soils
4) Areas with high salinity soils
5) Areas adjacent to arroyos (where residual moisture may be available)
6) Packrat middens
7) Upper 30 centimeters of the soil horizon, especially in virgin undisturbed soils
8) Sandy, well-aerated soil with relatively high water-holding capacities

Sites within endemic areas less favorable for the occurrence of *C. immitis* include:

1) Cultivated field
2) Heavily vegetated areas (e.g., grassy lawns)
3) Higher elevations (above 7,000 feet)
4) Areas where commercial fertilizers (e.g., ammonium sulfate) have been applied
5) Areas that are continually wet

---

[2] Centers for Disease Control and Prevention (CDC). 2020. Regional Analysis of Coccidioidomycosis Incidence—California, 2000–2018. Website: https://www.cdc.gov/mmwr/volumes/69/wr/mm6948a4.htm?s_cid=mm6948a4_e. Accessed June 16, 2023.

[3] California Department of Public Health (CDPH). 2021. Coccidioidomycosis in California Provisional Monthly Report January – April 2023 (as of April 30, 2023). Website: https://www.cdph.ca.gov/Programs/CID/DCDC/CDPH%20Document%20Library/CocciinCA ProvisionalMonthlyReport.pdf. Accessed June 16, 2023.

6) Paved (asphalt or concrete) or oiled areas

7) Soils containing abundant microorganisms

8) Heavily urbanized areas where there is little undisturbed virgin soil.[4]

The Project is situated on a site previously disturbed that does not provide a suitable habitat for spores. Specifically, the Project site had been previously disturbed and has some vegetation cover in the form of shrubbery. Therefore, implementation of the proposed Project would have a low probability of the site having *C. immitis* growth sites and exposure to the spores from disturbed soil.

Although conditions are not favorable, construction activities could generate fugitive dust that contains *C. immitis* spores. The Project will minimize the generation of fugitive dust during construction activities by complying with SJVAPCD's Regulation VIII. Therefore, this regulation, combined with the relatively low probability of the presence of *C. immitis* spores would reduce Valley fever impacts to less than significant.

During operations, dust emissions are anticipated to be relatively small because most of the Project area where operational activities would occur would be occupied by the proposed residential buildings, commercial buildings, landscaping, pavement, and internal streets. This condition of the Project being built-up would lessen the possibility of the Project site providing habitat suitable for *C. immitis* spores and for generating fugitive dust that may contribute to Valley fever exposure. Impacts would be less than significant.

Naturally Occurring Asbestos

Review of the map of areas where naturally occurring asbestos in California are likely to occur found no such areas in the immediate Project area. Therefore, development of the Project is not anticipated to expose receptors to naturally occurring asbestos.[5] Impacts would be less than significant.

Operations—The Project's Potential to Locate Sensitive Receptor Near Existing Sources of TACs

As a residential and commercial mixed-use development Project, the Project would locate sensitive receptors (future residents) to a site where future Project residents could be subject to existing sources of

Reported Historic Asbestos Mines, Historic Asbestos Prospects, and Other Natural Occurrences of Asbestos in California. Open-File Report 2011-1188 Website: https://pubs.usgs.gov/of/2011/1188/. Accessed May 20, 2023.

TACs at the project site. However, the California Supreme Court concluded in *California Building Industry Association (CBIA) v. Bay Area Air Quality Management District (BAAQMD)* that agencies subject to CEQA are not required to analyze the impact of existing environmental conditions on a project's future users or residents. Therefore, this impact will not be further addressed in this document.

Impact Analysis Summary

In summary, the Project would not exceed SJVAPCD localized emission daily screening levels for any criteria pollutant. The Project is not a significant source of TAC emissions during operations and would not be a significant source of TAC emissions during construction after incorporation of MM AIR-1. The Project is not in an area with suitable habitat for Valley fever spores and is not in an area known to have naturally occurring asbestos. Therefore, the Project would result in ***less than significant*** to sensitive receptors after incorporation of mitigation.

Mitigation Measures:

MM AIR-1:

Before a construction permit is issued for the proposed Project, the Project applicant, Project sponsor, or construction contractor shall submit documentation demonstrating reasonably detailed compliance with one of the following requirements to the City of Farmersville:

Option 1) Where portable diesel engines are used during construction, all off-road equipment with engines greater than 50 horsepower shall have engines that meet or exceed either United States Environmental Protection Agency (EPA) or California Air Resources Board (CARB) Tier 4 Interim off-road emission standards except as otherwise specified herein. If engines that comply with Tier 4 Interim or Tier 4 Final off-road emission standards are not commercially available, then the construction contractor shall use the next cleanest piece of off-road equipment (e.g., Tier 3) that is commercially available. For purposes of this Project design feature, "commercially available" shall mean the equipment at issue is available taking into consideration factors such as (i) critical-path timing of construction; and (ii) geographic proximity to the Project site of equipment. If the relevant equipment is determined by the Project applicant to not be commercially available, the contractor can confirm this conclusion by providing letters from at least two rental companies for each piece of off-road equipment that is at issue.

Option 2) Prior to the issuance of any demolition, grading, or building permits (whichever occurs earliest), the project applicant and/or construction contractor shall prepare a construction operations plan that, during construction activities, requires all off-road

equipment with engines greater than 50 horsepower to meet either the particulate matter emissions standards for Tier 4 Interim engines or be equipped with Level 3 diesel particulate filters. Tier 4 Interim engines shall, at a minimum, meet EPA or CARB particulate matter emissions standards for Tier 4 Interim engines. Alternatively, use of CARB-certified Level 3 diesel particulate filters on off-road equipment with engines greater than 50 horsepower can be used in lieu of Tier 4 Interim engines or in combination with Tier 4 Interim or better engines. The construction contractor shall maintain records documenting its efforts to comply with this requirement, including equipment lists. Off-road equipment descriptions and information shall include, but are not limited to, equipment type, equipment manufacturer, equipment identification number, engine model year, engine certification (Tier rating), horsepower, and engine serial number. The Project applicant and/or construction contractor shall submit the construction operations plan and records of compliance to the City of Farmersville.

d. Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?

Less Than Significant Impact. Two situations create a potential for odor impact. The first occurs when a new odor source is located near an existing sensitive receptor. The second occurs when a new sensitive receptor locates near an existing source of odor. Odor impacts on residential areas and other sensitive receptors, such as hospitals, day-care centers, schools, etc. warrant the closest scrutiny, but consideration should also be given to other land uses where people may congregate, such as recreational facilities, worksites, and commercial areas.

Although the Project is less than one mile from the nearest sensitive receptor, the Project is not expected to be a significant source of odors. The screening levels for these land use types are shown in Table .

Construction

During construction, various diesel-powered vehicles and equipment in use on-site would create localized odors. These odors would be temporary and intermittent, which would decrease the likelihood of the odors concentrating in a single area or lingering for any notable period of time. As such, these odors would likely not be noticeable for extended periods of time beyond the Project's site boundaries. The potential for odor impacts from construction of the proposed Project would, therefore, be less than significant.

Table 8
Screening Levels for Potential Odor Sources

Odor Generator	Screening Distance
Wastewater Treatment Facilities	2 miles
Sanitary Landfill	1 mile
Transfer Station	1 mile
Composting Facility	1 mile
Petroleum Refinery	2 miles
Asphalt Batch Plant	1 mile
Chemical Manufacturing	1 mile
Fiberglass Manufacturing	1 mile
Painting/Coating Operations (e.g., auto body shop)	1 mile
Food Processing Facility	1 mile
Feed Lot/Dairy	1 mile
Rendering Plant	1 mile
Source of Thresholds: San Joaquin Valley Air Pollution Control District (SJVAPCD). 2015. Guidance for Assessing and Mitigating Air Quality Impacts. February 19. Website: https://www.valleyair.org/transportation/GAMAQI-2015/FINAL-DRAFT-GAMAQI.PDF. Accessed September 2023.	

Operations

Project as a Potential Odor Generator

The development of the proposed Project would not substantially increase objectionable odors in the area. Land uses that are typically identified as sources of objectionable odors include landfills, transfer stations, sewage treatment plants, wastewater pump stations, composting facilities, asphalt batch plants, rendering plants, and other land uses outlined in Table . The proposed residential and commercial mixed-use Project would not engage in any of these activities. Minor sources of odors that would be associated with typical residential and commercial mixed-use development Projects, such as exhaust from mobile sources (including diesel-fueled vehicles), are known to have temporary and less concentrated odors. Considering the low intensity of potential odor emissions, the proposed Project's operational activities would not expose receptors to objectionable odor emissions. Therefore, the proposed Project would not be considered to be a generator of objectionable odors during operations. As such, impacts would be less than significant.

Project as a Receptor

With the *CBIA v. BAAQMD* ruling, analysis of odor impacts on receivers is not required for CEQA compliance unless the project would exacerbate the impact. As discussed above, the Project is a residential and commercial mixed-use Project and would not be considered a major source of odors during construction or operation. Therefore, the Project would not exacerbate an existing odor impact and no further analysis is required. The impacts will be ***less than significant.***

Mitigation Measures: None are required.

IV. BIOLOGICAL RESOURCES

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☒	☐
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☒	☐	☐

e.	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
f.	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

The proposed Project site is located in a portion of the central San Joaquin Valley that has, for decades, experienced intensive agricultural and urban disturbances. Current agricultural endeavors in the region include orange groves, olive orchards and row crops.

Like most of California, the Central San Joaquin Valley experiences a Mediterranean climate. Warm dry summers are followed by cool moist winters. Summer temperatures usually exceed 90 degrees Fahrenheit, and the relative humidity is generally very low. Winter temperatures rarely raise much above 70 degrees Fahrenheit, with daytime highs often below 60 degrees Fahrenheit. According to the Farmersville General Plan Community Profile, approximately 90 percent of all rainfall in Farmersville occurs between November and April. Average rainfall measured in Visalia is 10.15 inches.[6] Nearly all precipitation falls in the form of rain and stormwater readily infiltrates the soils of the surrounding the sites.

Native plant and animal species once abundant in the region have become locally extirpated or have experienced large reductions in their populations due to conversion of upland, riparian, and aquatic habitats to agricultural and urban uses. Remaining native habitats are particularly valuable to native wildlife species including special status species that still persist in the region.

The proposed Project site is currently vacant with minimal vegetation and located in an area surrounded with urban uses including residential and commercial.

[6] Ch. 2 Physical Environmental, Farmersville General Plan Part II Community Profile, November 2002. pg 2-1. Accessed June 2023.

RESPONSES

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Less Than Significant Impact. The proposed Project would include the development of a 9.4-acre parcel for two fully affordable multi-family projects for a total of 82 units, three commercial pads, a community building, and community areas. The site construction will also include parking spaces, internal access roads, lighting, site landscaping and additional related improvements.

The site is currently vacant and in an area that is highly disturbed and lacking in substantial vegetation, such as trees, brush or shrubs. This factor suggests that the Project site is extremely unlikely to serve as nesting habitat for bird species or any animal or plant species. No wetlands or waters of the U.S. or water of the State were found within the Project area.

According to the Farmersville General Plan, a total of eight special status animal species could potentially occur in the Farmersville area. Two of the eight species are listed as threatened or endangered by the U.S. Fish and Wildlife Service or the California Department of Fish and Game. The remaining six species are candidates for federal listing or listed species of special concern by the State of California. No special status plant species are likely to occur in the Farmersville planning area. The two species listed as Endangered or Threatened are the San Joaquin Kit Fox and the Valley Elderberry Longhorn Beetle. A biotic survey prepared for the General Plan update indicated that the overwhelming bulk of the planning area has been severely disturbed from its natural state by urbanization and agricultural activities.[7]

Tulare County is considered to be a portion of the larger regional habitat of the San Joaquin Kit Fox, a species whose habitat extends along the Sierra Nevada foothills and down to the Coast. According to the Tulare County Planning Department, kit foxes have been observed foraging in orange groves west of Lindsay City Limits many years previous. However, it is not known if any recent sightings have been documented. The potential for San Joaquin Kit Fox occurrence in the proposed Project area is considered to be quite low given the highly disturbed and barren nature of the site and precludes the ability of the San Joaquin Kit Fox to be on-site. Impacts are ***less than significant***.

Mitigation Measures: None are required.

[7] Ch. 4 Conservation, Open Space, Parks and Recreation Element, Farmersville General Plan Part I General Plan, November 2002. Accessed June 2023.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

c. Have a substantial adverse effect on federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Less Than Significant Impact. There are no natural waterways, sensitive natural communities, riparian habitat or protected wetlands on the Project site. As such, any impacts would be ***less than significant.***

Mitigation Measures: None are required.

d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less than Significant Impacts with Mitigation. The Project could impede the use of nursery sites for native birds protected under the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code (CFGC). Migratory birds are expected to nest on and near the Project site. Construction disturbance during the breeding season could result in the incidental loss of fertile eggs or nestlings or otherwise lead to nest abandonment. Disturbance that causes nest abandonment or loss of reproductive effort can be considered take under the MBTA and CFGC. Loss of fertile eggs or nesting birds, or any activities resulting in nest abandonment, could constitute a significant effect if the species is particularly rare in the region.

Construction activities such as excavating, trenching, and grading that disturb a nesting bird on the Project site or immediately adjacent to the construction zone could constitute a significant impact. Mitigation Measure BIO-1 (below) will reduce the potential effect to a ***less than significant*** level.

Mitigation Measures:

BIO-1: Protect nesting birds.

1. To the extent practicable, construction shall be scheduled to avoid the nesting season, which extends from February through August.

2. If it is not possible to schedule construction between September and January, pre-construction surveys for nesting birds shall be conducted by a qualified biologist to ensure that no active nests will be disturbed during the implementation of the Project. A pre-construction survey shall be conducted no more than 14 days prior to the initiation of construction activities. During this survey, the qualified biologist shall inspect all potential nest substrates in and immediately adjacent to the impact areas. If an active nest is found close enough to the construction area to be disturbed by these activities, the qualified biologist shall determine the extent of a construction-free buffer to be established around the nest. If work cannot proceed without disturbing the nesting birds, work may need to be halted or redirected to other areas until nesting and fledging are completed or the nest has otherwise failed for non-construction related reasons.

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Less Than Significant Impact. The City of Farmersville's General Plan includes various policies for the protection of biological resources. The proposed Project would not conflict with any of the adopted policies and any impacts would be considered ***less than significant***.

Mitigation Measures: None are required.

f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. There are no adopted habitat conservation plans that apply to the Project site. There is no impact.

Mitigation Measures: None are required.

V. CULTURAL RESOURCES

Would the project:

		Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a.	Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?	☐	☒	☐	☐
b.	Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☒	☐	☐
c.	Disturb any human remains, including those interred outside of formal cemeteries?	☐	☒	☐	☐

RESPONSES

a. Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?

Less Than Significant Impact with Mitigation. A cultural records search was conducted by the Southern San Joaquin Valley Information Center (SSJVIC) on May 30, 2023 (RS 23-182, Appendix B). The records search conducted at the SSJVIC indicated that there are no recorded cultural resources within the Project area. There are three recorded resources within the one-half mile radius: P-54-003229, 004885, & 005296. These resources consist primarily of a historic era ranch, single family property, industrial building, and a canal. There are no recorded cultural resources within the Project area or radius that are listed in the National Register of Historic Places, the California Register of Historical Resources, the California Points of Historical Interest, California Inventory of Historic Resources, or the California State Historic Landmarks.

There have been no previous cultural resource studies completed within the project area. There have been ten studies completed within the one-half mile radius: TU- 00121, 00134, 01033, 01144, 01171, 01179, 01499, 01718, 01783, & 01944.

While no archaeological or built environment resources were identified within the area, subsurface construction activities associated with the proposed Project could potentially damage or destroy previously undiscovered historic resources. This is considered a potentially significant impact; however,

implementation of Mitigation Measure CUL-1 will ensure that significant impacts remain ***less than significant with mitigation incorporation.***

Mitigation Measures:

CUL-1: The following measures shall be implemented:

- Before initiation of construction or ground-disturbing activities associated with the Project, the City shall require all construction personnel to be alerted to the possibility of buried cultural resources, including historic, archeological and paleontological resources;
- The general contractor and its supervisory staff shall be responsible for monitoring the construction Project for disturbance of cultural resources; and
- If a potentially significant historical, archaeological, or paleontological resource, such as structural features, unusual amounts of bone or shell, artifacts, human remains, or architectural remains or trash deposits are encountered during subsurface construction activities (i.e., trenching, grading), all construction activities within a 100-foot radius of the identified potential resource shall cease until a qualified archaeologist evaluates the item for its significance and records the item on the appropriate State Department of Parks and Recreation (DPR) forms. The archaeologist shall determine whether the item requires further study. If, after the qualified archaeologist conducts appropriate technical analyses, the item is determined to be significant under California Environmental Quality Act, the archaeologist shall recommend feasible mitigation measures, which may include avoidance, preservation in place or other appropriate measure, as outlined in Public Resources Code section 21083.2. The City of Farmersville shall implement said measures.

b. <u>Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?</u>

Less Than Significant Impact with Mitigation. The possibility exists that subsurface construction activities may encounter undiscovered archaeological resources. This would be a potentially significant impact. Implementation of Mitigation Measure CUL-1 would require inadvertently discovery practices to be implemented should previously undiscovered archeological resources be located. As such, impacts to undiscovered archeological resources would be ***less than significant with mitigation incorporation.***

c. Disturb any human remains, including those interred outside of formal cemeteries?

Less Than Significant Impact with Mitigation. There are no unique geological features or known fossil-bearing sediments in the vicinity of the proposed Project site. However, there remains the possibility for previously unknown, buried paleontological resources or unique geological sites to be uncovered during subsurface construction activities. Therefore, this would be a potentially significant impact. Mitigation is proposed requiring standard inadvertent discovery procedures to be implemented to reduce this impact to a level of ***less than significant with mitigation incorporation***.

Mitigation Measures:

CUL-2: The Project applicant shall incorporate into the construction contract(s) a provision that in the event a fossil or fossil formations are discovered during any subsurface construction activities for the proposed Project (i.e., trenching, grading), all excavations within 100 feet of the find shall be temporarily halted until the find is examined by a qualified paleontologist, in accordance with Society of Vertebrate Paleontology standards. The paleontologist shall notify the Project applicant, who shall coordinate with the paleontologist as to any necessary investigation of the find. If the find is determined to be significant under CEQA, the City shall implement those measures, which may include avoidance, preservation in place, or other appropriate measures, as outlined in Public Resources Code section 21083.2.

VI. ENERGY

Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

RESPONSES

The following information was provided by an Air Quality, Health Risk Analysis, Greenhouse Gas, and Energy Technical Memorandum that was performed on behalf of the proposed Project by Johnson, Johnson & Miller Air Quality Consulting Services, report date September, 2023. The report can be read in its entirety in Appendix A.

a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less Than Significant Impact. The proposed Project would be served with electricity provided by Eastside Power Authority or Southern California Edison (SCE).

Methodology

The energy requirements for the proposed Project were determined using the construction and operational estimates generated from the Air Quality Analysis (refer to Attachment A of Appendix A for related CalEEMod output files). The calculation worksheets for diesel fuel consumption rates for off-road construction equipment and on-road vehicles are provided in Attachment C (Energy Consumption Calculations) of Appendix A. Short-term construction energy consumption is discussed below.

Short-Term Construction

Off-Road Equipment

Table provides estimates of the Project's construction fuel consumption from off-road construction equipment for the entire Project, categorized by construction activity.

Table 9
Construction Off-Road Fuel Consumption

Project Component	Construction Activity	Fuel Consumption (gallons)
Gardenia Gardens Project (On-site, Off-road Equipment Use)	Site Preparation	912
	Grading	1,015
	Building Construction	9,082
	Paving	507
	Architectural Coating	59
Total Construction Off-Road Fuel Consumption		**11,575**
Source: Energy Consumption Calculations (Attachment C of Appendix A).		

As shown in Table , use of off-road equipment associated with construction of the proposed Project is estimated to consume approximately 11,575 gallons of diesel fuel over the entire construction duration. There are no unusual Project characteristics that would necessitate the use of construction equipment that would be less energy efficient than at comparable construction sites in the City of Farmersville, the larger Tulare County region, or other parts of California. Therefore, it is expected that construction fuel consumption associated with the proposed Project would not be any more inefficient, wasteful, or unnecessary than at other construction sites in the region.

On-Road Vehicles

On-road vehicles for construction workers, vendors, and haulers would require fuel for travel to and from the site during construction. Table 10 provides an estimate of the total on-road vehicle fuel usage during construction. There are no unusual Project characteristics that would necessitate the use of construction equipment that would be less energy efficient than at comparable construction sites in other parts of Farmersville or the Tulare County region. Therefore, it is expected that construction fuel consumption associated with the proposed Project would not be any more inefficient, wasteful, or unnecessary than at other construction sites in the region.

Table 10
Construction On-Road Fuel Consumption

	Project Component	Total Annual Fuel Consumption (gallons)
Gardenia Gardens Project (On-road Fuel Consumption)	Site Preparation	107
	Grading	4,323
	Building Construction	8,510

	Project Component	Total Annual Fuel Consumption (gallons)
	Paving	194
	Architectural Coating	177
Total Construction On-Road Fuel Consumption		**13,311**
Source: Energy Consumption Calculations (Attachment C of Appendix A).		

As summarized in Table and Table 10, the proposed Project would require 11,575 gallons of diesel fuel for construction off-road equipment and 13,311 gallons of gasoline and diesel for on-road vehicles during construction. There are no unusual Project characteristics that would necessitate the use of construction equipment that would be less energy efficient than at comparable construction sites in the region or other parts of the state. In addition, the overall construction schedule and process is already designed to be efficient in order to avoid excess monetary costs. For example, equipment and fuel are not typically used wastefully due to the added expense associated with renting the equipment, maintaining it, and fueling it. Therefore, it is expected that construction fuel consumption associated with the proposed Project would not be any more inefficient, wasteful, or unnecessary than at other construction sites in the region, and as such, impacts would be less than significant.

Other Energy Consumption Anticipated During Project Construction

Other equipment could include construction lighting, field services (office trailers), and electrically driven equipment such as pumps and other tools. The Project site is located in the City of Farmersville. As construction activities would occur primarily during daylight hours, it is anticipated that the use of construction lighting would be minimal. Singlewide mobile office trailers, which are commonly used in construction staging areas, generally range in size from 160 square feet to 720 square feet. A typical 720-square-foot office trailer would consume approximately 14,885 kWh during the approximate 1.07-year construction phase (Attachment C of Appendix A).

Long-Term Energy Demand

Building Energy Demand

As shown in

Table 3 and Table 4, the proposed Project is estimated to demand 902,208 kilowatt-hours (KWhr) of electricity and 2,434,546 1,000-British Thermal Units (kBTU) of natural gas, respectively, on an annual basis.

Table 3
Long-Term Electricity Usage

Land Use	Total Electricity Demand (KWhr/year)
Apartments Low Rise (Multifamily Resisential)	184,398
Health Club (Multifamily Community Center)	18,646
Retirement Community (Senior Living Housing)	193,617
Strip Mall	71,687
Fast Food Restaurant with Drive Thru	260,706
Parking Lot	173,154
Total Project Consumption	**902,208**
Source: Energy Consumption Calculations (Attachment C of Appendix A).	

Table 4
Long-Term Natural Gas Usage

Land Use	Total Natural Gas Demand (kBTU/year)
Apartments Low Rise (Multifamily Resisential)	720,004
Health Club (Multifamily Community Center)	82,265
Retirement Community (Senior Living Housing)	756,004
Strip Mall	42,055
Fast Food Restaurant with Drive Thru	834,218
Parking Lot	0
Total Project Consumption	**2,434,546**
Source: Energy Consumption Calculations (Attachment C of Appendix A).	

Buildings and infrastructure constructed pursuant to the proposed Project would comply with the versions of CCR Titles 20 and 24, including California Green Building Standards (CALGreen), that are applicable at the time that building permits are issued. The proposed Project is estimated to demand 902,208 KWhr of electricity per year and 2,434,546 kBTU of natural gas per year. As the Project site is currently undeveloped, this would represent an increase in demand for electricity and natural gas.

It would be expected that building energy consumption associated with the proposed Project would not be any more inefficient, wasteful, or unnecessary than for any other similar buildings in the City of Farmersville or the larger Tulare County region. Current state regulatory requirements for new building construction contained in the 2022 CALGreen and Title 24 standards apply to both residential and non-residential buildings and would increase energy efficiency and reduce energy demand in comparison to most existing development, and therefore would reduce actual environmental effects associated with energy use from the proposed Project. Additionally, the CALGreen and Title 24 standards have increased efficiency standards through each update. The most recent 2022 standards became effective January 1, 2023 and will be updated in the next cycle that will become effective at the start of 2026. Therefore, while the proposed Project would result in increased electricity and natural gas demand, electricity and natural gas would be consumed more efficiently than most existing development due to compliance with the latest building standards.

Based on the above information, the proposed Project would not result in the inefficient or wasteful consumption of electricity or natural gas, and impacts would be ***less than significant***.

Transportation Energy Demands

Table 5 provides an estimate of the daily and annual fuel consumed by vehicles traveling to and from the proposed Project. These estimates were derived using the same assumptions used in the operational air quality analysis for the proposed Project.

Table 5
Long-Term Operational Vehicle Fuel Consumption

Vehicle Type	Percent of Vehicle Trips	Annual VMT	Average Fuel Economy (miles/ gallon)	Total Daily Fuel Consumption (gallons)	Total Annual Fuel Consumption (gallons)
Passenger Cars (LDA)	46.04	5,421,903	30.14	492.8	179,875
Light Trucks (Pickups) and Medium Vehicles	43.52	5,125,467	22.05	636.8	232,446
Light-Heavy to Medium-Heavy Diesel Trucks	6.04	711,656	11.56	168.7	61,585
Heavy-heavy Trucks	1.57	184,751	5.96	84.9	30,998
Motorcycles	2.17	255,223	41.76	16.7	6,111
Other	0.66	78,207	7.56	28.4	10,348
Total	**100**	**11,777,207**	**—**	**1,428**	**521,363**

Notes:
VMT = vehicle miles traveled
Percent of Vehicle Trips and VMT provided by CalEEMod.

Vehicle Type	Percent of Vehicle Trips	Annual VMT	Average Fuel Economy (miles/ gallon)	Total Daily Fuel Consumption (gallons)	Total Annual Fuel Consumption (gallons)
"Other" consists of buses and motor homes.					
Source: Energy Consumption Calculations (Attachment C of Appendix A).					

The daily vehicular fuel consumption is estimated to be 1,428 gallons of combined gasoline and diesel fuel. Annual consumption is estimated at 521,363 gallons. In addition, the proposed Project would constitute development within an established community and would not be opening a new geographical area for development. As such, the proposed Project would not result in unusually long trip lengths for future residents, visitors, customers, employees, or deliveries to the proposed residential and commercial mixed-use development.

The property is located near residential land uses, including adjacent single-family homes to the east of the Project site and to the west of the north half of the project site. The proposed Project would be well-positioned to accommodate an existing community and provide housing and commercial uses for planned growth. Vehicles accessing the site would be typical of vehicles accessing similar residential and commercial mixed-use development uses in the City of Farmersville, Tulare County, and surrounding areas. For these reasons, vehicular fuel consumption associated with the proposed Project would not be any more inefficient, wasteful, or unnecessary than for any other similar land use activities in the region, and impacts would be ***less than significant***.

Mitigation Measures: None are required.

b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Less Than Significant Impact. The Project proposes the construction of new residential and commercial mixed-use development that would be built in accordance with all applicable rules and regulations. Compliance with established and applicable regulations would ensure that the project would not conflict with or obstruct any state or local plan for renewable energy or energy efficiency. Moreover, compliance with Title 24 standards would ensure that the proposed Project would not conflict with any energy conservation policies related to the proposed Project's building envelope, mechanical systems, and indoor and outdoor lighting. Notably, the applicable Title 24 standards require the Project to include on-site renewable energy to serve the future Project occupants and residents.

In addition, the proposed Project would constitute development within an established community. Specifically, the Project site is adjacent to built-up areas of the City of Farmersville. As such, the Project

would not be opening a new geographical area for development such that it would not result in unusually long trip lengths for future project residents or visitors. In addition, the proposed residential and commercial mixed-use development is specifically designed for increased walkability, facilitated by the proposed pedestrian connectivity throughout the Project site. For the above reasons, the proposed Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency, and impacts would be ***less than significant***.

Mitigation Measures: None are required.

VII. GEOLOGY AND SOILS

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii. Strong seismic ground shaking?	☐	☐	☒	☐
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv. Landslides?	☐	☐	☒	☐
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c. Be located on a geologic unit or soil that is unstable, or that would become	☐	☐	☒	☐

	unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?				
d.	Be located on expansive soil, as defined in Table 18-1-B of the most recently adopted Uniform Building Code creating substantial risks to life or property?	☐	☐	☒	☐
e.	Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f.	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

RESPONSES

a-i. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

No Impact. The proposed Project site is not located within a currently designated Alquist-Priolo Earthquake Fault Zone.[8] Since no known surface expression of active faults are believed to cross the site, fault rupture through the site is not anticipated. ***No impacts*** would occur.

Mitigation Measures: None are required.

[8] California Earthquake Hazards Zone Application, California Department of Conservation. https://maps.conservation.ca.gov/cgs/EQZApp/app/. Accessed June 2023.

a-ii. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking?

Less Than Significant Impact. There are no known active earthquake faults in the City of Farmersville. The proposed Project site is not located within an Alquist-Priolo Earthquake Fault Zone and no known faults cut through the local soil at the site. The closest known faults likely to affect the community are the Owens Valley fault, located about 65 miles to the east along the base of the Sierra Nevada in the Owens Valley, and the San Andreas fault located about 70 miles to the southwest in the coastal range. According to the Five County Seismic Safety Element (FCSSE), Farmersville is located in the V-1 zone, defined as an area "of hard rock alluvium on valley floors". The FCSSE further states that, "the distance to either of the faults expected to be a source of shaking is sufficiently great that shaking should be minimal and the requirements of the Uniform Building Code Zone II should be adequate for normal facilities."[9] Therefore, the impact is ***less than significant***.

Mitigation Measures: None are required.

a-iii. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?

Less Than Significant Impact. Tulare County has extremely low seismic activity levels, although shaking may be felt from earthquakes whose epicenter lie to the south and west. The proposed Project would comply with existing building code standards or design and construction, which would minimize any impacts resulting from ground shaking or liquefaction. Due to the relatively flat topography of the proposed Project area, impacts associated with landslides are not anticipated. Impacts would be ***less than significant.***

Mitigation Measures: None are required.

a-iv. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?

[9] City of Farmersville General Plan Part II Community Profile. 2002. Page 2-4.

Less Than Significant Impact. The City of Farmersville sits on the floor of the San Joaquin Valley. The City is nearly flat which precludes the occurrence of landslides. Any potential impact is ***less than significant***.

Mitigation Measures: None are required.

b. Result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. The City of Farmersville sits on top of the alluvial fans of the Kaweah River and its distributaries. The soil in the proposed Project area is characterized as very deep, well-drained, and with low shrink/swell potential.[10] The proposed Project site has a generally flat topography, is in an established urban area and does not include any Project features that would result in substantial soil erosion or loss of topsoil. Therefore, the impact is ***less than significant***.

Mitigation Measures: None are required.

c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less Than Significant Impact. The City of Farmersville is nearly flat and soils in the area are very deep, well drained with a low shrink/swell potential. See also Response a-ii. Any impacts would be ***less than significant.***

Mitigation Measures: None are required.

d. Be located on expansive soil, as defined in Table 18-1-B of the most recently adopted Uniform Building Code creating substantial risks to life or property?

Less Than Significant Impact. See Responses (c) and (a-ii). The impact is ***less than significant***.

Mitigation Measures: None are required.

---

[10] City of Farmersville General Plan Update Community Profile. November 2002. Page 2-2.

e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. The Project will tie into the City's existing wastewater system and will not require the installation of a septic tanks or alternate wastewater disposal system. There is ***no impact.***

Mitigation Measures: None are required.

f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant Impact With Mitigation Incorporation. As identified in the cultural evaluation performed for the Project site, there are no known paleontological resources on or near the site (See Section V. for more details). Mitigation measures have been added that will protect unknown (buried) resources during construction, including paleontological resources. There are no unique geological features on site or in the area. Mitigation measures CUL-1 and CUL-2 shall be implemented to reduce potential impacts and as such, impacts are considered ***less than significant***.

Mitigation Measures: CUL-1 and CUL-2.

VIII. GREENHOUSE GAS EMISSIONS

Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

The following information was provided by an Air Quality, Health Risk Analysis, Greenhouse Gas, and Energy Technical Memorandum that was performed on behalf of the proposed Project by Johnson, Johnson & Miller Air Quality Consulting Services, report date September, 2023. The report can be read in its entirety in Appendix A.

RESPONSES

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less Than Significant.

Quantification of Greenhouse Gas Emissions for Informational Purposes

Construction Emissions

GHG emissions generated during all construction activities were combined and are shown in **Error! Reference source not found.**.

Table 14
Summary of Construction-Generated Greenhouse Gas Emissions

Emissions Source	MT CO_{2e} per Year
Project Construction (2025)	280
Project Construction (2026)	48
Project Construction Total	**328**
Amortized over 30 Years	**10.9**
Notes: MTCO2e = metric tons of carbon dioxide equivalent	

Source: Modeling Assumptions and CalEEMod Output Files (Attachment A of Appendix A).

Operations

Operational or long-term emissions occur over the life of the Project. Sources of emissions may include motor vehicles and trucks, energy usage, water usage, waste generation, and area sources, such as landscaping activities. Operational GHG emissions associated with the proposed Project were estimated using CalEEMod 2022.1. Please see the "Assumptions" sections of the Technical Memorandum for details regarding assumptions and methodology used to estimate emissions. Operational GHG emissions for a full buildout scenario in the earliest operation year (2026) are shown in **Error! Reference source not found.**. Complete CalEEMod output files and additional supporting information are also included in Attachment A of Appendix A.

Table 15
Project Operational Greenhouse Gas Emissions (Buildout Year Scenario)

Emission Source	Unmitigated Buildout Year Total Emissions (MT CO_2e per year)
Area	33
Energy	316
Mobile (Automobiles)	446
Refrigerants	2
Water	14
Waste	80
Amortized Construction Emissions	11
Total (MT CO_2e per year)	**902**

Source of Emissions: Modeling Assumptions and CalEEMod Output Files (Attachment A of Appendix A).

The SJVAPCD has not yet adopted BPS for development projects that could be used to streamline the GHG analysis. The 29 percent GHG reduction level is based on the target established by CARB's AB 32 Scoping Plan, approved in 2008. The GHG reduction level for the State to reach 1990 emission levels by 2020 was reduced to 21.7 percent from BAU in 2020 in the 2014 First Update to the Scoping Plan to account for slower than projected growth after the 2008 recession.[11] First occupancy at the project site is expected to occur in 2026, which is after the AB 32 target year. The SJVAPCD has not updated its guidance to address SB 32 2030 targets or AB 1279 2045 targets. Therefore, whether the Project's GHG

[11] California Air Resources Board (CARB). 2014. First Update to the Climate Change Scoping Plan. Website: http://www.arb.ca.gov/cc/scopingplan/document/updatedscopingplan2013.htm. Accessed May 24, 2023.

emissions would result in a significant impact on the environment is determined by assessing consistency with relevant GHG reduction plans.

The City of Farmerville has not adopted a GHG reduction plan. In addition, the City has not completed the GHG inventory, benchmarking, or goal-setting process required to identify a reduction target and take advantage of the streamlining provisions contained in the CEQA Guidelines. The County of Tulare has adopted a Climate Action Plan; however, the County of Tulare's Climate Action Plan is only applicable to unincorporated areas of Tulare County. The SJVAPCD has adopted a Climate Action Plan, but it does not contain measures that are applicable to the project. Therefore, the SJVAPCD Climate Action Plan cannot be applied to the Project. Since no other local or regional Climate Action Plan is in place, the Project is assessed for its consistency with CARB's adopted Scoping Plans.

Consistency with CARB's Adopted Scoping Plans

Consistency with AB 32 and CARB's 2008 Scoping Plan

The State's regulatory program implementing the 2008 Scoping Plan is now fully mature. All regulations envisioned in the Scoping Plan have been adopted, and the effectiveness of those regulations has been estimated by the agencies during the adoption process and then tracked to verify their effectiveness after implementation. The combined effect of this successful effort is that the State now projects that it will meet the 2020 target and achieve continued progress toward meeting post-2020 targets. Former Governor Brown, in the introduction to Executive Order B-30-15, stated "California is on track to meet or exceed the current target of reducing greenhouse gas emissions to 1990 levels by 2020, as established in the California Global Warming Solutions Act of 2006 (AB 32)."

Consistency with SB 32 and CARB's 2017 Scoping Plan

The 2017 Climate Change Scoping Plan Update (2017 Scoping Plan) includes the strategy that the State intends to pursue to achieve the 2030 targets of Executive Order S-3-05 and SB 32. **Error! Reference source not found.** provides an analysis of the Project's consistency with the 2017 Scoping Plan Update measures.

Table 16
Consistency with SB 32 Scoping Plan

Scoping Plan Measure	Project Consistency
SB 350 50% Renewable Mandate. Utilities subject to the legislation will be required to increase their renewable energy mix from 33% in 2020 to 50% in 2030. *(The requirement is now 60% in 2030 per SB 100.)*	**Consistent**: The project will purchase electricity from a utility subject to the SB 350 Renewable Mandate.
SB 350 Double Building Energy Efficiency by 2030. This is equivalent to a 20 percent	**Not Applicable**. This measure applies to existing buildings. New structures are required to comply with Title 24 Energy Efficiency Standards that are

Scoping Plan Measure	Project Consistency
reduction from 2014 building energy usage compared to current projected 2030 levels.	expected to increase in stringency over time. New buildings (both residential and non-residential buildings) constructed as part of the proposed project would comply with the applicable Title 24 Energy Efficiency Standards in effect at the time building permits are received. The current Title 24 regulations are the 2022 Title 24 standards, which become effective January 1, 2023. The next update would become effective January 1, 2026.
Low Carbon Fuel Standard. This measure requires fuel providers to meet an 18 percent reduction in carbon content by 2030.	**Consistent**. This is a Statewide measure that cannot be implemented by a project applicant or lead agency. However, vehicles accessing the project site would be subject to the standards. Vehicles accessing the project site will use fuel containing lower carbon content as the fuel standard is implemented.
Mobile Source Strategy (Cleaner Technology and Fuels Scenario). Vehicle manufacturers will be required to meet existing regulations mandated by the LEV III and Heavy-Duty Vehicle programs. The strategy includes a goal of having 4.2 million ZEVs on the road by 2030 and increasing numbers of ZEV trucks and buses.	**Consistent**. Future project residents, visitors, customers, and employees can be expected to purchase increasing numbers of more fuel efficient and zero emission cars and trucks each year. The CALGreen Code requires electrical service in new development to be EV charger-ready. In addition, home deliveries will be made by increasing numbers of ZEV delivery trucks as the statewide fleet is expected to get cleaner over time.
Sustainable Freight Action Plan. The plan's target is to improve freight system efficiency 25 percent by increasing the value of goods and services produced from the freight sector, relative to the amount of carbon that it produces by 2030. This would be achieved by deploying over 100,000 freight vehicles and equipment capable of zero emission operation and maximize near-zero emission freight vehicles and equipment powered by renewable energy by 2030.	**Not Applicable.** The measure applies to owners and operators of trucks and freight operations. The project is residential and commercial mixed-use development and would not be considered an industrial land use or a large freight operator. However, home and business deliveries are expected to be made by increasing numbers of ZEV delivery trucks as technology continues to improve accessibility to ZEV vehicles and as regulations are phased in over time.
Short-Lived Climate Pollutant (SLCP) Reduction Strategy. The strategy requires the reduction of SLCPs by 40 percent from 2013 levels by 2030 and the reduction of black carbon by 50 percent from 2013 levels by 2030.	**Consistent**. The project is not expected to include fireplaces. However, any hearths that would be installed will only include natural gas hearths that produce very little black carbon compared with wood burning fireplaces and heaters in line with the SJVAPCD's Guidance for Assessing and Mitigating Air Quality Impacts mitigation measures.[1]
SB 375 Sustainable Communities Strategies. Requires Regional Transportation Plans to include a sustainable communities strategy for reduction of per capita vehicle miles traveled.	**Consistent**. The project will provide residential and commercial mixed-use development in the region that is consistent with the Regional Transportation Plan/Sustainable Communities Strategy (SCS) strategy to increase development densities to reduce VMT.
Post-2020 Cap-and-Trade Program. The Post 2020 Cap-and-Trade Program continues the existing program for another 10 years. The Cap-and-Trade Program applies to large	**Consistent.** The post-2020 Cap-and-Trade Program indirectly affects people who use the products and services produced by the regulated industrial sources when increased cost of products or services (such as electricity and fuel) are

Scoping Plan Measure	Project Consistency
industrial sources such as power plants, refineries, and cement manufacturers.	transferred to the consumers. The Cap-and-Trade Program covers the GHG emissions associated with electricity consumed in California, whether generated in-state or imported. Accordingly, GHG emissions associated with CEQA projects' electricity usage are covered by the Cap-and-Trade Program. The Cap-and-Trade Program also covers fuel suppliers (natural gas and propane fuel providers and transportation fuel providers) to address emissions from such fuels and from combustion of other fossil fuels not directly covered at large sources in the program's first compliance period.
Natural and Working Lands Action Plan. CARB is working in coordination with several other agencies at the federal, state, and local levels, stakeholders, and with the public, to develop measures as outlined in the Scoping Plan Update and the governor's Executive Order B-30-15 to reduce GHG emissions and to cultivate net carbon sequestration potential for California's natural and working land.	**Not Applicable**. The project is a residential and commercial mixed-use development and will not be considered natural or working lands.
Source: California Air Resources Board (CARB). 2017. The 2017 Climate Change Scoping Plan Update. January 20. Website: https://www.arb.ca.gov/cc/scopingplan/2030sp_pp_final.pdf. Accessed September 2023. [1] San Joaquin Valley Air Pollution Control District (SJVAPCD). 2015. Guidance for Assessing and Mitigating Air Quality Impacts. Website: https://www.valleyair.org/transportation/GAMAQI-2015/FINAL-DRAFT-GAMA. Accessed September 2023.	

As described in **Error! Reference source not found.**, the proposed Project would be consistent with applicable 2017 Scoping Plan Update measures and would not obstruct the implementation of others that are not applicable. The State's regulatory program is able to target both new and existing development because the two most important strategies, motor vehicle fuel efficiency and emissions from electricity generation, obtain reductions equally from existing sources and new sources. This is because all vehicle operators use cleaner low carbon fuels and buy vehicles subject to the fuel efficiency regulations and all building owners or operators purchase cleaner energy from the grid that is produced by increasing percentages of renewable fuels. This includes regulations on mobile sources such as the Pavley standards that apply to all vehicles purchased in California, the LCFS (Low Carbon Fuel Standard) that applies to all fuel sold in California, and the Renewable Portfolio Standard and Renewable Energy Standard under SB 100 that apply to utilities providing electricity to all California end users.

Moreover, the Scoping Plan strategy will achieve more than average reductions from energy and mobile source sectors that are the primary sources related to development projects and lower than average reductions from other sources such as agriculture. The proposed residential and commercial mixed-use development Project's operational GHG emissions would principally be generated from electricity consumption and vehicle use, which are directly under the purview of the Scoping Plan strategy and have experienced reductions above the State average reduction. Considering the information

summarized above, the proposed Project would be consistent with the State's AB 32 and SB 32 GHG reduction goals.

Consistency Regarding GHG Reduction Goals for 2050 under Executive Order S-3-05 and GHG Reduction Goals for 2045 under CARB's 2022 Scoping Plan

Regarding goals for 2050 under Executive Order S-3-05, at this time it is not possible to quantify the emissions savings from future regulatory measures, as they have not yet been developed; nevertheless, it can be anticipated that operation of the proposed Project would comply with whatever measures are enacted that State lawmakers decide would lead to an 80 percent reduction below 1990 levels by 2050. In its 2008 Scoping Plan, CARB acknowledged that the "measures needed to meet the 2050 are too far in the future to define in detail." In the First Scoping Plan Update; however, CARB generally described the type of activities required to achieve the 2050 target: "energy demand reduction through efficiency and activity changes; large scale electrification of on-road vehicles, buildings, and industrial machinery; decarbonizing electricity and fuel supplies; and rapid market penetration of efficiency and clean energy technologies that requires significant efforts to deploy and scale markets for the cleanest technologies immediately."

CARB recognized that AB 32 established an emissions reduction trajectory that will allow California to achieve the more stringent 2050 target: "These [greenhouse gas emission reduction] measures also put the State on a path to meet the long-term 2050 goal of reducing California's GHG emissions to 80 percent below 1990 levels. This trajectory is consistent with the reductions that are needed globally to stabilize the climate." In addition, CARB's First Update "lays the foundation for establishing a broad framework for continued emission reductions beyond 2020, on the path to 80 percent below 1990 levels by 2050," and many of the emission reduction strategies recommended by CARB would serve to reduce the proposed Project's post-2020 emissions level to the extent applicable by law:

- **Energy Sector:** Continued improvements in California's appliance and building energy efficiency programs and initiatives, such as the State's zero net energy building goals, would serve to reduce the proposed project's emissions level. Additionally, further additions to California's renewable resource portfolio would favorably influence the project's emissions level.

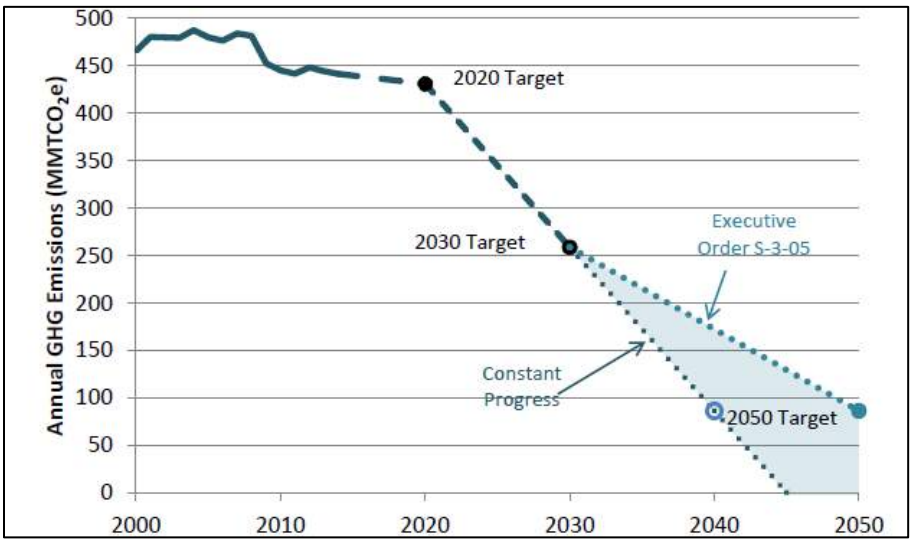
- **Transportation Sector:** Anticipated deployment of improved vehicle efficiency, zero emission technologies, lower carbon fuels, and improvement of existing transportation systems all will serve to reduce the project's emissions level.

- **Water Sector:** The project's emissions level will be reduced as a result of further desired enhancements to water conservation technologies.

- **Waste Management Sector:** Plans to further improve recycling, reuse and reduction of solid waste will beneficially reduce the project's emissions level.

For the reasons described above, the Project's post-2020 emissions trajectory is expected to follow a declining trend, consistent with the 2030 and 2050 targets. The trajectory required to achieve the post-2020 targets is shown in Figure 4.

Figure 4
California's Path to Achieving the 2050 Target



Source: CARB 2017 Scoping Plan Update

In his January 2015 inaugural address, former Governor Brown expressed a commitment to achieve "three ambitious goals" that he would like to see accomplished by 2030 to reduce the State's GHG emissions:

- Increasing the State's Renewable Portfolio Standard from 33 percent in 2020 to 50 percent in 2030;
- Cutting the petroleum use in cars and trucks in half; and
- Doubling the efficiency of existing buildings and making heating fuels cleaner.

These expressions of executive branch policy may be manifested in adopted legislative or regulatory action through the state agencies and departments responsible for achieving the State's environmental policy objectives, particularly those relating to global climate change. Studies show that the State's existing and proposed regulatory framework will allow the State to reduce its GHG emissions level to 40 percent below 1990 levels by 2030, and to 80 percent below 1990 levels by 2050. Even though these studies did not provide an exact regulatory and technological roadmap to achieve the 2030 and 2050 goals, they demonstrated that various combinations of policies could allow the statewide emissions level to remain

very low through 2050, suggesting that the combination of new technologies and other regulations not analyzed in the studies could allow the State to meet the 2050 target.

Given the proportional contribution of mobile source-related GHG emissions to the State's inventory, recent studies also show that relatively new trends—such as the increasing importance of web-based shopping, the emergence of different driving patterns, and the increasing effect of web-based applications on transportation choices—are beginning to substantially influence transportation choices and the energy used by transportation modes. These factors have changed the direction of transportation trends in recent years and will require the creation of new models to effectively analyze future transportation patterns and the corresponding effect on GHG emissions. For the reasons described above, the proposed Project's future emissions trajectory is expected to follow a declining trend, consistent with the 2030, 2045, and 2050 targets.

The 2017 Scoping Plan provides an intermediate target that is intended to achieve reasonable progress toward the 2050 target. In addition, the 2022 Scoping Plan outlines objectives, regulations, planning efforts, and investments in clean technologies and infrastructure that outlines how the State can achieve carbon-neutrality by 2045. Accordingly, taking into account the proposed Project's design features and the progress being made by the State towards reducing emissions in key sectors such as transportation, industry, and electricity, the proposed Project would be consistent with State GHG Plans and would further the State's goals of reducing GHG emissions 40 percent below 1990 levels by 2030, carbon neutral by 2045, and 80 percent below 1990 levels by 2050, and does not obstruct their attainment.

Summary

As described above, the proposed Project would be consistent with State GHG Plans and would not obstruct the State's ability to meet its goals of reducing GHG emissions 40 percent below 1990 levels by 2030, carbon neutral by 2045, and 80 percent below 1990 levels by 2050. Therefore, the Project's generation of GHG emissions would result in a ***less than significant impact*** on the environment.

Mitigation Measures: None are required.

b. <u>Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?</u>

Less Than Significant. As discussed under Impact VIII(a), neither the City of Farmersville nor the County of Tulare have adopted a GHG reduction plan that would be applicable to the proposed Project. In addition, the City of Farmersville has not completed the GHG inventory, benchmarking, or goal-setting process required to identify a reduction target and take advantage of the streamlining provisions

contained in the CEQA Guidelines. The SJVAPCD has adopted a Climate Action Plan, but it does not contain measures that are applicable to the Project. Therefore, the SJVAPCD Climate Action Plan cannot be applied to the Project. The County of Tulare has adopted a Climate Action Plan; however, the County of Tulare's Climate Action Plan is only applicable to unincorporated areas of Tulare County and would not be appliable to the proposed Project. Since no other local or regional Climate Action Plan is in place, the Project is assessed for its consistency with CARB's adopted Scoping Plans. This assessment is included under Impact VIII(a) above. As demonstrated above, the Project would not conflict with any applicable plan, policy, or regulation of an agency adopted to reduce the emissions of greenhouse gases. This impact would be ***less than significant***.

Mitigation Measures: None required.

IX. HAZARDS AND HAZARDOUS MATERIALS

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
f. Impair implementation of or physically interfere with an adopted emergency	☐	☐	☐	☒

	response plan or emergency evacuation plan?				
g.	Expose people or structures either directly or indirectly to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒

RESPONSES

a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less Than Significant Impact. The proposed Project would include the development of two fully affordable multi-family projects for a total of 82 units and three commercial pads. The development also includes a community building, basketball court, bocce ball court, dog parks, retention basins, and parking spaces. The site construction will also include internal access roads, lighting, site landscaping and additional related improvements.

Proposed Project construction activities may involve the use and transport of hazardous materials. These materials may include fuels, oils, mechanical fluids, and other chemicals used during construction. Transportation, storage, use, and disposal of hazardous materials during construction activities would be required to comply with applicable federal, state, and local statutes and regulations. Compliance would ensure that human health and the environment are not exposed to hazardous materials. In addition, the Project would be required to comply with the National Pollutant Discharge Elimination System (NPDES) permit program through the submission and implementation of a Stormwater Pollution Prevention Plan during construction activities to prevent contaminated runoff from leaving the project site. Therefore, no significant impacts would occur during construction activities.

The operational phase of the proposed Project would occur after construction is completed and employees and residents move in to occupy the structures on a day-to-day basis. The proposed Project includes land uses that are considered compatible with the surrounding uses upon approval of the General Plan Amendment and Zone Change Approval. None of these land uses routinely transport, use, or dispose of hazardous materials, or present a reasonably foreseeable release of hazardous materials, with the exception of common commercial grade hazardous materials such as household and commercial cleaners, paint, etc. The proposed Project would not create a significant hazard through the routine transport, use, or disposal of hazardous materials, nor would a significant hazard to the public or to the environment through the reasonably foreseeable upset and accidental conditions involving the

likely release of hazardous materials into the environment occur. Therefore, the proposed Project will not create a significant hazard to the public or the environment and any impacts would be ***less than significant***.

Mitigation Measures: None are required.

b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less Than Significant Impact. See Response a. above. Any accumulated hazardous construction or operational wastes will be collected and transported away from the site in compliance with all federal, state and local regulations. Any impacts would be ***less than significant***.

Mitigation Measures: None are required.

c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less Than Significant Impact. Farmersville High School is approximately 0.3 miles southeast of the proposed Project site. Construction-related activities will be intermittent, temporary, and short-term, and are not anticipated to result in the release of hazardous emissions, involve hazardous materials, or create a hazard to the school. As noted earlier, the proposed Project includes the development of general commercial and multi-family residences, hence it is not reasonably foreseeable that the Project will cause a significant impact by emitting hazardous waste or bringing hazardous materials. General commercial and residential land uses do not generate, store, or dispose of significant quantities of hazardous materials. Such uses also do not normally involve dangerous activities that could expose persons onsite or in the surrounding areas to large quantities of hazardous materials. See also Responses a. and b. regarding hazardous material handling. The impact is ***less than significant.***

Mitigation Measures: None are required.

d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact. The proposed Project site is not located on a list of hazardous materials sites complied pursuant to Government Code Section 65962.5 (Geotracker[12] and DTSC Envirostor[13] databases – accessed in July 2023). There are no hazardous materials sites that impact the Project. As such, ***no impacts*** would occur that would create a significant hazard to the public or the environment.

Mitigation Measures: None are required.

e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

No Impact. The proposed Project site is approximately 5.7 miles northwest of the Exeter Airport and the airport's safety zones do not extend into the City of Farmersville. There is ***no impact***.

Mitigation Measures: None are required.

f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

No Impact. The Project will not interfere with any adopted emergency response or evacuation plan. Construction activities will take place within right-of-ways of existing roadways. Construction activities will be temporary in nature and will not cause any road closures that could interfere with any adopted emergency response or evacuation plan. The construction contractor will be required to work with the City and County (public works, police/fire, etc.) if and when roadway diversions are required to ensure that adequate access is maintained for residents and emergency vehicles. There is ***less than significant impact.***

Mitigation Measures: None are required.

[12] GeoTracker, State Water Resources Control Board. https://geotracker.waterboards.ca.gov/. Accessed July 2023.

[13] EnviroStor, Department of Toxic Substances Control. https://www.envirostor.dtsc.ca.gov/public/. Accessed July 2023.

g. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

No Impact. The site is surrounded by urban uses and as such, there are no wildlands on or near the Project site. There is ***no impact***.

Mitigation Measures: None are required.

X. HYDROLOGY AND WATER QUALITY

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:	☐	☐	☒	☐
i. Result in substantial erosion or siltation on- or off- site;	☐	☐	☒	☐
ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☒	☐
iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv. impede or redirect flood flows?	☐	☐	☒	☐

X. HYDROLOGY AND WATER QUALITY

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

According to the City's Comprehensive Infrastructure Management Plan (CIMP), eight well sites are located in the City's water distribution system. On average, the wells can each produce around 700 gallons per minute (gpm), and are considered fairly shallow, with groundwater depths encountered approximately 60 feet below ground surface. [14]

The Kaweah Basin is the source of all drinking water supply for the City of Farmersville and surrounding communities. The Kaweah Delta Water Conservation District (KDWCD) manages the Basin. KDWCD and other irrigation districts and companies have historically managed groundwater through the conjunctive use of surface water. KDWCD regularly provides programs that benefit local agricultural customers by making available additional surface water supplies for irrigation. These programs effectively reduce the withdrawals of groundwater resulting in in-lieu recharge of the aquifer. Groundwater is normally used by agriculture as an alternate source when surface supplies are not available and is the sole source in areas within KDWCD jurisdiction that do not have access to surface water.

RESPONSES

a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

[14] Comprehensive Infrastructure Management Plan, City of Farmersville. November 2012. Pg 4-2

Less Than Significant Impact.

Construction

Grading, excavation and loading activities associated with construction activities could temporarily increase runoff, erosion, and sedimentation. Construction activities also could result in soil compaction and wind erosion effects that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas.

Three general sources of potential short-term construction-related stormwater pollution associated with the proposed project are: 1) the handling, storage, and disposal of construction materials containing pollutants; 2) the maintenance and operation of construction equipment; and 3) earth moving activities which, when not controlled, may generate soil erosion and transportation, via storm runoff or mechanical equipment. Generally, routine safety precautions for handling and storing construction materials may effectively mitigate the potential pollution of stormwater by these materials. These same types of common sense, "good housekeeping" procedures can be extended to non-hazardous stormwater pollutants such as sawdust and other solid wastes.

Poorly maintained vehicles and heavy equipment leaking fuel, oil, antifreeze, or other fluids on the construction site are also common sources of stormwater pollution and soil contamination. In addition, grading activities can greatly increase erosion processes. Two general strategies are recommended to prevent construction silt from entering local storm drains. First, erosion control procedures should be implemented for those areas that must be exposed. Secondly, the area should be secured to control offsite migration of pollutants. These Best Management Practices (BMPs) would be required in the Stormwater Pollution Prevention Plan (SWPPP) to be prepared prior to commencement of Project construction. When properly designed and implemented, these "good-housekeeping" practices are expected to reduce short-term construction-related impacts to less than significant.

In accordance with the National Pollution Discharge Elimination System (NPDES) Stormwater Program, the Project will be required to comply with existing regulatory requirements to prepare a SWPPP designed to control erosion and the loss of topsoil to the extent practicable using BMPs that the Regional Water Quality Control Board (RWQCB) has deemed effective in controlling erosion, sedimentation, runoff during construction activities. The specific controls are subject to the review and approval by the RWQCB and are an existing regulatory requirement.

Operation

The proposed Project includes the construction and operation of a multifamily housing consisting of 82 units, community areas and three commercial/retail pads including parking spaces, internal access roads,

lighting, site landscaping, and other improvements. The Project will tie into the existing City water and wastewater systems.

The proposed Project will result in wastewater from residential units and commercial structures that will be discharged into the City's existing wastewater treatment system. The wastewater will be typical of other urban/residential developments consisting of bathrooms, kitchen drains and other similar features. The Project will not discharge any unusual or atypical wastewater. Site buildout has been planned for and anticipated in the City's planning documents. Therefore, the proposed Project will not result in additional production of wastewater that was not already accounted for in the City's infrastructure planning documents.

The Project will comply with all City ordinances and standards to assure proper grading and drainage. Compliance with all local, state, and federal regulations will prevent violation of water quality standards or waste discharge requirements. The proposed Project will be required to prepare a grading and drainage plan for review and approval by the City Engineer, prior to issuance of building permits.

Additionally, there will be no discharge to any surface or groundwater source. As such, the proposed Project will not violate any water quality standards and will not impact waste discharge requirements. The impact will be ***less than significant***.

Mitigation Measures: None are required.

b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less Than Significant Impact. The City of Farmersville will provide water services upon development. The City of Farmersville's water supply comes from groundwater extraction. The City of Farmersville is located in the Kaweah Subbasin area and falls under the Greater Kaweah Groundwater Sustainability Agency (GKGSA). The Kaweah Subbasin is classified as high-priority, according to California Water Code § 10933 (b) and has been designated a critically overdrafted by the California Department of Water Resources (DWR).[15] GKGSA acknowledges a continuing decline in groundwater levels of the aquifer system below the Farmersville area.

[15] Executive Summary, Greater Kaweah Groundwater Sustainability Agency Groundwater Sustainability Plan. January 2020. https://greaterkaweahgsa.org/resources/.

The City of Farmersville General Plan has designated the site for urban development as an such, site development has been included and planned for in the City's infrastructure planning documentation. To assist in mitigating the groundwater decline, the City of Farmersville has established fees that are charged to new development, which will fund groundwater recharge and other water resource projects within the City. Project implementation would not affect groundwater supplies beyond what has already been accounted for. Impacts would be ***less than significant.***

Mitigation Measures: None are required.

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

   i. result in substantial erosion or siltation on- or offsite;

   ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;

   iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

   iv. impede or redirect flood flows?

Less Than Significant Impact. The site is currently vacant with minimal vegetation. The proposed Project will change drainage patterns of the site through the installation of impervious surfaces and structures (apartment complex, commercial pads, driveways, parking areas, streets, etc.) and will be required by the City to be graded to facilitate proper stormwater drainage into the stormwater basin included with the Project. Storm water during construction will be managed as part of the Storm Water Pollution Prevention Plan (SWPPP). A copy of the SWPPP will be retained on-site during construction.

The commercial buildings and residential dwellings will be built in accordance with the current California Building Code and the on-site retention basins have been appropriately sized to accommodate potential flood waters. Accordingly, the chance of flooding (and therefore the release of pollutants due to flooding) at the site is remote. Impacts are ***less than significant.***

Mitigation Measures: None are required.

d. In flood hazard, tsunami or seiche zones, risk release of pollutants due to project inundation?

e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less Than Significant Impact. The proposed Project site is located within Zone X, which experiences minimal flood hazards, as indicated by FEMA flood hazard map 06107C0954E, effective 6/15/2009.[16] The site development includes retention basins and will be designed for adequate storm drainage and will be required to prepare and submit a water quality control plan to be implemented during construction, as required by the National Pollutant Discharge Elimination System. This plan must be reviewed and approved by the City Engineer prior to the start of construction.

There are no inland water bodies that could be potentially susceptible to a seiche in the Project vicinity. This precludes the possibility of a seiche inundating the Project site. The Project site is more than 100 miles from the Pacific Ocean, a condition that precludes the possibility of inundation by tsunami. There are no steep slopes that would be susceptible to a mudflow in the Project vicinity, nor are there any volcanically active features that could produce a mudflow in the City of Farmersville. This precludes the possibility of a mudflow inundating the Project site. Any impacts are ***less than significant***.

Mitigation Measures: None are required.

LAND USE AND PLANNING

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Physically divide an established community?	☐	☐	☐	☒
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒

[16] National Flood Hazard Layer (NFHL) Viewer, FEMA. https://www.fema.gov/flood-maps/national-flood-hazard-layer. Accessed August 2023.

RESPONSES

a. Physically divide an established community?

b. Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the General Plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

No Impact. The proposed Project would include the development of two fully affordable multi-family projects for a total of 82 residential units and up to 13,950 square feet of commercial space. The northern portion of the Project site would consist of four buildings of senior housing developments with a total of 42 units, a commercial pad, community area, fenced dog park, bocce ball court, community garden, retention basins, and 97 parking spaces. The southern portion of the Project site would consist of an apartment complex with five residential buildings consisting of a total of 40 units, a community building, two commercial/retail pads, dog park, basketball court, retention basins, and 92 parking spaces. This apartment complex would include residential units, tot lot, half-basketball court, fenced dog park, on-site laundry facility, and outdoor picnic-barbeque area. The site construction will also include internal access roads, lighting, site landscaping and additional related improvements.

The proposed Project is located in the northeastern portion of the City of Farmersville within city limits, in an area of suburban residential and commercial land uses. The proposed Project site covers approximately 9.4 acres and consists of vacant land with minimal vegetation. The site is zoned General Commercial (C-G) and is also designated General Commercial by the Farmersville General Plan. The proposed Project includes a General Plan Amendment for the land use change of the eastern portion of the site to "Multi-Family Residential", and a Zone Change to "Multi-Family Residential (R-M)". Upon approval the Project will be in compliance with the General Plan and zoning ordinance.

The proposed Project will extend an existing community in the region. The Project has no characteristics that would physically divide the City of Farmersville. Access to the existing surrounding areas will be improved. ***No impacts*** would occur as a result of this Project.

Mitigation Measures: None are required.

XII. MINERAL RESOURCES

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

RESPONSES

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. The most economically important minerals that are extracted in Tulare County are sand, gravel, crushed rock, and natural gas. The four streams that have provided the main source of high-quality sand and gravel in Tulare County to make Portland cement concrete and asphaltic concrete are the Kaweah River, Lewis Creek, Deer Creek and the Tule River[17].

[17] Tulare County General Plan 2030 Update Recirculated Draft EIR. February 2010. Page 3.7-9.

The proposed Project area is not included in a State classified mineral resource zone[18], and the Kaweah River is approximately 1.7 miles northwest of the Project site. Therefore, there is ***no impact***.

Mitigation Measures: None are required.

XIII. NOISE

Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b. Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

RESPONSES

a. <u>Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?</u>

[18] Ibid. Page 3.7-10.

b. Generation of excessive groundborne vibration or groundborne noise levels?

Less Than Significant Impact. The City of Farmersville General Plan does not include a noise element, but rather states that the City has adopted Tulare County's Noise Element. The County of Tulare Noise Element of the General Plan (August 2012) establishes noise level criteria in terms of the Day-Night Average Level (Ldn) metric. The Ldn is the time-weighted energy average noise level for a 24-hour day, with a 10 dB penalty added to noise levels occurring during the nighttime hours (10:00 p.m.-7:00 a.m.). The Ldn represents cumulative exposure to noise over an extended period of time and is therefore calculated based upon *annual average* conditions.

Site development may increase ambient noise levels in the Project vicinity beyond those already present on the site from the residential activity. In the short term, noise levels would be raised during construction of the Project phases by the operation of heavy equipment and other associated activities. Because construction noise would generally occur intermittently on Monday through Saturdays during daylight hours, per the Farmersville Noise Ordinance, the impact of noise in surrounding land uses is not expected to be significant.

In the long term, any development would add traffic and other sources of noise that will somewhat increase the ambient noise levels in the vicinity. However, these noise levels should be relatively consistent with those experienced in the area and other existing developed areas of Farmersville.

Typical outdoor sources of perceptible ground borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. Construction vibrations can be transient, random, or continuous. Construction associated with the proposed Project includes the construction of multifamily housing consisting of 48 units along with grocery store, oil change/car wash, fueling station, convenience store with drive-thru, and general commercial. The site construction will also include internal access roads, lighting, site landscaping and additional related improvements.

The approximate threshold of vibration perception is 65 VdB, while 85 VdB is the vibration acceptable only if there are an infrequent number of events per day. Table 17 describes the typical construction equipment vibration levels.

Table 17
Typical Construction Vibration Levels

Equipment	VdB at 25 ft
Small Bulldozer	58
Jackhammer	79

Vibration from construction activities will be temporary and not exceed the Federal Transit Administration (FTA) threshold for the nearest residences which are located adjacent to the project site on the eastern boundary. As such, any impacts resulting from an increase in ambient noise levels or excessive groundborne vibration will be ***less than significant.***

c. For a project located within the vicinity of a private airstrip or an airport land use plan, or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The Project is not located within an airport land use plan. Therefore, there is ***no impact***.

Mitigation Measures: None are required.

XIV. POPULATION AND HOUSING

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☒	☐

RESPONSES

a. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less Than Significant Impact. The proposed Project would include the development of a 9.4-acre parcel for two fully affordable multi-family projects for a total of 82 units, three commercial/retail pads and community areas. The site construction will also include parking spaces, internal access roads, lighting, site landscaping and additional related improvements. The 9.4-acre site is currently designated and zoned for general commercial. The eastern portion of the site is proposed for the General Plan Amendment and Zone Change to Multi-family Residential to accommodate the Project.

According to the current Tulare County Regional Housing Needs Assessment (RHNA), the City of Farmersville needs a total of 654 net new housing units between the 8.5-year projection period (June 30, 2023 – December 31, 2031).[19] As part of the total RHNA Allocation, 218 units will be needed as part of

[19] Final Regional Housing Needs Plan, Cycle 6. August 2022. Tulare County Associated of Governments. https://tularecog.org/sites/tcag/assets/FINAL%20RHNP%20-%20COMBINED.pdf. Accessed June 2023.

Affordable Allocation (Combined Very Low + Low Income groups). Estimates as of 1/1/2023 shows the City has 2,783 housing units with an average of 3.75 people per household.[20]

The proposed Project includes construction of up to 82 fully affordable multi-family residential units. Based on the per-unit average of 3.75 persons for the City, the proposed Project would provide housing for approximately 308 people. The proposed Project would assist the City in reaching its RHNA goal, and as such, the site is planned for development. The City of Farmersville has sufficient labor force in the area to support many other types of industries. As such, any impacts are ***less than significant***.

Mitigation Measures: None are required.

b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

Less Than Significant. There are no residential structures currently on-site. As noted earlier, the Project intends to add multi-family housing to the community. The Project will not displace any housing and therefore there is ***less than significant***.

Mitigation Measures: None are required.

[20] E-5 Population and Housing Estimates for Cities, Counties, and the State, 2020-2023. May 2023. State of California Department of Finance. https://dof.ca.gov/Forecasting/Demographics/Estimates/e-5-population-and-housing-estimates-for-cities-counties-and-the-state-2020-2023/. Accessed June 2023.

XV. PUBLIC SERVICES

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
Fire protection?	☐	☐	☒	☐
Police protection?	☐	☐	☒	☐
Schools?	☐	☐	☒	☐
Parks?	☐	☐	☒	☐
Other public facilities?	☐	☐	☒	☐

RESPONSES

a. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

Fire protection?

Less Than Significant Impact. The Farmersville Fire Department is located at 909 W Visalia Road Farmersville, CA 93223, approximately 1.3 miles southwest of the Project site. The Department maintains a fleet of specialized fire apparatus including a 4-wheel drive Brush Fire Patrol Unit, a Quick Attack

Squad Unit (250 GPM Pumper), an Engine (1,500 GPM Pumper), a 55 Ft. Ladder Truck (1,500 GPM Pumper), and several Command/Utility Vehicles.

The Project site is already serviced by the Fire Department. The proposed Project at full buildout will add to the number of "customers" served, however, the Fire Department has capacity for the additional service need. No additional fire equipment, personnel, or services will be required by Project implementation. In addition, the Project applicant will be required to pay all associated impact fees related to public services. As such, any impacts would be less ***than significant***.

Police Protection?

Less Than Significant Impact. The proposed Project includes the construction of 82 multi-family residential units, which will accommodate approximately 308 persons, and up to 13,950 sq.ft. of commercial/retail space. The proposed Project site will continue to be served by the City of Farmersville Police Department, located at 909 W Visalia Road, Farmersville, CA 93223. Implementation of the proposed Project would result in an increase in demand for police services; however, this increase would be minimal compared to the number of officers currently employed by the Farmersville Police Department and would not trigger the need for new or physically altered police facilities. No additional police personnel or equipment is anticipated. In addition, each residential unit will be assessed a public safety impact fee by the City that is used to make capital improvements for the Police Department. The impact is ***less than significant.***

Schools?

Less Than Significant Impact. The proposed Project site is located within the Farmersville Unified School District. Farmerville High School and Freedom Elementary School are both located approximately 0.3 miles and 0.4 miles southeast of the Project site respectively. Other schools in the District include Deep Creek Academy, Farmersville Jr. High School, Hester Elementary School, Snowden Elementary School, and Farmersville Adult School. Pursuant to California Education Code Section 17620(a)(1), the governing board of any school district is authorized to levy a fee, charge, dedication, or other requirement against any construction within the boundaries of the district for the purpose of funding the construction or reconstruction of school facilities. The Project applicant would be required to pay such fees to reduce any impacts of new residential development of school services. Payment of the developer fees will offset the addition of school-age children within the district. As such, any impacts would be ***less than significant.***

Parks?

Less Than Significant Impact. The City of Farmersville has six developed park sites, including Armstrong Park (4 acres), Jennings Park (2.1 acres), Liberty Park (6 acres), Riverbank Park (0.5 acres), Roy's Park (4.5 acres), Veterans Memorial Park (4.33 acres), Veterans Memorial Sports Park (11.82 acres).

To ensure sufficient recreational opportunities, the City has established a Park Impact Fee, implemented by Chapter 4, Development Fees, of the Municipal Code. Municipal Code states that parks must be constructed or expanded commensurate with growth of the City. The City Council determined that a park impact fee is required to assist in the financing of these public park improvements and to pay for new development's fair share of the acquisition and development costs of these improvements. The Project applicant would be required to comply with the Municipal Code. As such, any impacts would remain ***less than significant.***

Other public facilities?

Less Than Significant Impact. The proposed Project is within growth projections identified in the City's General Plan and other infrastructure studies. As such, the Project would not result in increased demand on other public facilities such as library services that has not already been planned for. Any impacts would be ***less than significant***.

Mitigation Measures: None are required.

XVI. RECREATION

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☒	☐

RESPONSES

a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Less Than Significant Impact. As described in Impact XIV(a), the City has established a Park Impact Fee through the Municipal Code, which states that parks must be constructed or expanded commensurate with growth of the City. The Project applicant will be required to comply with that Municipal Code, as well as any fees that apply, and as such, any impacts will be ***less than significant***.

Mitigation Measures: None are required.

b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Less Than Significant Impact. The proposed Project does includes the construction of community areas with recreation facilities. The Project development consists of a community area, a community building, fenced dog parks, bocce ball court, community garden, tot lot, half-basketball court, and outdoor picnic-barbeque area. As determined by the analysis contained within this document, ***less than significant impacts*** would occur.

Mitigation Measures: None are required.

XVII. TRANSPORTATION/TRAFFIC

Would the project:

		Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a.	Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☒	☐	☐
b.	Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☒	☐	☐
c.	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d.	Result in inadequate emergency access?	☐	☐	☒	☐

A Traffic Analysis was performed on behalf of the proposed Project by Ruettgers & Schuler Civil Engineers (Appendix C). The following discussion and impact analysis are directly referencing this technical report.

RESPONSES

a. Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Less Than Significant Impact with Mitigation. The City of Farmersville General Plan Circulation Element contains Goals, Objectives and Action Plans to Ensure that streets in Farmersville are not congested and that the traffic on Farmersville's streets operates in an efficient and safe manner.

The Project site is situated on approximately 9.4 gross acres of undeveloped vacant land. The property is zoned Central Commercial. The proposed development would include 40 multi-family dwelling units, 42 multi-family senior adult housing, and up to 13,950 square feet of commercial development. Access to the site will be along Farmersville Boulevard.

Trip Generation

The Project trip generation volumes shown in Table 18 were estimated using the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition.[21] Trip rates, equations, and directional splits for ITE Land Use Codes 220 (Multifamily Housing-Low Rise), 252, (Senior Adult Housing-Multifamily), 822 (Strip Retail <40k), and 934 (Fast-Food Restaurant with Drive-Through) were used to estimate Project trips for weekday peak hour of adjacent street traffic.

Table 18
Project Trip Generation

General Information			Daily Trips		AM Peak Hour Trips			PM Peak Hour Trips		
ITE Code	Development Type	Variable	ADT RATE	ADT	Rate	In % Split/ Trips	Out % Split/ Trips	Rate	In % Split/ Trips	Out % Split/ Trips
220	Multifamily Housing (Low Rise)	40 Dwelling Units	eq	332	eq	24% 8	76% 27	eq	63% 24	37% 14

Trip Distribution and Assignment

[21] Traffic Study- Gardenia Courtyard, City of Farmersville. Ruettgers & Schuler Civil Engineers. September 2023. Appendix C.

The distribution of Project peak hour trips is shown in Table 19 and represents the movement of traffic accessing the project site by direction. The Project trip distribution was developed based on site location and travel patterns anticipated for the proposed land uses.

Table 19
Project Trip Distribution

Direction	Percent
North	10
East	35
South	10
West	45

Project peak hour trips were assigned to the study intersections as shown in Figure 4 of Appendix C. Project trip assignment was developed based on trip generation, trip distribution and likely travel routes for traffic accessing the Project site.

Existing and Future Traffic

Existing peak hour turning movement counts were obtained in March and July 2022. Average annual growth rates ranging between 0.5 and 2.53 percent were applied to the 2023 peak hour volumes to estimate peak hour volumes for the year 2043. These growth rates were developed based on a review of historical count data and output from TCAG's regional travel demand model as well as a discussion with the City of Farmersville Planning Consultant. Cumulative volumes were estimated based on information provided by the City of Farmersville regarding build year, land use, size and location for each pending development. See Appendix C for figures.[22]

Intersection Analysis

A capacity analysis of the study intersections was conducted using Synchro software from Trafficware, as detailed in Appendix C. The analysis was performed for each of the following traffic scenarios.

- Existing (2023)
- Existing (2023) + Project
- Future Cumulative (2043)

[22] Ibid, pg 7.

- Future Cumulative (2043) + Project

Level of service (LOS) criteria for unsignalized and signalized intersections, as defined in HCM 2010, are presented in the tables below. The City of Farmersville's Circulation Element designates LOS C as the minimum acceptable intersection peak hour level of service.

Table 20
Level of Service Criteria - Unsignalized Intersection

Level of Service	Average Control Delay (sec/veh)	Expected Delay to Minor Street Traffic
A	≤ 10	Little or no delay
B	> 10 and ≤ 15	Short delays
C	> 15 and ≤ 25	Average delays
D	> 25 and ≤ 35	Long delays
E	> 35 and ≤ 50	Very long delays
F	> 50	Extreme delays

Table 21
Level of Service Criteria - Signalized Intersections

Level of Service	Average Control Delay (sec/veh)	Volume-to-Capacity Ratio
A	≤ 10	< 0.60
B	> 10 and ≤ 20	0.61 - 0.70
C	> 20 and ≤ 35	0.71 - 0.80
D	> 35 and ≤ 55	0.81 - 0.90
E	> 55 and ≤ 80	0.91 - 1.00
F	> 80	> 1.00

Peak hour level of service for the study intersections is presented in Tables 22 and 23.[23] Intersection delay in seconds per vehicle is shown within parentheses for intersections operating below LOS C.

[23] Ibid, page 14.

Traffic Signal Warrant Analysis

Peak hour signal warrants were evaluated for the unsignalized intersections within the study based on the 2014 California Manual on Uniform Traffic Control Devices (2014 CA MUTCD). Peak hour signal

warrants assess delay to traffic on minor street approaches when entering or crossing a major street. Signal warrant analysis results are shown in Tables 24 and 25.[24]

Table 24
Traffic Signal Warrants - Weekday PM Peak Hour

		2023			2023+Project			2043			2043+Project		
#	Intersection	Major Street Total Approach Vol	Minor Street High Approach Vol	Warrant Met	Major Street Total Approach Vol	Minor Street High Approach Vol	Warrant Met	Major Street Total Approach Vol	Minor Street High Approach Vol	Warrant Met	Major Street Total Approach Vol	Minor Street High Approach Vol	Warrant Met
1	Farmersville Blvd at Ave 296	439	141	NO	459	147	NO	620	197	NO	640	203	NO
2	SR 198 EB Ramps at Ave 296	592	61	NO	612	67	NO	788	90	NO	808	96	NO
3	SR 198 EB Ramps at Ave 295	344	193	NO	363	199	NO	495	349	YES	514	355	YES
4	Farmersville Blvd at Ave 295	607	235	YES	652	241	YES	993	375	YES	1038	381	YES
6	Farmersville Blvd at Front St	954	210	YES	961	210	YES	1470	289	YES	1477	289	YES

It is important to note that a signal warrant defines the minimum condition under which signalization of an intersection might be warranted. Meeting this threshold does not suggest traffic signals are required, but rather, that other traffic factors and conditions be considered in order to determine whether signals are truly justified. It is also noted that signal warrants do not necessarily correlate with level of service. An intersection may satisfy a signal warrant condition and operate at or above an acceptable level of service or operate below an acceptable level of service and not meet signal warrant criteria.

Roadway Analysis

A capacity analysis of the study roadways was conducted using Table 4 in the State of Florida Department of Transportation *Quality/Level of Service Handbook* dated June 2020 (see Appendix). The City of Farmersville Circulation Element states that the peak hour level of service for roadways shall be no

[24] Ibid, page 15.

lower than LOS "C" for urban areas. The analysis was performed for the following AM and PM traffic scenarios:

- Existing (2023)
- Existing (2023) + Project
- Future Cumulative (2043)
- Future Cumulative (2043) + Project

Table 26

Intersection Improvements

Intersection improvements needed by the year 2043 to maintain or improve the operational level of service of the street system in the vicinity of the Project are presented in Table 28.[25]

Table 28
Future Intersection Improvements

#	Intersection	Total Improvements Required by 2043	Project Share
6	Farmersville Rd & Front St	Signal	1.1%

Project percent share is calculated using the following formula:

$$\% \text{ Share} = \frac{\text{Project Traffic}}{\text{(Future+Project Traffic) - Existing Traffic}} \times 100\%$$

In summary, all six study intersections currently operate at or above LOS C during peak hours prior to and with the addition of Project traffic. In 2043, it is anticipated that Farmersville Boulevard & Front Street will operate below an acceptable level of service prior to the addition of Project traffic. All roadway segments within the scope of the study currently operate above LOS C during peak hours prior to, and with the addition of Project traffic in both 2023 and 2043. With the addition of the mitigation measure identified in Table 28, all intersections will operate at acceptable levels.

As such, potential impacts will be ***less than significant with mitigation incorporation.***

Mitigation Measures:

TRA-1

> The Applicant shall pay the City of Farmersville for their Fair Share Portion of the intersection improvements described in Table 28, in order to maintain or improve the operational level of service of the street system in the Project vicinity.

b. Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Less Than Significant Impact with Mitigation. An evaluation of vehicle miles traveled (VMT) for project traffic was conducted in accordance with California Environmental Quality Act (CEQA) requirements.

[25] Ibid, pg 17.

The City of Farmersville has adopted the "County of Tulare SB 743 Guidelines", dated June 8, 2020, which contain recommendations regarding VMT assessment, significance thresholds and mitigation measures.

Baseline VMT was determined utilizing data from the California Statewide Travel Demand Model (CSTDM). The proposed residential Project is located in Traffic Analysis Zone (TAZ) 2757, which has an average VMT/capita of 11.27 miles. The proposed residential Project is considered a typical Project within the TAZ and therefore the Project would be expected to have the same VMT per capita. There are no special considerations with the Project to assume the Project would produce a VMT/capita lower than the average for the TAZ. The threshold of significance for residential Project VMT/capita is if the Project VMT is below the average in the TAZ where the Project is located. Since VMT/capita is assumed to be equal to the average for the aforementioned zone, it is anticipated that the proposed Project will have a significant transportation impact prior to mitigation. The proposed Project includes locally-serving retail as well as residential dwelling units. Locally-serving retail is defined by a retail development that is less than 50,000 square feet. The locally-serving retail "screens out" of VMT analysis and therefore, only the vehicle trips generated by the residential dwelling units is used in the VMT mitigation.

The Tulare County guidelines include detailed instructions for mitigation if a project has significant impacts. The guidelines state "The preferred method of VMT mitigation in Tulare County is for project applicants to provide transportation improvements that facilitate travel by walking, bicycling, or transit." In accordance with these guidelines, a survey was conducted within a half mile of the Project to determine any pedestrian, bicycle or transit facilities deficiencies exist. After review, three ADA compliant wheelchair ramps are proposed to be constructed at the following location: Farmersville Boulevard & Walnut Avenue. The proposed mitigation measures are shown in Figure 5.

The guidelines include a minimum cost for mitigation of $20 per daily trip generated by the Project or 0.5% of the total construction cost of the Project (not including land acquisition). As shown in Table 1, the Project excluding the locally-serving retail is anticipated to generate 478 daily trips, which equates to a target value of improvements of $9,560. The total mitigation cost is estimated at approximately $10,800 with a 20% contingency.

Pursuant to the guidelines, if a project provides mitigation which meets the minimum threshold listed above, the project can presume a 1% reduction in VMT. The assumed VMT/capita reduction is 1% of 11.27 or 0.11. The resulting VMT/capita after mitigation is 11.16 which is below the average VMT/capita in the TAZ which the Project is located.

Project VMT analysis showed a VMT which was equal to the existing local VMT in the area, which indicates a transportation impact under CEQA. With implementation of the mitigation measure TRA-2

identified above for reduction of VMT, the Project will have a ***less than significant transportation impact***.

Mitigation Measures:

TRA-2

The applicant shall install ADA compliant wheelchair ramps at the following locations:

- Farmersville Road & Walnut Avenue (3 ramps)

c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less Than Significant Impact. The proposed Project has been designed for ease of access, adequate circulation/movement, and is typical of residential developments in the City of Farmersville. On-site circulation patterns do not involve high speeds, sharp curves or dangerous intersections. Although there will be an increase in the volume of vehicles accessing the site and surrounding areas, the proposed Project will not present a substantial increase in hazards. Any impacts are considered ***less than significant.***

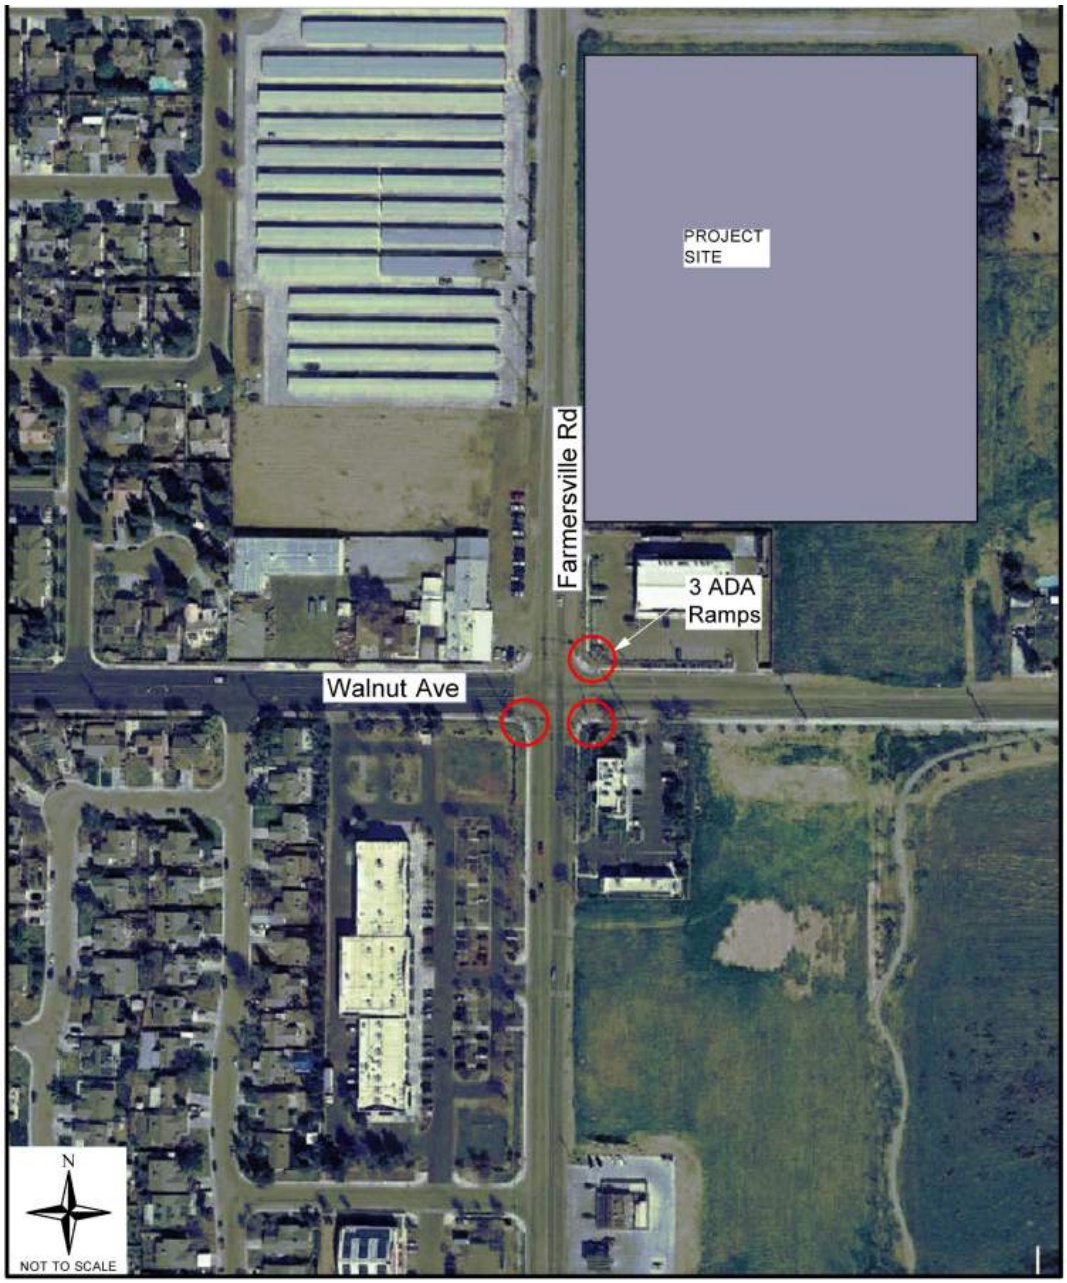
Mitigation Measures: None are required.

d. Result in inadequate emergency access?

Less Than Significant Impact. The proposed Project does not involve a change to any emergency response plan. Access to the site is proposed via Farmersville Boulevard. The site will remain accessible to emergency vehicles of all sizes. As such, potential impacts are ***less than significant.***

Mitigation Measures: None are required.

Figure 5
VMT Mitigation



XVIII. TRIBAL CULTURAL RESOURCES

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☒	☐
ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of the Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☒	☐

RESPONSES

a-i, a-ii. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k) or a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of the Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

Less Than Significant Impact. A Tribal Cultural Resource (TCR) is defined under Public Resources Code section 21074 as a site, feature, place, cultural landscape that is geographically defined in terms of size and scope, sacred place, and object with cultural value to a California Native American tribe that are either included and that is listed or eligible for inclusion in the California Register of Historic Resources or in a local register of historical resources, or if the City of Farmersville, acting as the Lead Agency, supported by substantial evidence, chooses at its discretion to treat the resource as a TCR. As discussed above, under Section V, Cultural Resources, no subsurface construction is anticipated to occur as a result of Project implementation as the site is currently built out.

The California Native American Tribes were contacted pursuant to AB 52 (Public Resources Code Section 21080.3.1, et seq.) and SB 18 on behalf of the City of Farmersville on May 30, 2023.

- Big Sandy Rancheria of Western Mono Indians
- Santa Rosa Indian Community of the Santa Rosa Rancheria
- Tule River Indian Tribe
- Wuksache Indian Tribe/Eshom Valley band
- Tubatulabals of Kern Valley
- North Fork Mono Tribe
- Big Sandy Rancheria of Western Mono Indians
- Kern Valley Indian Community

Tribes were provided 90 days, to request consultation pursuant to those statutes. The Santa Rosa Rancheria – Tachi Yokuts responded on July 3, 2023 and requested to be retained for consultation and monitoring, and to conduct a cultural presentation for construction staff. They also requested copies of the archaeological survey and record search as well as the Sacred Lands File search, which were provided via email. No other comments were received. Potential impacts to tribal cultural resources will be ***less than significant.***

Mitigation Measures: None are required.

XIX. UTILITIES AND SERVICE SYSTEMS

Would the project:

		Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a.	Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b.	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
c.	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d.	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e.	Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐
g.	Comply with federal, state, and local statutes and regulations related to solid waste?	☐	☐	☒	☐

RESPONSES

a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less Than Significant Impact. The proposed Project would include the development of two fully affordable multi-family projects for a total of 82 units and three commercial pads. The development also includes a community area, fenced dog park, bocce ball court, community garden, on-site laundry facility, and outdoor picnic-barbeque area. The site construction will also include internal access roads, parking spaces, lighting, site landscaping and additional related improvements.

Wastewater service, water, electric power, natural gas and telecommunications facilities would all provide service to the proposed Project from their respective existing facilities and as such, would not be required to construct new or expanded facilities.

As discussed in Section X, Hydrology and Water Quality, with an increase in the area of impervious surfaces on the Project site, an increase in the amount of storm water runoff is anticipated. The site will be designed so that storm water is collected and deposited in the City's existing storm drain system. The storm water collection system design will be subject to review and approval by the City Public Works Department. Storm water during construction will be managed as part of the Storm Water Pollution Prevention Plan (SWPPP). A copy of the SWPPP is retained on-site during construction. Thus, the proposed Project would have a ***less than significant impact.***

The Project will have a ***less than significant impact*** to this analysis area.

Mitigation Measures: None are required.

b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Less Than Significant Impact. As discussed in Impact X(b), the proposed Project will increase demands on the Farmersville water production and distribution area. The City's water system consists of a series of wells, pump stations, treatment facilities and distribution lines. The system draws from the groundwater system underlying Farmersville and the Central Valley. While groundwater supplies can accommodate multiple dry years, the City of Farmersville, Tulare County, and nearby cities are engaging in groundwater management activities to monitor and enhance recharge capabilities to accommodate future demands. The Project site has been designated for urban development and as such, has been

accounted for in the City's infrastructure planning documents and projections. The City will have sufficient supply to serve the proposed Project. As such, the proposed Project will have a ***less than significant impact*** to this impact area.

Mitigation Measures: None are required.

c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less Than Significant Impact. The Project will result in wastewater from residential units and commercial buildings that will be discharged into the City's existing wastewater treatment system. The wastewater will be typical of other urban/residential and general commercial/retail developments consisting of bathrooms, kitchen drains and other similar features. The Project will not discharge any unusual or atypical wastewater that would violate the City's waste discharge requirements. The City of Farmersville Public Works Department has reviewed the Project and determined that it can accommodate the wastewater generated from the project. Additionally, the proposed Project applicant would be required to comply with any applicable City and WWTF regulations and would be subject to applicable development impact fees and wastewater connection charges. With compliance to applicable standards and payment of required fees and connection charges, the Project would not result in a significant impact related to construction or expansions of existing wastewater treatment facilities. Therefore, the impact of the Project on wastewater treatment is ***less than significant***.

Mitigation Measures: None are required.

d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less Than Significant Impact. Disposal services in the City are provided by a private contractor, Mid Valley Disposal. Solid waste is usually hauled to the Visalia Landfill, north of Visalia on Road 80. The State of California requires that all cities and counties reduce the amount of waste going to landfills and the City is meeting its recycling requirements. Mid Valley Disposal has a program of recycling pick-ups in Farmersville; materials separated for recycling include paper, glass, metals and plastics to provide a diversion of portions of the waste stream resulting in a reduction of the solid waste stream going to landfills and similar disposal locations. The site has been designated for urban uses by the General Plan

and as such, the demand for City infrastructure, such as disposal services, has been accounted for in City planning documents. Impacts to this resource area are ***less than significant.***

Mitigation Measures: None are required.

e. Comply with federal, state, and local statutes and regulations related to solid waste?

Less Than Significant Impact. See Response d, above. The proposed Project would be required to comply with all federal, State, and local regulations related to solid waste. Furthermore, the proposed Project would be required to comply with all standards related to solid waste diversion, reduction, and recycling during project construction and operation. As such, any impacts would be ***less than significant.***

Mitigation Measures: None are required.

XX. WILDFIRE

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

RESPONSES

a. Substantially impair an adopted emergency response plan or emergency evacuation plan?

b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Less Than Significant Impact. The proposed Project is located in an area developed with residential and commercial uses, which precludes the risk of wildfire. The area is flat in nature which would limit the risk of downslope flooding and landslides, and limit any wildfire spread.

To receive building permits, the proposed Project would be required to be in compliance with the adopted emergency response plan. As such, any wildfire risk to the project structures or people would be ***less than significant.***

Mitigation Measures: None are required.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE

Would the project:

	Potentially Significant Impact	Less than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☐	☒	☐
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

RESPONSES

a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict

the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Less Than Significant Impact With Mitigation. The analyses of environmental issues contained in this Initial Study indicate that the proposed Project is not expected to have substantial impact on the environment or on any resources identified in the Initial Study. Mitigation measures have been incorporated in the project design to reduce all potentially significant impacts to ***less than significant***.

b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Less Than Significant Impact. CEQA Guidelines Section 15064(i) states that a Lead Agency shall consider whether the cumulative impact of a project is significant and whether the effects of the Project are cumulatively considerable. The assessment of the significance of the cumulative effects of a project must, therefore, be conducted in connection with the effects of past projects, other current projects, and probable future projects. Due to the nature of the Project and consistency with environmental policies, incremental contributions to impacts are considered less than cumulatively considerable. The proposed Project would not contribute substantially to adverse cumulative conditions, or create any substantial indirect impacts (i.e., increase in population could lead to an increase need for housing, increase in traffic, air pollutants, etc.). The impact is ***less than significant***.

c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less Than Significant Impact With Mitigation. The analyses of environmental issues contained in this Initial Study indicate that the project is not expected to have substantial impact on human beings, either directly or indirectly. Mitigation measures have been incorporated in the Project design to reduce all potentially significant impacts to ***less than significant.***

Appendix B

Best Management Practices Matrix

CITY OF FARMERSVILLE
NPDES PHASE II PERMIT
Storm Water Management Plan
Best Management Practices (BMPs)

BMP NO.	BMPS	Implementation Time Frame YEAR 1	2	3	4	5	MCM OBJECTIVE	IMPLEMENTATION	MEASURABLE GOALS	RESPONSIBLE PARTY
MCM - 1 PUBLIC EDUCATION AND OUTREACH ON STORM WATER IMPACTS										
1-1	Develop Inserts - Storm water quality message to be distributed in residents' water bills each month.	50%	**100%**	100%	100%	100%	The public education and outreach plan has the following objectives: 1) Change public perception and attitudes toward the drainage problems in the City of Farmersville, 2) Raise public awareness about storm drainage pollution and its impact on the City of Farmersville water resources, 3) Educate the community about specific pollutant sources and what the public can do to reduce drainage pollution, 4) Seek out public involvement (volunteer groups) in pollution prevention programs.	Insert flyer tailored to address storm water education. The flyer will be printed on the back of the existing utility bill. This mailing will go out to the entire City twice annually (population ± 8737), including areas outside of the permit boundary each month.	The effectiveness of mailer will be measured by selecting a random sample of County residents on the mailing list to survey. These residents will be mailed a feedback questionnaires. 10% of 1/10th of those surveyed will be maintained for return of the questionnaires.	Public Works Director (Eliseo Martinez)
1-2	Storm Water Link - California Integrated Waste Management Board	0%	0%	50%	**100%**	100%		The Administrative and Planning Departments will work together to develop a City website, including a storm water section to describe the background of the NPDES Phase II permitting process & hotline information.	The effectiveness of the web page will be measured by a web counter recording the number of visitors to the page. The goal for the web page will be 5 hits per month and monitored quarterly for evaluation.	Public Works Director (Eliseo Martinez)
1-3	School Visits and Public Education - Presentation to students and citizen groups regarding storm water pollution.	0%	25%	50%	**100%**	100%		The City will coordinate with adjacent comunities and the regional water quality control board to bring a storm water quality speaker to 1 of the 6 various schools and one community meeting each year.	The effectiveness of the BMP will be measured by a brief quiz/survey distributed immediately following the presentation, with a goal that at least 80% of the surveys are returned to the instructor.	Public Works Director (Eliseo Martinez)
1-4	EPA's Landscape maintenance brochures	0%	0%	**100%**	100%	100%		Distribute brochures at the hardware store, nursery and City events.	Number of flyers distributed will be logged for monitoring purposes. 100 brochures will be distributed at each designated retailer and the number and times replaced will be recorded and monitored. City will track number distributed in their office.	Public Works Director (Eliseo Martinez)
1-5	Establish pet waste control display at Liberty Parks.	0%	0%	**100%**	100%	100%		Install a sign that references the City of Farmersville pet waste ordinance and provide pick-up bags. Liberty Park has waste control bags and signage provided. All other parks do not permit animals but will have ordinance postings.	The effectiveness of the pet waste control display will be measured by tracking the number of bags distributed and by surveying the parks crew to see if there has been a noticeable change in the amount of pet waste seen or collected.	Public Works Director (Eliseo Martinez)

BMP NO.	BMPS	Implementation Time Frame YEAR 1	2	3	4	5	MCM OBJECTIVE	IMPLEMENTATION	MEASURABLE GOALS	RESPONSIBLE PARTY
MCM - 2 PUBLIC INVOLVEMENT/PARTICIPATION										
2-1	Multi-faceted City Ordinance for enhancement and enforcement of SWMP Minimum Control Measures and BMPs	**100%**	100%	100%	100%	100%	Local and State requirements will be met within this ordinance and it will be presented to the community through public notice and meetings. The success of the SWMP depends on securing support from City elected officials, citizens, business groups and County staff. To secure this support, we need to implement a plan that not only informs these audiences of the urban runoff concerns, but also asks them to participate in the development of the SWMP. The objectives of the plan will be to : 1) Raise public awareness about the drainage problems in the City of Farmersville through public involvement in the SWMP, and 2) Involve the public in the development and implementation of the SWMP to secure public "buy in" and support for the SWMP.	Adopt the ordinance which will give the City legal authority to fully implement the SWMP including provisions for a tiered level of enforcement of the program. Adapt a SWMP ordinance which will enhance and enforce the City's position on all SWMP Minimum Control Measures and BMPs. All state and locate procedures will be implemented in regards to Pulic notice and exposure.	Review of non-compliances and follow-up information will measure the effectiveness of the BMP.	Public Works Director (Eliseo Martinez)
2-2	Storm Drain Stenciling - The City will sponsor a storm drain stenciling program for eleven (11) City-maintained storm drain structures.	0%	33%	67%	**100%**	100%		Where signing and restriping is performed, existing storm drain inlets, culverts, headwalls, and other drainage structures will be stenciled annually. A stenciling standard will be developed by the City to be used for the annual stenciling program.	The effectiveness of this program will be measured by recording stenciled structures. Obtaining annual targets will confirm 100% completion by year 4. A logging procedure will track new structures to the system and process.	Public Works Director (Eliseo Martinez)
2-3	City Cleanups - City employees and citizens will clean up trash bi-annually/daily as a area or neighbhood function.	50%	50%	**100%**	100%	100%		Continue this existing cleanup activity, including roadways, culverts, hillsides, neighborhood and areas etc.	The effectiveness of this program will be measured by the quantity of garbage removed from the City road right-of-way each day or event. The minimum amount per day will be set at one load (2- disposal trash bags similar to Caltrans trash bag) of garbage. Locations of City cleanups will be recorded for evaluation.	Public Works Director (Eliseo Martinez)
2-4	Waterway Cleanup - Local Ditch Co. cleans local drainage waterways .	25%	50%	75%	**100%**	100%		Ditch Co. will continue to clean up waterways within the City on an annual basis.	The effectiveness of this program will be measured by recording the linear feet of waterway cleanup on an annual basis, with a minimum length of 2,000 lf. each year. Documentation will be completed and kept following each cleanup activity.	Public Works Director (Eliseo Martinez)
2-5	Survey - The City will develop a survey which will provide baseline information about knowledge of the storm sewer system and will provide an evaluation and assessment tool.	50%	**100%**	100%	100%	100%		The city will develop a survey to be distributed out to approximately 1% of the population in the city and areas outside of the permit boundary.	The effectiveness of the survey will be measured by the responses received.	Public Works Director (Eliseo Martinez)
2.6	Pulic Works daily cleaning	75%	**100%**	100%	100%	100%		Right-of-way clean up crews clean daily at present. Personal knowledge will be used to target areas of concern for monitoring.	Recording locations, type of cleanup & debris gathered & volume of material accumulated will measure effectiveness & targetable issues.	Public Works Director (Eliseo Martinez)
2-7	Street Sweeping (Contracted)	**100%**	100%	100%	100%	100%		Continue street sweeping operations. Maintain clean streets and environment. Develop database for record keeping and evaluation	Measures of effectiveness can be; - Number of miles per month - Volume & type of debris collected	Public Works Director (Eliseo Martinez)

BMP NO.	BMPS	Implementation Time Frame YEAR 1	2	3	4	5	MCM OBJECTIVE	IMPLEMENTATION	MEASURABLE GOALS	RESPONSIBLE PARTY
MCM - 3: ILLICIT DISCHARGE DETECTION AND ELIMINATION										
3-1	Storm sewer map and program developed to prioritize areas of concern and establish corrective action. The addressing of illicit Discharge in the Ordinance (BMP 2-1) allows an enforcement mechanism to prohibit illicit storm water discharges.	25%	50%	75%	**100%**	100%	Minimize storm water pollution reaching waters of the United States through identification of illicit discharge sources. Develop a plan to locate and prioritize areas of concern and address non-storm water discharges and illegal dumping.	Develop map and program to provide the baseline for tracking the system and discharge complaints. At a minimum, the map will include the location of all outfalls, approximate limits of watersheds and the names and locations of all waters that receive these discharges. The ordinance will supply the support of tiered enforcement: 1) Education, 2) Notification, 3) Citation, and 4) Fines. A Priority Action List will occur through reporting, inspections, public complaints, type of business targeting and response to corrective measures.	The effectiveness of the measure will be judged by the completion of the task and the corrective actions gathered annually.	Public Works Director (Eliseo Martinez)
3-2	Train public employees involved in program and develop inspection procedures/checklists	**50%**	**100%**	100%	100%	100%		Train building and construction inspectors (all Year 1) and other related municipal staff (Year 2); with refreshers, (1 per year). Develop checklist for inspectors and procedures to detect illicit discharge, non-storm water discharges or illegal dumping. (Year 1) Track & evaluate reports.	Review of non-compliances and follow-up information 9Priority Action List) will measure the effectiveness of the BMP.	Public Works Director (Eliseo Martinez)
3-3	Priority Action List	90%	**100%**	100%	100%	100%		Enforce violations through a tiered system and track violations and inspections. Violations of non-compliance will be recorded, reviewed and acted on accordingly per the ordinance.	Review of non-compliances and follow-up information will measure the effectiveness of the BMP.	Public Works Director (Eliseo Martinez)
3-4	Sewage Spill Response - A combination of the Police, Fire, and Public Works Departments will have personnel available to respond to spills and dumping from public facilities and prevent release to receiving waters.	**100%**	100%	100%	100%	100%		Continues the existing practice of responding to sewage spills. Citizens shall contact the Police Department, which will in turn notify the Public Works or Fire Department to have personnel clean the spill.	The effectiveness of this program will be measured by immediate response and reporting as currently conducted, plus the addition of the new Priority Action List & the tiered ordinance for enforcement.	Public Works Director (Eliseo Martinez)
3-5	Hazardous Waste Spill Resopnse - A combination of the Police, Fire, and Public Works Departments will have personnel available to respond to spills and dumping from public facilities and prevent release to receiving waters.	**100%**	100%	100%	100%	100%		Continues the existing practice of responding to hazardous waste spills. Citizens shall contact the Police Department, which will in turn notify the Public Works or Fire Department to have personnel clean the spill.	The effectiveness of this program will be measured by immediate response and reporting as currently conducted in conjunction with the Priority Action List & the tiered ordinance for enforcement.	Public Works Director (Eliseo Martinez)
3-6	Illegal Dumping Resopnse - A combination of the Police, Fire, and Public Works Departments will have personnel available to respond to spills and dumping from public facilities and prevent release to receiving waters.	**100%**	100%	100%	100%	100%		Continues the existing practice of responding to illegal dumping. Citizens shall contact the Police Department, which will in turn notify the Public Works or Fire Department to have personnel clean the spill.	The effectiveness of this program will be measured by immediate response and reporting as currently conducted in conjunction with the Priority Action List & the tiered ordinance for enforcement.	Public Works Director (Eliseo Martinez)
3-7	24-hour Dispatch Emergency Response System (Hotline)	**100%**	100%	100%	100%	100%		The City has established a hotline to provide a way for the public to take an active role in protecting water quality.	The effectiveness of the hotline will be measured by the number and types of calls received. The data retained on the Priority Action List will support the effectiveness of the program too.	Public Works Director (Eliseo Martinez)

BMP NO.	BMPS	Implementation Time Frame YEAR 1	2	3	4	5	MCM OBJECTIVE	IMPLEMENTATION	MEASURABLE GOALS	RESPONSIBLE PARTY
MCM - 4: CONSTRUCTION SITE STORM WATER RUNOFF CONTROL										
4-1	Construction SWPPP - Construction Storm Water Pollution Prevention Plan Guidelines that may be incorporated into existing building permit process.	50%	**100%**	100%	100%	100%	In the absence of appropriate management controls, construction sites can release significant amounts of sediments and other pollutants into a drainage system. The objective of the construction site runoff control plan is to provide the City of Farmersville means to manage and control discharges from construction sites.	The City will develop and adopt an ordinance (BMP 2-1) requiring construction site storm water controls on projects. The City will utilize SWPPP guidelines that incorporate BMPs.	Develop SWPPP packet that is to be distributed by the Public Works Department, and made available to the public, in association with grading permit applications. 100% of all grading permit applications shall include SWPPP, and City staff shall inspect 100% of all construction sites each year.	Public Works Director (Eliseo Martinez)
4-2	Construction Site BMP Standards - BMP Standards applicable to construction disturbing sites >1 acre.	33%	67%	**100%**	100%	100%		Continue to require site BMP standards as part of the building permit process.	The effectiveness of this BMP shall be to incorporate construction site BMP standards into Storm Water Pollution Prevention Plan submittals. 100% of SWPPP submittals shall include City-approved construction site BMP standards.	Public Works Director (Eliseo Martinez)
4-3	Complaint Procedures	75%	**100%**	100%	100%	100%		Use the "hotline" as established in under BMP No. 3-7.	The effectiveness of the hotline will be measured by the number of responses and types of calls received.	Public Works Director (Eliseo Martinez)
4-4	Training for Building and Construction Inspectors	0%	50%	**100%**	100%	100%		Conduct construction storm water training for Building and Construction inspectors. Storm water quality controls shall be included in what they inspect.	The effectiveness of the training will be measured by the number of attendees (all City staff by year 3) and through an evaluation form given to each attendee and by site inspection.	Public Works Director (Eliseo Martinez)
4-5	Procedures for assessing fines	0%	0%	**100%**	100%	100%		The city will develop procedures for assessing penalties. The penalty must be appropriate to the problem.	The effectiveness of the procedures will be measured by the number, violation and type of tiered enforcement actions initiated.	Public Works Director (Eliseo Martinez)
MCM - 5: POST CONSTRUCTION STORM WATER MANAGEMENT IN NEW DEVELOPMENT AND REDEVELOPMENT										
5-1	Establish technical criteria, guidence and design review for structural, non-structural and post BMP standards.	0%	0%	**100%**	100%	100%	Educate public employees and developers of the water quality issues associated with improper post-construction controls. Establish standards and enforcement measures as required to maintain compliance and protect water quality.	Develop new and redevelopment BMP standards as part of the plan review process, and require standards in 100 % of new and re-development plans, also used as guidelines by developers, contractors, and owners.	100% of plans submitted shall include City-approved new development BMP standards. The effectiveness of the implementation will be visual inspection	Public Works Director (Eliseo Martinez)
5-2	Establish a system that implements attachment 4 requirements / standards and enforces them and tracks their maintenance. Provide outreach and technical assistance to developers and designers.	0%	0%	**100%**	100%	100%		Develop and implement ordinance addressing post-construction runoff, including enforcement measures. (BMP 2-1)	The City will inspect 100% of the sites completed each year. Results from inspections will indicate effectiveness of measure.	Public Works Director (Eliseo Martinez)
5-3	Train department staff invovled with maintaining, implementing and tracking post-construction requirements and conditions of approval.	0%	0%	**100%**	100%	100%		Conduct post-construction storm water training for Building and Construction inspectors.	Attendee's and training content will be recorded and reported annually.	Public Works Director (Eliseo Martinez)

BMP NO.	BMPS	Implementation Time Frame YEAR 1	2	3	4	5	MCM OBJECTIVE	IMPLEMENTATION	MEASURABLE GOALS	RESPONSIBLE PARTY
MCM - 6: POLLUTION PREVENTION/GOOD HOUSEKEEPING FOR MUNICIPAL OPERATIONS										
6-1	Waterway and Drainage Facility Maintenance Program - Regular cleanup of local drainage waterways, sumps, and inlet structures outside of City road right-of-way.	50%	**100%**	100%	100%	100%	A significant amount of urban pollutants are associated with street and road surfaces, parking lots, plazas, corporation yards, and othermunicipal facilities. The objective of this pollution prevention and good housekeeping plan is to identify, develop and implement good housekeeping procedures to address drainage pollutants associated with all City of Farmersville public facilities.	Continue existing maintenance program utilizing one fulltime City employee to maintain drainage waterways and facilities. Develop a daily logging system of areas receiving maintenance, and the dates of maintenance performed.	The effectiveness of this program will be measured by recording the drainage areas receiving maintenance/cleanup each day. 100% of facilities will be inspected annually. Documentation will be performed by kept in a log of the following information: 1. Drainage area identifier (I.e. People's Ditch) 2. Area maintained (I.e. northeast quadrant) 3. Date cleaned and by whom 4. Special Notes All logs shall lbe filed over the permit period and made available for annual review.	Public Works Director (Eliseo Martinez)
6-2	Culvert Cleaning and Storm Drain Maintenance - Cleaning and maintenance program which maintains existing road drainage facilities	50%	**100%**	100%	100%	100%		Continue existing program to clean up culverts and other drainage facilities within the City road right-of-way prior to first storms and on an as-needed basis. Drainage inlets receive routine cleaning by the maintenance districts, of which two districts are included in the permit boundary areas. Other drainage facilities are cleaned by the Public Works Department.	The effectiveness of this program will be measured by recording the drainage areas receiving maintenance/cleanup each day. 100% of facilities will be inspected annually. Documentation will be kept in a log of the following information: 1. Drainage area identifier (I.e. People's Ditch) 2. Area maintained (I.e. northeast quadrant) 3. Date cleaned and by whom 4. Special Notes All logs shall lbe filed over the permit period and made available for annual review.	Public Works Director (Eliseo Martinez)
6-3	Waste Disposal - Proper and scheduled disposal of City garbage, antifreeze, oil, and filter materials.	**100%**	100%	100%	100%	100%		Continue existing program of contracting waste disposal to a private firm to be removed from the City.	Disposal logs will be maintained showing which wastes have been taken out of the City, and the date on which they were removed. Logs will be filed during the permitting period and made available annually for review.	Public Works Director (Eliseo Martinez)
6-4	Annual Administrative Report - Report compiled by City staff and presented to the Regional Water Quality Control Board	**100%**	100%	100%	100%	100%		The report will include a summary of the various BMPS outlined in this report, and their relative effectiveness as shown by logs, and other measurable goals, and will be submitted to the Board on an annual basis in June.	This BMP will be measured by the response received from the Regional Water Quality Control Board and the availability of data.	Public Works Director (Eliseo Martinez)
6-5	Litter Control	0%	50%	**100%**	100%	100%		Increase the number of trash receptacles and their locations in public locations.	The effectiveness of the litter control will be measured by the amount of trash recovered and continually compared to history for effectiveness and improvement.	Public Works Director (Eliseo Martinez)
6-6	Training- Municipal Staff	0%	50%	**100%**	100%	100%		Conduct training for municipal staff on the basic storm water overview and provide more targeted training for specific job duties. Training will be imperative for BMPs to be implemented and improved upon. Training to be preformed annually with refreshers as needed for new hires. etc.	The effectiveness of the training will be measured by the number of attendees and through an evaluation form given to each attendee.	Public Works Director (Eliseo Martinez)

AGREEMENT

THIS AGREEMENT, is made and entered into this 8th day of NOVEMBER, 1995 by and between the **CITY OF FARMERSVILLE**, hereinafter referred to as "City", and **CONSOLIDATED PEOPLES DITCH COMPANY**, a corporation, hereinafter referred to as "Company".

W I T N E S S E T H:

WHEREAS, the subject of this Agreement is man-made water channels commonly known as Consolidated Peoples Ditch, hereinafter collectively referred to as CPD, the origin and general course of which is described in the attached Exhibit "A"; and

WHEREAS, Company owns, uses and utilizes CPD for the purpose of diverting and transporting water released from Lake Kaweah for flood control, irrigation and other beneficial purposes, and waters from other sources downstream from Lake Kaweah; and

WHEREAS, pursuant to prior agreements, the Company has permitted the City to use CPD as an integral part of the means by which the City disposes of storm waters and other miscellaneous occurring surface waters collected within its boundaries; and

WHEREAS, conflicts may occur arising out of contemporaneous and conflicting uses of CPD by the parties; and

WHEREAS, from time to time the City intends to and will annex further lands which will result in the inclusion of other portions of CPD within its boundaries and which will result in further improvements along and in the CPD and may result in the discharge of additional waters into the CPD by City; and

WHEREAS, by the execution of the Agreement, it is the mutual wish and desire of the parties to define, fix and determine the mutual and reciprocal rights, duties and obligations of each of the parties relating to the use of CPD by City.

NOW, THEREFORE, FOR AND IN CONSIDERATION OF THE MUTUAL COVENANTS HEREINAFTER CONTAINED, IT IS AGREED AS FOLLOWS:

1. Proposed Improvements to CPD by City: As the need for further capacity in CPD to accommodate simultaneous Company flows and the City discharges becomes apparent, and as necessary funds become available, at the City's discretion, City will cause improvements tied to or in CPD within the City limits of City to be made, subject to the approval of Company. In addition, City shall implement a requirement of using detention basins for all new developments along the CPD to delay or prevent discharges therefrom into CPD, unless authorized in writing by the Company.

Any off-stream storage created by the improvements above mentioned shall be used exclusively by the City for its discharges and shall not be used by CPD without the consent of the City.

2. Approval of Improvements: Detailed engineering plans for all proposed physical improvements, installations and alterations within Company right-of-way by the City pursuant to the provisions herein shall be immediately forwarded to Company upon availability of said plans. The initial submittal of said plans shall be reviewed and commented upon by Company or its authorized representative within forty-five (45) days of receipt. Within said forty-five days, Company shall indicate if the plans are approved or disapproved. Company's failure to act within the time period set forth shall be deemed as its approval.

Should Company not approve said plans as initially submitted, City shall thereafter resubmit detailed engineering plans which respond to concerns raised by Company; said resubmittal shall be responded to within thirty (30) days of receipt by Company. Company's failure to act within the time period set forth shall be deemed as its approval.

Company shall evaluate engineering plans based on potential impacts to Company's ability to operate and maintain CPD without interference. Company's determination shall be final, but it will not withhold approval arbitrarily, capriciously, or without cause.

3. Simultaneous Use of CPD: The City acknowledges that Company has a prior and exclusive right to use all or any portion of the CPD's capacity. During the term of this Agreement, Company shall permit City to utilize ten percent (10%) of the presently estimated ditch capacity of eighty (80) cubic feet per second, on a first priority basis. It is recognized this capacity may change over time due to a number of factors. Company will permit the City to utilize all unused capacity that may be available in CPD, provided that City does not exceed the capacity of the CPD or downstream storage basins.

Notwithstanding the foregoing, when it appears imminent that the capacity of the CPD or downstream basins will be exceeded as a result of City discharges and diminution of other flows in CPD is not deemed feasible by Company, City shall fully cooperate with Company to reduce or terminate its discharges. Company shall give advance notice to City when reduction of City discharges is required.

4. Effect of Annexation of Lands to City: As the City annexes further lands, which includes other portions of CPD, the provisions of this Agreement shall be extended to the annexed area. No further agreement between the parties will be necessary to reflect the annexation.

5. Review of Plans for Development along CPD: The City agrees to provide Company with opportunities to review and comment on all tentative subdivision maps, tentative parcel maps, and all other plans relating to the development of land along CPD that are submitted to the City. The initial review opportunity shall occur during the City's

Site Plan Review process. Under the City's current process, copies of said development plans and tentative maps submitted for the Site Plan Review Committee's review shall be immediately made available to Company or its authorized representative. The City shall receive the comments from Company or its representative relating to or affecting the Company's right-of-way not later than the day before the Site Plan Review Committee meeting. The Site Plan Review Committee shall forward Company comments on said maps and plans to the applicant. The City shall require that all reasonable and justified comments and changes submitted by Company to be incorporated in plans and maps before the final map or plan is approved by the Site Plan Review Committee, provided that such comments and changes are not arbitrary or capricious. Should the City deem such comments and changes to be unreasonable or unjustified and not necessary to protect Company's rights and interest in CPD, the City and Company shall meet and confer to resolve the items of dispute. Items of dispute that cannot be resolved shall be submitted to arbitration. The City's obligation to require implementation of Company's comments and changes does not apply to development projects of other governmental agencies not subject to the City's jurisdiction.

Should the City's Site Plan Review process change, Company will be provided with a comparable opportunity to review said maps and plans.

Without cost to Company, the City shall require as a condition of development along CPD the dedication of sufficient right-of-way to allow for a 15-foot top width levee roadway on both sides of CPD, together with all necessary easements for flowage, capacity, inspection, repair, and maintenance of CPD. The provisions of this Agreement shall apply to such new areas.

6. Maintenance of CPD: Commencing on January 1, 1996, the City shall be responsible for all of the regular or necessary maintenance and repair costs of CPD within the city limits of City. This obligation shall also include the maintenance, repair and replacement of heretofore and hereafter piped or lined sections of CPD within the

city limits of City. Company shall perform, or cause to be performed, such work and City shall reimburse Company within thirty (30) days of billing. Company shall provide City a detailed billing of all maintenance performed in City limits.

7. Indemnity of Parties: The City agrees to defend, indemnify and hold Company harmless from all claims, losses, damages and costs occasioned by or arising out of the following activities:

(a) Public use of any park, bike or walking path or other facility installed by the City or others under the direction or control of the City intended for use by the public, along, adjacent to or within the Company's rights-of-way.

(b) Maintenance of any of the facilities referred to in paragraph 7(a) above.

(c) Realignment of CPD heretofore or hereafter accomplished by the City or under its direction.

(d) Operational activities of the City in the CPD.

(e) Violation by the City of any State or Federal discharge requirements, including but not limited to Proposition 65.

(f) Violation of Fish and Game Code Sections 5650, if applicable, arising out of or related to City operations or discharges.

(g) City discharges.

Except for work performed by Company on behalf of City, Company agrees to defend, indemnify and hold the City harmless from all claims arising out of any maintenance or operations activity undertaken by it in the CPD.

8. City Points of Discharge: The City agrees that all points of discharge into the CPD of surface waters by means of any discharge facility installed by the City after the date hereof shall be equipped with a gate or regulating device installed thereupon which will enable the City's discharge to be regulated or terminated should the need arise.

The City shall give Company written notice of the location of any new discharge facility. Accompanying the Notice, the City shall deliver to Company a map showing the portion of the City serviced through the discharge point, along with a written statement giving the location and manner of operation of the controlling device or gate.

In discharging surface flows into CPD, the City agrees to comply with all present and future discharge requirements imposed by the State of California or the United States. The City's discharge shall not include sanitary sewage, untreated process water from industrial and food processing plants, designated or hazardous waste. All waters in CPD leaving the city limits of the City shall not be materially different from the waters in CPD entering the City in the CPD. No discharge by the City shall render the CPD flows a nuisance or unsuitable for irrigation or ground water recharge.

The City shall not, by any affirmative act, allow any party to discharge water directly into CPD without the written consent of Company.

9. Monitoring the Flow: Upon execution of this Agreement, the City agrees to institute a monitoring program to determine the concentration of selected constituents in the City's discharge measured at a representative number of discharge sites to show the overall quality of the City's discharge into CPD. The purpose of the monitoring program shall be to establish a background profile of selected constituents in the water discharged into CPD by the City. Results of the City's monitoring program shall be made available to Company upon request.

10. City Discharge Fee: In addition to other renumeration required herein, City agrees to pay Company a fee of $1,000 per year during the term of this Agreement.

11. Term: The term of this Agreement shall be ten (10) years starting on the date of execution and ending ten (10) years thereafter. Should City or Company fail to cure any breach of the terms or conditions of this Agreement within 30 days of written notice of such, the other party shall have the right to immediately terminate this Agreement.

12. Interagency Communications: City and Company shall appoint and designate a person on their staffs who shall be available for information and expression of concerns concerning the maintenance of CPD, development along the channel, storm water discharges, compliance with the terms of this Agreement and any other matter relating to this Agreement or CPD. The object of this section is to provide a definite and easily instituted method of communication between all the parties to this Agreement with the assurance that each party's representative will have sufficient authority to and will respond by action to all concerns expressed by the other party.

13. Resolution of Disputes: The City acknowledges that CPD is a man-made channel that is owned, controlled and operated by Company. It is vital that no dispute concerning the uses of CPD results in legal action. With the object of avoiding litigation and the expenses and delays occasioned thereby, Company and City agree to submit all disputes to Arbitration.

14. Compliance with the Laws: The City agrees that any activities undertaken by it in the CPD shall be done only in compliance with all laws, and any other local, state or federal agency regulations.

15. Change of Agreement: This Agreement shall supercede any and all other past agreements between the parties concerning the CPD. This Agreement can only be

altered, discharged or prematurely terminated by a written Agreement signed by all the parties hereto. This Agreement shall be binding upon all the successors in interest of either party.

IN WITNESS WHEREOF, the parties have hereunto executed this Agreement this 8th day of November, 1995.

Appendix I

Attachment 4 of General Permit

Areas subject to high growth or serving a population of at least 50,000 must comply with the following provisions (for counties this threshold population applies to the population within the permit area).

A. RECEIVING WATER LIMITATIONS

1. Discharges shall not cause or contribute to an exceedance of water quality standards contained in a Statewide Water Quality Control Plan, the California Toxics Rule (CTR), or in the applicable RWQCB Basin Plan.

2. The permittees shall comply with Receiving Water Limitations A.1 through timely implementation of control measures and other actions to reduce pollutants in the discharges in accordance with the SWMP and other requirements of this permit including any modifications. The SWMP shall be designed to achieve compliance with Receiving Water Limitations A.1. If exceedance(s) of water quality objectives or water quality standards (collectively, WQS) persist notwithstanding implementation of the SWMP and other requirements of this permit, the permittees shall assure compliance with Receiving Water Limitations A.1 by complying with the following procedure:

   a. Upon a determination by either the permittees or the RWQCB that discharges are causing or contributing to an exceedance of an applicable WQS, the permittees shall promptly notify and thereafter submit a report to the RWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of WQSs. The report may be incorporated in the annual update to the SWMP unless the RWQCB directs an earlier submittal. The report shall include an implementation schedule. The RWQCB may require modifications to the report.

   b. Submit any modifications to the report required by the RWQCB within 30 days of notification.

   c. Within 30 days following approval of the report described above by the RWQCB, the permittees shall revise the SWMP and monitoring program to incorporate the approved modified BMPs that have been and will be implemented, implementation schedule, and any additional monitoring required.

   d. Implement the revised SWMP and monitoring program in accordance with the approved schedule.

   So long as the permittees have complied with the procedures set forth above and are implementing the revised SWMP, the permittees do not have to repeat the same procedure for continuing or recurring exceedances of the same receiving water limitations unless directed by the RWQCB to develop additional BMPs.

B. DESIGN STANDARDS

Regulated Small MS4s subject to this requirement must adopt an ordinance or other document to ensure implementation of the Design Standards included herein or a functionally equivalent program that is acceptable to the appropriate RWQCB. The ordinance or other document must be adopted and effective prior to the expiration of this General Permit or, for Small MS4s designated subsequent to the Permit adoption, within five years of designation as a regulated Small MS4.

All discretionary development and redevelopment projects that fall into one of the following categories are subject to these Design Standards. These categories are:

- Single-Family Hillside Residences
- 100,000 Square Foot Commercial Developments
- Automotive Repair Shops
- Retail Gasoline Outlets
- Restaurants
- Home Subdivisions with 10 or more housing units
- Parking lots 5,000 square feet or more or with 25 or more parking spaces and potentially exposed to storm water runoff

1. Conflicts With Local Practices
   Where provisions of the Design Standards conflict with established local codes or other regulatory mechanism, (e.g., specific language of signage used on storm drain stenciling), the Permittee may continue the local practice and modify the Design Standards to be consistent with the code or other regulatory mechanism, except that to the extent that the standards in the Design Standards are more stringent than those under local codes or other regulatory mechanism, such more stringent standards shall apply.

2. Design Standards Applicable to All Categories

   a. Peak Storm Water Runoff Discharge Rates
      Post-development peak storm water runoff discharge rates shall not exceed the estimated pre-development rate for developments where the increased peak storm water discharge rate will result in increased potential for downstream erosion.

   b. Conserve Natural Areas
      If applicable, the following items are required and must be implemented in the site layout during the subdivision design and approval process, consistent with applicable General Plan and Local Area Plan policies:

      1) Concentrate or cluster Development on portions of a site while leaving the remaining land in a natural undisturbed condition.
      2) Limit clearing and grading of native vegetation at a site to the minimum amount needed to build lots, allow access, and provide fire protection.
      3) Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.

4) Promote natural vegetation by using parking lot islands and other landscaped areas.
5) Preserve riparian areas and wetlands.

c. Minimize Storm Water Pollutants of Concern
Storm water runoff from a site has the potential to contribute oil and grease, suspended solids, metals, gasoline, pesticides, and pathogens to the storm water conveyance system. The development must be designed so as to minimize, to the maximum extent practicable, the introduction of pollutants of concern that may result in significant impacts, generated from site runoff of directly connected impervious areas (DCIA), to the storm water conveyance system as approved by the building official. Pollutants of concern consist of any pollutants that exhibit one or more of the following characteristics: current loadings or historic deposits of the pollutant are impacting the beneficial uses of a receiving water, elevated levels of the pollutant are found in sediments of a receiving water and/or have the potential to bioaccumulate in organisms therein, or the detectable inputs of the pollutant are at concentrations or loads considered potentially toxic to humans and/or flora and fauna.

In meeting this specific requirement, "minimization of the pollutants of concern" will require the incorporation of a BMP or combination of BMPs best suited to maximize the reduction of pollutant loadings in that runoff to the Maximum Extent Practicable. Those BMPs best suited for that purpose are those listed in the *California Storm Water Best Management Practices Handbook*s; *Caltrans Storm Water Quality Handbook: Planning and Design Staff Guid*e; *Manual for Storm Water Management in Washington Stat*e; *The Maryland Stormwater Design Manua*l; *Florida Development Manual: A Guide to Sound Land and Water Managemen*t; Denver *Urban Storm Drainage Criteria Manual, Volume 3 – Best Management Practices* and *Guidance Specifying Management Measures for Sources of Nonpoint Pollution in Coastal Waters* , USEPA Report No. EPA-840-B-92-002, as "likely to have significant impact" beneficial to water quality for targeted pollutants that are of concern at the site in question. However, it is possible that a combination of BMPs not so designated, may in a particular circumstance, be better suited to maximize the reduction of the pollutants.

d. Protect Slopes and Channels
Project plans must include BMPs consistent with local codes, ordinances, or other regulatory mechanism and the Design Standards to decrease the potential of slopes and/or channels from eroding and impacting storm water runoff:

1) Convey runoff safely from the tops of slopes and stabilize disturbed slopes.
2) Utilize natural drainage systems to the maximum extent practicable.
3) Stabilize permanent channel crossings.
4) Vegetate slopes with native or drought tolerant vegetation, as appropriate.
5) Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion, with the approval of all agencies

with jurisdiction, e.g., the U.S. Army Corps of Engineers and the California Department of Fish and Game.

e. Provide Storm Drain System Stenciling and Signage
Storm drain stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets. The stencil contains a brief statement that prohibits the dumping of improper materials into the storm water conveyance system. Graphical icons, either illustrating anti-dumping symbols or images of receiving water fauna, are effective supplements to the anti-dumping message. All storm drain inlets and catch basins within the project area must be stenciled with prohibitive language (such as: "NO DUMPING – DRAINS TO OCEAN") and/or graphical icons to discourage illegal dumping.· Signs and prohibitive language and/or graphical icons, which prohibit illegal dumping, must be posted at public access points along channels and creeks within the project area.· Legibility of stencils and signs must be maintained.

f. Properly Design Outdoor Material Storage Areas
Outdoor material storage areas refer to storage areas or storage facilities solely for the storage of materials. Improper storage of materials outdoors may provide an opportunity for toxic compounds, oil and grease, heavy metals, nutrients, suspended solids, and other pollutants to enter the storm water conveyance system. Where proposed project plans include outdoor areas for storage of materials that may contribute pollutants to the storm water conveyance system, the following Structural or Treatment BMPs are required:

1) Materials with the potential to contaminate storm water must be: (1) placed in an enclosure such as, but not limited to, a cabinet, shed, or similar structure that prevents contact with runoff or spillage to the storm water conveyance system; or (2) protected by secondary containment structures such as berms, dikes, or curbs.
2) The storage area must be paved and sufficiently impervious to contain leaks and spills.
3) The storage area must have a roof or awning to minimize collection of storm water within the secondary containment area.

g. Properly Design Trash Storage Areas
A trash storage area refers to an area where a trash receptacle or receptacles (dumpsters) are located for use as a repository for solid wastes. Loose trash and debris can be easily transported by the forces of water or wind into nearby storm drain inlets, channels, and/or creeks. All trash container areas must meet the following Structural or Treatment Control BMP requirements (individual single family residences are exempt from these requirements):

1) Trash container areas must have drainage from adjoining roofs and pavement diverted around the area(s).
2) Trash container areas must be screened or walled to prevent off-site transport of trash.

h. Provide Proof of Ongoing BMP Maintenance

Improper maintenance is one of the most common reasons why water quality controls will not function as designed or which may cause the system to fail entirely. It is important to consider who will be responsible for maintenance of a permanent BMP, and what equipment is required to perform the maintenance properly. As part of project review, if a project applicant has included or is required to include, Structural or Treatment Control BMPs in project plans, the Permittee shall require that the applicant provide verification of maintenance provisions through such means as may be appropriate, including, but not limited to legal agreements, covenants, CEQA mitigation requirements and/or Conditional Use Permits.

For all properties, the verification will include the developer's signed statement, as part of the project application, accepting responsibility for all structural and treatment control BMP maintenance until the time the property is transferred and, where applicable, a signed agreement from the public entity assuming responsibility for Structural or Treatment Control BMP maintenance. The transfer of property to a private or public owner must have conditions requiring the recipient to assume responsibility for maintenance of any Structural or Treatment Control BMP to be included in the sales or lease agreement for that property, and will be the owner's responsibility. The condition of transfer shall include a provision that the property owners conduct maintenance inspection of all Structural or Treatment Control BMPs at least once a year and retain proof of inspection. For residential properties where the Structural or Treatment Control BMPs are located within a common area which will be maintained by a homeowner's association, language regarding the responsibility for maintenance must be included in the project's conditions, covenants and restrictions (CC&Rs). Printed educational materials will be required to accompany the first deed transfer to highlight the existence of the requirement and to provide information on what storm water management facilities are present, signs that maintenance is needed, how the necessary maintenance can be performed, and assistance that the Permittee can provide. The transfer of this information shall also be required with any subsequent sale of the property.

If Structural or Treatment Control BMPs are located within a public area proposed for transfer, they will be the responsibility of the developer until they are accepted for transfer by the County or other appropriate public agency. Structural or Treatment Control BMPs proposed for transfer must meet design standards adopted by the public entity for the BMP installed and should be approved by the County or other appropriate public agency prior to its installation.

i. Design Standards for Structural or Treatment Control BMPs
The Permittees shall require that post-construction treatment control BMPs incorporate, at a minimum, either a volumetric or flow based treatment control design standard, or both, as identified below to mitigate (infiltrate, filter or treat) storm water runoff:

1) Volumetric Treatment Control BMP

a) The 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area, from the formula recommended in Urban Runoff Quality Management, WEF Manual of Practice No. 23/ ASCE Manual of Practice No. 87, (1998); or
b) The volume of annual runoff based on unit basin storage water quality volume, to achieve 80 percent or more volume treatment by the method recommended in California Stormwater Best Management Practices Handbook – Industrial/ Commercial, (2003); or
c) The volume of runoff produced from a historical-record based reference 24-hour rainfall criterion for "treatment" that achieves approximately the same reduction in pollutant loads achieved by the 85th percentile 24-hour runoff event.

2) Flow Based Treatment Control BMP
   a) The flow of runoff produced from a rain event equal to at least two times the 85th percentile hourly rainfall intensity for the area; or
   b) The flow of runoff produced from a rain event that will result in treatment of the same portion of runoff as treated using volumetric standards above.

Limited Exclusion
Restaurants and Retail Gasoline Outlets, where the land area for development or redevelopment is less than 5,000 square feet, are excluded from the numerical Structural or Treatment Control BMP design standard requirement only.

3. Provisions Applicable to Individual Priority Project Categories

   a. 100,000 Square Foot Commercial Developments

      1) Properly Design Loading/Unloading Dock Areas
      Loading/unloading dock areas have the potential for material spills to be quickly transported to the storm water conveyance system. To minimize this potential, the following design criteria are required:

         a) Cover loading dock areas or design drainage to minimize run-on and runoff of storm water.
         b) Direct connections to storm drains from depressed loading docks (truck wells) are prohibited.

      2) Properly Design Repair/Maintenance Bays
      Oil and grease, solvents, car battery acid, coolant and gasoline from the repair/maintenance bays can negatively impact storm water if allowed to come into contact with storm water runoff. Therefore, design plans for repair bays must include the following:

a) Repair/maintenance bays must be indoors or designed in such a way that doesn't allow storm water runon or contact with storm water runoff.
b) Design a repair/maintenance bay drainage system to capture all washwater, leaks and spills. Connect drains to a sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required by local jurisdiction, obtain an Industrial Waste Discharge Permit.

3) Properly Design Vehicle/Equipment Wash Areas
The activity of vehicle/equipment washing/steam cleaning has the potential to contribute metals, oil and grease, solvents, phosphates, and suspended solids to the storm water conveyance system. Include in the project plans an area for washing/steam cleaning of vehicles and equipment. The area in the site design must be:

a) Self-contained and/ or covered, equipped with a clarifier, or other pretreatment facility, and
b) Properly connected to a sanitary sewer or other appropriately permitted disposal facility.

b. Restaurants

1) Properly Design Equipment/Accessory Wash Areas
The activity of outdoor equipment/accessory washing/steam cleaning has the potential to contribute metals, oil and grease, solvents, phosphates, and suspended solids to the storm water conveyance system. Include in the project plans an area for the washing/steam cleaning of equipment and accessories. This area must be:

a) Self-contained, equipped with a grease trap, and properly connected to a sanitary sewer.
b) If the wash area is to be located outdoors, it must be covered, paved, have secondary containment, and be connected to the sanitary sewer or other appropriately permitted disposal facility.

c. Retail Gasoline Outlets

1) Properly Design Fueling Area
Fueling areas have the potential to contribute oil and grease, solvents, car battery acid, coolant and gasoline to the storm water conveyance system. The project plans must include the following BMPs:

a) The fuel dispensing area must be covered with an overhanging roof structure or canopy. The canopy's minimum dimensions must be equal to or greater than the area within the grade break. The canopy must not drain onto the fuel dispensing area, and the canopy downspouts must be routed to prevent drainage across the fueling area.

b) The fuel dispensing area must be paved with Portland cement concrete (or equivalent smooth impervious surface), and the use of asphalt concrete shall be prohibited.
c) The fuel dispensing area must have a 2% to 4% slope to prevent ponding, and must be separated from the rest of the site by a grade break that prevents run-on of storm water to the extent practicable.
d) At a minimum, the concrete fuel dispensing area must extend 6.5 feet (2.0 meters) from the corner of each fuel dispenser, or the length at which the hose and nozzle assembly may be operated plus 1 foot (0.3 meter), whichever is less.

d. Automotive Repair Shops

1) Properly Design Fueling Area
Fueling areas have the potential to contribute oil and grease, solvents, car battery acid, coolant and gasoline to the storm water conveyance system. Therefore, design plans, which include fueling areas, must contain the following BMPs:

a. The fuel dispensing area must be covered with an overhanging roof structure or canopy. The canopy's minimum dimensions must be equal to or greater than the area within the grade break. The canopy must not drain onto the fuel dispensing area, and the canopy downspouts must be routed to prevent drainage across the fueling area.
b. The fuel dispensing area must be paved with Portland cement concrete (or equivalent smooth impervious surface), and the use of asphalt concrete shall be prohibited.
c. The fuel dispensing area must have a 2% to 4% slope to prevent ponding, and must be separated from the rest of the site by a grade break that prevents run-on of storm water to the extent practicable.
d. At a minimum, the concrete fuel dispensing area must extend 6.5 feet (2.0 meters) from the corner of each fuel dispenser, or the length at which the hose and nozzle assembly may be operated plus 1 foot (0.3 meter), whichever is less.

2) Properly Design Repair/Maintenance Bays
Oil and grease, solvents, car battery acid, coolant and gasoline from the repair/maintenance bays can negatively impact storm water if allowed to come into contact with storm water runoff. Therefore, design plans for repair bays must include the following:

a) Repair/maintenance bays must be indoors or designed in such a way that doesn't allow storm water run-on or contact with storm water runoff.
b) Design a repair/maintenance bay drainage system to capture all wash-water, leaks and spills. Connect drains to a sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is

prohibited. If required by local jurisdiction, obtain an Industrial Waste Discharge Permit.

3) Properly Design Vehicle/Equipment Wash Areas
The activity of vehicle/equipment washing/steam cleaning has the potential to contribute metals, oil and grease, solvents, phosphates, and suspended solids to the storm water conveyance system. Include in the project plans an area for washing/steam cleaning of vehicles and equipment. This area must be:

   a) Self-contained and/or covered, equipped with a clarifier, or other pretreatment facility, and properly connected to a sanitary sewer or other appropriately permitted disposal facility.

4) Properly Design Loading/Unloading Dock Areas
Loading/unloading dock areas have the potential for material spills to be quickly transported to the storm water conveyance system. To minimize this potential, the following design criteria are required:

   a) Cover loading dock areas or design drainage to minimize run-on and runoff of storm water.
   b) Direct connections to storm drains from depressed loading docks (truck wells) are prohibited.

e. Parking Lots

1) Properly Design Parking Area
Parking lots contain pollutants such as heavy metals, oil and grease, and polycyclic aromatic hydrocarbons that are deposited on parking lot surfaces by motor-vehicles. These pollutants are directly transported to surface waters. To minimize the offsite transport of pollutants, the following design criteria are required:

   a) Reduce impervious land coverage of parking areas.
   b) Infiltrate or treat runoff.

2) Properly Design To Limit Oil Contamination and Perform Maintenance
Parking lots may accumulate oil, grease, and water insoluble hydrocarbons from vehicle drippings and engine system leaks:

   a) Treat to remove oil and petroleum hydrocarbons at parking lots that are heavily used (e.g. fast food outlets, lots with 25 or more parking spaces , sports event parking lots, shopping malls, grocery stores, discount warehouse stores).
   b) Ensure adequate operation and maintenance of treatment systems particularly sludge and oil removal, and system fouling and plugging prevention control.

4. Waiver

A Permittee may, through adoption of an ordinance, code, or other regulatory mechanism incorporating the treatment requirements of the Design Standards, provide for a waiver from the requirement if impracticability for a specific property can be established. A waiver of impracticability shall be granted only when all other Structural or Treatment Control BMPs have been considered and rejected as infeasible. Recognized situations of impracticability include, (i) extreme limitations of space for treatment on a redevelopment project, (ii) unfavorable or unstable soil conditions at a site to attempt infiltration, and (iii) risk of ground water contamination because a known unconfined aquifer lies beneath the land surface or an existing or potential underground source of drinking water is less than 10 feet from the soil surface. Any other justification for impracticability must be separately petitioned by the Permittee and submitted to the appropriate RWQCB for consideration. The RWQCB may consider approval of the waiver justification or may delegate the authority to approve a class of waiver justifications to the RWQCB EO. The supplementary waiver justification becomes recognized and effective only after approval by the RWQCB or the RWQCB EO. A waiver granted by a Permittee to any development or redevelopment project may be revoked by the RWQCB EO for cause and with proper notice upon petition.

5. Limitation on Use of Infiltration BMPs

Three factors significantly influence the potential for storm water to contaminate ground water. They are (i) pollutant mobility, (ii) pollutant abundance in storm water, (iii) and soluble fraction of pollutant. The risk of contamination of groundwater may be reduced by pretreatment of storm water. A discussion of limitations and guidance for infiltration practices is contained in, *Potential Groundwater Contamination from Intentional and Non-Intentional Stormwater Infiltration, Report No. EPA/600/R-94/051, USEPA (1994).*

In addition, the distance of the groundwater table from the infiltration BMP may also be a factor determining the risk of contamination. A water table distance separation of ten feet depth in California presumptively poses negligible risk for storm water not associated with industrial activity or high vehicular traffic.

Site specific conditions must be evaluated when determining the most appropriate BMP. Additionally, monitoring and maintenance must be provided to ensure groundwater is protected and the infiltration BMP is not rendered ineffective by overload. This is especially important for infiltration BMPs for areas of industrial activity or areas subject to high vehicular traffic [25,000 or greater average daily traffic (ADT) on main roadway or 15,000 or more ADT on any intersecting roadway]. In some cases pretreatment may be necessary.

6. Alternative Certification for Storm Water Treatment Mitigation

In lieu of conducting detailed BMP review to verify Structural or Treatment Control BMP adequacy, a Permittee may elect to accept a signed certification from a Civil Engineer or a Licensed Architect registered in the State of California, that the plan meets

the criteria established herein. The Permittee is encouraged to verify that certifying person(s) have been trained on BMP design for water quality, not more than two years prior to the signature date. Training conducted by an organization with storm water BMP design expertise (e.g., a University, American Society of Civil Engineers, American Society of Landscape Architects, American Public Works Association, or the California Water Environment Association) may be considered qualifying.

Appendix J

Sample Storm Water Informational Mailer

Tulare County Clean Storm Water Program

Where Does the Storm Water Go?

Rain and excess water from your home flow right to storm drains. This water flows down streets, through gutters, into pipes, to ponding basins, canals, creeks and rivers.

In these basins and waterways, runoff seeps through the soil and into groundwater – our drinking water supply. That's why it's important to keep storm drains and runoff clean.

Loose Litter

Litter hurts our community. It contaminates our water resources and clogs storm drains – causing floods in our neighborhoods. Be sure to properly dispose of garbage, pet waste and cigarette butts! For more information on litter control, go to www.donttrashcalifornia.info.

Home and Garden

Maintaining our homes and gardens is necessary, but overusing chemicals is not. Buy household and garden products only in the amount needed and read and follow the label directions. Better yet, use alternative products. Avoid using lawn and garden products when rain is forecast! Take all unused products to a Household Hazardous Waste drop-off center. For information, call 733-6441.

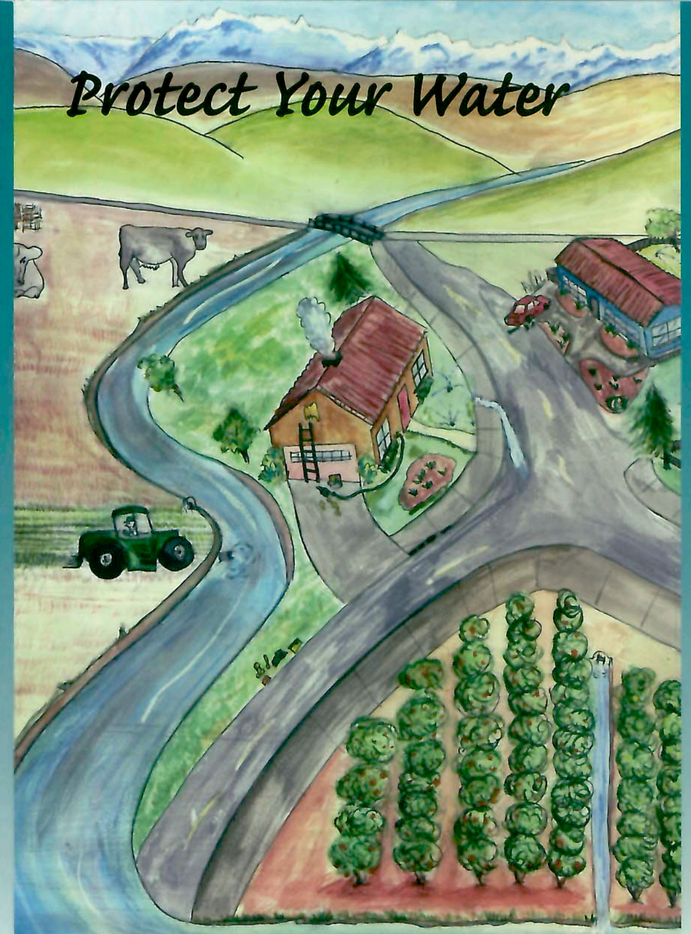
Protect Your Water



It's just beneath your feet.

Tulare County Clean Storm Water Program

Water is the most vital resource in the Valley. If you think about it, water has an effect on everything we do in our day-to-day lives. From keeping our lawns green, to washing our dishes, we depend on water. Water plays an important role throughout our community.

For Agriculture . . .

Water is delivered through a network of canals that is managed by individual water districts. Water from rivers flows through our community – providing water for food that feeds a nation.

For Industry . . .

Businesses in our community depend on clean water for food processing, manufacturing, health care and other related industries. A clean and reliable water source is necessary to support a healthy economy.

For Home . . .

Every day we need clean water for drinking and bathing. Our communities depend on water that is supplied primarily from groundwater. Protecting groundwater is essential to protecting public health.

For Wildlife . . .

Our urban environment needs clean water in streams, lakes and ponds to provide nesting habitat for birds and other wildlife.

How Can You Help?

We're all responsible for keeping our water clean – for the future of the Valley, our communities and our children. And it starts at home.

By doing a few simple things, you can help protect the water beneath our feet. Look inside to find out what you can do.

Bag, seal and throw away pet waste – it keeps runoff and streets clean.

Put litter in trash cans. It keeps our storm drains and community clean.

Carpool to reduce air pollution, so it also helps reduce water pollution.

Set sprinkler timers to reduce contamination of runoff water from pesticides and fertilizers and help maintain a clean water supply. Use a shutoff nozzle to avoid unnecessary runoff.

Volunteer to help label storm drains with "No Dumping!" signs.

Recycle waste to keep litter off our streets and ease the strain on our landfills.

Instead of hosing, sweep driveways and sidewalks. This prevents storm water pollution and conserves water.

Take unused paint, pesticides, fertilizers and other hazardous items to a Household Hazardous Waste drop-off center. For information, call 733-6441.

It's up to us!

We need clean water today and for future generations. Preventing storm water pollution is important and will help keep our communities clean.

Accidental Spills

Cover a hazardous material spill (such as used motor oil or antifreeze) with kitty litter, then sweep it up and take it to a Household Hazardous Waste drop-off center. Never hose spills into the gutter!

Car Fluids

Inspect your car regularly to prevent and repair leaks. Don't dump motor oil or antifreeze down storm drains! Recycle motor oil and auto fluids.

Paint

Paint keeps our homes looking beautiful, but it has an ugly effect on our water. Never wash paint into the gutter! Rinse water-based paintbrushes in sinks. Avoid oil-based paints and varnishes.

How Does Storm Water Become Polluted?

When it rains, storm water flows across driveways, streets and lawns. As it flows, it can pick up pollutants such as oil, pesticides, cigarette butts and trash. This runoff carries these pollutants through the storm drain system. The pollutants then can affect wildlife habitats, outdoor recreation and our water supply.

Even when it's not raining, water from sprinklers, car washing, pool draining and other sources can carry pollutants into the storm drain system.

Rain gathers oil and other toxic fluids from leaky cars.

Runoff collects litter and yard waste.

Rain turns air pollution into storm water pollution.

Runoff picks up detergent and grime from car washing.

Overusing pesticides means money and pollutants down the drain. (The storm drain, that is!)

Overwatering creates runoff that can carry fertilizers and pesticides into the storm drain system.

Appendix K

Green Waste Flyer

The Green Can is for…

Green Waste Only – Organic Yard Material

Examples:

- ✓ *Tree Trimmings*
- ✓ *Leaves*
- ✓ *Grass*
- ✓ *Weeds*
- ✓ *Brush*
- ✓ *Plants, Etc*

No Dirt
No Plastic Bags
No Recyclables
No Wire or Twine around Brush or Trimmings

Cans with trash or items other than Green Waste found in them will not be emptied! After these items have been removed, your can will be emptied on next week's pickup day.

Thank You,
The City of Farmersville and Waste Connections

Verde Bote Es Para…

Desperdicio Verde – Materiales Organicos de Jardin

Ejemplos:

- ✓ *Tree Podas de Arboles*
- ✓ *Hojas*
- ✓ *Sacare/Pasto*
- ✓ *Hierbas*
- ✓ *Ramas*
- ✓ *Planta, Etc*

No Tierra
No Bolsas de Platico
No Reciclables
No Alhambre o Mecate Alrededor de Podas o de Ramas

Botes que contengan basure u otros articulos qué no sean desperdicios verdas bi serab vacuadis. Despues de qué estos articulos hallan sido removidos, su bote sera vaciado la siguiente semana enal dia qué tiene programido a recojer su basura.

Thank Gracias,
La Cuidad de Farmersville y Waste Connections

Appendix L

Spring Clean-Up Flyer

Spring Clean-Up

Need to get rid of stuff that's been hanging around your yard or cluttering your garage for too long?

We Can Help! In celebration of Earth Week, the City of Farmerville is offering residents a way to help beautify our City by accepting Electronic Waste (E-Waste) and General Household trash.

The event will take place at Roy Park on South Farmersville Boulevard.

NEW EXTENDED HOURS

WHEN:

April 19th to 21st

Thursday 8:00am - 6:00pm

Friday 7:00am - 3:00pm

Saturday 8:00am - 3:00pm

WHO:

Any Farmersville resident can participate

WHAT:

General household trash, furniture, bulky items; yard waste.
Electronic Waste including televisions, computers, and monitors

*Not Accepted: Batteries, microwaves, concrete, paint, oil, or any hazardous waste

Free Dump Day Guidelines:

- A current City utility bill will be required as proof of residency.
- Residential customers only. No business or commercial waste allowed.
- All metal and wood should be separated for faster unloading.
- Trailers will be limited to no longer than 10 feet.
- Participants will be required to unload their own vehicle.

For more information, contact the City of Farmersville at 747-0458.

La "Primavera" llego
Tiempo de limpieza!

¿Necesita tirar materia que se está colgando alrededor
de su yarda o se está estorbando en su garage?

Le podemos ayudar! Para ayudar a celebrar semana de la tierra, la ciudad de Farmersville está ofreciendo a residentes dos maneras de ayudar a mantener limpia nuestra ciudad. ocurrirán en la

MAS HORAS

DONDÉ:
Roy Park

CUANDO:
Abril 19 al 21, 2007
Jueves 8:00am - 6:00pm
Viernes 7:00am - 3:00pm
Sabado 8:00am - 3:00pm

QUIEN:
Todo residente de Farmersville, puede participar

Aceptado: Basura de la casa (muebles, artículos abultados, basura de la yarda, metal de desecho)

No Aceptado: Baterías, micro ornos, cemento, pintura, aceite, o cualquier desecho peligroso

Reglas para El Dia de Limpieza Gratis:

- la cuenta actual de la basura de la ciudad será requerida como prueba de residente
- No se permite basura de negocios o de commercios
- todo el metal y madera se debe separar para descargar más rápidos
- el vagon será limitado a no más de largo de 10 pies
- Los participantes serán requeridos a descargar su propio vehículo.

Los participantes de los dos eventos serán elegibles para entrar en el sorteo del día de la tierra del condado de Tulare y poder ganarse un viaje de fin de semana!

4.01.040 - Establishment of development fees.

The following development impact fees are hereby established and imposed on the issuance of all building permits for development within the city to finance the cost of the following categories of public facilities and improvements required by new development. The development impact fees consist of the following fees which are hereby established:

A. Law Enforcement Facilities, Vehicles and Equipment. A development impact fee is hereby established for law enforcement facilities, vehicles and equipment;

B. Fire Suppression/Rescue Facilities, Vehicles and Equipment. A development impact fee is hereby established for fire suppression/rescue facilities, vehicles and equipment;

C. General Facilities, Vehicles and Equipment. A development impact fee is hereby established for general facilities, vehicles and equipment;

D. Circulation (Streets, Signals and Bridges). A development impact fee is hereby established for circulation (streets, signals and bridges);

E. Library Collection Items and Dedicated Public Use Computers. A development impact fee is hereby established for library collection items and dedicated public use computers.

F. Water Treatment, Storage and Distribution System. A development impact fee is hereby established for water treatment, storage and distribution system;

G. Wastewater Collection and Treatment System. A development impact fee is hereby established for wastewater collection and treatment system.

H. Storm Drainage Collections System. A development impact fee is hereby established for storm drainage collection system;

I. Public Use Facilities. A development impact fee is hereby established for public use facilities;

J. Park Land. A development impact fee is hereby established for park land.

(Ord. 425 (part), 2006; Ord. No. 512, § 1, 11-8-2021)

AIRPORT

WOODLAKE AIRPORT

Situated on approximately 87 acres, the Woodlake Airport provides the community with an air link to the world. The airport is located on the southern edge of Woodlake, next to the St. Johns River. Woodlake Municipal Airport is often free of the winter tule fog which plagues other Valley airports.

The airport is a general aviation facility and features one runway (Runway 7/25), 3,000 feet in length and 50 feet wide. The airport features the Runway Café, fueling facility, hangars and tie downs. The City has

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 5/15/2025 at 6:23 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

Subject: RE: [EXTERNAL] Tierra Vista Project [New Project: Gardenia Courtyards]
Date: Wednesday, February 11, 2026 3:01:14 PM
Attachments: Description of the Proposed Project and Endangered Species Analysis.docx
image001.png

Hi Maggie,

I'm sorry for bothering you after such a long time, but you were so helpful that I was hoping you could lend us a hand again. We are working on another project that may in the same boat as the project we talked about a while ago in this email string. We are preparing an Environmental Assessment for the Gardenia Courtyards Project in Tulare County (I'm not sure you're the right contact, but I hope so) and HCD requested that we conduct informal consultation with USFWS about effects to special-status species. In 2024, we talked about a project in the San Joaquin Valley, and you responded that USFWS does not issue a determination of no effect or conduct informal consultation for projects that do not have the potential to impact critical habitat or special-status species. I believe that the same situation applies to the Gardenia Courtyards Project and I'm hoping that you will concur. A description of the project site, the proposed development, and an excerpt of the analysis of potential impacts to endangered species is included as an attachment; a brief summary is provided below.

The 2.39-acre project site is located northeast of the intersection of Farmersville Road and East Walnut Street/West Walnut Avenue, in the City of Farmersville, California. The project site is currently undeveloped with a private, dirt stubbed street on the project site's southern frontage. The Gardenia Courtyards Project would include the development of a 42-unit affordable senior housing community. Construction of the proposed project would be expected to occur over an approximately one-year and five-month period and all staging areas during project construction would be located on-site. The maximum depth of ground disturbance during construction of the proposed project, including utility trenches and site grading, would be approximately 20 feet.

As discussed in detail in the attached document, habitat does not exist on-site to support the special-status species that were listed as potentially occurring in the project site vicinity. In addition, the IPaC results note that the project site does not contain any critical habitat. Thus, we concluded that the proposed project would not result in any adverse effects to special-status species. If you agree with our conclusions, will you confirm that this project falls under the same umbrella as the project that we discussed before, and that it is not a project for which USFWS would conduct informal consultation?

Please let me know if you have any questions; I look forward to discussing the project with you further (if needed).

Thanks,

Roderick Stinson

Vice President

Hi Margaret,

We spoke back on October 21st regarding the Tierra Visa Project. In that conversation you noted that you had reviewed the project (we also discussed the minimal nature of project effects), and that USFW would not typically enter into informal consultation for a project like this. The USDA is asking me to confirm with you through email. Can you please respond confirming that we had this discussion?

Thank you,

Roderick Stinson

Human Services

The Human Services Branch provides services and essential resources to protect the most vulnerable Tulare County residents through the implementation of programs that use best practice interventions and education. The Human Services Branch serves the residents of Tulare County by providing protective and supportive services to at-risk and underserved families and individuals of all ages.

The Human Services Branch comprises the following three divisions:

Adult Services
Develops and supports home- and community-based services that allow individuals to stay in their own homes or least restrictive, home-like environments. Additionally, this division provides assistance to veterans and their families looking to access veterans benefits.

Child Welfare Services (CWS)
Assists families in providing preventive services when health and safety issues occur. CWS is dedicated to helping families achieve safety and stability, making sure children are

protected from abusive and potentially harmful situations, and ensuring families in our system receive the services they need.

TulareWORKs

Provides essential resources and services to children and families experiencing financial hardship, life crises, or barriers to employment. Additionally, TulareWORKs partners with community organizations to minimize employment barriers, provide job skills training, and facilitate additional support services.

Tables — Farmland Classification — Summary By Map Unit

Summary by Map Unit — Tulare County, Western Part, California (CA659)

Summary by Map Unit — Tulare County, Western Part, California (CA659)

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
130	Nord fine sandy loam, 0 to 2 percent slopes	Prime farmland if irrigated and either protected from flooding or not frequently flooded during the growing season	8.7	100.0%
Totals for Area of Interest			**8.7**	**100.0%**

Description — Farmland Classification

Farmland classification identifies map units as prime farmland, farmland of statewide importance, farmland of local importance, or unique farmland. It identifies the location and extent of the soils that are best suited to food, feed, fiber, forage, and oilseed crops. NRCS policy and procedures on prime and unique farmlands are published in the "Federal Register," Vol. 43, No. 21, January 31, 1978.

Description — Dwellings Without Basements

ENG - Engineering

Dwellings are single-family houses of three stories or less. For dwellings without basements, the foundation is assumed to consist of spread footings of reinforced concrete built on undisturbed soil at a depth of 2 feet or at the depth of maximum frost penetration, whichever is deeper.

The ratings for dwellings are based on the soil properties that affect the capacity of the soil to support a load without movement and on the properties that affect excavation and construction costs. The properties that affect the load-supporting capacity include depth to a water table, ponding, flooding, subsidence, linear extensibility (shrink-swell potential), and compressibility. Compressibility is inferred from the Unified classification of the soil. The properties that affect the ease and amount of excavation include depth to a water table, ponding, flooding, slope, depth to bedrock or a cemented pan, hardness of bedrock or a cemented pan, and the amount and size of rock fragments.

The ratings are both verbal and numerical. Rating class terms indicate the extent to which the soils are limited by all of the soil features that affect the specified use. "Not limited" indicates that the soil has features that are very favorable for the specified use. Good performance and very low maintenance can be expected. "Somewhat limited" indicates that the soil has features that are moderately favorable for the specified use. The limitations can be overcome or minimized by special planning, design, or installation. Fair performance and moderate maintenance can be expected. "Very limited" indicates that the soil has one or more features that are unfavorable for the specified use. The limitations generally cannot be overcome without major soil reclamation, special design, or expensive installation procedures. Poor performance and high maintenance can be expected.

Numerical ratings indicate the severity of individual limitations. The ratings are shown as decimal fractions ranging from 0.01 to 1.00. They indicate gradations between the point at which a soil feature has the greatest negative impact on the use (1.00) and the point at which the soil feature is not a limitation (0.00).

The map unit components listed for each map unit in the accompanying Summary by Map Unit table in Web Soil Survey or the Aggregation Report in Soil Data Viewer are determined by the aggregation method chosen. An aggregated rating class is shown for each map unit. The components listed for each map unit are only those that have the same rating class as listed for the map unit. The percent composition of each component in a particular map unit is presented to help the user better understand the percentage of each map unit that has the rating presented.

Other components with different ratings may be present in each map unit. The ratings for all components, regardless of the map unit aggregated rating, can be viewed by generating the equivalent report from the Soil Reports tab in Web Soil Survey or from the Soil Data Mart site. Onsite investigation may be needed to validate these interpretations and to confirm the identity of the soil on a given site.

Rating Options — Dwellings Without Basements

Aggregation Method: Dominant Condition

Component Percent Cutoff: *None Specified*

Tie-break Rule: Higher

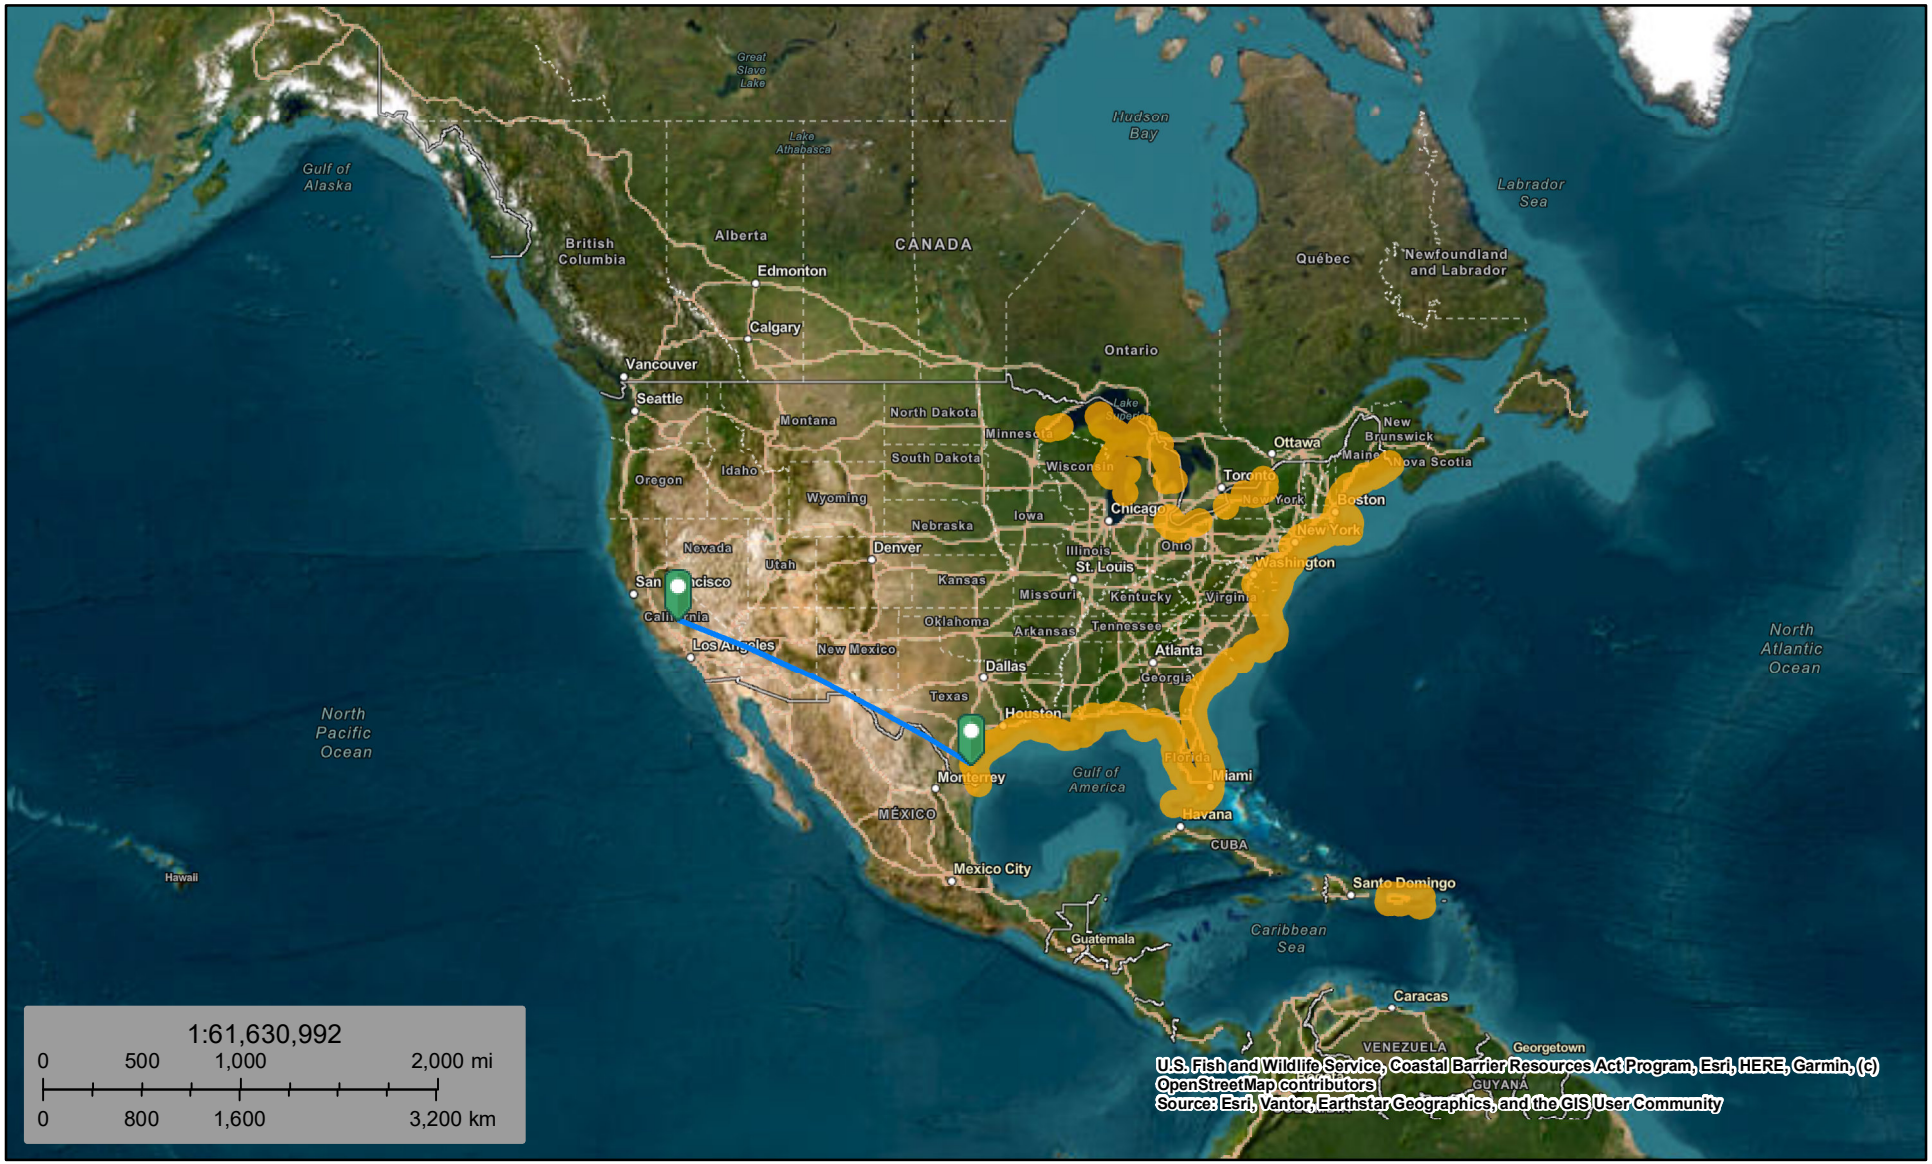
Coastal Barrier Resources System

Coastal Barrier Resources Map



December 10, 2025

Generalized Units

This map is for general reference only. The Coastal Barrier Resources System (CBRS) boundaries depicted on this map are representations of the controlling CBRS boundaries, which are shown on the official maps, accessible at https://www.fws.gov/library/collections/official-coastal-barrier-resources-system-maps. All CBRS related data should be used in accordance with the layer metadata found on the CBRS Mapper website.

The CBRS Buffer Zone represents the area immediately adjacent to the CBRS boundary where users are advised to contact the Service for an official determination (https://www.fws.gov/service/coastal-barrier-resources-system-property-documentation) as to whether the property or project site is located "in" or "out" of the CBRS.

CBRS Units normally extend seaward out to the 20- or 30-foot bathymetric contour (depending on the location of the unit). The true seaward

IPaC **U.S. Fish & Wildlife Service**

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

Location

Tulare County, California

Local office

Sacramento Fish And Wildlife Office

Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

---

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).

NOT FOR CONSULTATION

2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Mammals

NAME	STATUS
Buena Vista Lake Ornate Shrew Sorex ornatus relictus Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/1610	Endangered
San Joaquin Kit Fox Vulpes macrotis mutica Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/2873	Endangered
Tipton Kangaroo Rat Dipodomys nitratoides nitratoides Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/7247	Endangered

Birds

NAME	STATUS
California Condor Gymnogyps californianus There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/8193	Endangered

Reptiles

NAME	STATUS
Blunt-nosed Leopard Lizard Gambelia silus Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/625	Endangered

NOT FOR CONSULTATION

Northwestern Pond Turtle Actinemys marmorata — Proposed Threatened
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/1111

Amphibians

NAME	STATUS
Western Spadefoot Spea hammondii	Proposed Threatened

No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/5425

Insects

NAME	STATUS
Monarch Butterfly Danaus plexippus	Proposed Threatened

Wherever found
There is **proposed** critical habitat for this species. Your location does not overlap the critical habitat.
https://ecos.fws.gov/ecp/species/9743

Crustaceans

NAME	STATUS
Vernal Pool Fairy Shrimp Branchinecta lynchi	Threatened

Wherever found
There is **final** critical habitat for this species. Your location does not overlap the critical habitat.
https://ecos.fws.gov/ecp/species/498

NOT FOR CONSULTATION

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

There are no critical habitats at this location.

You are still required to determine if your project(s) may have effects on all above listed species.

Bald & Golden Eagles

Bald and Golden Eagles are protected under the Bald and Golden Eagle Protection Act [2] and the Migratory Bird Treaty Act (MBTA) [1]. Any person or organization who plans or conducts activities that may result in impacts to Bald or Golden Eagles, or their habitats, should follow appropriate regulations and consider implementing appropriate avoidance and minimization measures, as described in the various links on this page.

Additional information can be found using the following links:

- Eagle Management https://www.fws.gov/program/eagle-management
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide avoidance and minimization measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf
- Supplemental Information for Migratory Birds and Eagles in IPaC https://www.fws.gov/media/supplemental-information-migratory-birds-and-bald-and-golden-eagles-may-occur-project-action

There are Bald Eagles and/or Golden Eagles in your project area.

Measures for Proactively Minimizing Eagle Impacts
For information on how to best avoid and minimize disturbance to nesting bald eagles, please review the National Bald Eagle Management Guidelines. You may employ the timing and activity-specific distance recommendations in this document when designing your project/activity to avoid and minimize eagle impacts. For bald eagle information specific to Alaska, please refer to Bald Eagle Nesting and Sensitivity to Human Activity.

The FWS does not currently have guidelines for avoiding and minimizing disturbance to nesting Golden Eagles. For site-specific recommendations regarding nesting Golden Eagles, please consult with the appropriate Regional Migratory Bird Office or Ecological Services Field Office.

If disturbance or take of eagles cannot be avoided, an incidental take permit may be available to authorize any take that results from, but is not the purpose of, an otherwise lawful activity. For assistance making this determination for Bald Eagles, visit the Do I Need A Permit Tool. For assistance making this determination for golden eagles, please consult with the appropriate Regional Migratory Bird Office or Ecological Services Field Office.

Ensure Your Eagle List is Accurate and Complete

NOT FOR CONSULTATION

If your project area is in a poorly surveyed area in IPaC, your list may not be complete and you may need to rely on other resources to determine what species may be present (e.g. your local FWS field office, state surveys, your own surveys). Please review the Supplemental Information on Migratory Birds and Eagles, to help you properly interpret the report for your specified location, including determining if there is sufficient data to ensure your list is accurate.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to bald or golden eagles on your list, see the "Probability of Presence Summary" below to see when these bald or golden eagles are most likely to be present and breeding in your project area.

Review the FAQs

The FAQs below provide important additional information and resources.

NAME	BREEDING SEASON
Bald Eagle Haliaeetus leucocephalus This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Jan 1 to Aug 31
Golden Eagle Aquila chrysaetos This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1680	Breeds Jan 1 to Aug 31

NOT FOR CONSULTATION

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read "Supplemental Information on Migratory Birds and Eagles", specifically the FAQ section titled "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey

effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (▪)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

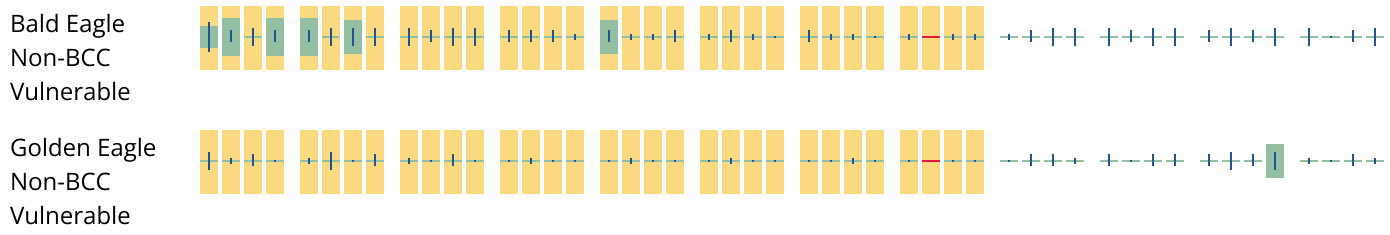
Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

NOT FOR CONSULTATION



Bald & Golden Eagles FAQs

What does IPaC use to generate the potential presence of bald and golden eagles in my specified location?

The potential for eagle presence is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are an eagle (Bald and Golden Eagle Protection Act requirements may apply).

Proper interpretation and use of your eagle report
On the graphs provided, please look carefully at the survey effort (indicated by the black vertical line) and for the existence of the "no data" indicator (a red horizontal line). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort line or no data line (red horizontal) means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list and associated information help you know what to look for to confirm presence and helps guide you in knowing when to implement avoidance and minimization measures to eliminate or reduce potential impacts from your project activities or get the appropriate permits should presence be confirmed.

How do I know if eagles are breeding, wintering, or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating, or resident), you may query your location using the RAIL Tool and view the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If an eagle on your IPaC migratory bird species list has a breeding season associated with it (indicated by yellow vertical bars on the phenology graph in your “IPaC PROBABILITY OF PRESENCE SUMMARY” at the top of your results list), there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

Interpreting the Probability of Presence Graphs

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. A taller bar indicates a higher probability of species presence. The survey effort can be used to establish a level of confidence in the presence score.

How is the probability of presence score calculated? The calculation is done in three steps:
The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of

NOT FOR CONSULTATION

presence of the Spotted Towhee in week 12 is 0.25.

To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.

The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

Breeding Season ()
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort ()
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps.

No Data ()
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

NOT FOR CONSULTATION

Migratory birds

The Migratory Bird Treaty Act (MBTA) [1] prohibits the take (including killing, capturing, selling, trading, and transport) of protected migratory bird species without prior authorization by the Department of Interior U.S. Fish and Wildlife Service (Service). The incidental take of migratory birds is the injury or death of birds that results from, but is not the purpose, of an activity. The Service interprets the MBTA to prohibit incidental take.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Measures for Proactively Minimizing Migratory Bird Impacts

Your IPaC Migratory Bird list showcases birds of concern, including Birds of Conservation Concern (BCC), in your project location. This is not a comprehensive list of all birds found in your project area. However, you can help proactively minimize significant impacts to all birds at your project location by implementing the measures in the Nationwide avoidance and minimization measures for birds document, and any other project-specific avoidance and minimization measures suggested at the link Measures for avoiding and minimizing impacts to birds for the birds of concern on your list below.

Ensure Your Migratory Bird List is Accurate and Complete

If your project area is in a poorly surveyed area, your list may not be complete and you may need to rely on other resources to determine what species may be present (e.g. your local FWS field office, state surveys, your own surveys). Please review the Supplemental Information on Migratory Birds and Eagles document, to help you properly interpret the report for your specified location, including determining if there is sufficient data to ensure your list is accurate.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, see the "Probability of Presence Summary" below to see when these birds are most likely to be present and breeding in your project area.

Review the FAQs

The FAQs below provide important additional information and resources.

NAME	BREEDING SEASON
Bald Eagle Haliaeetus leucocephalus This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Jan 1 to Aug 31
Belding's Savannah Sparrow Passerculus sandwichensis beldingi This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/8	Breeds Apr 1 to Aug 15

NOT FOR CONSULTATION

Black Swift Cypseloides niger — Breeds Jun 15 to Sep 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/8878

Bullock's Oriole Icterus bullockii — Breeds Mar 21 to Jul 25
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

California Gull Larus californicus — Breeds Mar 1 to Jul 31
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Common Yellowthroat Geothlypis trichas sinuosa — Breeds May 20 to Jul 31
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/2084

Golden Eagle Aquila chrysaetos — Breeds Jan 1 to Aug 31
This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/1680

Lawrence's Goldfinch Spinus lawrencei — Breeds Mar 20 to Sep 20
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9464

Northern Harrier Circus hudsonius — Breeds Apr 1 to Sep 15
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/8350

Nuttall's Woodpecker Dryobates nuttallii — Breeds Apr 1 to Jul 20
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9410

NOT FOR CONSULTATION

Oak Titmouse *Baeolophus inornatus* — Breeds Mar 15 to Jul 15

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9656

Santa Barbara Song Sparrow *Melospiza melodia graminea* — Breeds Mar 1 to Sep 5

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/5513

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read "Supplemental Information on Migratory Birds and Eagles", specifically the FAQ section titled "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

NOT FOR CONSULTATION

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (▪)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Migratory Bird FAQs

Tell me more about avoidance and minimization measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Avoidance & Minimization Measures for Birds describes measures that can help avoid and minimize impacts to all birds at any location year-round. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is one of the most effective ways to minimize impacts. To see when birds are most likely to occur and breed in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?

The Migratory Bird Resource List is comprised of Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location, such as those listed under the Endangered Species Act or the Bald and Golden Eagle Protection Act and those species marked as "Vulnerable". See the FAQ "What are the levels of concern for migratory birds?" for more information on the levels of concern covered in the IPaC migratory bird species list.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) with which your project intersects. These species have been identified as warranting special attention because they are BCC species in that area, an eagle (Bald and Golden Eagle Protection Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, and to verify survey effort when no results present, please visit the Rapid Avian Information Locator (RAIL) Tool.

Why are subspecies showing up on my list?

Subspecies profiles are included on the list of species present in your project area because observations in the AKN for **the species** are being detected. If the species are present, that means that the subspecies may also be present. If a subspecies shows up on your list, you may need to rely on other resources to determine if that subspecies may be present (e.g. your local FWS field office, state surveys, your own surveys).

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets.

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go to the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating, or resident), you may query your location using the RAIL Tool and view the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird on your IPaC migratory bird species list has a breeding season associated with it (indicated by yellow vertical bars on the phenology graph in your “IPaC PROBABILITY OF PRESENCE SUMMARY” at the top of your results list), there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Bald and Golden Eagle Protection Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially BCC species. For more information on avoidance and minimization measures you can implement to help avoid and minimize migratory bird impacts, please see the FAQ “Tell me more about avoidance and minimization measures I can implement to avoid or minimize impacts to migratory birds”.

Details about birds that are potentially affected by offshore projects

NOT FOR CONSULTATION

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Proper interpretation and use of your migratory bird report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please look carefully at the survey effort (indicated by the black vertical line) and for the existence of the "no data" indicator (a red horizontal line). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list does not represent all birds present in your project area. It is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list and associated information help you know what to look for to confirm presence and helps guide implementation of avoidance and minimization measures to eliminate or reduce potential impacts from your project activities, should presence be confirmed. To learn more about avoidance and minimization measures, visit the FAQ "Tell me about avoidance and minimization measures I can implement to avoid or minimize impacts to migratory birds".

Interpreting the Probability of Presence Graphs
Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. A taller bar indicates a higher probability of species presence. The survey effort can be used to establish a level of confidence in the presence score.

How is the probability of presence score calculated? The calculation is done in three steps:
The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.

To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.

The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

Breeding Season ()
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort ()

NOT FOR CONSULTATION

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps.

No Data ()
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Facilities

Wildlife refuges and fish hatcheries

Refuge and fish hatchery information is not available at this time

Wetlands in the National Wetlands Inventory (NWI)

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

This location did not intersect any wetlands mapped by NWI.

NOTE: This initial screening does **not** replace an on-site delineation to determine whether wetlands occur. Additional information on the NWI data is provided below.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

NOT FOR CONSULTATION

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.
